TO THE BINDER.—The two-page Engravings should be pasted in at a little distance from the fold in the middle, so that they may lie neither stitched through nor gathered in at the back when the volume is bound.

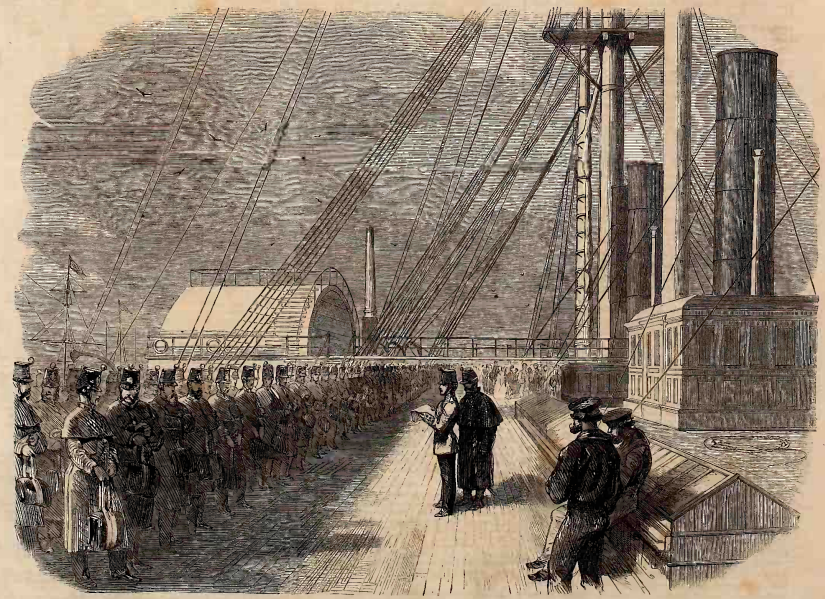
THE ILLUSTRATED LONDON NEWS.

No. 1097.—VOL. XXXIX.] SATURDAY, JULY 6, 1861. [WITH A SUPPLEMENT, FIVEPENCE

"THE SICK MAN."

NICHOLAS, the late Emperor of Russia, hit the mark when he described the Ottoman Empire as "the sick man." Sick he is, unquestionably—sick, we think, beyond all prospect of permanent recovery. Certainly, Lord Stratford de Redcliffe, and probably Lord Palmerston, think otherwise. The first noble Lord stood for so many years in the relation of chief physician to the patient that we can well understand how both his sympathies and hopes should be just now excited. The ex-Ambassador of her Britannic Majesty to the Sublime Porte, if we gather up his precise meaning from the speech he delivered in the House of Lords on the death of the late Sultan, Abdul Medjid, still discerns in Turkey the elements of a prosperous empire. He seems to have convinced himself that if the Government of the present Sultan could but be persuaded to act upon the advice of the British Ministers, and to carry out in Turkey the principles of administration which commend themselves to the approval of Western civilisation, the alterative would infallibly restore "the sick man" to vigour, and those of his neighbours who are impatient to inherit his possessions would have to dismiss their expectations as a too flattering dream. Lord Stratford may have reason for the faith that is in him—and it must frankly be conceded that no man in Europe is so rich as he in information on the actual state of Turkey. But there is another side to the case which, perhaps, he has not studied, and which is best seen by persons less familiar than the noble Lord with the daily habits, and, as we may say, the common life, of this invalid among European Governments. Comparative strangers will sometimes note more correctly the physical decrepitude of a man than his most intimate friends; and, in like manner, whilst first-rate British statesmen are cherishing the hope that Turkey is rapidly improving, and that she may ultimately rejoice in the complete restoration of her strength, the public, less conversant with details, but more alive to broad impressions, have been for some time settling down into a conviction that the house of Othman is irrevocably doomed, and that the Mussulman race will be compelled before long to retire into Asia.

The public, we think, if driven to account for this unfavourable impression, would be able to show that it is not wholly fanciful. The existence of the Turkish Empire in Europe, from its first establishment, has been an anomaly, but never before so marked an anomaly as now. A wedge of Mohammedanism forced into the trunk of a Christianised continent, and utterly incapable of becoming incorporated with it, cannot be regarded as a normal condition of things. It is "a thorn in the flesh," which, if it cannot be forcibly extracted without too inconvenient a result, will necessarily in course of time rot out. That it has maintained its position for several centuries is due partly to the energetic and tenacious vitality which it originally possessed, partly to the inert habit of the heterogenous mass in which it was imbedded, and, of late, chiefly to the mutual jealousies of the great Powers, who cannot agree as to how the gap is to be filled in the event of the Ottoman rule being withdrawn. The dominion of the Turk is one of sufferance merely, and, but for external support, would very speedily cease to be. But no external support, not even that of Great Britain, can long countervail the active causes of internal decay which incessantly operate upon the body politic of Turkey, and are rapidly converting it into an intolerable nuisance. The national life which has its source and centre in the Koran can no more withstand the action of the life which springs out of the Bible, particularly when the first, as in the instance before us, is hemmed round on all sides by



CALLING THE ROLL ON BOARD THE GREAT EASTERN SHORTLY BEFORE HER DEPARTURE FROM THE MERSEY WITH TROOPS FOR CANADA.—SEE SUPPLEMENT, PAGE 33.

the last, than can a limestone cliff ultimately resist the ceaseless encroachment of the billows which break upon it. The object at rest must eventually succumb to the element in motion—the *vis inertiæ* give way before the *vis momentum*. Theoretically, we suppose, all intelligent observers will recognise this as a primary and irreversible law of human progress, and it is really worth while to see what must be its practical effect in the case of Turkey in Europe.

A fixed belief in the unalterable decrees of fate, and a consequent apathy amounting to immobility of purpose—an ineradicable conviction that toleration is a crime detested alike by God and his Prophet—a social structure based upon polygamy and upon a denial to woman of both mind and immortality, those are the radical principles which form the national character of the Turkish people. They are principles, as any one may see at a glance, which can only maintain themselves when the race which they mould and satiate are indisputably in the ascendant. But now look at the influences to which this race in Turkey is exposed, and to the conditions by which it is surrounded. All the enterprise of Christian Europe, all the accurate scientific knowledge it has acquired and is acquiring, all its consequent commercial activity, all its interpenetrating intercourse, all its growing horror of persecution, all its reverence for the gentler sex, all its notions of family life, all its social instincts and habits, the outcome unquestionably of its Christian faith, may be said to play around Turkey like converging lines of light and heat. How can mere fatalism, intolerance, and sensualism, already exposed from unconcealed dilapidation, stand their ground against an atmosphere so all-pervading and, to Islamism, so corroding as this? It is impossible. It is contrary to the nature of things. Either the Turk must cease to be Turk, or he must, before the lapse of many years, cease to govern on the Continent of Europe. A country moved beyond all other countries with natural resources and capabilities, abandoned to the ruin which ever dogs the footsteps of pride and idleness—without a decent road extending twenty miles beyond the metropolis; the prey of rapacious and lawless pachas, who squeeze its inhabitants and enrich themselves with the taxes they should by fraud and violence; the ruling classes of which give themselves up to the most enervating sensualism, and the lower classes of which are indescribably depraved; whose best laws are a dead letter, whose finances are always in confusion, whose administrative machinery is rotten from end to end, and whose sole political purpose appears to be to trample without the glaoor population over which it exercises its sway—a race and a government like this, we say, neither can nor ought to perpetuate itself in the fairest domain in Europe, merely because it does not suit the convenience of the great Powers to determine what shall be done with it. Every year of delay is a warding off destruction from it for a while; but no earthly power, as it seems to us, can much longer avail to preserve this worst form of Oriental stagnation, brutality, and intolerance in closest contiguity with the institutions, forces, and influences which, born of a purer religious faith, press powerfully upon it on all sides.

The history of Turkey during the last fifty years is, in fact, a history of an utterly unsuccessful attempt on the part of its rulers to stave off its irreversible doom by adapting it, in some measure, to the adverse influences to which it is exposed. The Sultan Mahmoud, the father of both the recently deceased and the reigning Sultans, entered upon the work of reform with uncommon vigour; but his destruction of the Janissaries, who for ever enough represented the unchangeableness and ferocity of Musulman Puritanism, left him helpless against the rebellion of Mehemet Ali, the Pacha of Egypt, whose victorious advance through Syria towards Constantinople was only stayed at the armed intervention of Great Britain. Abdul Medjid, the Sovereign whose death has so lately caused a sensation throughout Europe, proved a far more amiable reformer. Pliant as wax in the hands of Lord Stratford de Redcliffe, he exhausted the vital force of his country in the war with Russia, and gave to it, for the first assistance of the allies, a firman of religious equality to his subjects which, everywhere beyond Constantinople, has been systematically set at nought by his provincial satraps. Having exhibited this easy form of gratitude, he held himself free to squander the annual revenue upon his harem, and to lavish upon the stupendous extravagance of his wives and favourites the finances which ought to have supported his defensive establishments. Abdul Aziz, his brother and successor, is said to be made of sterner stuff, but, as a natural consequence, to combine with his more vigour strong reactionary, or, in other words, Mohammedan tendencies. It will be comparatively easy for him, should he so resolve, to reduce the finances of the empire to order, to construct a creditable navy, to put his army upon a sound footing, and to keep his provincial pachas well in hand; but the mere effectual his reforms in this direction would be, the independence of external assistance he can render himself, the less will he be disposed or able to temper down the ferocity of Islamism to the requirements of the age and of the circumstances which environ his Government. What is gained in one direction will be lost in another. Europe may have its tame tiger if it will consent to have a listless, spiritless, and utterly useless one: the more vigorous it becomes, the more cruel and dangerous will be the instincts it will develop. Between an apathetic and sensuous and a well-disciplined and persecuting régime of Government there can be no intermediate one, we fear, in Turkey.

Such, perhaps, are the main reasons which tell upon the public mind in England in support of the general apprehension that "the sick man" is not destined to recover. It is the present policy of the great Powers to give him every chance. But the laws of nature are seldom reversed by the fiats of statesmen or by the prescriptions of diplomatic physicians. Within Turkey herself the Christian element is constantly expanding—the Mohammedan as constantly declining. It may seem as perilous to expel the latter from Turkey as it sometimes is to draw out a spearhead from the body which it wounds. But what man is afraid to do is often effected by a higher Power without his consent. We look on such solution of the Eastern difficulty.

We are satisfied that the existing policy can only succeed as a policy of transition. It may be possible, it may even be politic, to keep "the sick man" on his legs till the succession to his estates has been thoroughly settled; but the end will, even then, render any attempts at settlement obviously supercorogatory. But beyond this the prolongation of Musulman rule in Turkey is neither to be hoped for nor desired, and the best wish we can cherish for "the sick man" is that when his appointed time is come he may depart in peace.

FOREIGN AND COLONIAL NEWS.

FRANCE.

The Emperor arrived in Paris on Wednesday, and presided at a council of Ministers. He proceeded to Vichy on the following day.

Count Persigny returned to Paris on Wednesday morning from London.

The *Moniteur* of Monday contains an Imperial decree nominating M. de Talleyrand Perigord Envoy Extraordinary and Minister Plenipotentiary to the Court of Brussels.

The Court of Appeal in Paris on Monday confirmed the judgment which declared invalid the marriage of the late Prince Jerome Bonaparte with Miss Patterson.

Thursday's *Moniteur* says:—"At Fontainebleau, on Tuesday last, the Emperor formally received Count Arese, who was instructed to remit to him a letter, by which Victor Emmanuel officially notified to the Majesty the assumption by him of the title of King of Italy, and the title of King of Italy."

The prosecution against the Duc de Broglie for having had a book lithographed for private circulation has been abandoned. The copies that were seized are also ordered to be returned to him.

The new corvette La Reine Hortense was launched at Lorient on Saturday week with perfect success, in the presence of an immense concourse of people. This vessel is to have engines of 450-horse power, and will mount fifty-two rifled cannon. She was built from the designs of M. Dupuy de Lome, under the direction of M. Dorchaud.

The Emperor's visit to Algeria is expected in a few days ago at Brest with perfect success. The inauguration of the swing-bridge over the Penfeld, which unites the towns of Brest and Recouvrance, took place on the following day.

The Paris journals state that the construction of a harbour of refuge between Cabo and Boulogne has been decided on, and that plans of the work are to be begun early next month.

M. Dupuy de Lome, the Minister of Construction at the Ministry of Marine, has received orders from the Emperor to proceed on a tour of inspection of the naval ports of France. The orders for the armament of the Navy are to be largely augmented, with a view to meet all future requirements.

CORRESPONDENCE BETWEEN THE PERSONS IN THE ITALIAN CABINETS.

The despatches between the Courts of Paris and Turin relative to the emergency, in consequence of the Roman question, are published. The despatch of the Emperor attaches no conditions to the recognition, but cedes it simply to the request and wish of the King. At the same time, it expresses the hope that the occupation of Rome will cease and the past policy of the Sardinian Government, especially with respect to the aggression on the Neapolitan territory, is honestly given up. It also expresses the hope that the progress which the cause of Italy daily makes in the estimation of Europe will be secured by moderation without collision the solution so ardently longed for by the Italians; and that, as the wish of the Italian Government is to restore to Italy her glorious capital, she will take nothing away from the greatness of the Church or from the independence of the Head of the Catholic religion, it is glad to hope that the Emperor will be able in good time to recall his troops, and that the French Government will not refuse its good offices in bringing the Court of Rome to accept an agreement which would be for her the happy consequence for the future of religion as well as for the fate of Italy.

ITALY.

The National Loan Bill has been passed by 242 against 14 votes.

During the debate on the Loan Bill on Monday Baron Ricasoli made a speech in which he declared that, as the measure of the Council of Crown will pursue. The Italian Government will "arm, not only for the defence of the national territory, such as it actually is, but also to complete it, and to give to it natural and legitimate boundaries. There has been some mention of a cession of Italian territory; but, in the name of the Government, I declare that I will never consent to it. I may cede no portion of Italian soil that was to be ceded, and never would be ceded any. Italy must maintain a very fine army, composed of the best, and while the Ministry's attention would be turned towards Rome. The Government wished to go to Rome, not in consequence of rash and revolutionary movements, but by means of a loan from France; and he hoped that "the justice of their cause, their prudence, their patience, their perseverance, and their boldness at the right moments, would enable them to attain their ends."

The Italian Parliament have had rather an animated discussion upon some items in the Budget, which has, however, been carried. The proposal to extend the war scale of taxation to the southern provinces caused a strong opposition to be manifested.

The *Gazetta di Torino* says:—"The Government have informed Garibaldi that attempts would be made on his life, and that measures have been taken for watching him and protecting him."

General Cialdini will replace General Durando in the command of the army in the Romagna provinces.

The elections resulting from the change of Ministry have taken place here. Baron Ricasoli, Peruzzi, and De Cosmi, who elected to sit in the Chamber of Deputies, which has, however, not been constituted. The proposal to extend the war scale of taxation to the southern provinces caused a strong opposition to be manifested in the Chamber.

The *Gazetta di Torino* says:—"The Government have informed Garibaldi that attempts would be made on his life, and that measures have been taken for watching him and protecting him."

General Cialdini will replace General Durando in the command of the army in the Romagna provinces.

The elections resulting from the change of Ministry have taken place here. Baron Ricasoli, Peruzzi, and De Cosmi, who elected to sit in the Chamber of Deputies, which has, however, not been constituted. The proposal to extend the war scale of taxation to the southern provinces caused a strong opposition to be manifested in the Chamber.

According to the *Moniteur* the Pope was so much better on Saturday last as to have been able to celebrate Divine service. On Monday an affray took place between the population of Rome and the pontifical gendarmerie, in which the latter was killed and another wounded. A French gendarme and several other persons were also wounded.

SPAIN.

A Republican insurrection has broken out in the environs of Loreo, in the province of Murcia. The number of insurgents does not appear to be considerable, and the Royal troops are said to have completely surrounded them.

The *Correspondencia Autografa* of Saturday last says the Spanish Government has received to abandon its claims against Morocco; but adds, that the Government intend to declare Tetuan the property of Spain, to render it impregnable, and to colonise the territory.

SWITZERLAND.

The National Council and the Council of the States were opened on Monday. M. Rainer, member for Berne, was elected President of the National Council; and M. Escher, member for Zurich, Vice-President. M. Heimmen, member for Uri, was elected President of the Council of the States; and M. Vignier, member for Solothurn, Vice-President.

The Council of the States, in its sitting of Wednesday, voted the sum of 10,000 francs to defray the cost of an expedition to Japan for concluding a treaty of commerce with that country. In the National Council of the same day it was decided to treat the affair of Savoy as an open question, and to energetically protect the rights of Switzerland.

AUSTRIA.

At a Cabinet Council held on Saturday the Austrian Government came to the resolution not to accept the Address of the Hungarian Diet. On the Imperial rescript, in reply to the Address, being laid sealed on the table of the Lower House, cries were raised of "Return it unopened!" After some remonstrance, however, on the part of the President, the rescript was quickly read. The rescript was read in the Upper House without disturbance.

PRUSSIA.

A Council of Ministers was held at Berlin on Wednesday night, the King presiding at which, according to the correspondent of the *Daily Telegraph*, certain points in dispute between his Majesty and the Cabinet were settled.

The judgment given in the affair of the late duel having been confirmed, Major-General Manteuffel has been sent to Magdeburg to undergo his sentence of three months' imprisonment in the fortress.

TURKEY.

An Imperial *hatt* or edict, said to be conceived in a liberal spirit, has been issued by the new Sultan. The Ministry, with the exception of Riza Pacha, who remained; all existing laws are confirmed; the equality of all subjects before the law is guaranteed; and the Ministry are recommended to introduce order and economy in the administration of the finances. The reforms enumerated by the new Sultan are said to have been well received at Constantinople. Sweeping palace and other financial reforms continue to be effected. There appears to be something wrong with Riza Pacha's accounts, as a commission has been appointed to investigate them.

THE CIVIL WAR IN AMERICA.

The United States' mail-steamer Fulton has arrived at Southampton, bringing New York journals to the 22nd ult.

BELLIGERENT OPERATIONS ON SEA AND LAND.

The blockade is now effective at all the principal ports of the Southern coast. The first Confederate privateer Savannah, whose arrival at New York in charge of a prize crew we reported in our last, was captured by the man-of-war Perry off the coast of South Carolina. Her crew, numbering sixteen, are in irons on board the Minnesota, now blockading Charleston. The *New York Tribune* urges that these men be tried for piracy. The Savannah is a fine ship which applied for letters of marque. She had just captured and sent to Charleston a Baltimore brig from the same port. The Perry, there have been several more captures on the Potomac of Virginia coasting-vessels which were engaged in supplying the Confederates with provisions.

There has been no movement of importance in the neighbourhood of Fortress Monroe. A body of troops and war-vessels accompanying in a railway train was fired upon at Vienna, fifteen miles west of Alexandria, by a masked battery, and retired with a loss of twenty men. They were reinforced and returned, and found that the enemy had disappeared. This affair, in conjunction with the former check at Great Bethel, had caused a great anxiety "among officers," says the *Tribune*, "and a public opinion in favour of professional commanders."

In the direction of Falls Church the lines were pushed forward from Alexandria four miles. The enemy's pickets fell back on Fairfax.

The Confederate troops, under the command of General Johnson, who had evacuated Harper's Ferry and were supposed to have retired towards Richmond, suddenly reappeared on the Potomac at Piedmont, considerably to the west of Harper's Ferry. Here they fell in strength over the Potomac, which was guarded by forty loyal Marylanders, who were all cut to pieces except two, and then advanced to Cumberland, in Western Virginia, where they surrounded an Indiana regiment stationed there. Two Pennsylvania regiments have been sent forward from Indianapolis to relieve this regiment, if possible. If they have capitulated this will be by far the greatest success of the Confederate forces since the opening of the war.

The State of Missouri, which is loyal to the Union, has been the seat of a series of scattered fights. The parties to it are not the armies of the United States, but the United States militia of the citizens of Missouri and Federal volunteers of the same state, Illinois, and Iowa. The Iowa troops have invaded this populous and flourishing State in the west, and the Illinois troops have done so in the east. General Lyon is the Federal commander. He has utterly routed the State troops of Missouri, and driven the Governor out of the capital, and taken their camp. The loss of the vanquished was at first set down at three hundred, but this is an exaggeration. The Governor of the State fled from the field in a wounded condition, and has since afterwards a body of the militia attacked the Union Home Guard of the town of Cole, and driven them from the place with great loss. There have been several minor collisions in this afflicted State.

THE CONFEDERATE STATES.

The New York journals continue to receive telegrams from the South by way of Louisville, the chief city of the interior State of Kentucky, at which place Southern journals are still received. A company has already been started in the latter city to maintain postal communication between the people of the two Confederations. It offers to deliver a letter of ordinary weight for 25 cents (1s.).

By way of Louisville we learn that the South feels pinched for the want of coin, paper money being the only circulation. The Southerners and their slaves are in great want of new shoes.

In his reply to the Commissioners of the Maryland Legislature, Mr. Davis roundly asserts that the Federal declaration of independence is inconsistent with that idea of State sovereignty which is the fundamental principle of the Seven States Confederacy.

The vote on secession in Tennessee is—for separation, 99,239; against it, 14,780. That Tennessee gave a majority of 13,000 against seceding. A Convention of East Tennessee has been called to meet at Knoxville, to deliberate on the advisability of resisting the authority of the Confederate Government.

MARYLAND AND WEST VIRGINIA.

The Legislature of Maryland have passed resolutions to the effect that the war debt now being contracted by the Federal Government is unconstitutional, and that the State of Maryland will not be herself bound for any portion thereof.

The Western Virginians have signed a declaration of independence, and elected Mr. Pierpont Governor of the State, the theory being that the regularly elected State officials have forfeited their offices by their treason to the Federal Government.

WASHINGTON.

Journals belonging to the President's party state that Mr. Lincoln, in his forthcoming Message to Congress, will recommend the levy of half a million of men, and the creation of a debt of 250,000,000 dols. of debt for the speedy putting down of the rebellion.

The Government offers to pay for all darkies who come to private property by the occupation of land or buildings in Virginia, or by any lawful seizure for the part of the Federal army.

The Prize Court sitting in Washington has condemned an English schooner and her cargo, valued at 22,000 dollars, for endeavouring to run the blockade of the Virginia waters, subject, however, to further advisement as to an alleged relaxation of the strict law in favour of British ships then in port.

THE NORTHERN STATES.

Mr. Russell, the *Times*' "special," has arrived at Cairo, Illinois. He complains that many of his letters were reached their destination, and that others were tampered with and altered.

The slaver Nightingale arrived at New York on the 18th ult. in charge of a prize crew, having been captured on the coast of Africa with 1000 negroes on board.

The Pennsylvania State loan of 3,000,000 dollars has been all taken at par by the Philadelphians, and the offers for the Maine loan at par and up to 4 per cent prem. largely exceeded the amount required.

The King of Greece, it is reported, is, by the advice of his physicians, about to leave Athens in order to take the waters in Germany, the Queen in the meantime acting as Regent.

By the arrival of the mail from the Brazils we learn that a war has broken out at Buenos Ayres between the Government and the Argentine Confederation.

The *Daily News*' correspondent at Turin announces the death of "a cordial friend of the liberties of Italy and a bright ornament of English literature—Elizabeth Barrett Browning, who resided in 'Casa Guidi,' at Florence, an hour after daybreak on Saturday morning last."

LATEST NEWS FROM ABROAD.

The following telegrams were received through Mr. Reuter's office yesterday (Friday) :—

THE CIVIL WAR IN AMERICA.—New York, June 27.—General Banks has arrested the Marshal of Baltimore on a charge of treason (an immense quantity of ammunition having been found on his premises), and has appointed a provost-marshal for the city. The British ship Americus, bound to Charleston with contraband of war, has been captured and brought to Philadelphia. The British ship Forfarshire has been captured in the Gulf of Mexico by Federal ships. The Federal Government has recognised the new provisional Government of Virginia.

June 28.—An engagement has taken place at Mathias Point, on the Potomac. The rebels lined the small party from the gun-boats, killing two men and wounding several others.

METROPOLITAN NEWS.

The Lord Mayor's banquet to Mr. Cobden and the leading Freetraders of England and France has been postponed from the 10th inst. and is now fixed for the 17th inst.

John Anderson, the fugitive slave from Canada, appeared at Exeter Hall on Tuesday night, and resolutions of welcome were carried with much enthusiasm.

At an inquest recently held on a Spitalfields weaver, named Watchorn, the jury returned the verdict that he had committed suicide from "temporary insanity brought on through want and starvation." One witness testified to the poor fellow having been at one time three days without food.

The labours of the Indian Famine Relief Committee have been virtually brought to a termination. At a meeting held on Monday it was announced that the subscriptions received had reached nearly £400,000. Votes of thanks were passed to the sub-committee, hon. secretaries, and others upon whom the labour of this important work has principally fallen.

On Monday afternoon Sir Samuel M. Peto, Bart, M.P., laid the foundation-stone of a new Baptist chapel in the Park-road, Peckham, intended for the church and congregation under the pastorate of the Rev. T. J. Cole, now assembling for worship in Hill-street Chapel, Peckham. The dedication prayer was offered by the Rev. Newman Hall, the Rev. Archer, and the Rev. C. Stanford gave the inaugural address.

The labours of the 963 boys and 91 girls (in all 1004 children) were registered last week in London. In the ten corresponding weeks of the years 1851-60 the average number was 1602.—The deaths from all causes registered in London last week were 1076, the average number calculated from the returns of corresponding weeks in the ten previous years, 1851-60, and corrected for increase of population, 1149.

Blondin drew an enormous crowd to the Crystal Palace on Monday afternoon, when he went through some of his most difficult feats on the new rope stretched over the fountains on the terrace. The people covered the grass slopes, filling the space up to the terrace so as to afford a full and a full view of the performer, who threw somersaults on the rope, walked blindfold, and subsequently with his feet in boots filled with water. Blondin was injured by a fall from the rope up which he was climbing a few days back has been discharged from the hospital.

THE PALM HOUSE IN KEW GARDENS.—An improvement has been made in the arrangement of the rare foreign plants and trees in the great palm-house which renders their magnificent growth more visible to the public, for (the prince of the vegetable world), some of which are sixty feet high, can be viewed in all the upper portions of the house, and not only so, but among a crowd of these beautiful and useful exotics, on a level with their lofty trunks, and almost within an arm's length, are numerous orchids in pots and suspended in Rogue. Strangers are invited to ascend the spiral stairs and pass round the gallery, surrounded by blooming plants, which, with their fruit, festooning and garlanding the walls and roof of this splendid palace of flowers and crystal are indeed the loveliest.

THE STRIKE.—The system of pay ment by the hour came into operation on Monday at the building-yards. The carpenters can assert accept the new arrangement "cheerfully," but they will feel it "comfortably." The masons as a body, however, still refuse to go to work under the new regulations. The bricklayers received back on the same terms as previously. On the masons' state that they have nearly their full complement of men—that workmen are flocking the United in numbers, and going in to work on the hour-payment system, so that their numbers will be complete at the end of the week—the masons and bricklayers are not in a position to compromise for satisfaction, and that considerable numbers are continually leaving the yards. In the face of this contradictory statement it is hardly possible to form a correct judgment.

The annual meeting of the supporters of the Royal Society for the Protection of Life from Fire was held on Tuesday afternoon in the Council Chamber of Guildhall, under the presidency of the Lord Mayor. The large building was crowded in every part. The general report was read by the secretary, Mr. Braidwood. There are at present 75 escapes, and the staff consists of 4 inspectors, 75 conductors, and 2 coachmen, and the number of fires in connection with the various districts from Holloway to Kennington, and from Poplar to Kensington. During the year 61 persons attended the yards for instruction, and had been instrumental in saving 61 persons. The Lord Mayor presented the results which consisted of medals, clasps, and testimonials. The presentation of each was accompanied by some very touching remarks from the Lord Mayor, and the whole of the meeting was deeply interesting, especially Conductor Wood, who, the secretary stated, had saved 130 lives during the time or even more he had been in the service. Mr. Braidwood has also been awarded to James Larkin and Thomas Mattell for saving the life of a man who was in a burning boat at the great fire.

LAW AND POLICE.—Two actions were on Saturday brought against the London and North-Western Railway Company for damages for injuries received on the occasion of the accident which occurred at Atherstone, in November last, owing to a defective rail being taken up at the time when the Post Office and passenger-train was due at that station. At the time when the death of Lawyer, passenger was killed and the plaintiff in the latter were a Mr. Hills and a Mr. Langston, both clerks in the Post Office, and plaintiffs in the present actions. The former case was tried in the Court of Exchequer, obtained £100 damages, and the latter was tried from a jury at the Court of Common Pleas £275 damages. Another action for damages, occasioned by the accident at Atherstone, was tried in the Court of Exchequer on Tuesday. It was brought by the plaintiff, Mr. Brown, an auctioneer, in Glasgow, had received a violent contusion of the spine, which necessitated him following his business at home; and a verdict for £1300 damages was agreed to.

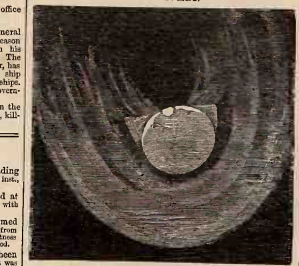
At the Queen's Bench, Guildhall, Messrs. Hitchcock, Hall, and Co., of Stone, who had traded as warehousemen in Cannon-street West, passed their final examination. A dividend of 6s. 6d. in the pound was stated, will shortly be paid.

The Lady Sanders for Middlesex commenced on Monday before the Recorder and Deputy Judges and a full bench of magistrates. There were 45 prisoners for trial. Two cases had several counts, but these were all of the same nature to call for remark.—On Tuesday Richard Fillingham, described as a mariner was found guilty of obtaining from Messrs. Hitchcock and Co. their sham-counsel, a quantity of goods value nearly £100, and sentenced to nine calendar months' hard labour. At the same session Joseph Charles, mariner, was indicted for stealing five valuable canoes from the Royal Surrey Gardens, and had been only about to receive transportation for life. His bad boots first taken into custody on a charge relating to a pin, but this was abandoned on the present case was proceeded with. Besides the canoes there were also missing seven valuable paintings, which had been taken from the same place. Of the paintings he sold all but one, which he retained, and the prisoner and the sold the others where he had pawned them. Sentence was passed upon the prisoner of twelve months' imprisonment. If he could, as to the other property missing.

At Guildhall Police Court on Monday Frangopoy Powell, the junior partner in the firm of Ambert and Powell, of 85, Newgate-street, was brought before Alderman Cowper on a charge of fraudulently disposing of goods on credit within three months of his bankruptcy, on the evidence of creditors, who believed that, in consequence of trade, which tended to defraud his creditors. Mr. Lewis, jun., stated the case for the prosecution. The examination was adjourned to the Court of Bankruptcy.—At the same police Alexander Ker, a medical practitioner sequestered the case into the public mind, alleged that professor and practitioner, and ordered a criminal prosecution against the prisoner, absolving Ambert, his partner, from all participation. The firm were declared bankrupts on the 21st of November, 1860, but the petition was dated on the 10th of October previous. Mr. Ker, on examination, said that he had called on the prisoner on and after the first of August, and had large quantities of goods to exchange, for which goods he put up on arriving at maturity. Objection were offered on the part of the prisoner, but they were overruled.

At Cuckfield Police Court, on Tuesday, a woman named Ellen Connor, who said she was married, was brought before Mr. Barker, charged with an attempt to murder her infant child by suffocation. She resides at 19, Pepperstreet, Islington, and a woman named Lucy Stanley, residing in the same house, stated that, hearing a moaning noise in prisoner's room, and knowing that Connor had gone out, she became alarmed, and entered her room by the window along with her husband, and found the child covered up with the bedclothes, having also a cloth over its mouth. A medical man was called in, and he found the child in a low state, and scarcely able to breathe. On witnessing the woman was re-examined and committed for trial.

THE COMET.



IN NUMBERS of the ILLUSTRATED LONDON NEWS for September, 1858, are given various representations of the changes which the nucleus of Donati's comet underwent as seen by the telescope. The most remarkable appearances seen were the envelopes of nebulous matter which were successively thrown off the nucleus, and which afterwards formed part of the head and passed onward in the direction of the tail. In the large present comet this phenomenon is well seen, and a luminous sector about the nucleus of the comet presents the appearance of a fan or of a gas-burner. It was beautifully seen on the morning of July 4, at which time the accompanying Drawing was taken by means of a powerful and excellent refractor, mounted opposite to the Observatory of Prof. Challis, Cambridge.—Eng., REREN.

In the Supplement, at page 22, we give a view of the comet as it appeared on Tuesday evening, with some particulars of its movements at various sources. Annexed are some further details, from Wednesday's *Guiltyness* :—"The reason why the comet was not observed before is, that up to the 30th ult. its distance from the pole was such as to make it set together with the sun; whereas, from that date, it has approached to near the pole that it cannot set at all. Its size does not, at present, exceed that of 1858, and it differs from it materially in this respect, that its tail is straight instead of being curved. On Monday its distance from the pole was not more than 33 deg., it having this performed nearly 9 degrees northward in the course of twenty-four hours. It is computed, as usual, at a very brilliant nucleus, a brilliance streak of considerable breadth, a tail on the side turned towards the sun, and a large tail in the opposite direction. According to M. Chacornac, the tail is enormous, and composed of six curved and radiating branches, each more than a minute in length; they are all curved in the same sense. The comet gave rise to much conversation among a sitting at its most recent appearance. M. Mie de Beaumont read a letter from M. Goldschmidt, the astronomer, in which he stated that the comet was 35 degrees in length, and between 20 and 30 millions of leagues in breadth, and weighed millions of leagues. M. Babinet remarked that M. Hind's Ephemerides of Charles V. gave the precise position of the present one. M. Bomme had predicted its return in 1858, and Mr. Hind admitted that it might return between 1856 and 1860. Considering the imperfect data on which observations were taken three centuries ago, it would surprise no one that a difference of six months should exist between the time predicted and that now calculated. If this were so, the present comet was the same that was observed in 1556, and caused the abdication of Charles V. It had previously appeared, according to Pingre, in 1264, when it was supposed to announce the death of Pope Urban IV., and its appearance had been recorded even earlier, in July 701, by the Chinese. Mr. Crowther was not of M. Babinet's opinion. Mr. Hind's table showed different conditions which Charles V.'s comet might occupy in the event of its return, and the present one was so undermined that it was no wonder to find a position in the table answering to that of the present comet. And, indeed, there was one corresponding to the position of the 30th of June, but the motion of the present comet in the course of twenty-four hours is so different from that given in the table that the identity of the two comets could no longer be admitted."

Mr. Hind writes on Wednesday from Mr. Bishop's Observatory, Regent's Park, as follows:—"Having obtained observations of the splendid comet now visible on three successive evenings, I have been enabled to calculate the elements of its orbit, which I now transmit, together with a rough ephemeris for observation. The comet arrived at its least distance from the sun about our o'clock on the morning of June 30. Its heliocentric longitude 244 deg. 5 min., being then separated from him by 76,000,000 miles. Its cosmic latitude of the earth's orbit from the south to the north side in longitude 279 deg. 1 min. on June 29, is a path inclined 85 deg. 58 min. to the ecliptic. The true orbital motion is direct. Its distance from the earth on the evening was rather over 18,000,000 miles, and a little less than 15,000,000 at eleven o'clock last evening. It is therefore, receding slowly from us, as well as from the sun. The apparent motion on the sun Tuesday night was 70 deg., corresponding to a true length of 16,000,000 miles. The nucleus, which is small, is estimated at about 600 miles in diameter. The comet has a very striking and interesting appearance in the telescope. It is certainly not the comet of Charles V. (1556), the return of which has been anticipated about this epoch."

The collection of manuscripts formed by Archbishop Tenison during the reigns of King Charles II., James II., William III., and Queen Anne, comprising very early and important manuscripts on origins, and some most curious and valuable manuscripts on popery, were sold on Tuesday by Mr. Wilkinson, at the firm of Sotheby, Wilkinson, and Hodge, in Wellington-street, in pursuance of an Act of Parliament, and with the approval of the Charity Commissioners. The 87 lots realised £1463. The sale occupied a very large number of persons.

We gladly give denial, on public grounds, to the report that the passengers who perished by the wreck of the Canadian were lost through some failure of Clifford's life-preserving boat-gear. Messrs. Allen Brothers, of Liverpool, the agents, state that, "though four boats were filled with Clifford's apparatus, *no one here was not.*"

LITERATURE AND ART.

We really feel bound to enter our protest against the gorilla. It is possible to have too much of a good thing; and by this time we have decidedly had a surfeit of this exaggerated baboon. If he be a baboon—of this preposterous ape, if he be an ape—of this gigantic man-monkey, if he be a man or a monkey, or anything save a mockery, a delusion, and a mare. Singe, que nous veux tu? Oh, doctor gorilla! The mischief latet but already been destructive of the peace and quiet so essential to the pursuit of science, literature, and art, and is to blame a musicians. It is gorilla songs, gorilla verses, and gorilla puns. Mr. Leech makes a *lusus* cartoon of his atrocious effigy; Mr. Byron dresses himself up in a gorilla dance, and speaks a gorilla prologue at the Lyceum; a dramatic author produces an "Apropos Gorilla," entitled the gorilla bonnet. Nor is this the worst. The mischief has provoked an estimable gentleman to break the Queen's peace. There was a fierce gorilla discussion at the last meeting of the Ethnological Society, which ended in an unseemly fracas, and into M. Du Chaillu's knowledge of dresses, customs, and musical instruments. Captain Richard Burton, who knows, perhaps, more about savages and savage life than any living traveller, read an admirable paper bravely standing up for M. Du Chaillu's veracity in his account of the tribes of Africa, but a Mr. Malone as vehemently impugned the Frenchman's statements, more particularly with regard to an aboriginal harp, which M. Du Chaillu stated to be strung with the fibres of grass. "Such a harp, he asserted" would not exist one musical note; whereupon M. Du Chaillu began to talk of pianos. And, at the end of the session, positively mistook Mr. Malone's face for a spittoon. And all the bottom of all this is the gorilla

This squalible about a negro harp (a banjo, probably) reminds us of Dr. Johnson's sneering remark about Bruce when he stated that he had seen "a cow killed in Abyssinia; but we may remind Mr. Malone that a harp strung with vegetable fibres is not necessarily a negro harp. With such fibres of twisted tendils or root-sprouts, carefully dried, the Russian lute, or balalaika, is strung, and, properly played, they will discourse most eloquent and plaintive music.

Mr. Du Chaillu's unstringed balalaika reminds us of a little Russian memorandum we have to make. Mrs. Jay has accepted the accompaniment of "From Eve till Morn," "The Knights of the Cross" &c., has just completed a new song, entitled "The Valley of the Golden Sands," the scene of which is laid amongst the serfs of mid-Russia, and which contains a graphic picture of manners among a class who are just now very prominently before the world.

Those who are curious in Hogarthian reminiscences will be interested to learn that the Rev. Daniel Lysons, F.S.A., Lecturer of Lambeth, formerly the mansion of Sir Joshua Reynolds), will be sold the chair formerly belonging to Hogarth, and which at the back of which is elaborately carved the "Analysis of Beauty" tablet, with Hogarth's portrait. It is a most elaborate specimen of special pleading, and Mr. Dixon deserves the thanks of the literary world for his additional vindication of the character of his favourite hero; but it is not a little too late in the day for these disinterested advocates of Hogarth? The son of Francis of Verulam, completed a new edition of Queen Elizabeth's virtue, or the new narrow words *Ex parte*," as Raleigh writes, and all atoned for by his glowing lines on Hogarth's genius, and the murder of Hogarth's cat by the authorship of "Junius," and the character of Richard III.

It is somewhat singular that Mr. Thomas Carlyle's admirers are few and far between, but when speech comes from him it has a trumpet sound. Great Tom of Chelsea has just boomed forth a short, powerful letter to the *Times* advocating a testimonial to the deserted Braidwood. The Lord Mayor has kindly bestirred himself in the matter, and we hope that a noble subscription will soon be the worthy monument to the gallant man who fell in the discharge of his duty. Mr. Carlyle, in the name of the Fellows, ignorant of the fact that the original suggestion for a "Braidwood testimonial" appeared two days after the great fire in a leading article of the *Daily Telegraph* newspaper, and that the widowhood of a worthy old man will be less valuable for having been anticipated.

The two principal exhibitions among the European States who were expected to contribute to the Exhibition of 1862 are Turkey and Rome. We are not surprised at the defection of the Papal States. They can stand in no need of advertising, but we do feel some interest about the Pontifical Government making an exhibition of itself. We are sure, however, that the Sultan and the Court of Turkey will send us no chibouckes and narghilles, no yashmaks and slintyans, no carpets and embroidered caftans, no Smyrna figs and dates, no Bosnian silks, no Danube salmon, and no sherbet. We should be ashamed of such an industry have not quite vanished from the dominions of the "sick man"? The new Ministry, we believe, will do all in its power to show Europe for competition in the world's fair. It is old enough, notwithstanding, to know that, backward as the Turks are thought to be in the arts of civilisation, they are not behind us in those of Turkey. Lord Stratford de Redcliffe mentioned the other day in the House, and one of the daily papers immediately contradicted, the word "sedition" which all the walls of Constantinople, even to those of the Seraglio, were placarded a few days previous to the demise of Abdul Medjid.

There is a story about the death of Abdul's father, the formidable Mahmoud, which is worth telling. Mahmoud was sitting in bed from the lips of a young Turk just arrived in England, and that it has never, to our knowledge, been told in print. When Mahmoud lay on his divan of death, he remembered that a great review of the garrison of Constantinople was to take place under his palace windows in three days' time. He called for his minister of war, and commanded him, his death should be kept secret from the troops until the review was over. Sultan Mahmoud was a man of his word. He died in the evening which the troops defiled, shouting "Long live the Sultan!"

Parliament have been inundated with petitions about the fine arts during the past week in a very energetic, not to say censorious, manner. Lord Redesdale has moved for a Select Committee to inquire into the delay in the completion of the Houses of Parliament. The matter is now confided to the pencil of Mr. J. B. Herbert, R.A. The eminent academician has, if report says truly, received many pounds' worth of work (for which he has been paid), hacked it all out of the walls, and begun it all over again. Commissions have been grumbling about the paltadian designs for the new Foreign Offices, now on view in one of the committee-rooms; and we are threatened with a renewal of the controversy between Gothic and Italian architecture. Finally, the cycles of the Kings of England have been called into question, and Oliver Cromwell's statue has once more been hoisted over the coals. One thing, however, is certain—the decoration of the Houses of Parliament ought to have been finished long ago; and this continued delay is assuming the proportions of a national scandal.

The Queen has appointed John Scott Beebe, Esq., to be Colonial Secretary for the Island of Trinidad; Charles Lobdell, Esq., to be Superintendent of Public Works for the Island of Trinidad; Charles Lobdell, Esq., to be a stipendiary magistrate for the Island of Mauritius; and Thomas Maguire, Esq., to be a police magistrate for the Island of Mauritius.

Baron de Krauss, ex-Austrian Minister of Justice and Vice-President of the Chamber of Notables, was three days ago found on the road from Schoenbrun to Hetzendorf, by Field-Marshal Count de Grun, and brought by him in a state of insensibility to Vienna. He had been struck by apoplexy, and expired in the course of the day. The Emperor went to see him, and expressed to the family of the Baron the regret he felt at the loss.

ST. ANDREW'S COLLEGE AND INDUSTRIAL SCHOOLS, CHARDSTOCK, DORSET.

ST. ANDREW'S COLLEGE AND INDUSTRIAL SCHOOLS, CHARDSTOCK.

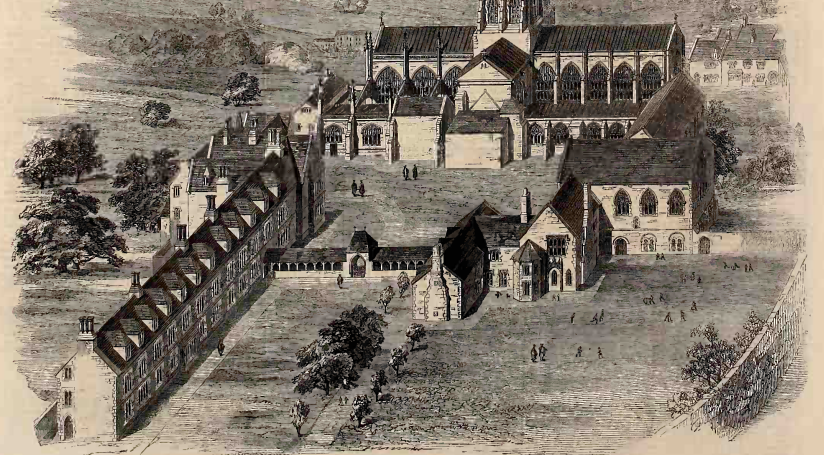
THE interest in Middle-class Schools so lately renewed by the advocacy of the veteran educationalist, Lord Brougham, induces us to give a view of one of the most extensive and successful institutions which have been set on foot within the last few years to meet the acknowledged want of a sound and liberal education for that class which of all others has been the most neglected. In the little village of Chardstock, in the remote borders of Dorsetshire, till lately far away from railways and fame, there has been quietly springing up during the last twenty years, under the hands of one energetic man, a group of schools, which, beginning from the nucleus of a very small parochial school, has now attained such a size and importance as to be dignified with the somewhat ambitious title of "St. Andrews College." But, perhaps, no other name could so well designate the combination of buildings which, embracing National, Industrial, and Middle Schools in simple but effective form, give a new dignity and interest to the parish of St. Andrew's, Chardstock. The difficulty of retaining any adequate number of his poorer parishioners at the good school which he early provided, induced the Vicar, the Rev. C. Woodcock, to add industrial teaching to his national school; but, as housework for the girls, who are trained for service, could not easily be found without a large establishment, the greater part of the children are lodged and boarded in the village, and the whole of the cooking, washing, and house-cleaning is done by the pupils, under the superintendence of a matron and housekeeper. Eighty orphan children who have been placed here by means of the Patriotic and Indian Mutiny Funds form the main body of the industrial division; but the chief feature of the institution is the Middle School, the examination of which came off last week previous to the breaking-up for the holidays, and proved, the fine weather aiding, a gala day for the neighbourhood. After Divine service, public examination, and luncheon, the boys recited with great spirit a series of dialogues and speeches in English, French, and Latin, and received their prizes at the hands of the Principal and the examiners, the Rev. W. Dawson and Rev. R. Hutchins, Rural Dean, who addressed the company of parents and friends gathered for the occasion with great effect, and testified to the excellent condition of the school both in scholarship and conduct, especially dwelling on the courteous and obliging behaviour of the boys towards their examiners. Each branch of the establishment, though perfectly distinct, is made to assist and play into the others, and the harmony with which they work together for each other's mutual good is very striking—a result mainly attributable to the judicious management of the Head Master, Mr. F. E. Allen, a graduate of Exeter College, Oxford. The whole body averages, with scholastic and domestic staff, 230 persons, many of whom are quartered in cottages fitted up for the purpose in the village, which, by the uniform of the boys, and the band of fifes and drums, signalling all their movements, assumes a military character unknown to rural England till these volunteering days. The payments for each class are put at the lowest figure to make the establishment barely self-supporting; but the whole is a work of love in Mr. Woodcock and his family, who have, at great personal sacrifices, devoted their best energies to afford the county of Dorset a first-rate education for the sons of the middle classes, who aim at obtaining public school spirit without the exorbitant expense of excessive classicism of our older public schools. In the erection of the buildings they have met with much kind aid from neighbours and friends, but there still remains a debt on this account which should not be allowed to rest on the same shoulders that bear the burden of daily superintendence. The Marquis of Westminster, Mr. Digby, Mr. Bryuner, Mr. Hoskins, and other county proprietors, have been most liberal benefactors. We have seldom been more pleased than with the happy and animated scene presented on the Examination-day; and, as the Chard Road station has now brought the college within three miles of the railway, it is within reach of all interested in this branch of popular education to go and judge for themselves what may be effected in the most seemingly unpropitious soil by the energies of one earnest man; and they will doubtless meet

HALLSVILLE SCHOOLS, PLAISTOW, BUILT BY THE VICTORIA DOCK MISSION.—SEE SUPPLEMENT, PAGE 18.

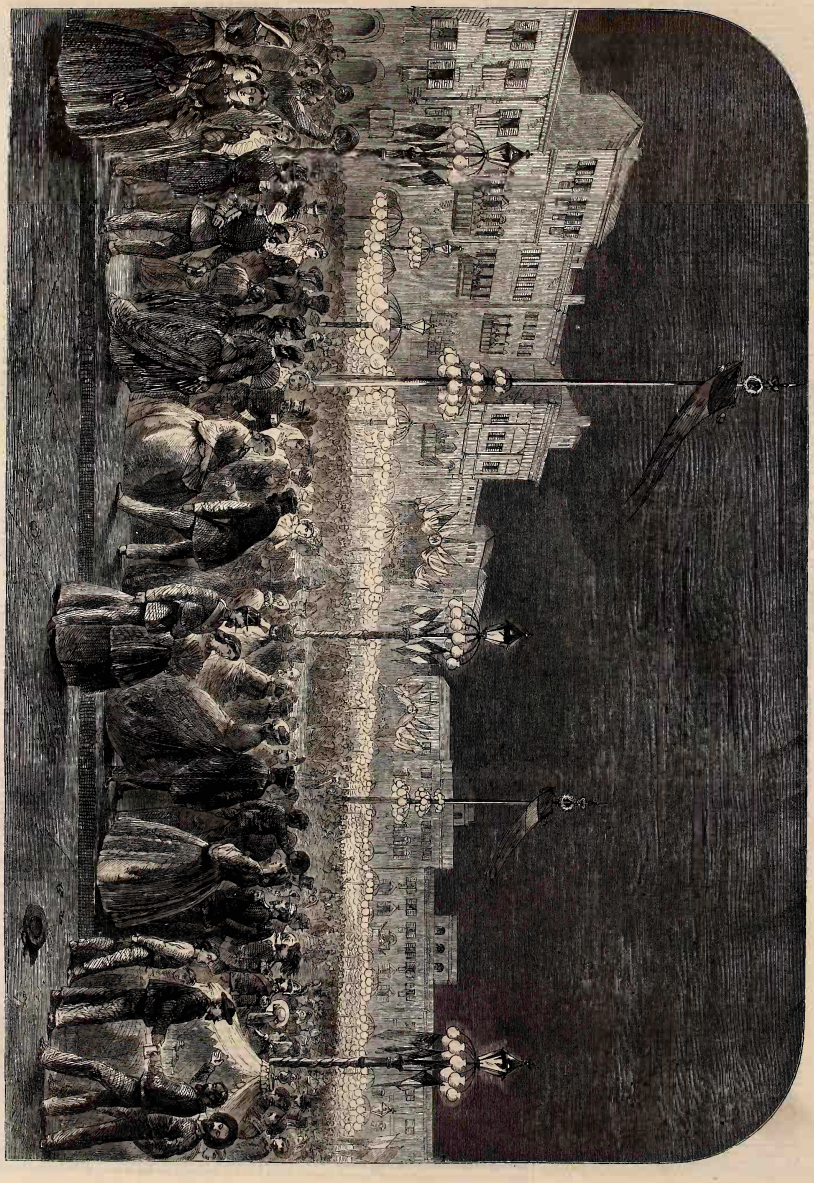
with the same courteous reception which we ourselves experienced Mr. Woodcock's labours deserve to be mentioned by the side of Mr. Woodward's, alike for their disinterestedness and success.

KING'S SCHOOL, SHERBORNE.

WE give below an Engraving of the Sherborne School buildings, just completed. There is more than usual interest attached to them from their being formed to some extent from the remains of the Abbey of Sherborne; and, with the Abbey Church for the south side, they form a quadrangle which is probably unsurpassed by any similar group in England. The work has been a gradual one, extending over a period of about six years, and commenced with the restoration of the refectory, buttery, Abbot's lodgings, and other portions of the abbey, including a fine old crypt, which have been converted into school and class-rooms, chapel, studies, and cloisters respectively. The part now completed, which finishes the work, forms the east side of the



KING'S SCHOOL, SHERBORNE.



CELEBRATION AT FLORENCE OF THE FIRST FESTIVAL FESTIVAL OF ITALIAN NATIONAL FREEDOM.—SEE PAGE 24.

quadrangle, and is entirely new. It contains a thoroughly good school-house, comprising, besides the head master's own residence, proper accommodation for a considerable number of boys. The first stone of this wing was laid on the 26th of June in last year by the Lord Lieutenant of Dorsetshire (the Earl of Shaftesbury) and the Bishop of Salisbury and Gloucester and Bristol, in the presence of most of the neighbouring gentry, as well as the school officials. Amongst the old Sherborne boys, well known in the world, we may number the Lord-Justice Knight Bruce, the Dean of Llandaff, the Warden of Wadham College, Oxford, the Right Hon. S. March Phillipps, William Forsyth, Esq., Q.C., and many others. The governors have been greatly assisted in their arrangement work by one of their body, G. D. W. Digby, Esq., of Sherborne Castle, who presented them with the sum of £2500 for the purpose. William Slater, Esq., of Carlton Chambers, is the architect.

The new buildings of the King's Schools were opened yesterday week, the anniversary of her Majesty's coronation day, and also to be ready for use at the reopening of the school on August 22. The occasion was naturally consecrated with the preacher for the half-year. At eleven o'clock the school chapel was filled with a large congregation of old Sherbornians and others interested in the school; and after the morning service, at which the Bishop of Worcester and Bristol preached a most impressive and eloquent sermon, the visitor and governors proceeded to the schoolroom for the distribution of the prizes. The visitor opened the proceedings by a general address to the boys, and, after the exhibition and other prizes had been awarded, the Head Master concluded by reminding all within the walls—both masters and scholars—of the new obligations laid upon them, by the increase of their privileges and advantages, for still more earnest exertion, and deprecated any loss of the old associations and interests, or their occupying new walls, which as yet were without their fruit, being only a new blossom upon the old stem. At the conclusion of the proceedings the whole party adjourned to the new library, where a luncheon had been provided by the Head Master, and the visitor separate, as many will be conscious, without drinking to the health, long life, and happiness of Mr. Digby.

CALENDAR FOR THE WEEK.

SUNDAY, July 7.—Sixth Sunday after Trinity.
MONDAY, 8.—Meeting of Sovereign, died, 1859. New Moon, 2h. 12m., a.m.
TUESDAY, 9.—Fire Insurance due.
WEDNESDAY, 10.—Victoria Asylum commenced, 1857.
THURSDAY, 11.—Peace of Villafranca, 1859.
FRIDAY, 12.—Great Heat in London, 1859.
SATURDAY, 13.—Lord Clyde left for India, 1857.

TIMES OF HIGH WATER AT LONDON-BRIDGE,
FOR THE WEEK ENDING JULY 13, 1861.

Sunday.	Monday.	Tuesday.	Wednesday.	Thursday.	Friday.	Saturday

THEATRE ROYAL HAYMARKET.—Positively the Last Week but One of THE GOVERNESS and MR. BUCKSTONE'S SON, with THE HAPPIEST DAY OF MY LIFE; after which, at EIGHT, THE DEVIL'S ROSE; with the Farce of A DAY WELL SPENT. Box-office open from Ten to Five daily.—On Monday, July 15, a Benefit and Last Night of Mr. BUCKSTONE'S Management. On Friday, for the Last Time, entirely NEW LORD AND MY LADY, or, IT MUST HAVE BEEN WORSE. Characters by Mr. Buckstone, Miss Fitzwilliam, Miss Reynolds, and Mrs. Wilkins. Doors will open at Seven; Commence at Half-past. Stalls, £1 1s.; Dress Circle, 10s. 6d.; Upper Boxes, 5s.; Pit, 3s.; Gallery, 2s. Saturday.—The New Comedy, and other Entertainments.

LAST SIX NIGHTS OF "THE COLLEEN BAWN."

NEW THEATRE ROYAL, ADELPHI.—Sole Proprietor and Manager, Mr. B. Webster.—On Monday and during the Week, MR. GOBIGAN; Messrs. T. Mathews, C. Bedford, THE GREAT DIVIDE, and A DAY AND NIGHT IN PARIS. And A TURKISH BATH: Mr. J. L. Toole and F. Bedford. Commence at Seven.

CRYSTAL PALACE.—QUEEN'S BIRTHDAY, TUESDAY NEXT, July 9, GRAND GALA, FIREWORKS, and ROMAN CANDLES will wish his Majesty Joseph Accot the Fountains in full play, for which purpose a new and powerful Steam Engine has been erected on the Terrace, and will be kept in operation.
The Orchestra and Fountains by the music of the Royal Artillery, who play the pantaloon of the Harlequinade. The Fireworks, will commence at Eight, and will consist of a Display of Fireworks, never before exhibited, including Rockets, Serpents, &c., &c., throughout the day.
THE KING OF THE ROCKS, an unhinged GYMNASIUM free of charge to visitors. Admission, One Shilling; Children, Half-price.

CRYSTAL PALACE.—WEDNESDAY NEXT.—HER MAJESTY'S BIRTHDAY.—Order of Military Sports, in commence at 2 o'clock: 1. Running Race, 2. Sack Race, 3. Wheelbarrow Race, 4. Hurdle Race, 5. Blindfold Race, 6. Jumping Race, 7. Quadrupedal Race, 8. Wheelbarrow Race, 9. Blindfold Race, 10. Tub Race, 11. Jumping Race, 12. Blindfold Race, 13. Flogging Match for Boys. The sports will take place in the Arena, at the conclusion of which the Prizes will be distributed on large Rostrums, to enable Visitors to witness. MOONDINE'S ROSE PERFORMING FLEAS, Mr. Corri, Mr. Rimmel, Mr. Shiel, and Mr. Beckwith, Comic Singers. Admission, One Shilling; Children, Half-price.

CRYSTAL PALACE.—GREAT ROSE SHOW THIS DAY.—SATURDAY, JULY 6. Show open from Twelve till Six o'Clock. BLONDIN'S TIGHT-ROPE ACROSS. Admission, Half-a-crown.

CRYSTAL PALACE.—Arrangement for Week ending Saturday, July 13.
Monday and Wednesday, open as Saturday.
On Monday; Display of GREAT FOUNTAINS and entire series of Waterworks, at Half-past Four.
On Wednesday; GREAT POPULAR FETE—BLONDIN'S LAST ASCENT BUT ONE; Military Band, Operatic Airs, and English Ballads. THE BRITISH ORPHANS, &c.
Thursday, Concert of Sacred Music.
Friday, open at Ten; GRAND CONCERT at Three. Admission, Seven Shillings and Sixpence each Person. Private Boxes accommodating Five, Fifteen Guineas.
Saturday, open at Ten; Mr. B. Webster on Hurdles' Third Lecture on "The Occult," at Two, in the Lecture Theatre of the School of Art. Half-price to Children.
Admission, One Shilling.
Concluding Rural Grand Open Performance, and Display of the Fountains daily, Monday to Saturday, during the Week, at the usual charges. Admission, Half-a-crown.
On Wednesday; GREAT POPULAR FETE—BLONDIN'S LAST ASCENT BUT ONE; Military Band, Operatic Airs, and English Ballads. THE BRITISH ORPHANS, &c.
Thursday, Concert of Sacred Music.
Friday, open at Ten; GRAND CONCERT at Three. Admission, Seven Shillings and Sixpence each Person. Private Boxes accommodating Five, Fifteen Guineas.
Saturday, open at Ten; Mr. B. Webster on Hurdles' Third Lecture on "The Occult," at Two, in the Lecture Theatre of the School of Art. Half-price to Children.
Admission, One Shilling.
Concluding Rural Grand Open Performance, and Display of the Fountains daily, Monday to Saturday, during the Week, at the usual charges. Admission, Half-a-crown.

PRINCE GEORGE GALITZIN begs to announce that he will GIVE A SERIES of ALL PERSONO IMITATIONS at the ROYAL SURREY GARDENS THIS MORNING (Saturday) Evening, and Every Evening next Week. The Prince will also perform several of his latest comic Scenes, which will be performed by a full orchestra. Conductor, the Prince George Galitzin. The vocal Entertainments and Dancing in the Gardens. Admission, 1s.

MRS. KEY BLUNT begs to announce that she will give TWO MATINÉES at WILLIS'S ROOMS, King-street, St. James's, on Monday AFTERNOONS, July 8 and 15. To commence at Half-past Three o'Clock. Honorary Stalls, 10s. 6d. each; may be secured at Mr. Mitchell's Royal Library, 33, Old Bond-street; Benson, Davison, and Co's, 34, Regent-street, W.

ROYAL HORTICULTURAL SOCIETY.—THE GREAT ROSE SHOW, in the GARDENS at KENSINGTON, will be held on Tuesday, July 30. Tickets, to admit the day, 7s. 6d., can be had of the principal Musicsellers and Fruiterers, and at the Gardens.
FLOWER-SHOW THIS DAY, and every Wednesday and Saturday (except July 10). Public admission on payment of 2s. 6d.
NOTICE.—A SPECIAL GENERAL MEETING of FELLOWS will be held on SATURDAY NEXT, July 6.

ROYAL HORTICULTURAL SOCIETY, South Kensington, W. (Old Entrance, BUTCHER HEYBURY GATE).—THE ANNUAL MEETING of the ELECTION of FELLOWS will be held in the Council Room at the Gardens, on TUESDAY, the 30th instant, at Two o'Clock precisely. By order of the Council,
ARTHUR BARNES, Assistant Secretary.

"CROMWELL REFUSING THE CROWN OF ENGLAND," offered by the Parliament, A.D. 1657, exhibiting upwards of thirty authentic portraits, vastly life-size, painted by Maratte (the pictures of Frank Cromwell, Esquire), Mercier, and E. M. JENNINGS (the last-named artist's fine picture is now ON VIEW at the GALLERY, 62, Cheapside, E.C., from Ten to Five daily. Admission by invitation or private address card.

GERMAN ACADEMY OF ART, EGYPTIAN HALL, 170, Piccadilly.—The First Annual EXHIBITION of PAINTINGS is NOW OPEN. ADMISSION, 1s. Open from 10 A.M. to 6 P.M. Catalogues, 6d. Season Tickets, 5s.

WILL CLOSE ON THE 27TH INST.
SOCIETY OF PAINTERS IN WATER COLOURS.—The Forty-seventh Annual EXHIBITION, at 53, Pall-mall, is NOW OPEN at their Gallery, 53, Pall-mall, near St. James's Palace. Admission, 1s. Catalogue, 6d.
JAMES ORROCK, Secretary.

THE NEW SOCIETY of PAINTERS in WATER COLOURS. The Forty-seventh Annual EXHIBITION, at 53, Pall-mall, is NOW OPEN at their Gallery, 53, Pall-mall, near St. James's Palace. Admission, 1s. Catalogue, 6d. Certain Works in Oil, by Members, are also Exhibited.
JAMES ORROCK, Secretary.

On Wednesday next, the 10th inst., will be published
THE ILLUSTRATED LONDON NEWS, Vol. XXXVIII., JANUARY TO JUNE, 1861, price 13s. cloth, gilt edges; 15s. sewed.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, JULY 6, 1861.

AFTER various contradictory statements, and some rumours of professional jealousies, the law appointments of the Government are announced by the Ministerial organ. Sir William Atherton, late Solicitor-General, does not at present become a Judge, but takes the office vacated by Sir Richard Bethell, now Lord Westbury. Sir William has to be re-elected for Durham, and an opposition is menaced, but it is not expected to be formidable. Mr. Roundell Palmer, to whom the attorney-generalship was stated to have been given, takes the solicitor-generalship, and has to be brought into the House, Mr. Antrobus, however, not making way for him. It is probable that this arrangement will not be a permanent one, and that Sir Roundell Palmer (as he will shortly be entitled) will not long occupy the inferior position in the front of battle. Wolverhampton has elected a very good member in the place of the Lord Chancellor—Mr. Wegenlin, who was defeated at Southampton at the last contest, having been returned by a majority of nearly two to one over the Conservative candidate. In connection with the legal appointments it may be mentioned that Government have acquired the absence of the Ministerial lawyers from the House as a reason for not at once stating what is to be done with the Lords' alterations in the only important measure of the Session, the Bankruptcy Bill, but have announced that it is not to be abandoned.

Up to the last mails from America there is no account of an engagement of importance; and the journals which, unhappily, adopt, alternately, a tone of exaggeration and of flippancy, now scoff at the incessant reports of actions of a "glorious" but perfectly valueless character. This is not the way to treat topics of such importance, and it may be that in this fabled retiring of the American press, with some honourable exceptions, is not proving itself the best friend of the nation. It is not easy to select from the mass of rumours which are daily flung, hot and hot, from the newspaper offices any substantial information; but it would seem that what advantages have yet been gained have been won by the Secessionists; while, on the other hand, General Scott appears to be moving down forces of such strength that he will be enabled by sheer power of numbers to compel a Secessionist retreat, unless some act of brilliant strategy by the South interfere with his plans. He, a veteran General, is not considered to be deficient in energy or skill, and he cannot afford to insist upon the necessity of their being converted into soldiers by steady and continuous drill and discipline. An Indian regiment is said to have fallen into the hands of a strong body of Secessionists. The latest item of all is that a battle is expected to be fought on the 4th of July. Federal Government has resolved upon the imposition of an income tax, the Republicans will learn something of the sacrifices necessitated by a war. At the same time it would be an injustice to a generous nation to suppose that supplies will not be as readily granted as men and arms. The President's Message is spoken of as one which is stated to be in the hands of the officials. Report says that Mr. Lincoln recommends a modification of the Morrill Tariff, a course which will doubtless be delicately characterised as the throwing a sop to the English lion. The sympathy and good faith which have been shown towards America by the people and the Government enable us to take petulances with good humour; but it is too much to ask us to forget, amid all our hatred of slavery as an institution, that it is only a few months since the Republic—one and indivisible—would have been indignant at England presuming to sit in judgment upon the conduct of a single State or Territory. The Southerners were our brothers on the last 4th of July, and, if we are not so quick at forgetting old ties as the sad who were still more closely allied to the Secessionists, let this be imputed to the slow habits of islanders, not to interested motives.

Count Cavour's successor, Baron Ricasoli, had delivered a most outspoken and energetic address at the Italian Parliament. Plainer language has seldom been used by a great statesman since the days of Oliver Cromwell. The Italian Minister declares that the unity of the Peninsula is the object of the Government; that the term of Venice will come; but that, in the meantime, he looks to Rome. Professing himself a thorough Catholic, and devoted to religion, he regards the temporal power of the Pope as the one grand enemy of Italy, and this power must be subverted. Not another inch of Italian soil is to be yielded on any consideration whatsoever. The Minister expresses warm thanks to the nations that have assisted or recognised the kingdom of Italy, and speaks courageously and hopefully of the future. Meantime, the reactionists continue to disturb the peace of the country, and the conspiracies which break out in various quarters render severe punishment necessary. A plot for the assassination of Garibaldi appears to have been a real thing, but the fact that it is known seems the best guarantee against the success of the hireling miscreants who are said to have leagued themselves against the Liberator. Perhaps, when Lord Normanby is permitted, by the impatient House of Lords, to meander over the wrongs of the ex-Duke of Modena, his Lordship will say whether his client approves of the stiletto, and whether the daggers of the assassins have received priestly benediction, after the fashion of the swords in "Les Huguenots."

Three legal investigations have occupied the attention of France. In one, the appeal in the Bonaparte-Patterson case, the Government have obtained certain victory, and the claimants are dismissed. In the second, the trial of M. Mirès, the matter is pending, and though the Hebrew speculator has a great deal to say, and though much of what he says would be taken into the consideration of men of business and of the world in this country, it is not probable that it will have any weight before the tribunal which is trying him, and he looks no doubt for a heavy sentence, which, if his studies have been classical, he may annotate with a *sic vos non vobis*. The third case has been that of the Duc de Broglie, who has completely discomfited the officials, besides showing them that they were not "up" in the law which they administer inadequately. Happier than the aristocratic victim of the revolutionary tribunal in Dr. Croly's spirited poem—

> He dashed his cloak, he tore aside his vest,
> A ribbon'd cross was on his haughty breast.
> Nor, . . . He deigned no more reply,
> But with a look of proud disdain he eyed
> He kissed his cross, and turned him to the door—

the Duke, instead of meeting his fate, compels his intending judges to put an end to a process which their tribunal was not empowered to take approval of, Knight Grand Cross. The virtues of such an amulet have set Paris smiling at the disconcerted officials.

Our Parliament has not been very busy, but has voted much money up to late hours, and has completed the defeat of the Government plan for the appreciation of property finally allotting the last of the four members to the West Riding, which is to be divided into two parts. Thus the counties obtain three out of the four seats taken from the peccant boroughs. The bill for enabling members of the Universities to vote by means of papers sent by post has gone through Committee, and will be a boon to many a needy clergyman who will be glad to register his vote, but who can ill spare the time and money for the journey. It is an exceptional indulgence, but it is given to an exceptional, non-resident, and educated constituency. Hereafter, it may be used as precedent when other non-residents desire to vote by proxy—a privilege which, as a rule, has been made against the sacrifice of a portion of Kensington Gardens to the caprice or indolence of fashionable equestrians, who might spare one of the few pleasant walks within reach of the humbler dwellers in Babylon, and might push a little further into the country, if they require large areas for canvassing votes and the exchange of smiles and scandals. And this is about all the news of the week, except that nearly all the twenty millions of British faces have been turned skyward to admire a splendid comet which has broken in unintroduced upon our skies, and is hurrying away—who shall guess on what awful errand?

THE COURT.

Yesterday se'nnight a state concert of sacred music took place at Buckingham Palace by command of the Queen. The Prince Consort received the company on behalf of her Majesty, who herself passed the night in retirement at the White Lodge, in Richmond Park.

On Saturday the Queen, accompanied by Prince Leopold and Princess Louise, drove in an open carriage and four. The Prince Consort, the Crown Prince and the Crown Princess of Prussia, Prince Alfred, Prince Arthur, and Prince Louis of Hesse, visited the Horticultural Gardens at South Kensington. The Royal party afterwards went to the South Kensington Museum. The Duke and Duchess of Hamilton, the Earl of Clarendon, Earl Spencer, Earl Russell, and Lord John Russell had the honour of dining with the Queen.

On Sunday the Queen and the Prince Consort, the Crown Prince and Princess of Prussia, Princess Alice, Helena, and Louise, Prince Arthur, Prince Leopold, and Prince Louis of Hesse, the ladies and gentlemen in waiting, and the household, attended Divine service in the private chapel, Buckingham Palace. The Rev. C. Eborley, Head Master of Westminster, preached the sermon.

On Monday the Queen held investitures of the Most Ancient Order of the Thistle and of the Most Honourable Order of the Bath.

On Tuesday her Majesty, accompanied by the Crown Princess of Prussia (Princess Royal), Princess Alice, and Prince William of Prussia, took the open carriage drive. The Royal Banks de Nemours, accompanied by Princesses Marguerite and Blanche, the Count d'Eu, and the Duke d'Alençon, visited the Queen at Buckingham Palace. The Prince Consort, attended by Colonel the Hon. A. Hardinge, visited the Duchess of Cambridge at her residence in Stratford-place. The Duke of Newcastle, Lord Sydney Godolphin Osborne (Gilpinet), the Dukes of Wellington, the Duke of Somerset, Lady Caroline Barrington, Lord and Colonel F. Seymour, C.B., had the honour of dining with the Queen.

On Wednesday the Right Hon. T. Headlam, Judge Advocate-General, had an audience of her Majesty at Buckingham Palace, introduced to her Majesty the proceedings of some court-martial. The Prince Consort, attended by Colonel the Hon. A. Hardinge, the Princess Alice and Princess Beatrice, took a drive in an open carriage and four. In the evening the Duchess of Cambridge and Princess Mary dined with the Queen. The Earl of Clarendon, the Earl of Malmesbury, and Viscount Palmerston had also the honour of dining with her Majesty.

On Thursday the Queen and the Prince Consort, accompanied by the Crown Prince of Prussia (Princess Royal) and Princess Alice, and by the Princesses and Princes of the Royal family, left Buckingham Palace at three o'clock in the afternoon for Osborne, in the Isle of Wight, where her Majesty is expected to remain, with occasional intervals, until the close of the summer.

We understand that the Queen's intention to visit Ireland towards the latter end of August. Her Majesty will remain four or five days at the Viceroy Lodge, in Phœnix Park, and will probably visit the camp at the Curragh of Kildare. Thence the Queen will make an excursion to the Lakes of Killarney. Her Majesty's visit being of a private character, the Royal Yacht in 1853, no public receptions or ceremonies are contemplated.

The Countess of Gainsborough has succeeded Viscountess Jocelyn as the Lady in Waiting to her Majesty. The Hon. Emma Stopford has succeeded the Hon. Beatrice Byng as Maid of Honour in Waiting to the Queen. Colonel the Hon. A. Hardinge has relieved Major De Plat in his duties as the Equerry in Waiting to the Prince Consort.

ORDERS OF THE THISTLE AND THE BATH.

The Queen held investitures of the Most Ancient Order of the Thistle and the Most Honourable Order of the Bath on Monday at Buckingham Palace.

The Queen entered the white drawing-room, attended by the Ladies in Waiting and the officers of State, and her Majesty was conducted by the Lord Chamberlain to a chair of state. Her Majesty (the Sovereign

of the order) and his Royal Highness the Prince Consort were the mantle and collar of the Thistle.

The Knights were called over in the saloon, when the following answered—viz, the Earl of Rosebery, the Earl of Mansfield, the Duke of Montrose, the Earl of Elgin, the Duke of Argyll, and the Marquis of Ailsa.

The Queen having signified her pleasure, the Knights proceeded to the election of a Knight into the order, and the sufferage having been presented to her Majesty, the Sovereign was pleased to declare that the Right Hon. Thomas Earl of Zetland had been duly elected a Knight of the Most Ancient and Most Noble Order of the Thistle. After the usual ceremonial the noble Earl knelt, and the Queen was graciously pleased to knight his Lordship with the sword of state.

The Queen having proceeded to a second election, the Queen declared the Right Hon. Robert Montgomery, Lord Belhaven, had been duly elected a Knight of the Most Ancient Order of the Thistle, and his Lordship, after the usual ceremonies, was in like manner knighted by her Majesty.

The Knights Grand Cross of the Order of the Bath then assembled in the promenade gallery, and afterwards passed into the state drawing-room.

The Queen, the Sovereign of the Bath, accompanied by the Prince Consort, Great Master of the Order, was conducted to a chair of state in the state drawing-room. Her Majesty and his Royal Highness wore the mantle and collar of the order.

The Knights Grand Cross having been admitted to the Royal presence,

Lieutenant-General Sir James Hope Grant and Major-General Sir Patrick Grant, were severally introduced between two Knights Grand Cross present, had the honour of knighthood conferred upon them with the sword of state by the Queen, and were afterwards invested by her Majesty, assisted by his Royal Highness the Great Master, with the ribbon and badge and also with the star of the Military Division of the first Class of the Most Honourable Order.

General Sir Arthur Benjamin Clifton, General Sir James Archibald Hope, Lieutenant-General William Bretherton, General Sir Thomas Wiltshire, and Vice-Admiral the Right Hon. Sir Maurice Frederick Fitzhardinge Berkeley were next severally introduced and invested by his Sovereign and Master by the Grand Master, with the ribbon and badge and with the star of the Military Division of the first Class of the order.

Lieutenant-General Sir Henry Marion Durand received from the Queen the honour of knighthood with the sword of state, and was afterwards invested with the ribbon and badge and also the star of the Military Division of the first Class of the Most Honourable Order.

The following Knights Commanders of the Bath were also severally introduced, had the honour of knighthood conferred upon them by the Queen, and were afterwards invested by her Majesty with the insignia of their respective divisions in the Second Class of the Order—viz, Rear-Admiral Robert Lambert Baynes, Deputy Uniform and Dockyard (Civil), Major-General George Hall M'Gregor, late Bengal Artillery (Civil), Major-General William Rowe, Major-General Sir William Bretcrton, and Colonel the Earl of Longford.

A great number of military and naval officers were nominated Companions of the order by her Majesty.

At the Court Mr. Hastings Russell had an audience of the Queen, and delivered into her Majesty the insignia of the Order of the Garter worn by the late Duke of Bedford. The Right Rev. Dr. Gell, Bishop of Madras, had an audience of the Queen, and kissed hands on his appointment.

THE STATE CONCERT.

A state concert took place at Buckingham Palace on Friday night by command of the Queen.

The Duchess of Cambridge and the Princess Mary arrived at the palace at seven minutes before ten o'clock, attended by Lady Geraldine Somerset and Captain Gust.

The Duke of Cambridge was attended by his Equerry in Waiting.

The Prince Consort entered the hall and concert-room accompanied by the Prince of Wales, the Crown Prince and the Crown Princess of Prussia, Prince Frederick, the Duchess of Nassau, the Duchess of Cambridge, Mary, the Duke of Cambridge, Prince Louis of Hesse, and Prince Frederick of Holstein, conducted by the Lord Chamberlain and other officers of state, attended by the Equerries in Waiting.

The band comprised her Majesty's private band, with numerous additions from the Royal Italian Opera and the Royal Opera, Pit.

The chorus were selected from the Italian Opera and the assistants of the Sacred Harmonic Society, Exeter Hall. The entire orchestra comprised upwards of 250 performers.

The vocal performers were Mdlle. Titiens, Miss Lascelles, Miss Amadio, Patti, Signor Gardoni, Mr. Sunley, Mr. Patey, and Signor Gassier.

THE PRINCE OF WALES.

The Prince of Wales, attended by Major-General the Hon. R. Bruce and Lieutenant-Colonel Keppel, left Buckingham Palace at five minutes before seven o'clock on Saturday morning for the Bantonsquare station of the London and North-Western railway on his way to the Curragh of Kildare. His Royal Highness arrived at Kingstown at half-past five o'clock on the same afternoon. An immense crowd, amongst every class from the highest to the lowest of landing could be obtained. When the Connaught came alongside the pier the Lord Lieutenant was on board and warmly welcomed the Prince.

On landing, the Prince, accompanied by the Lord Lieutenant, entered a special train and proceeded to Dublin, where crowds lined the various streets through which the cortege passed. In every place the people manifested their loyalty and affection for their sovereign's eldest son. The route, and numbers ran after the carriages to secure a good look at his Royal Highness, who gracefully acknowledged the fervour of his reception.

On Sunday the Prince attended the Chapel Royal, where the Dean of Down preached. On Monday his Royal Highness visited the Art Exhibition, and on Tuesday the Prince proceeded to the Curragh,

DEPARTURE OF PRINCE LOUIS OF HESSE.

Prince Louis of Hesse arrived on Monday in the Duchess of Cambridge, the Duke of Cambridge, Prince Edward of Saxe Weimar, and the Duchess of Hamilton, at their respective residences, to take leave on the departure for the Continent. In the evening the Grand Ducal Highness took leave of the Queen, upon his return to the Continent. The Prince left Buckingham Palace shortly before eight o'clock.

Her Royal Highness Princess Alice and his Grand Ducal Highness Prince Louis of Hesse have honoured Mrs. Thorncycroft with sittings for two models.

His Royal Highness Prince Alfred arrived at Montreal on the 18th ult.

Their Royal Highnesses the Duchess of Cambridge and Princess Mary honoured the performances at the Royal Italian Opera with their presence on Monday evening.

The Right Hon. Lord Rendlesham with Lady Egidia Montgomery, daughter of the Earl of Eglinton, took place on Thursday morning at St. James's, Piccadilly.

His Excellency the Prussian Minister and the Countess Bernstorff are on the eve of leaving London for Carlsbad.

His Excellency the Swedish Minister and the Countess von Platen entertained a select circle at dinner on Tuesday evening at their residence in Grosvenor-square.

Sir William Atherton has been appointed Attorney-General in succession to the present Lord Chancellor; and Mr. Roundell Palmer has been appointed to the office of Solicitor-General. In succession to Sir William Atherton. Sir William Atherton is the son of the late Rev. William Atherton, a minister of the late Wesleyan Methodist Connection, who was some time President of the Conference. Sir William became Solicitor-General and received a knighthood on the elevation of Sir Henry Keating to a puisne judgeship in the Court of Common Pleas. He has for some years past represented the city of Durham. Mr. Roundell Palmer is the second son of the late Rev. William Jocelyn Palmer, Rector of Mitchury, in Oxfordshire, by the daughter of the late Rev. William Roundell, of Gledstone House, in the county of York, and grandson of William Palmer, Esq., of Naeing Park, in the county of Essex, and then nephew of the late Gen. Palmer, Esq., M.P. for South Essex, and also of the late John Horsley Palmer, Esq., and Sir Ralph Palmer; and cousin to Sir George Prevost, Bart., of Wanlip Hall, Leicestershire. Mr. Roundell Palmer was born in 1812, and married, in 1840, Lady Laura Waldegrave, second daughter of William, eighth Earl Waldegrave, by whom he has several children.

MUSIC.

At the ROYAL OPERA, LYCEUM, the "Huguenots" was produced on Saturday last in a manner entitled, on the whole, to commendation; for, if the performance was in some respects defective, in others it was admirable. The characters of Valentina and Raoul were sustained by Titiens and Giuglini, and there are no two performers now on the stage who could sustain them better. The truth and pathos of their acting, and the beauty and expression of their singing, were beyond all praise, and above the reach of criticism. We need scarcely add that they were received with the enthusiasm so justly their due. The other parts were at least respectably sustained, Mdme. Lemaire Lemaire, the page Urbain; Mdme. Lucchesini, De Nevers; Gassier, St. Bris; and Mdlle. Bury, Marguerite of Valois. This last young gentleman, a native of Ireland, who has certainly not had very long time for study, especially the unsteadiness of the orchestra and chorus, which slowed that the opera had been hastily brought out.

The STATE CONCERT given at Buckingham Palace on Friday evening was also an interesting intellectual treat, and was received at the British Court and in our highest circles of society; for a great musical performance got up with the utmost care and splendour for the entertainment of above a thousand distinguished members of the aristocracy must be presumed to have been in accordance with the taste both of the Queen and Prince Consort. The selection was of sacred music, and the selection was dictated by the soundest judgment. The first part was taken from the "St. Paul" and "Elijah" of Mendelssohn, and contained some of the grandest and most beautiful portions of these oratorios. The remainder of the concert was miscellaneous, and was extracted from Beethoven's "Mount of Olives," Haydn's "Creation;" "Rossini "Stabat Mater," and Meyerbeer's "Struensee." The singers were Titiens, Miss Lascelles, Miss Patti, Miss Lascelles, Signor Giuglini, and Mr. Santley. The orchestra and chorus, about 250 strong, were selected from the Philharmonic Society, the two Italian Operas, the Sacred Harmonic Society, and the Queen's private band. Mr. W. G. Cusins, organist of her Majesty's Chapel Royal, presided at the organ, and Mr. Anderson, director of the private band, conducted the whole performance.

The YORKSHIRE CHORAL UNION gave two performances in London last week, which were the culmination of the musical festivals. This society has been formed, under the patronage of many persons of influence and eminence connected with Yorkshire, for the cultivation of choral music, and is a combination of the choral societies of Leeds, Huddersfield, Halifax, Sheffield, and York. Its president is Richard Lloyd, Esq., of Halifax, who has been sufficient as patron of music in the county. The association has now visited London for the first time, in order for the more extensive metropolis to "extend its sympathy." "The Messiah" was performed at Exeter Hall on Tuesday evening, and on Friday evening there was a miscellaneous concert of choral music at St. James's Hall. In "The Messiah" the choruses were sung by Mrs. Sunderland, a lady of great provincial celebrity, by Miss Freeman, and Mr. Inkersall, a local tenor, and Mr. Lawler, a bass singer. Mr. Sims Reeves and Mr. Santley. The whole performance was excellent, the choruses especially, which were allowed on all hands to be incomparable. The orchestra of about eighty was led by Sivori, and was equally admirable—a number of fine choral gloss and part-songs of Bishop, Hatton, Mendelssohn, Goss, and Macfarren, and with wonderful precision, refinement, and expression. In short, these performances showed that Yorkshire deserves its renown as the land of vocal harmony.

The series of MONDAY POPULAR CONCERTS terminated for this season on Monday evening last with the benefit of the able and excellent director, Mr. Arthur Chappell, and the St. James's Hall was crowded to overflowing—a just tribute of public gratitude for his invaluable services. The programme was a very fine one, and the most brilliant of the season. Two of the finest quartets of Haydn and Beethoven were played by Messrs. Wieniawski, Ries, Webb, and Piatti. Mrs. Arebella Goddard performed Mozart's Sonata in B flat, and Dussek's sonata in G, accompanied by Wieniawski; Hulle played a selection from Bach's "Forty-eight Preludes and Fugues;" Madame Dussek's "Name the glad day," and Sims Reeves sang no less than three pieces—Beethoven's "Adelaida," Cimarosa's "Pria che spunki," and Meinhardt's "Lurker's Song." The first concert of the season included one of the established musical entertainments of the metropolis, and we look forward with pleasure to the next performance in October.

The seventeenth season of the MUSICAL UNION was brought to a close on Tuesday morning. The last concert (the "Director's Benefit") was one of a more varied character than the previous performances of the season, and admitted of a greater display of the powers of vocal music. On this occasion the programme was singularly rich and interesting. It included Mozart's Quartet in G major, for stringed and wind instruments, Beethoven's in E flat, op. 20, and Hummel's in D minor, op. 74, a trio of Mendelssohn's in C minor. To these were added Beethoven's sonata in E flat, from op. 31, played by Arabella Goddard solo, by Vieuxtemps, played by Wieniawski; a solo on the piano, played by Charles Hallé, and Beethoven's "Adelaida," sung in one of her two vocal pieces, sung by Delle-Sedie. In the two sets already mentioned the performers were—Wieniawski, violin; Ries, violin; Webb, viola; H. Blagrove; violoncello, Signor Piatti; contrabasso, Mr. Howell; oboe, M. Barret; bassoon, M. Hausser; flute, Mr. Pratten; clarinet, Mr. Lazarus; horn, Mr. Lindsay; and Mr. Harper; and Mr. Lucas; piano, to be excelled. The hall was crowded to the very doors by the elite of the fashionable and musical circles.

Signor Piatti gave his annual concert on Saturday morning last at Campden House, Kensington. He was assisted by Mdme. Clemence Lancaster, Mdme. Patti, Mdme. Sainton-Dolby, Signor Delle Sedie, Mr. Santley, and Signor Gardoni. Mdme. Patti, who is an Englishwoman—the daughter of an eminent musician, the late Mr. Welsh—made her début as a singer. She is also a pianist and a singer. On this occasion she appeared in both capacities, playing the piano part in a trio of Mendelssohn's, and a duet of Schneider's, and singing the soprano part in the quartet "A te, O cara," from the "Puritani," and in Meyerbeer's duet, "Della mora," from the "Prophète." In the latter she displayed a knowledge of the delicate subtlety of the day, and now holds the pre-eminent place so long occupied by Mdme. Sainton-Dolby.

HERR LIDELL'S CONCERT at the Hanover-square Rooms on Tuesday evening last was well and fashionably attended. The brilliant performance of Herr Lidell, as well as that of Miss Arabella Goddard, at the head of the pianists, and Mdme. Sainton-Dolby at the head of the violoncelli and pianofortes. Signor Regondi displayed great beauty of execution in his performance of concertante for concertina and flute. Lidell was well supported by the vocal abilities of Miss Banks, Mdme. Lascelles, Mr. Sunley, and Mr. Pearce. Harp, Herr Oberth; and guitar, Signor Regondi.

The ROYAL SOCIETY OF FEMALE MUSICIANS had its annual concert at the Hanover-square Rooms on Tuesday evening. This society, of the existence of which we learned in 1859, is managed by a committee of ladies, eminent members of the musical profession, to one of the most praiseworthy institutions established for the benefit of females. The concert, as usual, was an excellent entertainment, to which a number of the most distinguished vocal and instrumental performers contributed their assistance. The room was crowded auditory, and the receipts, we trust, have been of substantial benefit to the society.

MR. SILAS's concert at the Hanover-square Rooms on Wednesday evening was an excellent and interesting one. Mr. Silas is a very well known, is a composer and a pianist of the first class. His trio in C minor, for the piano, violin, and violoncello, which was played by himself, with M. Wieniawski and M. Paque, is a superb composition, noteworthy of Beethoven or Mendelssohn. It produced an immense effect, was warmly applauded by a highly-critical audience, and the scherzo (a charming movement, full of grace and fancy) was loudly encored. Mr. Silas also played two original morceaux de salon, composed by himself. The other principal features of the concert were the first movement of Dussek's concerto in D minor, for the piano, accompanied by stringed instruments, and Hummel's introduction and rondo for two pianos, played by Mr. and Mdme. Silas, who is an accomplished performer. A very beautiful song by Mr. Silas, "O, would I were your silver moonbeam," was sung by Mr. Santley; and another, of equal merit, "The voice of the fountain," was sung by Mdme. Sherrington. The room was full, and many distinguished musicians and amateurs were among the audience.

HERR WILHELM GANZ, the distinguished pianist and composer, gave a musical matinée at his residence in Queen Anne-street on Monday last, which was attended by a numerous and fashionable audience. The principal instrumental pieces were Hummel's trio in B flat, played by Messrs. Ganz, Sainton, and Paque; the andante and variations, from Beethoven's "Kreutzer Sonata," by Mr. Sydney Pratten and Signor Regondi; and Schubert's grand duo for two pianos, performed by Mr. Ganz. Miss Lascelles, Mr. Julius Lorel, Mdme. Rieder, and Mr. Wilbye Cooper were the vocal performers.

THE THEATRES.

STRAND.—A farce was produced on Saturday. It is from the pen of Mr. T. J. Williams, and is called "Love and Quiet." The title suggests that the value of these articles should be demonstrated by their opposites, and accordingly we find that noise and confusion are the prevailing incidents of the piece. Mr. J. Clarke, in fact, is suited to a character in which he may be guilty of any extravagance with propriety. As Mr. Beauchamp Cobb, a law student, he annoys the keeper of the house in which he lodges by his incessant performances on the cornet, and excites all his inmates to rebellion. They procure his expulsion by the door, but he gets in at the window. Low it turns out, is the motive for his extraordinary conduct. As coxswain of the Thames Rowing Club he has been accustomed serious danger near Battersea-bridge, from which Miss Hintercome (Miss Lester) had the good fortune to rescue the aspiring youth. This young lady is the daughter of the lodging-house-keeper, Mr. Twitterly Flusterome (Mr. H. Bland), and Cobb's musical performances are intended as a somewhat expressive of somewhat equivocal gratitude to his fair preserver in the hour of peril. These materials are obvious enough, and the nature of the incidents may be easily guessed from what follows. Numerous chambers, the ladies of the establishment rush in their night dresses on the stage; and after some very decorous conduct on the part of Flusterome, Miss Hintercome, and Cobb, during the progress of an extraordinary behaviour, accepts Gobt as her lover, and thus, we hope, restores peace to the house and to the house and neighbourhood. Pieces of this kind are open to obvious objections, and the present was not, perhaps, so successful as had been anticipated. It was a little too absurd.

STANDARD.—On Saturday Mr. Creswick commenced a "starring" engagement at this house. The piece selected was Sheridan Knowles's excellent tragedy of "Virginius." The play was warmly welcomed by a respectable audience. His performance was deservedly applauded, and he was summoned before the curtain on the conclusion of the play. The eminent French actor, M. Jules Brasseur, appeared on Monday as Count of Lyons, in Dubosc and Lemaigne, and received a courteous hearing. His delicious manner decidedly good, but the Continental style of acting failed to make the impression that had probably been expected.

CHURCH AND UNIVERSITIES.

The Archbishop of Canterbury gave his usual dinner at Lambeth Palace yesterday week to the stewards of the anniversary festival of the Sons of the Clergy.

On Sunday afternoon the Bishop of London officiated at the open-air religious services which have been instituted in Covent-garden. The Bishop's admonitions were evidently listened to by the 1200 or 1500 persons who composed his congregation.

The diocese of Jamaica is to be forthwith divided, and the archdeaconry of Barbadoes erected into a separate see. The Rev. Charles Caulfield, D.D., Archdeacon of Bahamas, is to be the first Bishop of Jamaica.

Dr. Gell, the new Bishop of Madras, was consecrated at Lambeth last Saturday, the officiating Prelates being the Archbishop of Canterbury and the Bishops of Winchester, and London.

Last Sunday evening the series of special services at Westminster Abbey for the working classes brought to a close a most successful throughout in drawing immense congregations, principally composed of members of the working classes, for whom they were primarily designed. There have been during the present year twenty-six services.

The Bishop of London has appointed the following gentlemen to be the select preachers at St. Paul's Cathedral during the present month—July (to-morrow), the Rev. Robert Collier Pashman; 14, the Rev. William Thomas Hincks; 21, the Rev. Robert Bickersteth; 28, the Rev. Thomas Jones.

A new bishopric in connection with the Church of England has been erected in Natal, the seat of which is at Kingston, and the Rev. J. Francis Lewis, D.D., has been appointed to the see.

The Bishop of Exeter has intimated his intention of giving £10,000 towards the endowment of a theological college for the west of England, which is to be immediately begun.

On Thursday week Bristol Cathedral was reopened for Divine service with great ceremony. The Lord Mayor, the High Sheriff, and the Town Council, attended by the city officials, joined in the procession, in order to take their seats in the places assigned to them by the Restoration committee.

The Archbishop of York has intimated to his clergy his intention of holding the primary visitation of his diocese according to the following arrangements:—Richmond, 20th; Ripon, 21st; Boroughbridge, 22nd; Doncaster, 23rd; Sheffield, 24th; Malton, 25th; Scarborough, 26th; Beverley, 27th; Hull, 28th; Selaby. His Grace's next general ordination will be held on Sept. 22.

PRESENTATIONS.—The Rev. Henry Anson, M.A., late assistant of St. Stephen's, Southwark, was presented on Wednesday week with a handsome silver tea and coffee service, purse, and testimonial, by the family and a score of forty gentlemen, from members of the congregation of Trinity Church, Newington, to which he officiated as curate. In speaking of their appreciation of his faithful and self-denying labours as a Curate during a period of nearly six years—now resigned—the late Vicar of Trinity and the London Diocesan Home Mission, has been presented with a handsome silver tea and coffee service, purse, and testimonial, in behalf of their sincere esteem and as acknowledgment of their appreciation of his services.

PREFERMENTS AND APPOINTMENTS.—The Rev. Charles John Ellicott to the Deanery of Exeter. The Rev. Edward Cooper, M.A., and the Rev. J. Simpson, Perpetual Curate of Holme Cultram, to be Honorary Canons of Carlisle Cathedral. The Rev. Thomas Hill, M.A., Rector of Stanningley, Yorkshire; Rev. J. Comins, to North Hinkh, near Ivybridge, Devon; Rev. G. P. Bowring, to Ham, Devon; Rev. John Wills, Vicar, W. Saltoe, to Ugley, Yorkshire; Rev. A. C. Lucas, to Walworth. *Chaplaincies*: Rev. W. B. Ryan, Rector of Rockington, Salop, to be Domestic Chaplain to the Right Hon. the Earl of Crawford and Balcarres; Rev. J. Rudd, to be Chaplain of the Union Workhouse, Bridgnorth, Salop; Rev. W. J. Tremamby, Scholar of Balliol College, Oxford, now Fellow of All Souls' and Vicar of Lowlinch, Oxfordshire, to be Domestic Chaplain to the Bishop of London. *Perpetual Curacies*: Rev. M. S. Berry, to West Ashton, Wilts; Rev. J. Robinson, to Hollinwood, Prestwich, Lancashire; Rev. S. Sampson, to Ashton-under-Lyne; Rev. Augustine, to Bury, Lancashire; Rev. F. R. Swallow, to Bolton, Lancashire. *Curacies*: Rev. W. F. Crocker, to All Saints', Chelmsford; Rev. J. Augustine, to Ashton-under-Lyne; Rev. G. D. J. Keogh, to Whitford, Wilts.—*Guardian*.

UNIVERSITIES AND PUBLIC SCHOOLS.—The distribution of prizes took place at the University College on Saturday last. The prizes were personally presented by Lord Brougham, who delivered a lecture on the proceedings. The report for the session stated that the increase in the number of students during the session was 29 as compared with 1860 and 103 in the two preceding years. The number of new students this year was 114. The report gave a very favourable account of the condition of the college.

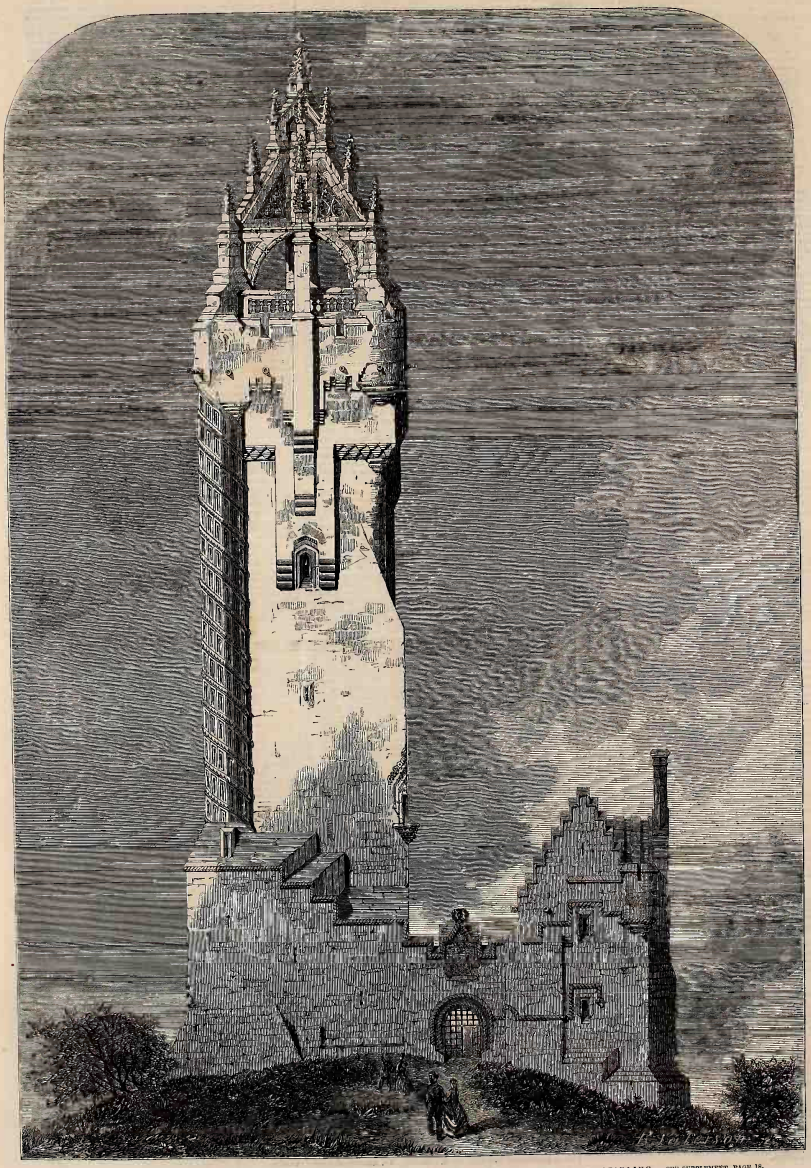
The annual meeting for the distribution of prizes was held at Owens College on Saturday last, under the presidency of Mr. Alderman Neale.

At a meeting of the trustees of the Chard Grammar School on Wednesday week, the Rev. G. Phillips, second master of the Wallingtonwoe School, was elected master, in the room of the Rev. J. F. Billing, resigned.

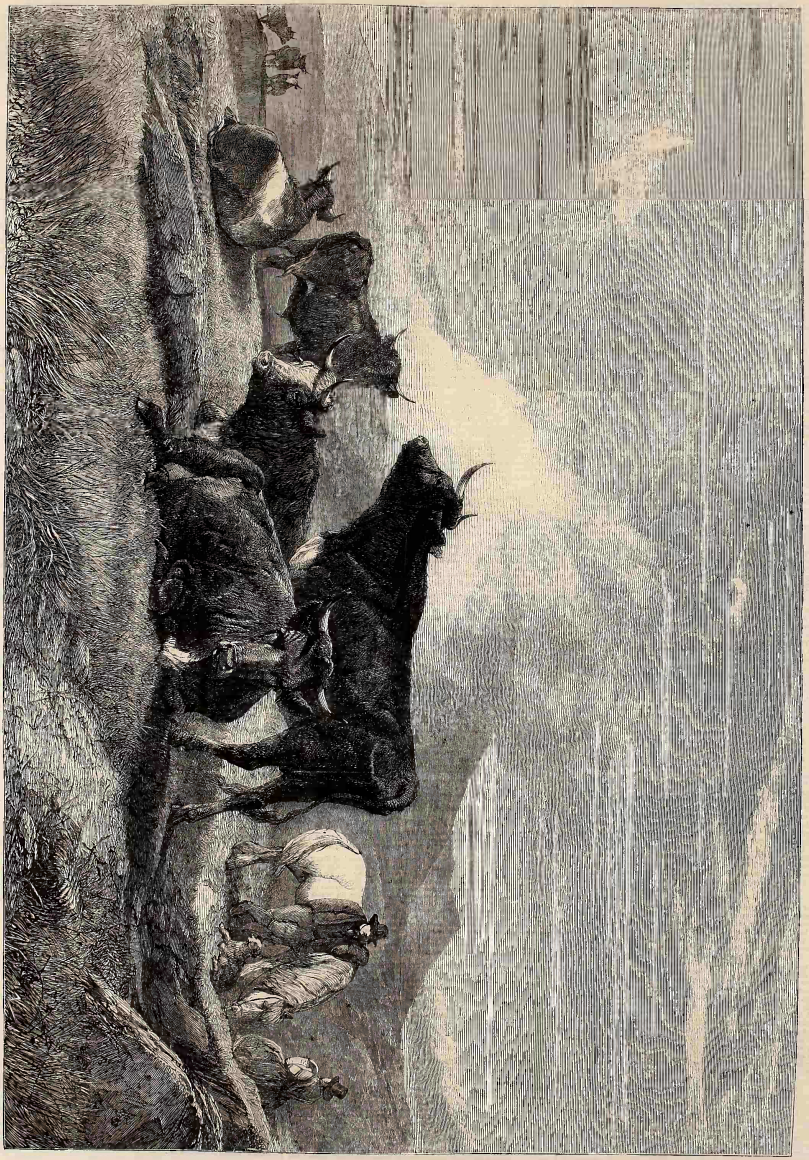
The annual meeting of the Leeds Grammar School took place on Wednesday week, and afterwards the distribution of prizes was made by the Vicar of Leeds, one of the school trustees, who spoke in favourable terms of the prosperity of the institution.

A letter from Weimar announces the approaching marriage of Liszt, the pianist, to the Princess Wittgenstein, a match which has been already spoken of.

The book fair for Southern Germany, just held at Stuttgardt, was attended by the representatives of above 400 houses engaged in the trade. The settling of accounts passed off very satisfactorily, and the booksellers, before they left Stuttgardt, made the necessary arrangements for applying to the Federal Diet, German Governments to enact new laws for regulating the handling of books, and protecting article productions against photographic pirates.



THE NATIONAL WALLACE MONUMENT, ABOUT TO BE BUILT ON THE ABBEY CRAIG, NEAR STIRLING.—SEE SUPPLEMENT, PAGE 18.



"A REST ON THE ROAD TO THE FAIR," BY H. B. WILLIS, IN THE EXHIBITION OF THE ROYAL ACADEMY.—SEE PAGE 10 [illegible]

SKETCHES IN PARLIAMENT.

We are in July. Time was when at this date that Heraldian process the nomenclature of which has been somewhat profusely adopted in Parliament was formally announced as imminent. As yet the right Minister has declined to state when the measure is to commence. All that he has done towards indicating an idea of bringing the Session to a close has been recommending a kind of suicide to independent members—a choice between the two ways of severing themselves which they could not fail to deliver themselves, and about two hours of a precious business night were wasted in a very pretty exhibition of a precious business night were wasted in a very pretty exhibition of a cut which will be that the course of Parliament is like that of a hot shoe in a circus, always going at what appears to be a fast gallop, but everlastingly in a circle, so that no goal is ever reached, and the affair is only brought to an abrupt and ludicrous end by the physical exhaustion of the performer. At this period of the year the House of Commons presents the singular anomaly of a place where a chance of showing their quality in the House, although the outside world has no means of appreciating it, may be lost by going to morning prayers. Just the verse of rule which has descended on the House still prevails, and some of these quiet patriots who, happening to be in a metropolitan church, and are liable to be called upon to receive from influential publicans in the lobby every day if their names are not in the debates the night before, are always alarmed directly they find themselves alone by being the stage which it is intended to get through, and for which alone morning sittings are adopted, and move immediately that the House prays to the Lord for o'clock, when the Speaker leaves the chair for twenty minutes, and half a clause is got through.

The cry is still "Time" for the two hundred and fifty members of the nation. But somehow there is found opportunity and many long hours for considering the affairs of the Metropolis. There are some youthful, and some pseudo-youthful, gentlemen in Parliament who, in default of more legitimate vents for their energy superfluous energy have the grievance of Metropolitan Boards, and doing humanity service when they present them in a sort of caricature to that British Institution which is so hospitable to the eccentric from through the home legislation of the United Kingdom. Look at one night, when Mr. Baillie Cochrane solemnly brought down an indictment against the Carlisle Fund committee, which was of such importance—or rather impotence—that it could not manage to stir up the English spirit to a greater height of wrath than a debate which occupied by some £2000. This terrible machine, it seems in the eyes of Mr. Cochrane, Sir George Bowyer, and Mr. Pope Hennessy, was the monument of a desire to do away with the law of nations, and simply treason to gentlemen who rate subscriptions for the Pope, and who have a feeling for a French General who has "put down" the rebellion in the one season against "perfide Albion." There was name, to be used in the same sentence with Garibaldi, and Victor Emanuel, a one result of the debate which, terrible machine, it seems in the eyes of the Attorney-General, actually got roused, and uttered a few smart and sensible sentences. Mr. Bouverie, the Member for Kilmarnock and the Premier as to whether he was big enough for the vacant place which ought to have been left for the birth of succession. The birth of the world, which Parliament relieved in the reports of the debates, supposes that the wrongs of Poland were dealt upon the other evening by a deputy-sympathising House of Commons. It was not so. In showing interest in a subject there, of course, is by a large assemblage of members. Now the fact is that the House was not half full when Mr. Hennessy was speaking (with an interlude of an attempt to "count," prevented only by a rush of Members who had one of their number speaking on matters speaking on); of fifteen when Mr. Monckton Milnes was delivering a very mild poem in the metre—if it be metre—and diction, and of fifteen when Mr. Roebuck, in the same possible voice, tried to avoid the trap which had been set for him by the utterance of a few nothings which would have sounded very like a "no" from

NATIONAL SPORTS.

AT HOYDON it could not boast of the brilliant fields which we have seen there, the Stockbridge Thursday hacked none of its wonted visitors. John Day was, as usual, clerk of the course, but did not mount the scarlet coat, to which "Old John" was so partial on these festivals; and "Uncle Sam," the celebrated steersman of Gustavus, Friam, Pyrrhus the First, and Mendicant, was installed as janitor of the new Stand. Barballs gave Prime Minister another lift in the 200 sov Plate; and Fairwater at last rewarded Tom Oliver's care by making a complete example of Cosmo, Jun., in the Stewards' Plate. In spite of the 7lb. extra, William Day fanned nothing for Alexander (who is barely fifteen hands), but Mr. Merry had quite a fresh horse to pull out against him in Costa, the son of an Oaks and St. Leger winner and, according to the judge, Mr. Manning, a race, in which Costanza sole in a most determined style, ended in a dead heat. It is difficult to see how a mistake could have been made, as the horses finished close together. Still Alfred Day declared that he won by nearly a neck, and those who were opposite the chair were of the same opinion. Costa is a very own-built and capitally-bred horse, and, when he has had a little more work, we fully expect to see him help off some of his heavy engagements.

The Newmarket July Meeting commenced on Tuesday with about as meagre a programme for the day as was ever issued; and were it not for the July Stakes, the third and last on the card, there would have been a very poor show indeed. Thormanby's two year old wins and beating in mind Costa's running at Stockbridge, already referred to, Mr. Parr may be said to possess a rather formidable Derby team.

The race on Wednesday was preceded by an event which excited a melancholy interest—the sale of the late Duke of Bedford's stud. The Marquis of Exeter, the Earl of Yarborough, Lord Zetland, and many other noblemen and distinguished members of the Jockey Club were there, and it would have done the memory of that excellent man good had he witnessed the solemn dignity of the great Conservative chief as he listened to Mr. Tattersall while he discoursed of the merits of the stud of the deceased Duke of Bedford. The Stanford Plate was won this, the second year of its inauguration, by Thunderbolt, a four-year-old son of Orlando, and fell to the lot of Mr. Merry for the second day in the year's Derby. Sir Joseph Hawley purchased the training establishment for 2500 guineas.

Newmarket attended its annual carnival last week, and Carlisle held its meeting on Tuesday and Wednesday in this. Joey Jones, who so completely put the nationality of the Londesborough party by his victory in the Northumberland Plate, was, in turn, doomed to signal defeat in the Cumberland Plate on Tuesday, thus affording the City of the West a small kind of revenge for the signal punishment which the Northumbrians to nothing both meetings in the same week. Under hand 10st. the Cumberland Plate became the property of Mr. Osbaldeston Oldmeister, and ran Brusque (whom he "savaged" at the finish) to a head for the Queen's Plate.

Specular, who had to Cumete or Lord Faucenberg to confront him, won the Rumier Sire Prize at Ripon last week; and the Romford Show brought two very remarkable horses to the post, belonging to Mr. Westwood Cluffy. The winner, Fee Trade, by Theon, was sixteen years old, and had carried his services to the Stud in England and Ireland; the highly commended Bendigo by Sir Hercules was six years his senior, and could boast of 500 days in thirteen seasons.

The race meeting for next week are—Liverpool, on Tuesday, Wednesday, and Thursday; Abingdon, on Tuesday and Wednesday; Pontefract, on Wednesday and Friday; and Mansfield, Friday. The Liverpool Cup, which was once quite a lion of the year in betting circles, seems to have utterly lost its prestige, and so far it has figured but very little in the betting of the Metropolitan quidnuncs.

The Surrey and Cambridgeshire match was marked by a most wonderful exhibition of batting on the part of Mr. Lyttelton, who never left the wicket from the score was at 7 and left it at 229, and the latter when it was at 10 and left it at 227. They both made runs amazingly fast, only giving a chance between the wickets, and never ran more than seven runs apart, and the wicket-ranging and the subscriptions flowed in to the tune of £20 when the "Cambridge Slogger" made up his 100 and the other with 108 for his score, came up to the pavilion to receive the public acknowledgement of their masterly defence and hitting. Also on behalf of Cambridge, who made a good innings; while Julius Caesar was great in this respect on the Surrey side.

The Cambridge and Player match at Lord's formed the lasting topic of conversation in cricketing circles during the week, but it was patent to all judges who witnessed the contest that the Gentlemen never stood a chance, nor the Players a stronger team into the field. Moreover, the former had had luck from the start, commencing by losing the toss, and the little stuck to them. Mr. Ross (5) and Lyttelton beautifully bowling Carpenter before he scored with a "no ball" after which escape he was not got out for 51. But when Lyttelton was, however, the best bowler on the side of the "Ineffables," and finely bothered Hayward. Mr. Miller played up his old form in the Gentlemen's second innings, but three of 5's and 4's being as good things with the bat as any in the match. Mr. Ellis headed the Gentlemen's first innings score with 24: and Daft, Lockyer, and others did good service for the professionals, who fairly out-bowled, out-batted, out-fielded, and out-generalled the Gentlemen in a first match of the kind. Another match between them is now progressing on the Oval, and the bat and ball will create an attraction at Lord's on Monday, Tuesday, and Wednesday next between Kent and England; at Manchester between the two Elevens, and at the Oval with a Gentlemen's match: the latter two on Thursday, Friday, and Saturday.

NEWMARKET JULY MEETING.—TUESDAY.

Handicap Plate of 60 sovs.—Eastern Princess, 1. Bonduil, 2. Plate of 50 sovs.—Midia, 1. Mahmoud, 2.
July Stakes.—Toluma, 1. Costa, 2.

WEDNESDAY.

Sweepstakes of 100 sovs.—Chittara's Daughter, 1. Pargala, 2.
Handicap Plate of 50 sovs.—Lucetta, 1. Aetolia, 2.
Sweepstakes of 10 sovs.—Rescorter, 1. Hambleton Lass, 2.
Sweepstakes of 10 sovs.—Mr. Walton, 1.
Stanford Plate.—Thunderbolt, 1. Stampede, 2.
Sweepstakes of 10 sovs.—Bath Paper, 1.
Town Plate.—Eastern Princess, 1. Midia, 2.
Plate of 50 sovs.—Don del Lago, 1. Night Revel, 2.

THURSDAY.

Handicap.—Little Lady, 1. Lady Derby, 2.
Handicap of 10 sovs.—Gimcrack, 1. Bonduil, 2.
£50 Handicap Plate.—Cosmopolite, 1. Waterwheel, 2.
Sweepstakes of 10 sovs.—Costa, 1. Kangaroo, 2.
Midsummer Stakes.—Diophantus, 1. Ranger, 2.
Selling Sweepstakes.—Rosalind, 1. Filly by Talmor, 2.

CARLISLE RACES.—TUESDAY.

Cumberland Volunteer Stakes.—Locheil, 1. Wallachia, 2.
Grand Stand Handicap.—Highflyer, 1. Kirkdale Lass, 2.
Cumberland Plate.—Prince of Denmark, 1. Oldmeister, 2.
Ribble Hill Plate.—Eastarth Tub, walkover.
Her Majesty's Plate.—Bivouac, 1. Underhand, 2.

WEDNESDAY.

Corby Castle Stakes.—Locheil, 1. Wallachia, 2.
Surrey Handicap Stakes.—Patrick Vale, 1. Zachariah Tutt, 2.
Lottery Stakes.—Inkerman, 1. Oldmeister, 2.
Consolation Scramble Handicap.—Young Viscount, 1. Montrose, 2.

WORCESTER RACES.—THURSDAY.

Trial Stakes.—Scapegrace, 1. Broad Arrow, 2.
Worcestershire Stakes.—Fairwater, 1. Van Stroom, 2.
Crown Stakes.—Billy Dreadnought, 1. Sunbeam, 2.
£50 Handicap Plate.—Curlew, 1. Jessie Brown, 2.
Macclesfield Stakes.—Fairy Queen, 1. Charles Fox, 2.

CRICKET.—All England v. Broughton: The annual match between the All-England Eleven and eighteen of the Broughton Club was brought to a close last Saturday, on the Broughton ground, Manchester. The Broughton Club were again victorious. All England's innings was 216 and Broughton's, 217.

Thought vs. the House of Lords and Commons: This match was played on Lord's Ground last Saturday. Only one innings each was played, and the following score will illustrate the game:—Lords and Commons, 161; Zingari Club, 116.

County of Surrey v. Cambridgeshire: Last Saturday (the third day), at the Surrey ground, Kennington Oval, this match was concluded, Cambridgeshire winning by two wickets. Surrey numbered 187; and Cambridge, 189.

The annual cricket-match between Winchester and Eton came off at the latter college on Friday and Saturday last week, and terminated against Winchester. The following is the score:—Winchester, 78 and 98; Eton, 112 and 65, with nine wickets to go down.

The Gentlemen of the Surrey Club v. The County of Kent: This match, played on Monday and Tuesday at the Oval, was brought to a conclusion in favour of the County of Kent by 158 runs. The full score of the match is as follows:—Kent, 153 and 158; Surrey, 115 and 36.

The Gentlemen v. The Players of England: This match was played on Tuesday and Wednesday at Lord's Ground, and brought to a conclusion with the defeat of the Gentlemen in one innings, by 40 runs. The following is the complete score:—Players of England, the Gentlemen, 70 and 116.

AQUATICS.—Royal London Yacht Club: The annual regatta amongst the first-second class cutter yachts of this great metropolitan club came off on Wednesday. The following is the result:—Mary, very valuable, there being two for the first class, and one for the second; the former sailing from Erith round the Nore Light-vessel and back, the turning distance for the second class being off Southend Pier, each class receiving a time allowance of half a minute per ton. The race terminated as follows:—

	Tons.	h. m. s.		Tons.	h. m. s.
Crystabel	77	3 30 0	Oberon	75	3 30 45
Mary	76	3 30 0	Wizard	75	3 31 0

Mr Arrowsmith presented the first prize of the first class to Mr. Lane, owner of the Crystabel; and the prize of the second class to Mr. Hewett, owner of the Oberon.

COUNTRY NEWS.

Lord Palmerston has sent a donation of £25 to the Leeds Bagged School and Shoeblack Society.

One evening last week, at Henley-on-Thames, a man lay down to drink with his friends after a fatiguing journey, fell on the floor and killed him. His body was forced some inches into the earth.

The Rev. Llewellyn Powell, who was drowned at the time Corsair, of Chelsea, under the Rector of Liverpool, has been committed for trying other divers upon charges of having stolen a gold watch from another.

The wife of the Rev. F. Gooch, Bayington Rectory, Coventry, and of the late Sir Thomas Gooch, Bart., was thrown from her chaise while going to bed, owing to inadvertently hearing some Rimmel's vinegar, and was so injured that she died the following day.

Mr. F. Atkin, who carried on business at Manchester under the firm of Frank Atkin and Co., lately insolvent, was tried at the Manchester City Sessions last week on a charge of fraudulent bankruptcy, and found worth of coins from Messrs. Miles and Sevitle. After six hours' investigation the jury found him guilty, and he was sentenced.

A dreadful accident occurred on Tuesday in a railway tunnel near the town of Rossendale, in Lancashire, to a man named Holden Hall. A portion of the roof fell in, burying a number of men who were engaged in excavating. Of the number thus buried, Hall was the most severely hurt of life, while a fifth was terribly injured, and died on the following morning.

The election for Wolverhampton, in place of Sir R. Bethell, terminated in the return of Mr. Gilpin, the Liberal Conservative candidate for Southampton, and Governor of the Bank of England. The numbers at the close of the poll were—Gilpin, 1,679; Sergeant Hill Townshend, 1,673. There were 20,000 people round the hustings at the close, and some rumours of a breach of the peace, but nothing occurred.

The inauguration of the Luton Industrial Exhibition Bazaar took place on Monday in the exhibition building, Luton. A vast crowd assembled on the occasion, and the object was to raise the sum of £1,000 of money to pay off a debt contracted in building Christ Church, a new edifice for the use of the parish, and to enable the poor parishioners to be in a position to exhibit the various processes in the manufacture of straw plait at the present time, from the cultivation of the straw to the production of the finished article. The manufacture of the Bedfordshire pillow-lace was also exhibited. The proceeds amounted on Monday (Saturday).

The Lady Nyassa, the yacht which was recently built for Dr. Livingstone, left Southampton on Thursday week for the mouth of the Zambesi, on arrival at which place she will be conveyed thirty-four miles inland, by means of craft on the banks of the Nyassa, an unexplored river, on launched.—*Sotumes.*

The annual inspection of the Chatham division of the Royal Marines, by Major-General S. B. Wesley, Deputy Adjutant-General, took place last Saturday.

In consequence of recent reductions in the Army Medical Department, there will be no more examinations this year of candidates for Army assistant-surgeoncies.—*Medical Army Gazette.*

The only movement of importance in the camp at Aldershott last week, independent of the usual routine of duties, was the arrival on Thursday and Friday of the 33rd Regiment, under the command of Lieutenant-Colonel Hay, and the 97th Regiment, under the command of Lieutenant-Colonel Lysaght, from the Curragh of Kildare, in Ireland, to North Camp in the superb mess of the 84th Regiment. An account of some brief, but very interesting, experimental practice with a battery of field-day formed also one of the events of last week. Lieutenant-General Sir J. Pennefather, accompanied by his Staff, inspected the assembled troops.

In a pamphlet recently published by Mr. Lewis Gompertz, it is speedily ordered that in the future entry of men for the Navy petty officers and able seamen are to be rated as ordinary, with only a small increase of pay as may have previously served in the Navy, and so may be considered desirable men for the Navy. The object is to be attained by the fact that the men so to be rated as ordinary are not physically fit, and likely hereafter to prove valuable seamen. Mr. Gompertz is of opinion that under their lordships trust that every exertion may be made for their training.

A Warsaw letter published in the *Dresden Journal* says:—"From time immemorial it has been the usage here to throw wreaths of flowers into the Vistula on the eve of St. John, either to honour the memory of the ingenious Nepomuk, the patron saint of bridges, who, for refusing to disclose to the king the secrets of the confessional, was thrown from the bridge of Prague, or to draw auguries from the floating or sinking of the wreaths. On the night of St. John, therefore, a vast crowd, of the whole population, dressed in their best attire, took to the river side and the bridge to take part in the ceremony. Every one to be married that year deposited at the spot usually selected for that purpose; but the public, instead of going there, went to the bridge of Nepomucky, in order to see the fun, and threw their wreaths of roses and thorns on the graves of the victims who fell on the 8th of February, 1831, in the battle. The sounds of cannon in mourning were present, and all joined in repeating the national prayers and singing patriotic hymns over the graves."

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

NOTWITHSTANDING that the new Loan, when viewed in a commercial light, is considered rather more favourable, the transactions in most national securities, during the greater part of the week, have been of a very unsatisfactory scale; nevertheless, as the supply of stock about has not increased, prices have, on the whole, been well maintained. Consequently, the Loan has changed hands heavily, at further depressed rates.

The Bank continues overflowing with capital; yet in every instance the rates of discount, arising from an active demand for accommodation, have fallen on the Loan. The lowest quotations for the best commercial bills are as follows:—

	Per Cent.		Per Cent.
Three months' Bills	.. 3½ to 4	Four Months' Bills ..	.. 4 to 4½
Two Months' Bills	.. 3½ to 4	Six Months' Bills ..	.. 4½ to 5

In the Stock Exchange very little money can now be obtained, and the lowest price to 5½ per cent.

The new Indian Loan of £4,000,000 has been officially announced. It is to be issued at £94 per £100 stock. In July, 1857, Bonds, accompanied by a deposit of 5 per cent, will be received up to Friday, the 19th inst., and the whole amount will be payable to the Bank of England, on account of the Secretary of State for India in Council in January and July. The minimum price has not been fixed, but we think that it will be about 98.

Several parcels of foreign coin, chiefly Russian, have been disposed of to the Bank during the past week, at 76s. per oz. for gold bars with a trifling premium for the dollar-looking Spanish coin and the large sum of £229,185. The exchange at New York continues favourable, and the Bank has received £100,000 in gold from that port. Also £50,000 from the West Indies, and £274,681, including £140,000 on Government account, to India and China.

Owing to the scarcity of the stock of gold the Directors of the Bank of France have determined to pay their drafts in silver. The same course is likely to be pursued by the Bank of Australia.

The report of the Republican Bank of London states that a further return of 2½ per share will be made to the shareholders, making 45s out of the £50 paid up.

At the half-yearly meeting of the shareholders in the Colonial Bank a dividend at the rate of ½ per cent per annum was declared. The reserve fund now amounts to £62,714 18s. 6d.

Most of the Continental exchanges are somewhat favourable. In the value of money very little alteration has taken place compared with the previous week.

The dealings in the Consols and Indian Market on Monday were on a very moderate scale:—Consols for Money were done at 93¾; for Account 93⅞; Reduced and New Three per Cents sold at 93¼; Long Annuities, March, 12⅞ to 9-16; Bills, June, 7s. to 9s. Bank Stock was 228 to 230; Ruper Paper, 94½ to 100½. India Bonds realised 20s. to 12s. discount. On the following day prices ruled almost stationary; but the transactions were very limited:—Bank Stock, 230½; Reduced and New Three per Cents marked 93¾; Consols for Transfer, 93¾; for Account, 93⅞; India Stock, 224 to 226; Long Annuities, 1885, 12½; Exchequer Bills, March, 12s. to 9s. 12s. dis.; India Bonds, 7s. 2s. discount. India Five per Cents were 99¾; Ditto, Debentures, 95¼ to 96; Ditto, Bonds, 10s. dis. India Four per Cent Paper was 74½. There was rather more firmness in the quotations on Wednesday:—Consols for Money, marked 93¾; for Time, 93⅞; Reduced and New Three per Cents, 93¼; New Three-and-a-Half per Cents, 95. Bank Stock was 229½ to 229; Exchequer Bills, 12s. to 9s. dis.; India Bonds, 12s. to 10s. discount. On the next Great Seal was done at 93¼; and the Five per Cent Rupee Paper at 94. On Thursday the Bank of England, by Council, for Money, sold at 93½; for the Account, 93⅝ to ¾; the Reduced and the New Threes, 93¼ to ⅜; Bank Exchequer Bills, 11s. dis.; Ditto, June, 7s. to 9s. dis.; India Bonds, 12s. dis.

With the exception of an advance in the value of Turkish Stock very little change has taken place in the value of the Foreign Securities dealt in during the week, and even here to a very moderate extent as follows:—Brazilian, Five per Cents, 101½; Brazilian Five per Cents, Small, 1858, 101½; Dutch, Four per Cents, 94¼; Four-and-a-Half per Cents, 80½; Mexican Three per Cents, 21½; New Granada Three-and-a-Half per Cents, 19½; Peruvian Four per Cents, 1849, 80½; Ditto, Ufthavens, 81 ¼ex div.; Peruvian Three per Cents, 71½; Portuguese Four per Cents, 1853, 44½; Russian Five per Cents, 1822, 104½; Ditto, Five per Cents, 1859, 104½; Spanish Three per Cents, 49; Ditto, New Deferred, 41½; Ditto, Passive, 14¾; Turkish Old Six per Cents, 1858, 87½; Ditto, New Six per Cents, 1858, 86½; Dutch Two-and-a-Half per Cents, 64¼ ex div.; and Dutch Four per Cents, 99¾.

Joint-stock Bank Shares have been in limited request; nevertheless, the quotations generally have been well supported. Bank of Egypt have sold at 18¼; Chartered of India, Australia, and China, 21½; Colonial Bank, 2½ ex div.; Indian, London, and China, 22¾ ex div.; London and County, 35¾; London and Westminster, 8¾; and Union of Australia, 31¼.

Ocean Marine Insurance Shares have been done at 3¾ to 3¾ prem.; Thames and Mersey, 2¾ to 3 prem.; and Universal Marine, 1¾ to 1 7-8 prem.

A fair amount of business has been passing in Colonial Government Securities. Canada Six per Cents have realised 114 ex div.; Ditto, Five per Cents, 104 ex div.; New South Wales Five per Cents, 1871 to 1876, 97¾ ex div.; Ditto 1868 and 1869, 98¾ ex div.; Ditto, Four per Cents, 1867 to 1872, 97¼ ex div.; and Victoria Six per Cents, 105.

The Railway Market has been devoid of animation. Crystal Palace Six per Cent Debentures have sold at 102½ National Discount, 93; North British and Australian, 4½; Ditto, Four per Cent Debentures, 94¼; Peninsular and Oriental Steam, 87½; Ditto, New, 40; Royal Mail Steam, 93½; Sidmouth Working Railway, 10; Old Australian Mail Steam, 1½; and Wolf Tavistock, 2¾ ex div.

In the Railway Share Market the dealings have been on a very moderate scale. On the whole, however, prices have been tolerably firm. The following are the Companies' official closing quotations:—

ORDINARY SHARES AND STOCKS.—British and Exeter, 36¾; Caledonian, 87; Eastern Counties, 10¾; Edinburgh and Glasgow, 110; Great Northern, 107½; Great Western, 71½; Lancashire and Yorkshire, 112½; London and Blackwall, 37½; London, Brighton, and South Coast, 84; London and North-Western, 93½; Midland, 102½; North British, 63½; North Eastern—Berwick, 105½; Ditto, Leeds, 98½; Ditto, York, 104½; South Eastern—Dover, 72½; Tenbigden and Grantham Railway and Canal, 86; South-Eastern, 82½; South Wales, 93½; and York, Newcastle, and Berwick, 79½.

LIKE ISSUED AT A FIXED RENTAL.—Chester and Holyhead Five per Cent, 112.

PREFERENCE SHARES.—Great Western Four-and-a-Half per Cent, 92 ex div.; Ditto, Five per Cent, 1863-4-5, Guaranteed, 107½; Ditto, Five per Cent, and Brighton Four per Cent Preference, 90; London, Chatham, and Dover—Metropolitan Extension, 6½; Ditto, Preference, 12½; and Ditto, New, 12½.

THE MARKETS.

CORN EXCHANGE, July 1.—*The supply of* English wheat in to-day's market was only moderate. Selected samples of both red and white were disposed of at full prices; but the middling and inferior qualities of all kinds of wheat were a dull sale, at a decline of 1s. per quarter on the currency quoted last Monday. Barley and malting were in good request, at former rates. Grinding barley was 1s. per quarter cheaper. Fine malting was fully supported, and realised extreme prices. Grey peas were 1s. dearer. Boilers and maples were in steady request, at full quotations. Otherwise the trade was heavy. Good sound oats commanded former terms. Inferior and heated samples, as well as corn of new growth, were a slow sale, at a decline in the value of 1s. per quarter. Beans were 1s. per quarter dearer, for which cut of either kind of produce was in a sluggish state, at Monday's currencies.

English.—Wheat, English and Scotch, white, 52s. to 55s.; Scotch and Suffolk, red, 50s. to 52s.; rye, 30s. to 32s.; grinding barley, 22s. to 23s.; distilling ditto, 25s. to 26s.; malting ditto, 28s. to 30s.; Chevalier, 32s. to 34s.; Yorkshire and Lincolnshire ditto, 30s. to 32s.; Kingston, 30s. to 32s.; Chevalier, 32s. to 34s.; Yorkshire and Lincolnshire feed oats, 18s. to 19s.; Scotch feed, 20s. to 21s.; Dutch, 19s. to 20s.; Irish, 18s. to 19s.; potato ditto, 20s. to 21s.; Dutch, 19s. to 20s.; Irish, 18s. to 19s.; potato ditto, 20s. to 21s.; poland ditto, 20s. to 21

GROUP OF ANIMALS LATELY RECEIVED AT THE GARDENS OF THE ZOOLOGICAL SOCIETY, REGENT'S PARK.—SEE TEXT P. 624.

THE NEW

LORD CHANCELLOR.

THE Right Hon. Richard Bethell, Baron Westbury, of Westbury, in the county of Wilts, the new Lord Chancellor, is the son of Richard Bethell, Esq., M.D., and is descended from the old Welsh family of Ap Ithell. He was born in 1800; was a Fellow of Wadham College, Oxford, where he was first class in classics and second in mathematics, in 1818, having taken his degree of B.A. before reaching the age of eighteen. In 1821 he was elected Vinerian Fellow. He was called to the Bar at the Middle Temple in 1823; became A Queen's Counsel in 1840; was Solicitor-General from December, 1852, till November, 1856, and Attorney-General from that date till March, 1858. He was re-appointed Attorney-General in June, 1859. He at one time held the office of Vice-Chancellor of the County Palatine of Lancaster. From a very early period of his career he held a prominent position at the Chancery Bar, and for many years has been acknowledged as its head. He sat in the House of Commons for Aylesbury from April, 1851, till May, 1859, when he was elected for Wolverhampton. In politics he is a Liberal, being an advocate for the ballot and the abolition of church rates.

Our Portrait of Lord Westbury is from a photograph by Mayall.

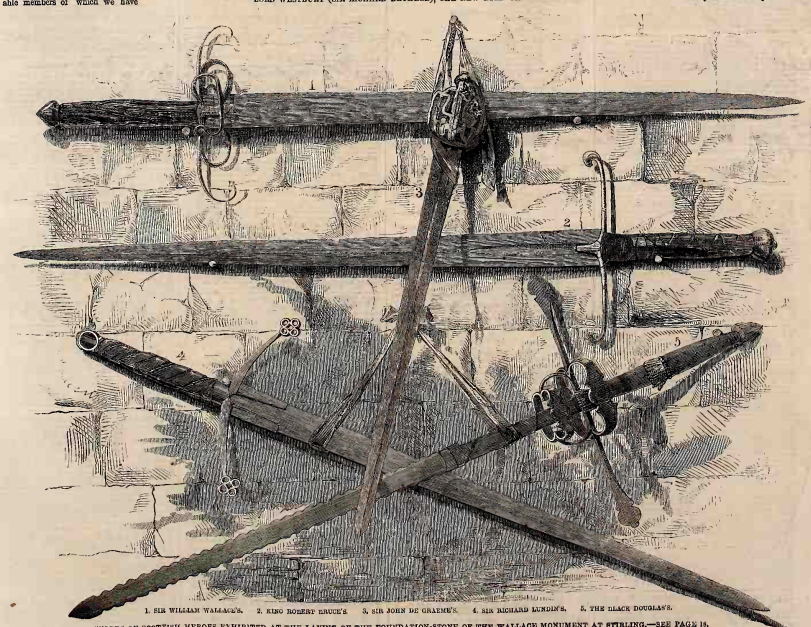
LORD WESTBURY (SIR RICHARD BETHELL), THE NEW LORD CHANCELLOR.

ANIMALS RECENTLY RECEIVED AT THE ZOOLOGICAL SOCIETY'S GARDENS.

THE accompanying group of animals represents the principal members of a valuable living collection lately received by the Zoological Society of London from Sir George Grey, the Governor of the Cape of Good Hope. Sir George has always been a liberal patron of the Zoological Society, and on his return to his government last autumn offered to take with him a collector and agent of the society for the purpose of conveying back to England from time to time such living animals as he might be able to obtain for presentation to the society's menagerie in Regent's Park Gardens. This offer was gratefully accepted.

About a month ago the first fruits of Sir George's Grey's liberality arrived in the shape of the fine series of animals, the more noticeable members of which we have figured in the Illustration on the preceding page.

The Burchell's zebra is a female, and particularly acceptable to the Society's collection, since they previously possessed only a male of this species. The blaaubok, grysbok, reinbok, steinbok, and philantomba are five species of the beautiful family of antelopes. The hyrax, or rock rabbit of the Cape colonists, of which Sir George Grey has sent over numerous specimens, is a particularly interesting animal, as being a close ally of the Syrian hyrax, or rock-loving coney of the Holy Scriptures. This curious little animal has, however, nothing to do with the rabbits, nor, indeed, with the class of rodents to which the rabbits belong; but, strange to say to say, is most nearly allied in every detail of structure to the tapirs and rhinoceroses, and belongs to Professor Owen's class of Perissodactyles. Of the two cranes represented on the right hand of the Engraving the society had previous examples of the Stanley crane in their gardens; but the beautiful carunculated crane of South Africa (*Grus carunculata*) had been absent from their collection for several years, and this specimen is a most acceptable addition to the already large living series of this group of birds. The island hen (from the island of Tristan d'Acunha) was perhaps, to naturalists, the most interesting object in the whole collection. It is a bird nearly allied to our common moorhen (*Gallinula chloropus*), but, upon accurate comparison, readily distinguishable by its thick, strong legs and undeveloped wings, which render it incapable of flight. These and other anatomical differences have been described at length by Dr. Sclater, the secretary of the society, at one of the scientific meetings held during the past month, and the name, *G. nesiotis*, proposed for the bird—which was previously unknown to science—from the Greek term, *νησιωτις*, "an islander." To the large and daily-increasing number of naturalists of the "Darwinian" school this bird is most interesting as showing the way in which animals are modified in accommodation to circumstances. The organs of flight would be of little use to a moorben in the dry, volcanic, lush-covered rock of Tristan d'Acunha, while speed in running becomes doubly valuable where there are no sedgy freshwater ponds (such as ordinary moorhens love) to supply a ready means of escape.



1. SIR WILLIAM WALLACE'S. 2. KING ROBERT BRUCE'S. 3. SIR JOHN DE GRAHME'S. 4. SIR RICHARD LUNDIN'S. 5. THE BLACK DOUGLAS'S.

SWORDS OF SCOTTISH HEROES EXHIBITED AT THE LAYING OF THE FOUNDATION-STONE OF THE WALLACE MONUMENT AT STIRLING.—SEE PAGE 18.

*** *The charge for the insertion of Births, Marriages, and Deaths, is Five Shillings for each announcement.*

The company has obtained the Agreement for purchasing a boat-making Establishment presently occupied by Messrs. Matthew Thompson, marine engineer, of New York, for the manufacture of boats by machinery. Mr. Thompson, after many years' experience and the successful application of his mechanical skill, has produced the most perfect machinery for boat-building, and is now constructing a complete establishment for which must be a great extent, supersede the present mode of boat-building by hand labour, and will be prepared with the greatest accuracy and economy.

The Prospectus, Reports of experts, Form of application, with specimens of the boats and machinery, and Models as shown at Society's Meeting of the 19th and "Daily News" of the 11th June, to be obtained, or may be made, at the Secretary's office on application to the Secretary, No. 16, Bishopsgate-street Within, E.C.

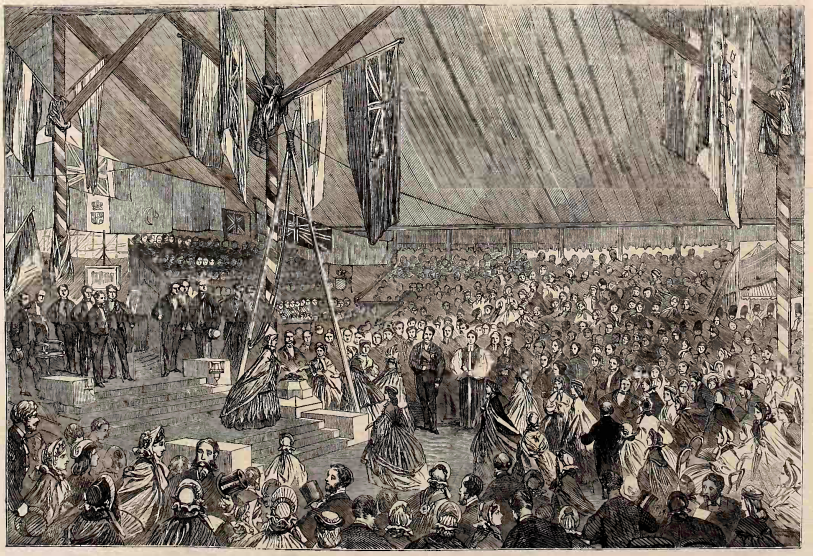
FUNERAL OF MR. BRAIDWOOD, THE LATE CHIEF OF THE LONDON FIRE BRIGADE, IN ABNEY-PARK CEMETERY.—SEE NEXT PAGE.



LAYING THE FOUNDATION-STONE OF THE MERCHANT SEAMEN'S ORPHAN ASYLUM, BY THE PRINCE CONSORT: LADIES PLACING PURSES ON THE STONE.—SEE NEXT PAGE.

FUNERAL OF MR. BRAIDWOOD.

THE remains of the late chief of the Fire Brigade were solemnly conveyed to their last resting-place in Abney Park Cemetery last Saturday, in the presence of an immense concourse of spectators. Seldom if ever before in London has such a marked tribute of public respect been paid to a private individual. The London Rifle Brigade, the Tower Hamlets Volunteers, all the public and private fire brigades, with a large number of the City and metropolitan police, and the representatives of the various great fire companies attended on the occasion, and formed part of the procession, which extended for upwards of a mile in length. Every avenue leading to Watling-street was blocked by a dense and almost impenetrable crowd, while throughout the entire length of the route along which it was to pass every path was thronged, and the windows, and even roofs, of the houses were crowded. Before those nearly all the shops were shut, and in the streets houses the shutters were closed and the blinds drawn. Every bell from the City churches rang out a funeral peal, except that in Bow-church, which the City authorities kept dumb, out of respect for the Lord Mayor's dying office.

On reaching Abney Park the procession turned from the principal entrance down Church-street to the southern gates of the cemetery, near which the Presbyterian Chapel is situated. Here the funeral service was read by the Rev. Dr. Cumming, the late chief's own minister, and was conducted with the usual solemnities. The ceremony was extremely fine, and the influence of the district made quite a gala day of the occasion. A triumphal arch was erected, and the Prince's flag was flying after five o'clock his Royal Highness ascended it, accompanied by the Bishop of London in his ecclesiastical vestments, and a numerous body of the magistracy of the district.

Mr. George Somes Clarke, honorary secretary to the institution, presented his Royal Highness an address expressing the thanks for the honour conferred on the institution by his Royal Highness, by his gracious presence on the occasion, and detailing the rise, progress, and objects of the institution.

The Prince Consort replied as follows:—"Gentlemen, I am very grateful to you for your kind address, and for the kind manner of your reception you have given me. I am glad by my presence here to-day to mark not only my own desire, at all times, by any means in my power, to promote whatever may be for the benefit of any portion of her Majesty's subjects, but also the deep interest taken by the Queen in a class of men to which the success of this country is so largely owing. You may be assured that her Majesty will hear with the liveliest satisfaction of the extended means of usefulness and efficiency which I am sure will be by the first stone will afford to your excellent institution. It must, indeed, be gratifying to your managers, and to those who have so liberally supported him to witness the success which has so far attended their benevolent and patriotic exertions, assured as we must be that the efforts which have been put forth cannot be in vain, but that they will now be directed towards the realisation and extension of the benefits of the institution to the men for whose benefit it was founded, and it is impossible to doubt that still more satisfactory results will follow. I thank you once more, gentlemen, for your address, and for the part you have taken in this very interesting occasion." This brief speech was loudly cheered at its conclusion.

His Royal Highness then descended from the platform and laid the stone with the ordinary ceremonies. The Bishop of London offered an appropriate prayer, and a hymn was sung by the children belonging to the institution. The ladies who had collected subscriptions then deposited their purses on the stone, and in a few cases a little bag of coins was added to the number. It was announced amid loud cheers that Lady Morrison had given a purse containing one hundred guineas. The Queen's name having been received with three hearty cheers were given for the Queen, and also three cheers for the Prince Consort, which he then retired.

The new institution, which will be in the Venetian Gothic style, is to be built of brick, with Arcaster freestone and Mansfield redstone facings. The accommodation is to be for 200 children (50 boys and 50 girls) in addition, whose ages vary from seven years, the period prescribed by the rules for their admission, to fourteen, the age at which each child leaves the asylum. The new building is designed to be at once ultimately to accommodate 200 children—200 boys and 100 girls.

NEW SCHOOL-CHURCH AT PLAISTOW.

THE new and handsome school-church which has been built through the exertions of the Victoria Dock Mission in the parish of Plaistow, near the Victoria Docks, was formally opened last Thursday by the Bishop of London. The presence of a large number of the chief subscribers to this most deserving missionary effort. The idea of building these schools was suggested by a letter which appeared in the Times in 1857, and which, under the title of "Pursuit of Knowledge under Difficulties," gave a graphic description of the miserable state in which the Holy Sacrament of Baptism was held, and of the wretched condition of the parish of Plaistow generally. At once a number of philanthropic and benevolent individuals established the Victoria Dock Mission, to provide both proper schools and proper and sufficient church accommodation, and a committee was organised to carry out the objects of the public meeting held at Stratford. The district over which these Londoners over the Border were scattered contained some 4000 people, but the neighbourhood in which they lived was a mere swamp, and a most unhealthy one too, from the want of proper drainage. Therefore, the first efforts of the committee were directed to the improvement of the sanitary condition of the people, and, by making energetic efforts in the right direction, they at last got a proper system of drainage introduced and thoroughly carried out, to the benefit of the health of the whole of the property. In 1857 the Bishop of London appointed Mr. Meyrick and Mr. Douglas curates. A small school was built and fitted up for them, in which they lived was a mere swamp, and a most unhealthy one too, from the want of proper drainage. Therefore, the first efforts of the committee were directed to the improvement of the sanitary condition of the people, and, by making energetic efforts in the right direction, they at last got a proper system of drainage introduced and thoroughly carried out, to the benefit of the health of the whole of the property. In 1857 the Bishop of London appointed Mr. Meyrick and Mr. Douglas curates. A small school was built and fitted up for them, in which they lived, and a large and handsome building. The chief room is plainly but very substantially fitted up, and capable of accommodating 400 scholars. The master's and mistress's house is attached to it, and there are also three fine separate class-rooms for the more advanced pupils. All the rooms are lofty, well ventilated, and scrupulously clean and well fitted, and in the rear of the building are separate playgrounds for the boys and girls. The average attendance at the school, it is expected, will not be less than 300 daily, the poorer children paying 2d. a week, and others more in proportion to the condition of their parents. On Sundays the large room will be used for church services until such time as the mission is able to build a church on a site which they have their eye upon.

FIRST ITALIAN NATIONAL FESTIVAL.

On the 2nd of June Italy celebrated her first great national festival; on the 2nd because that day was a Sunday, and a month—a month, as our readers are aware, the day set apart in Roman Catholic countries for festivals, rejoicings, and holiday-keeping of all sorts, as well as for prayer. And the first Sunday after June is the day which has been fixed on for an annual universal festival in celebration of the national unity and the national independence henceforth for ever *for ever*, after the fashion of human talk. It will be for Italy what the 4th of July is—or must we, shall we say *was?*—for the citizens of North America.

The plan on which this permanent anniversary has been established is this: In every city and town, and village, and almost in every village throughout Italy there has existed immemorially some more or less important annual festival, generally on the commemoration day of the patron saint of the locality. At Florence it was St. John's Day, on the 24th of June, which has been a great holiday and equal to the great holiday of the year with choice races, illuminations, fireworks, and so forth. Now all these old-world "feste" days will fall back into the rank of ordinary saints' days, and the Festa, whether the local one accepted by the "community," or corporation, as we should say—were spent in celebrating Italy as a united kingdom, and the resident Italian national festival. But it must be noted that all the old local holidays had a more or less marked religious, or at least ecclesiastical, character: they had all a procession, more in the streets of them, and church services made a very prominent feature of them. Now it is especially declared that the new national festival shall have no part in the commemoration day of the patron saint of the locality, or of any ecclesiastical character, nor depend in any wise for its full solemnity on any priestly ministrations. In the present temper of the country, and in view of the political part which the Italian clergy especially, have played in the recent events in Italy, it is easy enough to understand why this should be the case. And it is a significant fact that consequences of this first avowed and visible breach between church and people are likely to be far-spreading and important. Festivals, processions, and holidays are dear to the Southern Europeans. In many place manners of the clergy—principally the lower ranks of the secular clergy—have been allowed to grow into a scandal and a reproach, and the national rejoicing, by the performance of a Te Deum, on the morning of the holiday, and the attendance of the local authorities on the occasion, but the priests who have done so have fallen under the severest censure of their superiors; and the commencement of nothing less than a schism in the Church seems to be the result.

We shall probably find occasion shortly to return to this part of the subject, and before concluding our present article to refer to the political schism has already manifested itself. But our present business is with the gala doings which passed off—in Florence at all events, and, we believe, throughout Italy—on Sunday last. Of course, in spite of the graver considerations to which they may give rise; unblushing also by any means to be regarded as matters of little moment. Festivals which are necessarily gall and wormwood to them. Reports were rife on the preceding day that such would not be the case. It was whispered that the Florentines were disposed to be sulky; and those who spread the report succeeded so far in their object as to cause many of the more timid and peaceably disposed to keep out of the lower classes to shut themselves in their houses during the "festa."

The holiday was a perfectly successful one notwithstanding, for Florence was full to the very doors of the city. By common the holiday doings were concentrated in the magnificent square in the new quarter of the city, which when it opposite the railway station. And in the evening of the first celebration of Italian nationality, our artist has given a very spirited sketch of the scene. Much, it seems, was done to which abundant tricolor banners, and draperies, a concourse of people met to enjoy themselves, a lovely starlight night, and a delicious, balmy air, to which the season of the year makes no stranger, and the simple, easily-pleased people. It was intended that dancing in the Piazza Vittorio Emanuele should take place, and the band of the Grenadier Guards was engaged for the evening. But those who knew the Florentines well predicted that this would be a failure. And the result proved them to be right. The Italian lads, including grown men, prefer folk made some little attempt at jumping about in time to the music, but the attempt was a failure. The performances seem to be found to commit such a solecism in Tuscan manners as to dance in public. "They say," we heard from the lips of a pretty young woman, "that the people in the north of Italy dance in public, but we Florentines, we would not be seen doing such a thing?" And, alas! in fact, they would not be seen doing such a thing?" And, alas! in fact, they would not be seen doing such a thing?" And, alas! in fact, they

Relics of the Past.

THE GREAT FIRES OF LONDON AND OTHER CITIES IN OLDEN TIME.

THE predominant topic of conversation throughout the country for the last fortnight has been the appalling and costly conflagration near London-bridge. While this terrible fire is still burning, and public attention is still engaged in speculating upon its origin and consequences, it may be interesting to revert to some former and still more disastrous visitations of the same description.

One of the most fatal of these sweeps which English history records occurred on the 10th of July, 1212, very near the site of the present calamity. In the evening of that day a fire broke out on the Southwark end of London-bridge, and a strong southerly wind rapidly drove the flames across, eglwyd. London-bridge, as is well known, was at that time thickly covered with houses; some of these, particularly on the Southwark side, were places of public resort, and it happened on this occasion that more than three-and-twenty persons were crushed on the bridge. The flames, beginning on the extreme south, soon communicated by sparks, borne by the wind, with the wooden structures on the north, and stripped inestimable property as saw itself surrounded by a belt of fire—

Then shriek'd the timid, and stood still the brave.

On the Southwark side retreat was impossible; there was an immense block of buildings, including the Church of St. Mary Overy, sent forth volumes of flame and smoke, through which none could penetrate and live; on the City side the danger was scarcely less imminent. The latter, however, seeming to offer the greater chances of escape, the frantic crowd pressed on in undivided eagerness towards the north, driving those in front right into the flames. In a short time the passage was choked by the bodies of those who fell. The wretched people then could look for safety only from the river. What followed is graphically told by Stow—"There came to their aid many ships and vessels, into which the multitude so suddenly rushed that the ships were thereby sunk, and they all perished. It was said through the fire and shipwreck there were destroyed about three thousand persons whose bodies were found in part or half burned, besides those who were wholly burnt to ashes and could not be found." It is hardly credible that such an enormous loss of life could have occurred in a fire so confined in scope as this appears to have been, but Stow's account is substantially confirmed by all the ancient writers of the time.

The next important conflagration in the metropolis was the so-called Great Fire of London. This terrible fire began on Sunday, Sept. 2, 1666, after midnight, in the house of a baker in Pudding-lane, not far from old London-bridge, and close to where the Monument now stands. There are several accounts and versions of the Great Fire, but none more real and stirring than the sketches of John Evelyn and Samuel Pepys, who were eyewitnesses of the ghastly and terrible spectacle. Describing the aspect of the City the day after the fire commenced, Evelyn says—"The conflagration was so universal, and the people so astounded, that, from the beginning, I know not by what despondency or fate, they hardly started to quench it; so that there was nothing heard or seen but crying out and lamentation, running about like distracted creatures, without at all attempting to save even their goods, such a strange consternation there was upon them. So it ismed both in heaven and earth, the churches, public halls, Exchange, hospitals, monuments, and ornaments, leaping, after a prodigious rate, from house to house and street to street, at great distances one from the other; for the heat, with a long set of fair and warm weather, had even ignited the air, and prepared the materials to conceive the fire, which devoured, after an incredible manner, houses, furniture, and everything. Here [at the Bankside, Southwark] you might behold the Thames covered with goods floating all the barges and boats laden with what some could save, and the carts and coaches, which instantly were fired and carried in conflagration heaps one upon another. Now no sermons nor lectures could expect auditories; all the churches and publique places were filled with the miserable and distressed, who came and came laden with what they could bring to save their goods, such a strange consternation there was upon them. So it ismed both in heaven and earth, the churches, public halls, Exchange, hospitals, monuments, and ornaments, leaping, after a prodigious rate, from house to house and street to street, at great distances one from the other; for the heat, with a long set of fair and warm weather, had even ignited the air, and prepared the materials to conceive the fire, which devoured, after an incredible manner, houses, furniture, and everything. Here [at the Bankside, Southwark] you might behold the Thames covered with goods floating all the barges and boats laden with what some could save, and the carts and coaches carrying out to the fields, which lay open; cellars were strewed with persons there to watch and tents erecting to shelter both people and what goods they could get away. Oh, the miserable and calamitous spectacle! such as the like the world hath not seen since the foundation of it, nor can be outdone till the universal conflagration thereof. All the sky was of fiery aspect, like the top of a burning oven, and the light shone upon many furlongs round about. God grant mine eyes may never behold the like who now saw above 10,000 houses all in one flame; the noise and crackling, and thunder of the impetuous flames, the shrieking of women and children, the hurry of people, the fall of towers, houses, and churches, was like a tempest, and the air all about so hot and inflamed, that at the last one was not able to approach it, so that they were forced to stand still and let the flames burn on, which they did for near two miles in length and one in breadth. The clouds also of smoke were dismal, and reached upon computation near fifty miles in length. Thus I left it this afternoon burning, a most woful spectacle or the last day."

Pepys's inspiring account of the scene, and of the panic-stricken authorities, is full of interest also:—"I to Whitehall . . . and did tell the King and Duke of York what I saw; and that, unless his Majesty did command houses to be pulled down, nothing could stop the fire. They seemed much troubled, and the King commanded me to go to my Lord Mayor [Sir Thomas Bloodworth] from him, to command him to spare no houses, but to pull down before the fire every way. The Duke of York bid me tell him that if he would have any more soldiers he shall; and so I went by land Arlington. Here, meeting with Captain Cocke, I in his coach, which he lent me, and I set down my Lord Mayor at Paul's, and bade him, as I could, every creature coming away loaden with goods to save, and here and there a hackney carried empty to bring more. Extraordinary good goods carried in carts and on backs. At last met my Lord Mayor in Cannings-street, like a man spent, with a handkercher about his neck. To the King's message he called like a fainting man, 'Lord, what can I do? I am spent. People will not obey me. I have been pulling down houses, but the fire overtakes us faster than we can do it.' Thus he needed no more soldiers, and that, for himself, he must go and refresh himself, having been up all night. So he left me, and I him, and walked home, seeing people all almost distracted and no manner of means used to quench the fire." Later in the day the worthy Pepys, hearing that Whitehall "an extraordinary thing," he was glad and as merry as at this time we could be," returned to Whitehall, where he met with the King and Duke of York, in their barge, and with them to Queenhithe, and there called Sir Rehard Browne to the window. Their order was only to pull down houses apace, and so below bridge at the waterside; but little was or could be done, the fire grew so mighty, and so fast." After sunset the same day Pepys accompanied his wife to "little Woodstreet, by the Bankside, over against the Three Cranes." There he "saw the fire grow, and as it grew darker appeared more and more, and in corners and upon steeples, and between churches and houses, as far as we could see up the hill of the City, in a most horrid, malicious, bloody flame, not like the flame of an ordinary fire."

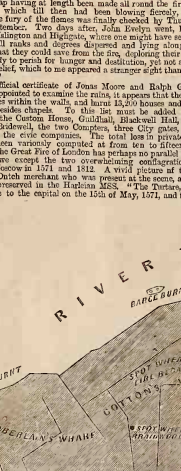
On Tuesday, Sept. 4, John Evelyn had another look at the devastated town and the still raging element. "It was now burned," he says, "as far as the Inner Temple. All Fleet street, the Old Bailey, Ludgate-hill, Warwick-lane, Newgate-market, Paternoster-row, Cheapside, and most of it reduced to ashes. The stones of St. Paul's flew like grenades, the melting lead running down the streets in a stream, and the very pavements glowing with fiery redness, so as no human foot could endure to walk on them."

On the following day the fiery sparks began falling on Whitehall, and then there was a stir indeed. "But, oh!" says Evelyn, "the confusion there was now at Court! It pleased his Majesty to command me, among the rest, to look after the quenching of Fetter-lane toward Holborn, while he took another part at Holborn-bridge, which the rest of the gentlemen took their several posts, some at one post, some at another, for now they began to bestir themselves, and not till now, who hitherto had stood as men astonished, with their hands across; and, indeed, to consider that nothing was likely to put a stop but the blowing up of so many houses as might make a wider gap than any that had yet been made by the ordinary method of pulling them down with engines. This some stout seamen proposed early enough to have saved near the whole city; but the same tenacious and avaricious men (aldermen, &c.) would not permit, because their houses must have been of the first."

Strangely enough, if we may believe the garrulous Pepys, women were far more industrious and energetic in extinguishing the flames than men:—"It was pretty to see how hard the women did work in the cannells, sweeping of water," but he adds—which is not gallant—that "then they would for drink and be as drunk as devils." An immense gap having at length been made all round the fire, and the east wind, which till then had been blowing fiercely, somewhat abating, the fury of the flames was finally checked by Thursday, the 6th of September. Two days after, John Evelyn went, he tells us, "towards Islington and Highgate, where one might have seen 200,000 people of all ranks and degrees dispersed and lying along by their heaps of what they could save from the fire, deploring their loss; and, though ready to perish for hunger and destitution, yet not asking one penny for relief, which to me appeared a stranger sight than any I had yet beheld."

By the official certificate of Jonas Moore and Ralph Gatris, the surveyors employed to estimate the damage, it appears that there were burnt 373 acres within the walls, and burnt 13,200 houses and 89 parish churches, besides chapels. To this list must be added the Royal Exchange, the Custom House, Guildhall, Bladewell Hall, St. Paul's Cathedral, Bridewell, the two Compters, three City gates, and fifty-two halls of the civic companies. The total loss in private property alone has been variously computed at from ten to fifteen millions sterling. The Great Fire of London has perhaps no parallel in modern history, if we except the two overwhelming conflagrations which destroyed Moscow in 1571 and 1812. A vivid picture of the first is given by a Dutch merchant who was present at it, and the scene, and whereof an account is preserved in the Harleian MSS. "The Tartars," he tells us, "set fire to the capital on the 15th of May, 1571, and the flames soon kindled, then did arise so fierce and violent a wind that it drove the rifiers and long trees from the suburbs into the City. The conflagration was so sudden that nobody had time to save himself, but had to remain in the place where he happened to be. The persons that were burnt in this fire were above two hundred thousand, which did happen because the houses are all of wood and the streets paved with great fir-trees set close together, which, being oily and resinous, make the incredibly inexpressible; so that in four hours time all was underneath ashes, being wholly consumed. . . . Many lords and gentlemen were stifled in great trees, when they fell they crushed down all that was underneath others, being without all remedy. Besides all this, there was a want of going and coming out, so that for want of air they all perished. The poor country people that had saved themselves in the city, with their cattle, from threescore miles round about, hoping the confusion was past, ran into the market-place, which is not paved of wood as the rest, nevertheless they were all roasted there, in such sort that the tallest man seemed but a child, so much had the fire contracted their limbs, and this by reason of the great houses that were round about—a thing more hideous and frightful than any can imagine."

The burning of Moscow in 1812, though the subject of repeated conjecture and speculation, has never yet been satisfactorily explained. Count Rostopchine, the then Governor of the city, to whom the fire is imputed by most historians, repudiates the charge in a work entitled "La Vérité sur l'Incendie de Moscou," published at Paris in 1823. Napoleon I., however, in his famous bulletin declares unhesitatingly that the fire was



SITE OF THE GREAT FIRE IN SOUTHWARK.

the crime of Rostopchine. The same bulletin goes on to state that "thirty thousand sick and wounded Russians have perished in the flames." This is probably an exaggeration; but there can be no doubt that the conflagration was more stupendous than any modern times have witnessed—far more horrible, indeed, than even the Great Fire of London.

It was on the 14th of September that Napoleon took up his head-quarters in the Kremlin, and on the same day the frightful scourge broke out in the shops of the Kremlin-bazaar. By the 16th the fire had spread in all directions; and on the evening of that day a vast sea of flames rushed the horizon for miles around, carrying death and destruction to every thing in its course. The various quarters of the town are said to have taken fire, to have burned, and disappeared all at once, leaving only heaps of blackened ruins, and stones to indicate the spot where they had stood. Wherever the fire-spout was turned, it was met by smoking ruins or devouring flames. The silence of terror was broken only by a roaring like that of the waves of a stormy sea; the frightful sound was occasionally heard by the weak-minded, horrified with desolation under the events of flame. Napoleon is related to have gazed for hours in silent horror at the sight. At length a shudder ran through his frame, and, giving a few hasty orders, he left the Kremlin precipitately, and fled to the Castle of Petrowsky. The loss of life and property by this fire is beyond all estimation. Three thousand and eight hundred houses, innumerable churches, chapels, palaces, and public buildings were reduced to ashes. The private loss is supposed to be equal to that in the City of Moscow sterling. The public loss is incalculable in money. "Palaces and temples," writes Segnuris, the Russian historian, "monuments of art, and muscles of luxury, the accumulation of past ages, which had been the creation of yesterday; the tombs of ancestors, and the nursery-cradles of the present generation, were promiscuously destroyed; nothing was left of Moscow save the remembrance of former glories."

Of all the European cities, except Constantinople has suffered most from fires. In 1729 a conflagration which lasted eight days destroyed in this city no less than seven thousand people, and twelve thousand houses. Another fire of less magnitude in 1751 was equally fatal to six thousand of the inhabitants; another, five years afterwards, caused a thousand deaths; and in 1794, smouldering up two thousand, and finally, the last great fire in Constantinople, in 1799, destroyed twenty-eight thousand persons and thirty thousand houses. Next to Constantinople in the calamity of fire-doomed cities is Copenhagen. The capital of Denmark has been burnt almost to the ground three times in modern history—in 1728, 1795, and 1794. Again, during the bombardment of 1807, a fire broke out which lasted three days, and consumed two thousand houses.

Gothenburg, in Sweden, has been destroyed by fire more than once during the last seventy years, and Flushing in Holland, dated in Richardson's Book of Knowledge, has passed through a similar ordeal. But the most recent calamity of this nature, on a gigantic scale, was that which befell the ancient city of Hamburg in 1842. The fire of Hamburg began in an old tarred building, called the Dalbethof, in which were many warehouses of great height, mostly built of wood, and full of a violently inflammable character. The conflagration, and in a few hours reached the Church of St. Nicholas, with its celebrated steeple, three hundred feet high. As they ascended the inner woodwork, the steeple was observed to wave, and then gradually incline from the perpendicular till the descending weight burned it to the ground, and fell with a crash that was heard all throughout the city. The fire rapidly became general, and on the second day an area exceeding that which had been burnt on the previous day presented a scene of blaze. The peril becoming more and more imminent, Admiral Danish, and Prussian troops marched into the fated city, and cleared a huge space around the fire by blowing up whole stacks of houses. This voluntary demolition had the effect of confining the flames, and on the third day they were subdued; but, however, before nearly all the most important public buildings of the city were in ruins. Three hundred persons are reckoned to have perished on this occasion, and the amount of private property sacrificed was estimated at more than eight millions sterling.

Since the Great Fire of 1666 London has happily been visited only by one conflagration which approached that terrible disaster in magnitude. This was the fire at Hatcliff in July, 1794. It broke out at Cock-hill, in the house of a bidder, from whose timber-yard it reached to a large lakes with saltpetre, and thence to the Hatcliff Wharf-houses belonging to the East India Company. The wind, blowing strong from the south, kindled the flames towards Ratcliff-highway, which, being narrow, took fire at both sides and thereby prevented the approach of the engines. The flames soon extended towards Stepney, but having come to an open space they stopped for lack of material. In this fire not less than seven hundred houses were destroyed, and the misery it occasioned was so severe that Government was obliged to send several hundred tents, which were pitched near Stepney Churchyard, for the reception of the homeless sufferers.

There are, it is stated, about 2000 different languages and dialects used in Great Britain.

The works for laying down the narrow gauge in combination with the broad gauge between Paddington and Reading have been resumed.

Railway excursions are coming into existence even in Spain. On the 24th ult. one took place from Madrid to the Escurial, the distance was accomplished in about two hours. When that line is completed the journey will take about an hour and a quarter.

At the official reception of the Siamese Ambassadors by the Emperor Napoleon on Thursday week the presents which the Ambassadors are charged to present to the Emperor were laid out on tables in the morning. Independently of the Order of the White Elephant, studded with diamonds, these presents consist of a crown of rubies and crystal with diamonds; a gold waist-belt, with a plate ornamented with diamonds; gold canes, richly mounted; of enormous size, and a number of golden vases, thrones, arms, &c. The crown, which is remarkably handsome and of a unique form, is covered with a profusion of the most beautiful rubies, the diamonds are placed, so that as a little distance it resembles an enormous pile of precious stones.

THE PRINCE OF PRUSSIA AND THE FORTHCOMING EXHIBITION.—The Prince of Prussia, in a letter to Lord Granville announcing the formation of a Prussian Commission in connection with the Exhibition of 1862 says—"The idea of affording to the nations another opportunity of showing their industrial progress seems to me happy and opportune, and I therefore feel that there is every cause for gratitude to those who first conceived it; and have taken upon themselves the labour of carrying it into execution. The manufactures of Berlin among European nations which have lately been made, or may shortly be exhibited, occupy an honourable place in the rank of the population of which confers the greatest honour upon Great Britain and her enlightened statesmen—will, no doubt, be greatly increased by the exchange of goods, and materially add to the range of commerce. Under these circumstances the exhibition will assure the character of a great fair, calculated to create new and commercial relations, and to extend those that exist. Berlin sends forth the assurance of its interest in it, and will endeavour by substantive advantages to those who take part in it, and will, doubtless, on this account, find all the more encouragement. I am convinced that the Prussian manufacturers will appreciate the importance of the undertaking."

THE GREAT FIRE.

ALTHOUGH the ruined warehouses and wharves in Tooley-street still present the appearance of a recent conflagration, all danger of their crumbling seems to have passed away. The fire is still burning with considerable power in the lower portion of the cellars of Cotton's Wharf, and the adjoining portion of the ruins. Last Saturday evening the flames and smoke burst forth with great force, and at ten o'clock an explosion took place, causing considerable alarm. The wind having shifted, the smoke was blown direct over the houses in Tooley-street, causing great annoyance to the inhabitants. At seven o'clock on Sunday morning an immense body of flame forced its way upwards from the vaults, rising high above the surrounding walls, and created much alarm, owing to the high wind prevailing and the direction in which it was blown. The steam float was brought to bear upon the body of fire, and after about an hour succeeded in reducing it within its former limit. Towards evening, however, it again broke out, but was again brought under control. At twelve o'clock it had again attained the ascendancy, and was distinctly seen from the various bridges in the metropolis. Experiments with the fire-annihilator have been made upon the ruins, but have not succeeded in extinguishing any of the immense bodies of fire pervading their destructive course amongst the vaults and cellarage. There are nine cellars, each 100 feet long and 20 wide, and in them at the present time about two feet of palm oil and melted tallow are floating and burning over the whole surface.

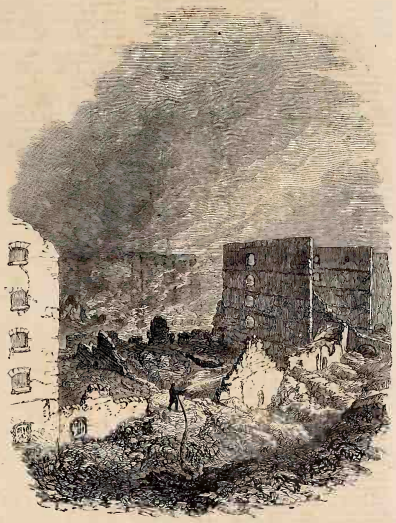
PARTS OF COTTON'S WHARF AND HAYE'S WAREHOUSE.



THE RUINS OF COTTON'S WHARF.

An account on Wednesday morning states:—"On this, the twelfth day of the fire, a more threatening aspect is presented by the burning ruins than a week ago. The flames may be seen through several openings for an immense distance, like an underground lake of fire." The following facts may help to form some conception of the ravages of the great fire, and of the extent to which trade and commerce suffer thereby. We quote from the *Economist* of Saturday last. That journal says:—"About 17,000 bales of Surat cotton, and 6000 Tinnevelly, are entirely destroyed; while the large quantity of bacon, about 2000 bales, either consumed or consuming in the burning ruins, has augmented the price, and placed dealers in a very awkward position, not a bale of fine bacon being left in the market. 300 tons of olive oil, 30,000 packages of tea, 900 tons of sugar, 427 casks of castor oil, and 8800 casks of tallow, form but a few amongst many of the goods consumed, or now at the mercy of the devouring element."

THE CIVIL WAR IN AMERICA.

(From our Special Artist and Correspondent.)

In Camp, near Washington, June 6.

I REALLY have found it impossible to get my pen under way till now. Since I have been down here there has been so much ground to be gone over, such a distance between the subjects sketched, so much information to be gleaned on all sides, that this is positively the first opportunity I have had of writing.

My Fourth of July quarters are in the camp of the 2nd New York Regiment (of which an Engraving was given in our last Number), and I should not be badly located were it not for the recognized but unofficial night alarm, both of which disturb one's rest considerably. The former inconvenience goes bawling about the tent from night to morning, during the entire time the sentries are like the whirr of a rifle-ball, and waking him up with a start of agony as each shot from the enemy takes effect. The night alarm, however, has become less frequent as our sentries gain more experience in their duties; at present the men are green, and every rustle of the wind among the trees, every bird that breaks the stillness of the night, is taken for the advance of the Secessionists. And here, south of Mason and Dixon's line, on the borders of Virginia, every night is full of such cavarls the earth or has wings commences its revels at the approach of darkness and continues its noisome promptings till dawn of day. The bull-frog and tree-toad hoarsely croak their dirges from swamp and wood, the whip-poor-will sighs forth his melancholy plaint, the screech-owl utters his hideous wail, the unearthly noise, which is the cricket's fiddle-stage about in every direction like the sparks from a blacksmith's anvil, illumining the darkness with their gay lightning. Above all, our green sentries, some very funny incidents have occurred lately, showing their ignorance of their duties. An officer with whom I am acquainted was ordered by his quarters at a somewhat late hour, and had to pass through the lines of a strange camp to reach his own. As a matter of course, he was challenged by the sentinel, who was a German, and in answer to the "Who comes there?" replied, as usual, "Friend with the countersign." Now, the challenger should have called out, "Pass, friend, and give the countersign," instead of which he, in this instance, yelled at the top of his lungs, "But the countersign not pass me no matter—I am Richesonte." Richmond was the magic word before which all barriers were to fall, and our Leger Book acquaintances took good care that the sentinel should be widely diffused. Again, the field officer of the day, with an escort, was visiting the posts on an unusually gloomy night, and was brought to a stand by the challenge with the customary "Who comes there?" To this the Sergeant of the escort replied, "Grand Rounds with the countersign," and waited for the commons to advance. Instead of which Pat exclaimed in merry tones, "Botheration to Gran Rounds! who the divil is he? I thought it was the rebels." However, all this will come right in time, and it is but justice to this young army to say that they are doing their best to make soldiers of themselves, and in reality are succeeding admirably.

On the first evening of my arrival at Washington I was honoured with an invitation to the reception at Mr. Secretary Seward's, the Minister of State, and on being presented was received most kindly by him. I found that the ILLUSTRATED LONDON NEWS had its place in the American Cabinet, and my late connection with it in this country by name familiar to many whom I met in the Minister's rooms. In the course of a short conversation I had with the Secretary of State I was asked if I thought of following in Mr. Russell's footsteps—of the going South, and I landed I could perceive a shade of irritation at the course our great "word-painter" had thought fit to pursue. I disclaimed any idea of so doing, and replied that my fortunes, at least for the present, would be cast with the army of the Union, and that I should study to delineate truthfully, with pen and pencil, without preference one way or the other, all that came under my observation. I also suggested that had Mr. Russell, like myself, seen the South as I now saw it he would not have felled in doing justice to the singlehearted enthusiasm of those States whose best men are given to uphold the Union and defend the honour of the national flag. It should be recollected that when Mr. Russell landed the insult to the stars and stripes had not been offered at Fort Sumter, and in reality there was very little outwardly-shown feeling among Northern people. In opposition to this state of things Our Special Correspondent found in his journey south a population perverting enthusiasm from every pore, and strong in their determination to fight to the last man for what they term their State rights. It would be difficult, indeed, to travel among a people so confident of the justice of their cause, and so sanguine of their ultimate success, without becoming to certain extent a convert to their opinions. Southern hospitality and southern arguments, washed down with southern claret, may be supposed to go far to influence the chief amongst them taking notes; but I very much doubt if Mr. Russell has committed himself in any way. Of one thing I am very certain—that he has truthfully and graphically given his experience, and, it seems to me, without comment on either side. In this as a way, Mr. Russell's letters have given great umbrage to the North, and he has personally been attacked by many in every New York paper, the *Herald* being most rabid in its remarks, and even—I am sorry to say it—hostile. The insane remarks of this journal against England and Englishmen generally would do more to create an ill feeling between the two countries than everything I have seen published on one side of the water; but, fortunately, no respectable person here pays the slightest attention to its "editorials," and I do not suppose it ever obtains the honour of being quoted at home.

In my last I said I would endeavour to say something about the merits of the fratricidal conflict dividing the North and the South. For many years, until the election of Mr. Lincoln as President, the Central Government of the United States had been in the hands of the Southern party, or, in other words, during the long period of office they enjoyed supremely over the North. Tired of this condition of things, the Republicans, the Northern party, determined at last to make an effort to overthrow the Democrats, and we all know how they succeeded. Aware of the storm that was brewing, and foreseeing the probable extinction of political rule, the late Government, composed chiefly of Southern Ministers, prepared for eventualities by acting in a fashion which many would call treachery, and plundered their oath to the Constitution. They transported all kinds of war material South; they distributed the regular Army to remote points where it was of little service to the then reigning Administration, and even had an eye to its being cut off in the event of an uprising of the Northern people; in fact, their measures were diligently preparing for the present unfortunate state of affairs. Even admitting the right of the South to secede, surely it should have taken some constitutional mode of doing so, instead of commencing its new way by firing the first shot on Fort Sumter, which the late Government had prepared for the reception of troops, and even provisions, after enjoying the reins of power for years, for a defeated party to excite retaliation? Is this a legal action and Government, and whose emblem of nationality has floated proudly in every known portion of the world? What would the English people think if the Parliament House were for a defeat, being obliged to quit it, they were to create a revolution in the country simply because their political creed was not paramount to the seceders? This appears to me to be what the South has done.

Now, what is the distinction between the Democrat and the Republican? The Democrat advocates State rights and the extension of slavery into certain territories belonging to the United States Government, which, as yet, have been considered common to the Union as States in themselves. "State rights" would seem to imply, and I believe it does, independent power of action in individual States without reference to the central Government. Such a system, once admitted would, I assume, develop itself to an extent scarcely anticipated by those who advocate it; and, instead of a partial Secession movement, every State would declare itself a separate sovereignty. As for the Union super exist. As for the extension of slavery, the curse should be diminished, not increased; and such is the doctrine of the Republican party, who repudiate the idea of its being taken to those territories where it does not exist, to the exclusion of white labour and enterprise. The Republicans desire the non-extension of this evil, and are advocates of Free-soil institutions, so that the tide of emigration flowing into North America may carry the energy of the white race to the cultivation of those lands termed territories lately purchased by the Federal Government.

Such are the points at issue between the North and the South, and it remains for others more competent than myself to judge between them. One thing is, however, certain—the North is determined to support the constituted Government and preserve the integrity of the stars and stripes; and to do this she will, if need be, send her thousands, nay, millions, to the field; and, powerful as she is, her ultimate success cannot for a moment be doubted.

A few days since, while scouting about for subjects, I found myself near the advanced posts in the neighbourhood of Fairfax Court House, Virginia. The latter place was in the occupation of the Confederate troops, and orders had been issued for a reconnaissance in force, to make in that direction to ascertain their numbers.

A troop of United States' cavalry was detailed for this purpose, and they made a most gallant charge through the village, contending against a much superior force, and killing and wounding between twenty and thirty of the Confederates, besides taking off five horses. I sent you a sketch of this skirmish in my last (engraved in our Number of the 22nd ult.). Probably the most important result exposed of the Union forces are the New York Fire Zouaves, a regiment that was recruited by the late Colonel Ellsworth from the fire companies of the Empire City. They have always been in the van since the commencement of hostilities. They were among the first to cross the Potomac into Virginia, and it was they who took their Colonel at the occupation of Alexandria, shot by a Secessionist while capturing a Secession flag. Now they are encamped at the very advance, and there is not a night or day that passes that their pickets are not engaged with the enemy. I have made you drawings of their guard towing out to support outlying companies (portrayed in our Number for June 22), and also of the burial of one of their men killed in a skirmish close to the camp. The whole thing at this front is exceedingly harassing, and very few of those who are posted at night expect to see another day dawn. The country all round is thickly covered with wood, and in the darkness the Secessionists, acquainted with every cowpath, creep softly towards the poor fellow pacing to and fro on the road, lighter in shadow, and, before a cry can be uttered or a rustle of every falling leaf, until close upon him, where either the knife-bowie or a rifle-shot does the rest. Before assistance can reach

THE COMET AS IT APPEARED ON TUESDAY EVENING, AT ELEVEN O'CLOCK, FROM NEAR THE SOUTH-WESTERN RAILWAY STATION, NEW BRENTFORD.

sidering the unfavourable circumstances in which this comet has been seen by the light of the moon and in the shortness of the days of summer, it must be justly considered a much more striking object than the comet of 1858 (that observed by Donati at Florence). Mr. Lassell, the astronomer near Liverpool, states that this comet, seen on a dark sky would exceed in splendour any which has visited us this century. Dr. Robinson, Director of Armagh Observatory, says that its brilliancy was such that a shadow was sensibly projected on white paper when its light was intercepted by a suitable and well-

WILLS AND BEQUESTS.

The will and two codicils of his Grace the Most Noble George Granville Sutherland-Leveson-Gower, Duke of Sutherland, K.G., D.C.L., was proved at the Maguey, Clerk of Arms, on the 17th inst., by the two published executors—his son, hereditary Marquis of Stafford, the present Duke of Sutherland, and Sir Robert Peel, the Hon. Charles Wellesley, and Sir Thomas the Right Hon. Sir David Dundas; and George Loch, Esq., of Aldenham. Dated the 1st of December, 1859, and proved with two codicils of the 15th of May, 1860, and 1st of February, 1861, at Trentham, Staffordshire, and Hamilton Palace, Lanarkshire, the personalty was sworn under £1,000,000. The executors and trustees. The personalty was sworn under £1,000,000. The executors and trustees named in his property, which exceeds both of real and personalty, almost entirely to his heir, leaving her a life interest in the same, and on her decease then to his children equally amongst them, or the issue of appointed, with a power of disposition also over the sum of £100,000, which formed her marriage portion with the late Duke. He bequeaths an annuity of £1,000 to his daughter, the Lady Alfred Paget, and a pecuniary legacy of £500, and another of £1,000 to each of the children of his deceased brother, Lord Francis Egerton, at the time of his decease. He has also bequeathed to her his furniture, plate, and other effects, and the carriages, horses, &c., at Trentham. There are no other bequests, and the will bears date so long back as 1819, but the two last codicils are dated in 1855. The additional duty is £6,000.

The will of the Hon. and Rev. George Bredrick, M.A., Rector of Titley, Godetone, Surrey, was proved in the London Court, on the 22nd ult., by his

of Beeston, saw it at 7.49, when the tail was not visible. About 10.30 he says that the tail appeared to be 45 deg. in length. Mr. Eaton, of Leyton, describes the head as having the stellar appearance of a star of the first magnitude enclosed in a misty envelope, of which the innermost was much the brightest. A space devoid of luminosity separated the innermost from the middle envelope, except at the apex, and a similar vacant space between the middle and the outer, but on the left side only." Other observers state that the brilliancy had increased on Monday at midnight. On

DEPARTURE OF THE GREAT EASTERN WITH THE CANADIAN CONTINGENT.

SHORTLY after noon on Thursday week the Great Eastern sailed out of the Mersey on her voyage to Quebec to convey with them to the Canadian garrisons. The day was cloudless, there was brilliant sunshine, and the piers and dock vessels for Her Majesty, as well as the landing-stages, were lined with spectators, who, as the great ship passed them, responded most heartily to the cheers raised by the soldiers who thronged the deck and the lower sections of the rigging. As she passed the landing-stages she fired salutes, and another on passing the fort. Both paddle and screw were in motion. In her wake were a score or two of tugs, occasional steamers, and other boats, filled with passengers, whose interest was to accompany the Great Eastern as far as the Bell buoy. The troops were embarked in the dock during the passage down the river a band on board the steamer played several favourite airs. There were on board the Great Eastern 30 men and 46 officers; the former having with them 150 wives and 244 children. The cabin passengers (civilians) who went at the same time numbered about 40.

We give in this week's Impression two Engravings in connection with the departure of the Great Eastern—one on the first page representing the soldiers embarking, and on the first page Calling the Roll on board Ship.

THE NEW COMET.

THERE is now visible in the north a comet of extraordinary magnitude. The celestial wanderer seems to have been first seen on Sunday morning. It was observed at Clifton by Mr. W. C. Bunder on Sunday, at 10 P.M., near the zenith-west horizon. About ten o'clock on the night of the same day it appeared to be fully as bright as a star of the

of Beeston, saw it at 7.49, when the tail was not visible. About 10.30 he says that the tail appeared to be 45 deg. in length. Mr. Eaton, of Leyton, describes the head as having of the stellar appearance of a star of the first

The Observatur Belge states that thirty-five glass-furnaces have been stopped near Charleroi in consequence of the cotch in America.

Punch's Pocket Book for the following curious information:—A fact

last Miss Knowen, although perfectly authentic, is the relationship which united between the late Duke of Suffolk and his wife. Mrs. Knowen was the sister-in-law of the former was Mdme. Alexis Dubuc de Rivery, a relative of Josephine de la Pagerie, and consequently of the Empress of the French."

The Scinde Railway was formally opened on the 11th of May by her Majesty's Commissioner in Scinde, and on the morning of the 13th she left Kotree train for passengers and goods run from each terminus of the the crowd of passengers at the Kurrachee terminus being enormous. Since then great numbers of passengers were booked daily.

On the 23rd of April a large instalment of the indemnity was paid into the Consolidated Bank at Canton by the Chinese Government. The gun-monitors with the terms of the convention signed at Pekin.—The gunboat Cleon, Lieutenant-Commander Lee, took to Swatow at Tien-Tsin on the 4th inst. a portion of the first instalment of the Anglo-French indemnity, conveyed to Hong Kong for remittance to Hong Kong.

The Dutch Government has received official accounts of the great extent of the late misfortunes in Netherlands India, which are even more serious than was anticipated. According to these despatches it appears that 1558 lives were lost, 325 towns and villages, with an aggregate of 17,809 houses, destroyed, and ten villages so completely swept away that not the slightest traces of their former existence or locality can be discovered. In addition to all this, the total loss of rice and indigo crops, and damage done to coffee plantations, are very serious.

OBITUARY OF EMINENT PERSONS.

THE SULTAN.

His Highness the Sultan Abdul Medjid Khan, Emperor of the Turks, Emperor of Constantinople, Lord of the East and West, Sovereign Protector of the Sacred and Ancient Cities of Mecca and Medina, &c. &c. &c., eldest son of the Sultan Mahmoud Khan II., and was the thirty-eighth ruler of the house of Osman and the twenty-eighth since the taking of Constantinople. He was born on the 20th of July, 1823, and, when sixteen years of age, on the 2nd of July, 1839, succeeded his father to the throne of reformer Sultan Mahmoud, on the troubled throne of Turkey. Abdul Medjid had received a solid, peaceful, and ruling nature; but it has been his misfortune during the whole time he has occupied the throne to see a state of perpetual political commotion and dire pestilence and famine of frequently occurring in them. First came the war with Mehemet Ali, and the intervention with Great Britain and other European Powers, which ended with the Treaty of London, July 15, 1840, and followed the reverses in Turkey itself, which improved the position of the Christian and other inhabitants, but which gave umbrage to the Moslem race of Mussulmans. The latter also remained about the Ottoman empire, and seemed to make it their object to create a schism in the Christian Church, which, if successful, would have destroyed the Sultan's influence with the Greek Church, and consequently the Sultan is succeeded by his only surviving brother, Abdul Aziz, now Sultan and Emperor of the Turks.

LORD ABINGER.

The Right Hon. Robert Campbell Scarlett, Baron Abinger, of Abinger, in the county of Surrey, and of Inverwick, was the eldest son of the eminent advocate and lawyer, James Scarlett, first Lord Abinger, and Lord Lieutenant of the Exchequer, by his wife, Louisa Hendricks, daughter of Peter Campbell, Esq., of Kilmory, in the county of Argyll. He was born the 8th of September, 1794, and was educated at Trinity College, Cambridge, where he graduated in B.A. in 1815, and M.A. in 1818. He was called to the Bar by the Hon. Society of the Inner Temple in 1819, and in 1834 he was elected M.P. for the city of Norwich, and in 1835 for Horsham, which he continued to represent until the

death of his father, on the 7th of April, 1844, when he succeeded to the honour of Abinger. He married, on the 7th of May, 1840, Georgiana Caroline, third daughter of the Hon. George Smith, late Chief Justice of the Maritimes, and by her, who survives him, he has had issue two sons—viz., William Edward, now Lord Abinger, and James Henry Laurence, who died young, in 1845; and two daughters—viz., Henrietta Elizabeth, married to the Hon. Arthur Duncombe, second son of Lord Hector, second Earl of Northesk; and Frances Mary, married to the Rev. Sidney Smith, fourth son of Benjamin Ashe Southwell Hawkins, Lord Bishop of Gibraltar, one of the gallant Crimean General the Hon. Sir James Yorke Scarlett, K.C.B., of the 5th dragoon guards, Charlotte, the Hon. Peter Scarlett, late Secretary of Embassy to the Court of Tuscany; and of the late Baroness Strathallan, the sixth of the deceased, Lord Hampden Campbell, who survives him, and who before that of Lord Abinger. Lord Abinger died on the 21th ult., at his seat, Abinger Hall, Surrey, having survived his father only seventeen years, and surviving son, William Frederick, now third Lord Abinger, who was born Aug. 30, 1838, and is a Lieutenant-Colonel in the Scots Fusilier Guards. The paternal ancestors of Lord Abinger were seated in Jamaica, of which colony was Robert Scarlett, Esq., grandfather of the late Lord Abinger, Chief Justice. The name Scarlett is as ancient as any in the realm, and was of Kentish origin. One of the Scarletts was Constable of Dover Castle, temp. Edward I., and another was Thomas Scarlett, obtained a patent appointment for his conduct at Agincourt. The branch from which Lord Abinger descends, and which he represents, had in the sixteenth century property in Bottle and Eastbourne, in Sussex. This branch emigrated to Jamaica in the following century.

SIR JOHN PATTESON.

The Right Hon. Sir John Patteson, Serjeant-at-Law, and late a Judge of the Court of Queen's Bench, was one of the oldest, the most high-minded, and most estimable members of the Judicial Bench in England. He was the second son of the Rev. Henry Patteson, of Drinkstone, Suffolk, by his wife, Sophia, daughter of R. A. Lee, Esq., a London banker, and of the same family as John Patteson, for some time M.P. for Norwich. He was born at Coney Weston, Suffolk, in 1790. He was sent to Eton College, and was a scholar on the foundation, and succeeded to King's College, Cambridge, where he distinguished himself in the Classical University Scholarship Examination, and was elected a fellow in 1811. He was admitted to Lincoln's Inn, and was called to the Bar by that Inn there in 1815. He went the Norfolk Circuit, and soon became a leading member of it. He was also a leading member of the Midland Circuit, and was for many years the leader of the Oxford Circuit. He was also for many years the leader of the Norfolk Sessions. He was a Bencher of Lincoln's Inn, and was Treasurer of that Inn in 1834. He was also a Bencher of the Middle Temple, where he became successively the pupil of Godfrey Sykes and Joseph Littledale and Justice Littledale, and practised with them in the practice of the common law with remarkable assiduity and success. In 1816 he commenced as a special pleader, and soon obtained a considerable practice, and many pupils. At the end of five years he was called to the Bar, and with his experience as a pleader at the Serjeants' Inn, which was then full, he soon acquired at York he got to lead them thirty briefs. He soon reached an eminent position among the common law practitioners of the day, and was appointed, however, to argue many important cases at Westminster. His manner was simple and clear; and he possessed, from the first, all those points, which were subsequently by all the authority properly qualifications to them. The report of the Common Law Commissioners, of whom Mr. Patteson was one, was presented to Parliament, and the Welsh Judicature having been abolished, it became necessary to find a place for the existing members of the Welsh Judicature. Allerton, and Patteson were the Judges selected. Mr. Patteson was appointed to the Queen's Bench in 1841, and was knighted. The duties of his judicial office he discharged with the very highest reputation for industry, learning, and integrity more than twenty years, and he retired at the end of that period a growing infirmity in his hearing had interfered with the discharge of his duties to the public, and he felt it to be a duty to resign. He was raised to the Privy Council in 1850, and was a member of their administration for a short time. He was immediately after sworn of the Privy Council, and became a member of the Judicial Committee, where his deafness was not such an impediment to his usefulness as the Common Law Courts. But now his infirmity finally failed. His physicians forbade him any longer to undergo the mental exertion of judicial duties, and, as the only practical way of the discharge of the committee, he ceased towards the end of 1857 to attend their sittings. From that period the termination of his life he resided at his seat, the Pension Court, near Hoxton, in Devonshire, and so long as his strength permitted he maintained a large and liberal hospitality, and rendered active service in his power to his neighbours by frequently acting as an arbitrator between differences. He was especially skilful in this capacity, from his knowledge and experience, and from the universal opinion entertained of his strict justice and integrity. His illness was of short duration, and he died on the 20th ult., at Fenton Court. He had been married twice—first to Elizabeth, eldest daughter of Sir Thomas Gage, and, secondly, to Frances, sister of James Coleridge, Esq., and sister of Mr. Justice Coleridge; but he died a widower, and is left behind him (with two daughters by his first wife) the Rev. Dr. Patteson, the recently-consecrated missionary Bishop of the Western Islands of the Pacific Ocean, and J. B. Patteson, Esq., Barrister-at-Law, of the Northern Circuit. The name of Mr. Justice Patteson, coupled with his learned and able labours, will last as long as the Law Reports exist, and his biography will ever afford a pleasing example of success achieved and maintained by industry, integrity, and kindness, and, above all, the constant esteem and affection of the Bar, the public, and all who knew him.

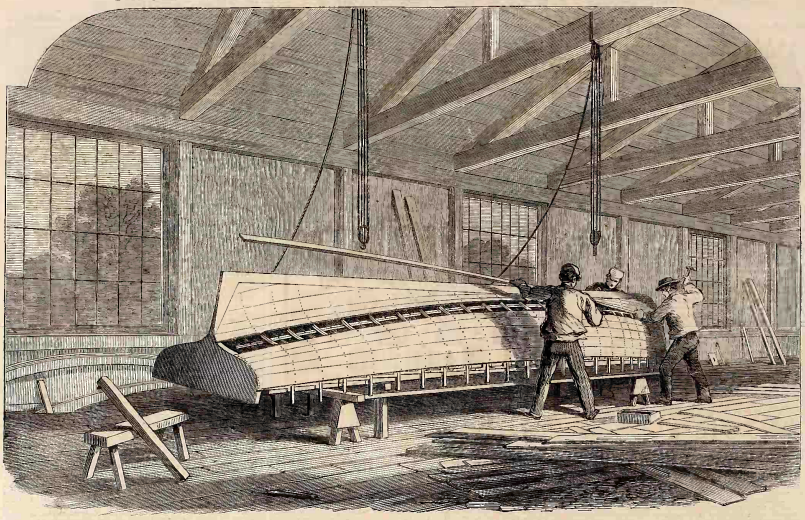
The first fatal accident in the Alps this season of which we heard has just occurred to the daughter of a Prussian Lieutenant-General, Baron de Schweinitz. It appears that the director of the Lessing Gymnasium, at Wernek, in Bavaria, M. Gudden, lately went on a tour in the Swiss Alps with his wife, his son, and the lady just mentioned, who resided at Berlin. They went from Hofgastein to Wildnder Gastein by the grand route, when Mme. de Wangenheim and M. Gudden resolved to turn aside and take a footpath which led to the summit of Gamskarh Kogeth, which is 7434 feet high, while the rest of the party continued by the chief road. The two arrived safely at the top of the mountain, admired the various views therefrom, and prepared to return, but by the path which they had followed in their ascent, but by descending in a straight line, the foot of the mountain that way appearing so much nearer. Deserved had they commenced this perilous descent when the lady stumbled, and, after sliding a few yards, fell down a chasm one hundred feet deep, and was killed on the spot.

CHESS.

TO CORRESPONDENTS.

MR. MONNET AND MR. KOLISCH.—According to the *Manchester Examiner*, the match each of battle between these gigantic players has been "arranged" at the rooms of the Manchester Chess Club. The writer says, there is "every good authority" for saying that Mr. Kolisch was simply an opponent of Mr. Kay's willingness to play a match with Mr. M. merely to test the relative merits of the players. If "the" should appear to which Kolisch replied, "I am willing to play a match with Mr. M. should appear to which Kolisch replied, "I am willing to play a match with Mr. M. merely to test the relative merits of the players. If "the"

THOMPSON'S BOATBUILDING MACHINERY.

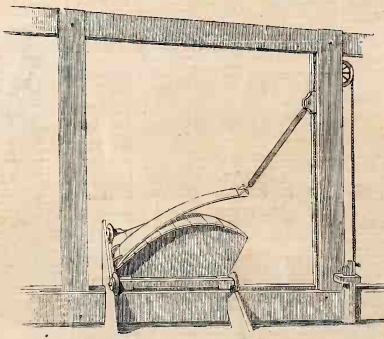


PUTTING THE PARTS TOGETHER ON THE ASSEMBLING FORM.

the same time a perfect fit throughout—I am of opinion that both the work and strength of the boats built by his process would be superior to that of the ordinary method, and also ensure a great saving of time and expense. The division of labour consequent on the machinery going on rapidly and without interruption, while every part of a boat is simultaneously manufactured, must necessarily reduce the cost of labour. And the dispatch at command would be greatly increased when pressing orders required executing." The following is an extract from a letter subsequently received by the inventor from the same gentleman:—"Your cutter, compared in cost of labour with one built by contract, would be a difference in your favour as 7 is to 32. I cannot speak too much in favour of your method of building boats, and have not failed in doing so even in head-quarters."

Looking at Mr. Thompson's project through his testimonials, we are bound to acknowledge that he may fairly claim to have disarmed suspicion and silenced all objectors. Inventions which have secured the circumstantial adhesion and support of the Duke of Cambridge, the Duke of Sutherland, Sir John Pakington, Lord Alfred Paget, Colonel Sykes, Rear-Admiral Elliot, Richard Green, J. Scott Russell, William and Thomas Fairbairn, Frederick and W. O. Young, as well as many other persons equally honourable though not so universally known, must possess claims which cannot be ignored.

Twelve machines are used for turning out the different parts of a boat. First is the combination saw, for all kinds and dimensions of stuff, either square, bevelling, or angling, that can be sawed with a circular saw, and to any desired width or taper without measuring. The second is the patent form for spiling, or giving the plank edge the required bevel throughout its entire length. The third is for giving the proper bevel to the stern-board, thwart-knees, transom-knees, breast-hooks, risings, forward and stern ribs, cants, stern-sheets, gratings, &c. The fourth is for bearding and rebating keels



FOR BENDING AND GIVING THE RIBS THEIR PROPER CURVATURE.

at a single operation, and in the most perfect manner. The fifth machine is for tenoring toggels. The sixth for marking and slotting gunwales to receive their toggels and rowlocks. The seventh is the excentric saw for grooving, grating, &c. The eighth for giving the ribs their required bevel. The ninth for planing a plank on both sides at one operation, at the same time giving its interior and exterior curve in the most perfect manner, and uniform in thickness throughout its entire length. The tenth is a machine for planing perfectly plain surfaces. The twelfth is for moulding toggels, bottom boards, gunwales, and risers, and it cuts any bevel or irregular mould, or three sides, or planes three flat surfaces at a single operation. The twelfth is for bending the ribs to any form or size required in boatbuilding. We give Engravings of a few of the principal machines employed in the new system of boatbuilding.

When the various parts of the boat have been perfected by these twelve machines they are put together by the aid of the thirteenth, which we also engrave. This latter is what the inventor calls his "patent assembling form." It is in reality the reversed framework or shell of a model boat—a kind of boat-mould, if one might employ such an expression. It is a frame adapted to receive all the parts of the boat, to hold them together firmly in their proper places, and to retain them there until the easy work of bolting and screwing has been thus expeditiously performed, and the perfected craft is lifted off the "assembling form," and pronounced ready for sea.

A company has been formed to carry out Mr. Thompson's inventions in this country, bearing the title of the National Company for Boatbuilding by Machinery (Limited), of which the general manager is Captain John Vine Hall.

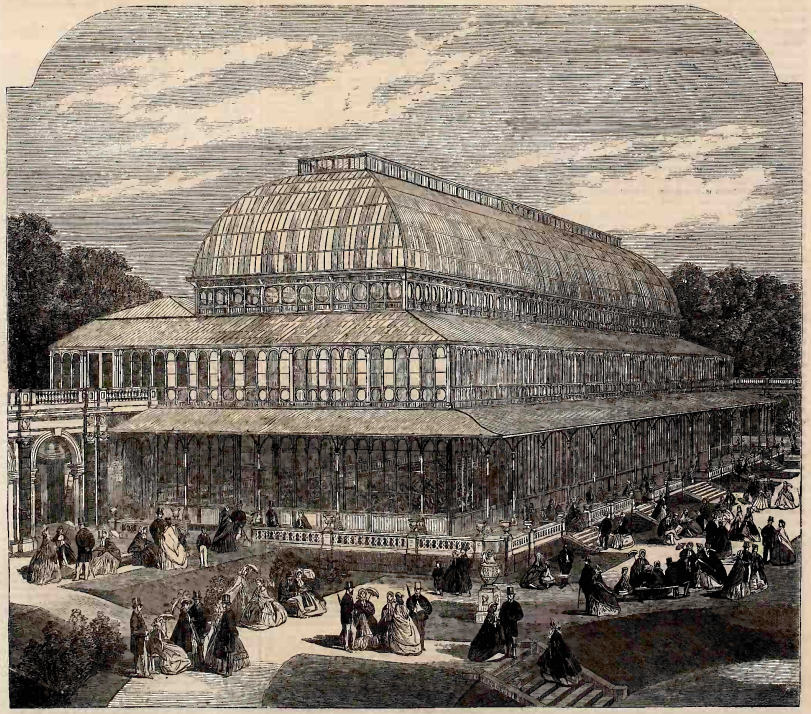
No. 1098.—VOL. XXXIX.] SATURDAY, JULY 13, 1861. [WITH A SUPPLEMENT, FIVEPENCE

DEVELOPMENT OF INDIA.

THE trite proverb that out of evil comes good is only an epigrammatic mode of stating that almost all human affairs are based on a system of compensations. At this moment there are indications that out of the danger of two great calamities, viewed in reference to their bearing on the material interests of this country—namely, the Indian mutiny and the lamentable disruption of the United States of America—we shall pluck advantage. A very superficial glance at recent legislation and administrative reorganisation will show that our Indian empire is passing into a new phase of existence and development. A debate in the House of Lords not many days since has afforded much information, and has directed public attention to what may be said to be the practical means of rendering India something beyond a glittering, a somewhat falsely glittering, adjunct of the British Crown. Already much progress has been made in the reformation of the legislative, financial, and governmental system of that country; and the raising of the question of public works, and especially of the important matter of irrigation, is a decided step towards the carrying out of ideas and hopes with regard to our Eastern dependencies, which are every day taking at once a more enlarged and a more realistic shape. The most complex machinery and the mightiest fabrics are generally, if not always, dependent in the last resort on some single screw, or some late-driven nail. The clinching of the last bolt of the great tubular bridge in Canada represented some such image to the mind. Without reducing the notion to such a minimised point, it may well be said that when you speak of irrigation in India you have used what may be called the representative word. Two circum-



THE CONSERVATORY IN THE ROYAL HORTICULTURAL SOCIETY'S GARDENS, SOUTH KENSINGTON.—SEE NEXT PAGE.

stances have at the present time given peculiar importance to that question—the famine, which has desolated so large a portion of India, and the troubles in the United States, which have threatened so seriously our cotton supply. The one unmistakably proves the defective state of our existing system of irrigation in India, and the other shows the hazard to which we expose ourselves in depending entirely on a single source of supply. Although for this year Lancashire and the northern manufacturing districts, with their population of four or five millions dependent on an adequate supply of cotton, are safe, yet there is no disguising the peril which must arise from a defective supply next year, which is more than imminent. Without putting India forward as the sole source on which we can fall back in this respect—for it would be shortsighted in a remarkable degree to ignore the capabilities of the West Indies and West Africa—it is undoubted that the former country only wanted irrigation for fertilising the soil and providing against climatic transitions and inland navigation for conveying produce to points of embarkation, in order to give us an unlimited quantity of a raw material which is simply one of our prime necessities.

It has been said on good authority that as much cotton is wasted in India as is grown in America. The number of acres of cotton under cultivation there has been estimated at no less than 24,000,000. The valley of the Godavery alone contains a larger cotton-field than America. The cotton-growing districts of America but 4,000,000 acres—about the area of Yorkshire—are under cotton cultivation. This year the district of Guzerat alone—about a hundredth part of India—is estimated to produce one-third of our ordinary supply from America. Then, as regards quality, it is admitted that the cotton of India, even our Indian products, with all its imperfections, is equal to 75 per cent of what is required for our consumption; while it is asserted that the cultivation of American cotton is increasing at the rate of 20,000 to 40,000 acres a year in the district of Dharwar only, and that the acreage last year of the whole of America was reduced 50 per cent in new equal to that of New Orleans. It is to be noted that as regards cotton in India it is not a question of new cultivation, nor is there any necessity for introducing seed or instructing the people in the manipulation of a new product. The capabilities of many parts of India for the production of other articles—such as flax, jute, linseed, &c.—are shown by the large increase in the import of the first and last of these commodities from that country into England since the Russian War. Assuming the case for the capability of our cotton supply from India to be made out, the other side of the question arises—namely, whether any proportionate reciprocity of trade is to be expected. We find it stated that in 1851 the value of cotton manufactures imported into India from Great Britain was £5,220,194, and of other articles £2,022,000, making a total of £7,242,194; while in 1859 the value of British cotton manufactures imported was £11,121,141, and of other articles £5,521,103, giving a total of £16,644,920, and this in the face of war, mutiny, and other difficulties. This goes far to prove that it is possible for India to be one of our best customers. And it coexists with the undoubted fact that the immense area of India has by no means been brought within the compass of commercial enterprise. As yet the great natural annihilators of time and space—railways—are, relatively, in an infinitesimal state of existence; and the great physical difficulty of the country, the means of transit, is to a great extent in its old-world condition. It is to this question, which, happily, is in immediate connection with that of the fertilising process of irrigation, that attention is now being directed.

The system of irrigation and its adjunct, navigable canals, is peculiarly adapted to the conformation of the country in India, and it was carried on to some extent centuries ago under the native Princes. The rivers of India are quite adequate for this purpose. It is shown in unmistakable evidence that to the want of water communication is owing the greater part of the evils from which the country suffers—its famines, its pestilences, its fevers, with all their consequent suffering. Of the beneficial effects of such works of this nature as have been established there is ample testimony. The great Ganges Canal, although a district originally in need of the agency of water; and had there been no canal there would have been no crops on broad lands which are now covered with wheat and other cereals in large abundance. According to a rough calculation, 236,243,840 lb. of grain have been supplied to the market during the present cultivating season, and for each pound is sufficient for one person daily this would be equal to the maintenance of 644,718 men and 467,718 women and children for a whole year, while it has also produced fodder sufficient to keep from starvation the cattle of the districts through which the canal passed, and probably saved the Government from making remissions of land revenue to the amount of £180,000 or £200,000. Again, we have the case of the opening-up of the work which is known under the general name of the Godavery, the result of which last year was an increase in the revenue of one district of £30,000, while the exports were £300,000, being an increase of £180,000. The million imported by the people—once the most impoverished in India—amounted to £190,000. The increase of the revenue was ninety per cent on what it was before the works began, and the profit on the expenditure was forty per cent. The Godavery River itself runs for one hundred miles through the finest cotton-fields of India, and may be said to direct its course in almost a straight line from the chief cotton centre to Coringa, the best and safest port on the eastern coast; and this great stream, with its numberless tributaries, is spoken of as capable of becoming one day the Mississippi of India. Great authorities have spoken on the subject of irrigation in one strain. Everywhere is found evidence of the wonderful effect produced by irrigation wherever the means can be obtained; but everywhere are to be seen lands of vast extent, fertile properties lying comparatively waste, but wanting water only to convert them into plains of the richest cultivation; and everywhere amongst the people is to be found the keenest anxiety to be supplied with that by which alone they can be enabled to turn their labour to good account. It is undoubted that as regards irrigation works the physical impediments are generally few and easily met; the returns are always considerable, sometimes immense; they add from three to six fold to the annual productiveness of the land; they create new wealth, and the commercial and political results are a confusion at which there is no other example; they increase the wealth of the inhabitants in a remarkable degree, and with property the people acquire habits of independence, and a desire for knowledge and for the extension of useful schemes of every description. It is equally clear that by the means a large addition may be made to the revenue without pressing upon the people, while the people themselves will have their condition greatly improved. In a political point of view the results must be quite as important, for every increase in the happiness and contentment of the people must give additional security to the Government.

In endeavouring to turn attention to this question, and its direct influence on the immediate wants and interests of this country, we have attempted no more than the throwing together of a few plain facts and the giving some slight statistical information. To what we have already stated we may add that the Government of India, both at home and abroad, appears to be quite alive to the value and importance of the subject; and we learn that, out of a sum of £1,500,000 which it is intended to devote this year on public works in that country, no less than £1,400,000 is to be applied exclusively to carrying out works of irrigation and inland navigation, and the improvement of communication, whether by water or by land. It may be that in times past we have not been keenly sensible of the responsibility which we undertook when we brought the greatest part of the vast continent of India under our rule. We may have treated our new possession more as a source of individual wealth and of the factitious splendour of dominion than as an integral portion of our national greatness in the more direct sense of that term. The dream of the pagoda-tree has long since faded, and now everything seems to tend towards bringing our Eastern empire into that close union which are comprehended in our duties as well as our rights.

ROYAL HORTICULTURAL SOCIETY'S ROSE SHOW.

On Wednesday a grand show of roses took place in the new gardens of the Royal Horticultural Society at South Kensington. This is the second exhibition of the kind which has been held, the first of which was held in these gardens since their opening a few weeks ago; and, the weather being all that could be desired, the arrangements for the show were completed, and the ground assembled on the occasion. Among the visitors were the Duchess of Cambridge and the Princess Mary, besides many members of the Royal Family. The tents were erected in the conservatory, and the show was in all respects a successful one. In addition to a large selection of roses, exhibited by amateurs, there were also fine collections from the nurseries of Messrs. Paul and Son, Cheshunt Nurseries, Herts; Messrs. Lane and Son, Old Charlton Nurseries, Herts; Messrs. Veitch and Son, Exeter; Mr. Mitchell, Hyde Nurseries, Englefield Green; Messrs. John Cranston, King's Acre Nurseries, Hereford; John Keynes, Salisbury; Messrs. Cutbush and Son, Highgate; Lewis Ashburnham, Battle; Salisbury; Rev. W. F. Radcliffe, Ruddon Rectory, Blandford; J. T. Hodge, Reed Hall, Colchester; Charles Turner, Royal Nurseries, Slough; Messrs. Osborn and Son, Fulham; Messrs. Lee and Kennedy, Hammersmith; Messrs. Standish and Noble, Bagshot; Lewis Ashburnham, Battle; Messrs. Paul and Son, Old Charlton Nurseries, Herts. The heads of the 1st Life Guards and of the Coldstream were in attendance, and performed various pieces from the most popular operas. At half-past six o'clock the ceremony of presenting these silver bugles, the gift of the ladies of Kensington, to the 1st (Middlesex) Engineers (Volunteers) took place. They were presented by Mrs. Macleod, the wife of Colonel Macleod, who commands the corps, and one bugle by Miss Macleod. Sketches and bases executed by Mr. Theed, and part of the collection intended to be placed in the Wellington College, were exhibited in the garden, which will continue open for the present month.

On the prodigious page is an Engraving of the Conservatory, and on page 29 a view of the Gardens. Our Artist has given these Sketches a view of the interior of the Conservatory, together with an account of the opening of the Gardens by his Royal Highness the Prince Consort, and other descriptive details.

CHURCH AND UNIVERSITIES.

The new Church of St. James, High Wych, in the parish of Sawbridgeworth, was consecrated on the 27th ult. by the Bishop of Rochester.

A new cemetery, situated on the line of the Great Northern Railway at Colney Hatch, and occupying 104 acres, was opened on Wednesday week as a burial-ground for Hornsey.

The Lord Chancellor has appointed Mr. Kenneth Palmer, M.A., Magdalen College, University Counsel, in the room of Mr. Bayford, deceased to the peerage.

The Rev. Dr. Ellicott was formally installed Dean of Exeter, on Tuesday week, in Exeter Cathedral. On Saturday week, the right Rev. Dr. Turner, Sub-Dean of Exeter, was installed a Prebend in that cathedral, in the room of the late Rev. Dr. Hall, deceased.

On Monday the foundation-stone of the new schools in St. Paul's-row district, Alnwick, was laid by the Duchess of Northumberland, in the presence of a large number of the nobility and gentry, numbering at least 3000 persons.

The Archbishop of York intends to hold his primary visitation at the places and times following:—York, August 29; Doncaster, August 31; at the places and times following:—York, August 29; Doncaster, August 31; Selby, September 2; Malton, September 3; Scarborough, September 4; Whitby, August 29; Thirsk, August 30; Sedbergh, August 30. And his Grace will hold Archidiaconal visitations, September 11; Richmond, September 12; Catterick, October 2; Whitby, October 7; Ripon, October 8; Knaresborough, October 9; Pontefract, October 10; Doncaster, October 11; Bolsover, October 14; Chesterfield, October 15; Hemsley, Oct. 16; Market Weighton, Oct. 18; Brompton, Oct. 19.

The two Houses of Convocation for the province of Canterbury met for the despatch of business on the Upper House at once proceeded to take into consideration the resolution of the Lower House, adopted on the 6th ult., in favour of the appointment of a synodical action on the book entitled "Essays and Reviews." The Bishop of Salisbury moved that the Bishop of Oxford, the Bishop of Ely, and the Archdeacon of Chichester, be a committee to consider the Rev. Dr. Rowland Williams's recent publication, and to report to the House. Dr. Rowland Williams would most probably be called on to act before the Bishop of Salisbury's committee was in their hands. The question of admissibility in that suit, it was not expected, would be raised on the motion for the appointment of the committee. The question of the resolutions of the Lower House, His Lordship accordingly moved that the House should go into committee on the 30th inst. The motion was carried *nem. con.* Both Houses stand prorogued to the 13th of August next.

PREFERMENTS AND APPOINTMENTS.—The Rev. J. D. Ridout, Vicar of Bacon, Cambridgeshire, to be Rural Dean; Rev. J. Fletcher to be one of Newmarket; Rev. W. H. Hewlett to be Minor Canon and Precentor in Carlisle Cathedral. *Rectories*: Rev. H. Burton to Abington, Irton; Rev. W. A. Cutting to Trimdon-grange, Norfolk; Rev. W. Wardell to St. Leonard's, Colchester. *Vicarages*: Rev. F. Bishop to Buntingford, Cambridgeshire; Rev. W. H. Laughton to Long Compton, Warwick; Rev. C. J. E. Walker to Thurleigham with Pertenhall, Bedfordshire. *Incumbencies*: Rev. T. G. Gower to Wilmcote, Warwickshire; Rev. W. W. Merlin to the New Church at Bucks, North Devon; Rev. C. Massey to St. Peter's, West Bromwich. *Chaplaincies*: Rev. W. H. Jones, Vicar of Bradford-on-Avon, to the Lord Chancellor; Rev. G. Stanhan to the Surrey County Lunatic Asylum. *Perpetual Curacies*: Rev. J. J. Hardman to Hednesford, Staffordshire; Rev. G. Smith to St. Peter's, Great Wyndmill-street, Haymarket; Rev. J. Rees, St. Barnabas's Church, Cardiff; Rev. J. Sandy to Seywell to Marlamleigh, near Southminster, Devon.—*Guardian*.

FOREIGN AND COLONIAL NEWS.

FRANCE.

Napoleon III. has arrived in Vichy, and has had an enthusiastic reception there. He has taken up his residence in the Villa Sichel, formerly occupied by the distinguished musician. The Emperor takes long walking and riding excursions in the environs of Vichy. If, however, only half the dramatic incidents occur which are chronicled by the semi-official press, his Majesty's quiet must be sorely broken in upon. The Emperor "rides out" On Sunday Vichy presents a spectacle as picturesque as unaccustomed. Its habitual guests were less amidst the people that cause down from the mountains of Forez and the Auvergne. More than 10,000 peasants, with their wives and children, had taken possession of the park; they had literally encamped there, surrounding the Imperial residence in order to have the pleasure of seeing and saluting the Emperor during the day. When his Majesty went to church, he had to force his way in the midst of them. An immense crowd placed itself along his way, accompanying him with the warmest acclamations. In the evening the Emperor, touched by the sympathetic reception of the people who remained encamped round his residence, ordered that they should be admitted. Then all, rushing in, greedy of a nearer sight of their Sovereign, defiled before his Majesty to cries, a thousand times repeated, of 'Vive l'Empereur! Vive l'Impératrice! Vive le Prince Impérial!' According to the *Moniteur du Puy de Dôme*, on the evening of the Emperor Napoleon's arrival at Vichy, a silly woman—it is said an English lady—took off her shawl and spread it on the ground for the Emperor to walk on. His Majesty took it up, and politely handed it back to the lady.

The treaty of commerce between France and Prussia has been signed.

M. de la Guerronière has been appointed a member of the Senate.

Tuesday's *Moniteur* published a letter addressed by the Emperor to the Governor of Algeria in reference to the organisation of the colonies on the African coast for the French colonists. The Emperor announces that he has signed a treaty with England which authorises the French Government to engage labourers in India for the French colonies. He says, "We shall find in India and the French possessions in Africa as many free labourers as we require. He commissions and orders the Minister to take measures for prohibiting the introduction of negroes into the French colonies after July, 1862, the date of the execution of the treaty with England.

SPAIN.

The insurrectionary movement appears to be entirely suppressed. The principal leaders of the party are in the hands of the troops, and the others are likely to be captured.

A letter from Gerona says that a Republican movement has taken place in the city of Jonar, in that province. At the last dates a battalion had been sent to that town to restore order.

The *Correspondencia Autografa* says:—"If the Emperor Napoleon manifests a wish to have an interview with Queen Isabella in Spain, such interview will take place."

Spain has just taken stock of her population, which is found to number fifteen millions.

The Spanish Government have some fresh work on their hands in their new Dominican property, which the Haytians have invaded.

ITALY.

The Italian Chamber of Deputies are most zealous in adopting measures for the defence of the country. On Saturday last they voted a fresh levy of 24,000 men.

Kossuth arrived at Turin yesterday week.

Garibaldi occupies some of his spare time at his island in experiments on the propagation of sponges and oysters. These studies do not, however, engross all his attention. He has written a pressing letter to Mr. Peabody, requesting him to employ her to organise at Milan and other cities lady associations for visiting the homes of the humbler classes and promoting indigenous habits, the moral and physical benefits of which the under-striation of society being less looked after by the intelligent and opulent laity than holds in country parts of Italy, is most conspicuous. Those who, like Mr. Peabody, should not be left to any class or caste, but concern every citizen in a Christian land.

A contents of the Pope's health continue as contradictory as ever. The Turin papers describe it as in some degree improving. Some Roman correspondents also declare that he is decidedly hopeful; whilst one letter from Rome describes the Pope as sinking fast.

SWITZERLAND.

The Federal Assembly has elected M. Stæmpfli, present Vice-President, as President of the Swiss Confederation for 1862. Doctor Furrer, Federal Councillor, has been elected Vice-President of the Swiss Confederation.

PRUSSIA.

The solemn coronation of the King and Queen has been appointed to take place in October next, in the city of Konigsberg. From the provinces of the Diet and of deputations summoned from the provinces, members of the Diet and of deputations summoned from the provinces.

AUSTRIA.

The Hungarian Diet, after lengthened conferences, agreed to yield to the demands of the Emperor, and not to modify a single item of their Address. They decided upon adopting the draught originally proposed by M. Deak, which is to be addressed to the Emperor as recognised Queen and Sovereign of Hungary here in the Address of 1790 and subsequently. The Presidents of the two Chambers left again on Saturday morning for Vienna to present the Address. The reply of the Emperor to the Presidents of the two Houses on receiving from them the Address was of the most conciliatory nature. His Majesty thanked the States for the readiness with which they met his desires, and promised an early reply, which he trusted would be received in a similar spirit.

RUSSIA.

The inhabitants of Warsaw have issued an address to their fellow-countrymen, to be circulated all over Poland, recommending the course of action which they believe ought to be pursued by all Poles, and signalising the recent manifestations of the Czar's policy of the Russian Government. All immature attempts at insurrection are earnestly discouraged.

INDIA.

A rupture took place between the Nawab of Bhawalpore and his Minister, Ahmed Khan, on May 25. The Minister arrested his house with 250 men and two guns. The Nawab's troops attacked the house and overpowered the Minister, who, with two brothers, was killed fighting valiantly.

No excitement now exists in the Sanchal districts.

Mr. Laing sailed for England in the Colombo on the 9th last.

The volunteering for Her Majesty's forces had been so successful that only 500 of the late Company's troops have remained for local service.

The famine was dying out, and future prospects were bright, rain having fallen throughout the north-west provinces.

CHINA.

There is a collision at Bucharest between the Legislative Chamber and the Ministry. The former have passed a vote of want of confidence against the latter, and the Ministry have consulted the Prince regarding the dissolution of Moldavia and Wallachia, and not having preconcerted the matter, the Prince has given the Government a refusal.

News has been received from the west coast of Africa, but it is of little general interest. Mr. Foote, our Consul at Lagos, died of fever shortly after the arrival of the *Arrow*. Rev. Edward Long, King of old Calabar, died on May 22. The Falcon had captured a Dutton slaver with 450 slaves on board. The weather on the coast was very unhealthy.

The Chinese Classics, or the orthodox Confucian literature, are about to be given to the public in seven volumes. The important undertaking comes in return to the cultural skill of Dr. Legge and the munificence of Mr. Jardine, a merchant in the opium trade, and the printing of the volumes is wholly the work of Chinese workmen in Hong-kong.

A Garibaldian officer in Parma, who believed that an insult was offered to his chieftain by some regular officers at a dinner, issued a challenge to the whole company from whom the offence emanated. The challenge was accepted. He fought successively four antagonists, wounding three slightly, but to his fourth adversary he gave a mortal wound. The Minister of War has ordered the arrest of the officer who has challenged all the parties amenable; but the Garibaldian officer is believed to have escaped into Switzerland.

THE CIVIL WAR IN AMERICA.

By the June we have received New York journals of the 27th ult., and telegrams to the evening of the 29th.

BELLIGERENT OPERATIONS ON SEA AND LAND.

There have been no movements of any importance since our last. Mr. Lincoln and General Scott seem to be waiting for the sanction of Congress, which was to assemble on the 4th inst., before ordering any further advance into Virginia. The report of the cutting to pieces of the Hessian regiment at Hagerstown, and the surrounding of the Indiana regiment at Cumberland, Maryland, by Confederates under the command of General Johnston, was entirely without foundation. The Governor of Missouri, when last heard of, was marching southward, with a view of securing the head-mines in the south-west corner of the State. It was reported that Arkansas troops were on their way to aid the State Government of Missouri against the Federal Government. The ship Isabella, captured off the British ship Adventure, has left Charleston, and laden with stores said to be contraband of war—which were iron crates, empty ovens, engines, and machinery. It was to be taken to Nice. Another British ship, the Hector Gunshire, has been captured in the Gulf of Mexico,—reason not stated.

Professor Dana has been taking observations of the Confederate positions near Washington in his balloon, and communicating the results by means of an electric-telegraph apparatus which he takes up with him, the wire of which connects with the ground.

THE CONFEDERATE STATES.

Connection between these States and the civilised world continues to be maintained by the telegraph and railway lines which run through Kentucky, and by private letter-delivery companies, which have their head-quarters in Louisville, the chief city of this neutral State.

The Secession agitation has not yet come to an end, and is in need of leader-matches and gunpowder. In many places they are obliged to have recourse to the old-fashioned tinder and flint. The General Government has issued a call for fresh and large, so endemic in the Southern and Western States. A Philadelphia house refused lately to supply even a Kentucky purchaser with this valuable article.

The people of Eastern Tennessee refuse to send representatives to the Legislature at Nashville, Secession centre of the Southern portion of the region, has been to Washington, and, it is said, obtained the promise of Mr. Lincoln that his people shall receive assistance from the Federal authorities.

The Federal Government have recognised the provisional Government of Virginia, which is the only lawful existing one in the State, being that the regularly-appointed State Government has forfeited its rights by committing acts of treason against the United States.

THE NEUTRAL STATES.

General Banks has arrested Marshall Kane, the chief of the Baltimore police, on a charge of treason, and has appointed a provost-marshal for the city. The Capital has also been sent to Fort M'Henry. The Baltimoreans sympathise strongly with him.

With Kentucky a sort of concordia has been made, as she is to execute all Filibustier laws as recommended by the Kentucky Legislature. The Federal troops will not invade her soil provided she does not allow it to be occupied by the enemy.

Thirty-four companies had volunteered their services to the Federal Government from Kentucky. The election returns from this State indicate that nearly the Union majority which the Congress have been elected.

THE FEDERAL GOVERNMENT.

According to a statement furnished by the Secretary of War to President Lincoln for the message to Congress, about 22,000 volunteers are now enrolled in the United States service.

General Dembinski, the celebrated Pole, has offered his services to the Federal Government.

THE SOUTHERN STATES.

A mob has attacked the banks in Milwaukie, Wisconsin. The military were ordered out, and arrested thirty of the rioters. A strict guard is kept over the banks to prevent a run. The reason for the run on the banks was the throwing out of the notes of several of the State banks.

The French declaration of neutrality has been received by the New York press. They profess to be able to see an important difference between it and that of Great Britain.

The New York Tribune still directs public attention to the approaching International Exhibition of 1862. It says it is referred to the speedy organisation of a commission, "We know that a large number of our best mechanicians are anxious to exhibit, and we would inquire, on their behalf, if our Government has taken any steps in the matter. Such steps, suggested by the proper persons, would, we think, be spared from war matters, and would be ample to settle this whole business. We earnestly recommend the subject of an extended project to the attention of the Government: it is a subject not of temporary, but of permanent, importance to the people."

The capture of the Confederate Savannah has been thus analysed by a New York evening paper:—The captain is a Philadelphian by birth; the first officer and purser are Southerners; the sailing master is North Carolinian. Of the deck hands three are Irish, two are Scotch, one each from New York and Massachusetts, and one from Germany. The steward is a native of Africa, and the cook of China.

Only one-third of the six per cent State loan of Indiana was taken at satisfactory prices in New York. The lowest offer accepted was at 15 per cent discount.

Northern public opinion is impatient of the Fabian tactics of General Scott, denounces the Kentucky concordat, and suspects treachery in the non-arrest of Marshal Harney. A twenty-gun ship of war is at Portugal, and the ex-correspondent of the *Charleston Mercury*.

The Hon. Reverdy Johnson, of Maryland, offers a petition, with numerous signatures, praying the Federal Administration to suspend hostilities.

A movement is on foot in the southern portion of California to join the Confederate States.

The *Frankfort Journal* states that the King of Wurtemburg has had a slight attack of apoplexy. His Majesty has reached a great age, having been born in 1781.

A third child, evidently of European parentage, and about five years old, was recently discovered in the Delhi purchase. She is supposed to be one of the survivors of the massacre of 1854. Inquiry is being made.

The Secretary of State for India has issued instructions for the survey forthwith of a new copper coinage for India. The contract is taken by Messrs. Heaton, Birmingham, likely to be soon prepared to strike the new money.

A letter from St. Petersburg of a late date says, "According to the last remarks from Pekin, the death of the Emperor was so generally expected that the authorities were preparing the carriages necessary for his funeral.

A supplementary estimate for the civil services has been moved, estate for the purchase by delay the properties of the compensation payable by Great Britain for the redemption of the Slave Debt to be £1,050,000.

It is stated that the Duke of Brabant has left the country to fill in different parts of France, and particularly in the extern departments, thirty-three times, and has very cousins either killing some one or inflicting serious personal injury.

Prince Alfred and suite arrived at Hamilton, Canada West, on the 24th inst. The Royal Highness was received on the same day, and was enthusiastically received by loyal people. There was no formal reception. His Royal Highness after visiting Niagara, returned to Canada Bank. He left at London on the 27th, and Montreal on the 28th ult.

A Nova Scotia paper states that when her Majesty's steamship Nova was approaching the harbor her captain tried to steer clear of a mass against some icebergs. An Armstrong shell was fired at a small iceberg about 150 feet back, from a distance of four miles and a half. Such was the effect that a block of ice, judged to be of about 100 tons, fell from the summit. This large weight, falling from the top of the berg, removed the centre of gravity, which caused the whole fabric to roll over and rock to and fro."

The Nova Scotia gold discoveries continue to attract attention. In addition to the deposits at Tangier, others have been found at Musquodoboit, in the westward of Halifax, and at a place called Musquodoboit, in the interior. Several specimens, believed to be above standard, were about to be forwarded to England. Some of the quartz at Tangier is alleged to have yielded twenty ounces to the ton. All the various statements made are without a reservation from any one possessing scientific knowledge.

LATEST NEWS FROM ABROAD.

The following telegrams were received at Mr. Reuter's office yesterday (Friday):—

FRANCE.—Paris, July 11.—Judgment was given to-day in the affair of MM. Mires and Solar. Both were condemned to five years' imprisonment and a fine of 5000f. Count Simeon, member of the Council of Surveillance of the Caisse des Caisses de Fer, was declared civilly responsible for the losses of the depositors.

SWITZERLAND.—Berne, July 11.—The Federal Council has received another note from the French Government, in which the latter reasserts the right of sovereignty and the power the valley of the Dappes, but declines to enter into any further discussion of the question.

SPAIN AND MOROCCO.—Paris, July 11.—According to advices received here from Gibraltar to the 8th inst. the English Consul at Tangiers had gone to Fez. It is asserted that he will offer the Emperor the mediation of England for the definitive settlement of the difficulties between Spain and Morocco.

COUNTRY NEWS.

The weavers' strike at Derby has been brought to a close, the men having gone to the various factories this morning.

The Tynemouth Chamber of Commerce has opened a public test for anchors and cables on the Tyne.

Four "rough" have been arrested about a mile from Ennistillen for holding revival meetings on the American plan.

At the General Assembly of the Presbyterian Church in Ireland last week, the Rev. John Scott, of Mary-Street, Manchester, now being disendured, when the roof fell in, crushing two children to death and inflicting serious injuries on several others.

Newcastle-on-Tyne has lost another of its eminent men. Mr. Richard Grainger, who originated the idea of the present magnificent streets and public buildings, died on Thursday week, in the sixty-third year of his age, after a short illness.

At Windsor, last Saturday, a young woman undertook to walk twenty miles in four hours and a half. She stepped off in professional style, in a nine-inch dress, and completed the task within the time given time.

William Wood, a cotton-waste broker, was on Tuesday committed for trial at the Manchester Police Court on the charge of forging the signature of a person named Ashton, representing together £174 8s. The police held three more of his worthless bills.

At the Portsmouth Quarter Sessions, on Wednesday, Christopher Hall Harvey, late a clerk in the Portsmouth branch of the Bank of England, was tried on the charge of embezzlement. The prisoner pleaded "Guilty," and was sentenced to seven years' penal servitude.

New assize courts are to be immediately erected at Guildford, to meet a want long felt. The matter has been taken up in a spirited manner by the county gentry, and, when the Lenten assizes are held, the new building will be ready. A competition for designs has been called for, and one hundred guineas is offered.

A charge of murder on the high seas has been preferred against Captain Lee, of the ship Lennox, now lying in the river Mersey, bound to Liverpool on Wednesday, the evidence going to show that the prisoner had caused the death of his second mate by a series of outrages of almost incredible brutality.

A fatal railway accident took place on the Trent Valley line on Thursday week, by which a luggage train was run into by the 8.30 Euston-square at 8.30, had arrived four miles beyond Rugby, the latter exploded, blowing the engine into a thousand pieces, and others, and also a post-office clerk, sustained severe injuries.

The *Bristol Daily Post* states that a few days ago a person at the Anglesea-street Police-court, named James Miles Hoskins, another inmate, also endeavoured to get away, but was detained. The groom, however, on hearing the noise, gave information to the police, who took charge of him when he got clear off.

The daughter of the Earl of Brecknock, eldest son of the Marquis of Camden, was celebrated last week at Bigham Abbey by the friends and tenantry of the Earl of Brecknock. The marriage ceremony was twelve thousands of six of the same age in the young noblemen.

Sir William Atherton, the Attorney-General, was re-elected at Carlisle on Monday, by a majority of 1,000 votes. Mr. Parker, the Liberal new Solicitor-General, was returned without opposition as member for Newcastle-under-Lyme, in the room of Mr. Adam, who retires from Hundreds.—The election for the county of Longford took place on Thursday week, when Mr. Greene, the Liberal candidate, was returned without opposition. Colonel White is a Liberal.

The Queen, August Saleman, who is supposed to be concerned in the murder of Mr. Harvey, Secretary, was re-examined on Monday at Belfast. At the close of the proceedings he made a statement, in which he asserted that he was innocent of the charge, and that he knew who had implicated in the murder. According to a report received from Hull, the steamer Lucy, belonging to the Hull and Hamburg Steam Packet Company, has been endeavored to commit a burglary.

The Rev. Mr. Bowden Powell, who was sent for trial at the Sessions about ten days ago on the charge of stealing some silver ladles, the property of Mr. Bertram Mitford, of Mitford Castle, was brought up for re-examination on Saturday sentenced by the Recorder to three months' hard labour.—The Rev. Mr. Gleig, Rector of Liverpool, was committed for trial on Wednesday, that Mr. Powell was at one time Curate of Chilliwell under him, Mr. Campbell says:—"He always conducted himself in an accurate manner as a Curate, and only once. He never was one of my Curates, or any way connected with me, and never saw him but once in all my life. I beg to add that he is only in Deacons' orders."

In the early part of the week there were violent thunderstorms in different parts of the country. At Wolverhampton on Monday the parish church at Leamington was struck by the lightning in the course, and two or three people were injured. At Bilston, Staffordshire, the tall spire of the Christ, and the electric fluid, passing down into the transept, destroyed some of the pews. The bell-tower of Lichfield Cathedral was struck by the lightning down, the steeple of Dunstable old parish church silvered into many pieces; and the top of the tower of Bedford Church was damaged materially. At Warwick a volunteer carrying his rifle had his eyeglass. A party of excursionists from Nottingham, on their way to Skegness, on Monday week were struck down Doncaster, one girl died, the others were seriously injured.

The squadron of the Channel Fleet under the command of Admiral Stewart was still at Kirkwall (Orkney), according to the latest accounts.

Commander Thomas Hamilton, R.N., died at Park-place, Regent's Park, a few days since, aged seventy-two.

Mr. W. Buck, of the Rye House, has been appointed private secretary to Sir Benjamin Hall, Chief Commissioner of Works.

The 78th Highlanders have determined to erect on the Esplanade of Edinburgh Castle a memorial of their comrades who fell during the Indian campaign. It will consist of a bronze figure of the regimental colour mounted on a massive pedestal—the whole to be some twenty-eight feet high.

The Lord Provost of the new-created Burgh of Govan, on the Clyde, place at Chateau De Lyard on Tuesday with the most complete success, in the presence of a concourse of several thousand spectators. Miss Lush, daughter of the late Captain Lush, and niece of Mr. Lush, late Secretary to the Lord of Argyle, performed the ceremony. Mr. Lush, who was also present, is about to erect a monument to the memory of his late uncle.

A meeting of shipowners, commanders, and others connected with the merchant service, was held on Tuesday to consider the regulations under which masters and mates of merchant vessels may be carried as officers of the Royal Naval Reserve; and to consider also how the Government could be most effectually enlisted in procuring the number of seamen required to complete the Royal Naval Reserve Force. Mr. Lindsay, M.P., presided. Resolutions were passed expressing a conviction that 40,000 seamen could be obtained from the mercantile marine if they were placed on a proper footing in regard to the Royal Navy, the being that the rank of Lieutenant and Sub-Lieutenant should imply equality with the corresponding rank in the Navy. It was agreed to memorialise the Government to the effect that no officer should be considered in a memorial to be presented to the Duke of Somerset.

METROPOLITAN NEWS.

Mr. Tremenheere has opened an official inquiry into the condition of the operative bakers.

The American resident in London celebrated the 4th of July by a dejeuner, presided over by a New York clergyman.

There was a rose show at the Crystal Palace last Saturday, which proved a great source of attraction. A grand fancy fete will be held at the Crystal Palace on Saturday next, July 20, in aid of the funds of the Royal Dramatic College.

The Metropolis Road Commissioners have resolved, by a large majority, that the Regent's Quadrant shall be removed, and that the site shall be restored to its original state. They give May 1, 1862, as the date at which the work shall be completed.

The annual examination fête of the Warehousemen and Clerks' Schools took place last Saturday. Mr. Milner Gibson presided, and presented the prizes to the successful pupils. The right hon. gentleman expressed his warm interest in the institution.

Yesterday week the foundation-stone of the Arthur-street Chapel, Freshwharf-road, Rotherhithe, for the church and mission premises formerly worshipping at Vernon Chapel, Bagnigge-wells-road, under the patronage of the Hon. Rev. Baptist Noel, was laid by Lord Lovaine.

A small paddle-steamer, the Wonder, on Tuesday morning, when opposite Greenwich pier, struck upon a barge by way of wood. A portion of her bow timbers was knocked away, and water poured into the hull so rapidly that these on board had only time to escape.

A conversazione of the Royal Institute of British Architects was held on Wednesday at the society's rooms in Conduit-street, Hanover-square, under the presidency of Mr. R. Kerr, F.R.S.A., M.R.I., the president. More than 600 persons were present.

On Wednesday morning a large boiler connected with the manufactory of Mr. Hall, in New Victoria Park, exploded, causing a great destruction of property, and in one instance loss of life, with serious injury to a number of persons. Happily, however, the property of the deceased was also much damaged.

The births of 870 boys and 877 girls (in all 1747 children) were registered in London last week. In the ten corresponding weeks of the years 1851-60 the average number was 1,660. The number in the week ending 29th June was 1068. The number as derived from the returns of corresponding weeks in the ten years 1851-60 is 1,660, and in 1861 it is probably 1,720.

Two iron screw steam-vessels were launched from Messrs. Langley's yard at Deptford last Saturday. The vessels are the Briton, 100 tons, intended for the mail-packet service between Holyhead and the Cape of Good Hope; and the barque Mary Langley, of 400 tons, intended for the tea-vessel trade.

As four men were employed, on Monday, in repairing the front of Sir De Lacy Evans's house in Great Cumberland-place, the scaffold suddenly gave way. An old man, named Hall, who was employed on the premises, was conveyed to the hospital without hope of recovery, as was his grandson, a boy of twelve. His son, a lad of fifteen, was also taken to the hospital, but escaped with very serious injuries, the fall having been fully fifty feet.

A fatal accident happened on the premises of Messrs. Shrubbs, Ballantine-street, Manchester, in Hatton, on Thursday week. While seven of the workpeople were hoisting a cistern in the top of the boiler exploded, wrecking six of the number were seriously scalded and otherwise injured, one of whom died on Friday morning, an event that he expired on hours after his admission into St. Bartholomew's Hospital.

A meeting to raise a memorial fund on behalf the late Mr. Braidwood's family was held at the Mansion House on Monday week. In the absence of the Lord Mayor, Alderman Salomons presided, and the meeting was adjourned to the Egyptian Hall, Mansion House, where, including the names of the Duke of Sutherland, the Earl of Caithness, Alderman Salomons, Alderman Rose, Sir Peter Laurie, M.P., Mr. J. Locke, M.P., Mr. C. Oiye, M.P., Mr. H. B. Sheridan, M.P., Dr. Cumming, Mr. Scott Russell, and other gentlemen, £1,851 had been subscribed in the room.

Flames are still to be seen rising from the Tooley-street ruins, but there appears to be little doubt that the fire is on the point of complete exhaustion. Traces of the fire have been discovered by the police in Braidwood, have at length been discovered. His watch, his pocket-book, some coins and a few pieces of his clothing, together with some articles belonging to each other under a mass of debris. On Monday Mr. Sergeant Payne held an inquest on the fire brigade men who perished in the fire. Mr. Braidwood, believed to be the remains of Mr. Scott. The evidence of Mr. O'Connor, a partner of the deceased, was to the effect that he was with some others, who depend to by other witnesses, served the purpose of identification, and the jury returned a verdict of "Accidental death." The Coroner's jury also returned a verdict of "Accidental death." The Coroner's jury also returned a verdict of "Accidental death."

Lord Ashburton's family was held at the Mansion House on Monday week. In the absence of the Lord Mayor, Alderman Salomons presided, and the meeting was adjourned to the Egyptian Hall, Mansion House, where, including the names of the Duke of Sutherland, the Earl of Caithness, Alderman Salomons, Alderman Rose, Sir Peter Laurie, M.P., Mr. J. Locke, M.P., Mr. C. Oiye, M.P., Mr. H. B. Sheridan, M.P., Dr. Cumming, Mr. Scott Russell, and other gentlemen, £1,851 had been subscribed in the room.

The Coroner's jury also returned a verdict of "Accidental death."

LAW AND POLICE.—In the Court of Chancery last Saturday the new Lord Chancellor, Sir Hugh Cairns, and Mr. Justice Wood, sat to disposed the appeal with costs, observing that, unless in very exceptional cases, he had no disposition to alter the order. It was also stated that he thought the direction vested in the Court had in some instances been exercised injudiciously.

In the Court of Common Pleas, on Monday, an action was brought by Mr. Campbell, late a member of the celebrated "Forlorn Hope" Club, against Mr. Bird, secretary to the Protestant Alliance, to recover damages for two alleged libels. The action had been brought to recover the sum of £5 which had been sent by a deputation to Lord Palmerston against Mr. Turnbull's appointment, in which it was stated that Mr. Turnbull, whose business was a bankruptcy compact three days, resulting in a verdict for the defendant.—On Wednesday Lieutenant Alan Lennox Boyd, late of the Royal Engineers, entered the Duke of Cambridge. The jury returned a verdict for the plaintiff, damages £200. In the London Court of Bankruptcy, on Monday, it was stated that a meeting in land in the matter of Mr. Hallett's estate might yield another 6s. in the pound, making 3s. 6d. in all.

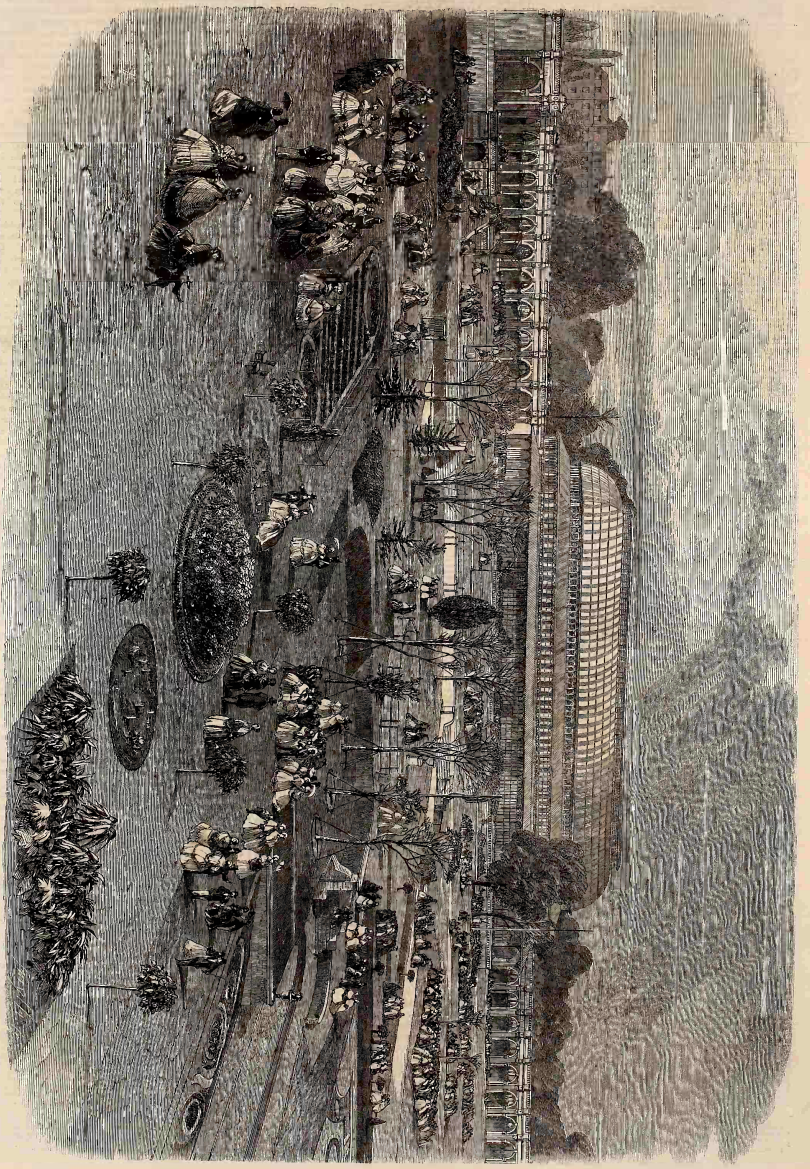
The sittings of the Central Criminal Court were resumed on Monday. The calendar for the present session contained 349 prisoners for trial, being a number of committals and the gravity of the offences charged. There are in all 109 prisoners for trial. On Tuesday, Mr. Ernest Jones, with a view to possess for stealing a large sum of money, the property of his employers, a respectable firm in the City. He was defended by Mr. Parry, who brought up for judgment, received sentences of ten years' penal servitude. In the New Court several cases of fraud were disposed of, the majority of convictions and sentences ranging from six months' imprisonment to ten years' penal servitude.—On Wednesday, Mr. Chapman, a bankrupt, pleaded guilty to two indictments, one charging him with not surrendering to pay his examination, and the other with concealing his effects, embezzling and securing a portion of his goods. Sentence was deferred.—Joseph Bowell, a carpenter, was charged with fraudulently obtaining goods within three months of his bankruptcy, and also with obtaining money by false pretences. The latter charge was withdrawn, and the Judge having expressed an opinion that they were unsupported by evidence, the prisoner was discharged. Mr. Bowell pleaded guilty to the other indictment.—Thomas John Smith, a letter-carrier, was charged with stealing a letter containing a post-office order. On his conviction and sentences ranging from six months' imprisonment to ten years' penal servitude.—On Thurs

THE CIVIL WAR IN AMERICA: HOW THE OUTLYING SENTRIES OF THE FEDERAL ARMY ARE KILLED BY SECESSIONIST SCOUTS.—FROM A SKETCH BY OUR SPECIAL ARTIST.

CHARGES of brutality, and even of assassination, are rife in the Unionist camp against the Secessionists, who, doubtless, have counter-charges with which they also could horrify us, had they, like their rivals, the car of Europe; for all camps are sure to be infested with desperadoes who, under the garb of patriotism, prowl about to gratify their own evil purposes. The sentry duty at the front of the Unionist camp is, we are told, exceedingly hazardous and very few of those who are posted at night expect to see another day dawn. The country all round is thickly covered with wood, and in the darkness the Secessionists, acquainted with every cowpath, creep softly towards the poor fellow pacing to and fro on the road, taking advantage of every shadow, and profiting by the rustle of every falling leaf, until close upon him, when either the bowie-knife or a rifle-shot does the rest.

One night our Special Artist accompanied the scouting party, of which the annexed is an illustration, twelve miles into the enemy's country. The men were dressed in round slouched hats, rough flannel blouses, and carried revolvers and bowie-knives in their belts. Two in advance carried guns, ready cocked, keeping a sharp look out for ambuscades on each side among the trees. The Lieutenant in command and our artist were in the centre.

THE CIVIL WAR IN AMERICA: UNIONIST SCOUTING PARTY IN THE VIRGINIAN WOODS IN THE NEIGHBOURHOOD OF ALEXANDRIA.—FROM A SKETCH BY OUR SPECIAL ARTIST.



THE ROYAL HORTICULTURAL SOCIETY'S GARDENS, SOUTH KENSINGTON, SHOWING THE CONSERVATORY AND PORTIONS OF THE ARCADES.—SEE P. 36.

CALENDAR FOR THE WEEK.

SUNDAY, July 14.—7th Sunday after Trinity.
MONDAY, 15.—St. Swithin. Moon's 1st quarter, 2h. 47m., a.m.
TUESDAY, 16.—Bicester fair, 1867.
WEDNESDAY, 17.—Length of day, 16h. 2m.
THURSDAY, 18.—Hampden killed, 1643.
FRIDAY, 19.—Victory of Havelock at Bithoor, 1857.
SATURDAY, 20.—St. Margaret. Thetford or the Spanish Armada, 1588.

TIMES OF HIGH WATER AT LONDON-BRIDGE,

FOR THE WEEK ENDING JULY 20, 1861.

THEATRE ROYAL HAYMARKET.—MONDAY, July 15, and during the week, an entertainment in two parts, the MUSICAL AND DRAMATIC ART, with, as a Quarter to Eight, the New Comedy MY LORD AND MY LADY. Characters by Mrs. Stirling, Mrs. C. Mathews, Miss Rose Williams, Mr. C. Mathews, Mr. Compton, &c.; with TAKING BY STORM—Mr. C. Mathews; and THE SCAFFOLD.

THEATRE ROYAL ADELPHI.—On Monday and during the Week, THE DEAD HEART—Messrs. R. Wheler, J. L. Toole, D. Fisher, Miss Woolgar. To conclude with THE PRETTY HOUSEMAIDS—Messrs. J. L. Toole, F. Robson, Miss Woolgar, E. Kelly, and E. Thorne. Commencement Seven.

CRYSTAL PALACE.—The Arrangements for Week ending Saturday, July 13, are more than usually attractive.
Monday, open at Nine; display of Grand Fireworks and Entire Series of Waterworks, at Half-past Four.
Tuesday, open at Ten.
Wednesday, Great Performances by 5,000 Children and Adults of the TONIC SOL-FA ASSOCIATION on the Handel Orchestra.
Thursday, open at Ten; THE TWELFTH ASCENT, in Paper.
Friday, Fifth Concert of the GREAT CHORAL SOCIETY of the SERIES.—Mozes. Oriel and Mills. Tickets for the first time.
Saturday, ROYAL DRAMATIC COLLEGE BAZAAR and FANCY FAIR.
Orchestral Band. Great Organ Performances, and Display of Fireworks and Waterworks. Open from Ten to Seven. Admission, 1s.; Children under Twelve, 6d. Season Tickets admit. Guaranteed Pure Provisions, Excellent Refreshments, and Knowle in the Bower and in the ornamental halls of the terraces, are now in full bloom. The flowers, trees, also, like it with Gravesiana, are in their full splendour—the display is a regular Flora's Festival.
Admission—Saturday, Two Shillings; Stepsons; Friday, Seven shillings; Stepsons: other days One Shilling; Children under Twelve, Sixpence. Open daily for visitors.

CRYSTAL PALACE.—GRAND FOUNTAINS.—The Fourth Performance of the GRAND FOUNTAINS and Entire Series of WATERWORKS will take place on Saturday, July 13, at 4 o'clock precisely. The Great Fountain, the Nile, the Upper Series, the Water Temples, the Cascades, and Grand Waterfalls, the Dancing Fountains, and the numerous groups and jets of water, will play together, comprising many hundreds of jets, and discharging 120,000 gallons of water per minute, the greatest jets of the kind in existence. Admission, 1s.; Children under Twelve, 6d.

BLONDIN will make his TWELFTH ASCENT at the CRYSTAL PALACE on THURSDAY NEXT, July 18, and will perform some of his MOST STARTLING FEATS while descending the rope. Doors open at Ten. Ascent at Four. Admission, One Shilling; Children half price.

CRYSTAL PALACE.—OPERA CONCERT.—The Last of the Series of Twenty-six Concerts of Sacred Music will be given on SATURDAY NEXT, July 20. Admission, 2s. 6d.; or by Tickets taken before the day, 2s.

CRYSTAL PALACE.—GRAND BAZAAR and FANCY FAIR IN AID of the FUNDS of the DRAMATIC COLLEGE, SATURDAY, July 20. The sale of articles will be under the management of the Lady Patronesses, Lady Dorothy Nevill, Lady Jane Peel, and Lady Stuart de Rothesay, assisted by a numerous Committee of Ladies. Mr. Charles Coote, A. Harding Dennis, A. Harding Bennett, and Kenyon in the Bower and in the ornamental halls of the terraces, are now in full bloom. The flowers, trees, also, like it with Gravesiana, are in their full splendour—the display is a regular Flora's Festival.
Admission—Saturday, Two Shillings; Stepsons; Friday, Seven shillings; Stepsons: other days One Shilling; Children under Twelve, Sixpence. Open daily for visitors.

CRYSTAL PALACE.—GREAT FOUNTAINS.—The Fourth Performance of the GRAND FOUNTAINS and Entire Series of WATERWORKS will take place on Saturday, July 13, at 4 o'clock precisely. The Great Fountain, the Nile, the Upper Series, the Water Temples, the Cascades, and Grand Waterfalls, the Dancing Fountains, and the numerous groups and jets of water, will play together, comprising many hundreds of jets, and discharging 120,000 gallons of water per minute, the greatest jets of the kind in existence. Admission, 1s.; Children under Twelve, 6d.

CRYSTAL PALACE.—THE SECOND GREAT NATIONAL CHORAL FESTIVAL will take place on THURSDAY, the 25th, FRIDAY, the 26th, and SATURDAY, July 27. Arrangements are being made for Excursion Trains from all districts. Admission on the Days, 5s. each.

CRYSTAL PALACE.—ARCHERY MEETING.—The Annual Grand Archery Meeting will be held on TUESDAY, July 23, and THURSDAY, July 25, when the Prizes will be delivered by the Marquis of Chandos. The number of archers and amount of prizes will be limited. Applications for Tickets, Instructions as to the mode of Meeting must be addressed to the Secretary, Crystal Palace, Sydenham.

CRYSTAL PALACE.—SATURDAY, July 20, 1861.—THE CRYSTAL PALACE COLLEGE GALA FETE and FAIR.—The Council have the honour to announce that they have made arrangements with the Directors of the Crystal Palace for a Grand Fancy Fair to be held at the Crystal Palace, for the benefit of the College, for the above date. The Fancy Fair, Fancy Fete-fetes, and Wheels of Fortune will be presided over by the following Ladies, who have kindly undertaken the duties:—

Mrs. Stirling,	Mrs. Billington,	Mrs. Charles Mathews,
Mrs. H. Vining,	Mrs. Alfred Mellon,	Mrs. Frederick Robson,
Mrs. H. Leslie,	Mrs. Howard Paul,	Mrs. Compton,
Miss Bufton,	Miss Laidlaw,	Miss Caroline Hutton,
Miss Rose Leclercq,	Miss Rose Bell,	Miss Julia Matthews,
Miss Redgrave,	Miss Johnstone,	Mrs. Charles Young,
Miss Fanny Huddart,	Miss Mary Keeley,	
Miss Rosina Vokes (Mrs. Wedgwood),	Miss Amy Sedgwick,	Miss Talbot.

AND ALSO, CHEAP JOHN, PUNCH, TEST OF MYSTERY, HARLEQUIN, &c., UNDER THE DIRECTION OF

Mr. J. B. Buckstone,	Mr. Mellon,	Mr. W. Shirley,
Mr. Frank Matthews,	Mr. Lewis Ball,	Mr. Conway,
Mr. J. L. Toole,	Mr. W. Wigan,	Mr. Charles Dillon,
Mr. Paul Bedford,	Mr. John Povey,	Mr. Chas. Sillmore,
Mr. Alfred Wigan,	Mr. Charles Selby,	Mr. Addison,
Mr. Charles Dunstall,	Mr. W. Gomersall,	Mr. Alfred Mellon,
Mr. Barnett,	Mr. J. B. Johnstone,	Mr. Basil Barrow,
Mr. Sam Cowell,	Mr. Dalton,	Mr. Howard Paul,
Mr. W. Smith,	Mr. Joseph Noble,	
Mr. Charles Mathews,	Mr. H. J. Byron,	The Alexander Family.
Mr. Charles Dickens,		

The Council have also the gratification to announce that the following Artists have most kindly promised to act as a VOCAL AND INSTRUMENTAL CONCERT:—Misses Wells and Miss Palmer, Mr. Smith, Mr. Santley, Mr. Weiss, and Mr. Alfred Mellon. Conductor, Mr. Mellon. Band, Mr. Alfred Mellon's Band and Grand Military Band.
ROYAL DRAMATIC COLLEGE QUADRILLE, composed expressly for this occasion by M. A. Lutgen.
The Address, by J. Stirling Coyne, Esq., "The Royal Dramatic College," will be spoken by Paul Bedford, Esq., Stirling

MUSIC.

ADELINA PATTI's appearance last Saturday as Zerlina, in "Don Giovanni," was, as might have been expected, her happiest effort and her greatest triumph. She looked and acted the part to the very life—the giddy country girl whose very folly is mere innocence and simplicity. Her singing was perfection. She was as scrupulously faithful to the text of Mozart as the severest German critic could desire, while she clothed the lovely melodies with all the charms that could be given by beauty of voice, exquisite taste, and delicious expression. Every one of her airs was secured with the warmest expressions of delight. As a whole, the opera was performed in a manner which we have never seen equalled. Grisi as Donna Anna, Calliga as Donna Elvira, Patti as Zerlina, Faure as Don Giovanni, Tagliafico as Leporello, Gardoni as Don Ottavio, and Agnesi Swedish formed such a combination of excellence in the masterpiece of Mozart as probably no opera in Europe has ever exhibited. One of the pictures of that splendid group we shall never see again. We have seen Donna Anna under the form and lineaments of Grisi for the last time, and we shall survive her as a mother.

JENNY LIND has once more given the aid of her vocal powers to a benevolent purpose. On Thursday week a concert was given, for the benefit of the Society of Female Artists, at the Earl of Dudley's residence in Park-lane. The ball-room of that mansion was crowded with an audience belonging almost exclusively to the "upper classes." Mdme. Goldschmidt sang several pieces, particularly an air from Handel's "Samson," an Arabian melody, "I Dreamt I Dwelt in Marble Halls," John Anderson, my jo," and a Norwegian melody. We need scarcely add that her performances were received with enthusiasm, and that the opinion was unanimous that the "Swedish Nightingale" warbles as beautifully as ever.

Mdme. RUDERSDORFF gave a matinée on Tuesday at the Hanover-square Rooms. Like all pieces at the "Bijou Theatre," the pretty little *salle* under the roof of Her Majesty's Theatre, and consisted chiefly of concerted pieces in one act, entitled "Out of Bounds," by Mr. Charles Stephenson, and composed by Mr. Frederick Clay. The piece, the subject of which is a comic incident supposed to have happened in Scotch during the Peninsular War, is lively and clever, and the music, composed by an amateur well known in fashionable society, is of very considerable merit, and would do no discredit to an eminent professional musician. The performance was excellent. Mdme. Rüdersdorff, as the heroine, an innkeeper's daughter, acted with much archness and spirit, and sang charmingly; and Mr. Quintin Twiss, as her lover, not only sustained the character with great spirit, but displayed vocal and instrumental talent of no common order. The other parts were performed by Mr. Patey, Signor Palmieri, and Mr. Walker; and this pleasant little piece went off with great eclat. It was followed by another operetta, entitled "Dolly," by Adams, in which the part of a young milliner was admirably performed by Mdme. Lemmens-Sherrington. The pieces received with great applause by a fashionable audience, who completely filled the theatre.

The arrangements for the BIRMINGHAM FESTIVAL of this year are now complete. For the first time these triumphs of musical art work of any class, sacred or secular, is announced—a striking proof of the decay of religious feeling throughout the whole world of Europe. But a single competition worthy of being produced at the Birmingham Festival appeared in any part of Europe, the active and energetic managers of that festival resolved on it, and the result is a magnificent selection of the materials at their command. The Festival is to be held on the 19th, 20th, and 21st of August. On the first day morning "Elijah" will be performed; on the second, "Samson;" on the third, "The Messiah;" on the fourth, Beethoven's mass in D, and "Israel in Egypt." With the evening performances we have nothing to do: they are miscellaneous concerts, and at the other two "The Creation" and "Hymn of Praise." There will thus be seven performances of sacred music. We do not remember an instance at any musical festival of an oratorio being performed in the evening. A powerful host of vocal talent is announced. Mdlle. Titiens, Mdme. Rudersdorff, Mdme. Lemmens-Sherrington, Mdlle. Patti, Mdme. Sainton-Dolby, Miss Palmer, Mdme. Weiss, Mdme. Montem Smith, Mr. Sims Reeves, Signor Giuglini, and Signor Belletti. Mr. Stimpson will be the organist, and Mr. Costa the conductor.

A series of Grand Festival Concerts are to be given at LEEDS during the visit of the Royal Agricultural Society to that town. The solo singers engaged are Mdlle. Parepa, Mrs. Sims Reeves, and Herr Formes, together with Mr. Santley, an accomplished young vocalist, whose appearances in London will be remembered by many of our readers. The Yorkshire Choral Union, the unrivalled local association whose recent appearances at Exeter Hall and St. James's Hall made so great an impression, will give their assistance. One evening will be devoted to their performance of the great double chorus in "Israel in Egypt," and on another they will give the glees, part-songs, and other secular pieces which they lately sang at London. It is to be earnestly hoped that these performances have no connection with the "Leeds Triennial Festival," the arrangements for which were in a state of considerable forwardness when it was suddenly and unexpectedly abandoned.

Miss ELEONORA WILKINSON's concert on Saturday morning last, at the Hanover-square Rooms, was an elegant and accomplished entertainment. The young lady has an accomplished voice, and in various performances—Verdi's boleros, from "Les Vepres Siciliennes;" the quartet, "Quel Nume," from Gounod's "Faust;" the duet from "Il Ballo in Maschera;" and Blumenthal's duet (with Gardoni), "Per voli, per boschi," were most warmly applauded. There was a numerous and distinguished audience.

Mr. FREDERIC JENNA's successful entertainment, "Highways and Byways of Music," at the Egyptian Hall, Piccadilly, has been brought to a close for this (the first) season, the performances having been crowded by fashionable audiences. It has deserved its success, for Mr. Jenna is a most agreeable singer, who sings his songs with judgment, and adds to their interest by pleasant and instructive remarks on the music. He is admirably assisted by Mdme. Penna, who is one of the best accompanyists on the piano that we have heard.

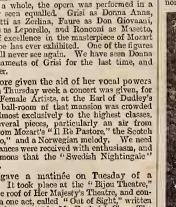
THE THEATRES.

ST. JAMES'S.—The selection of M. Emile Augier's comedy, "Les Effrontés," is not so happily made for an English audience as most of the pieces chosen by the management. It tells only on the ear, and not on the eye. The dialogue is easy-writing, but the story can be told, not by dramatic effects or stage situations, but in words. M. Paul Arbouville is a character which will immediately strike us by his style and person. The part is that of a literary man on the Parisian press, named M. Sergine, who rejoices in a Marchioness (Mdlle. Camille Lemerle) for his mistress, yet nevertheless loves another woman, the daughter of M. Charrier, a rich banker. In her affections, however, he has only a competitor, a commissary named Vermelin (M. Gravier), the founder of a bank that had failed, and who is treated with contempt by the banker. By the advice of the Marquis D'Ambevire (M. Corsaglia), he seeks to retrieve his position by becoming the proprietor of an influential journal, in the columns of which he hurls the Marquis into the mire, and by this means effects his marriage with the rich banker's daughter. Sergine is prevented by his peculiar position from avenging the insult; but the Marquis, who is rather remarkable for his want of squeamish notion on such subjects, comes forward in defence of his recusant wife, and wounds her accuser in the arm. Amongst the supernumeraries of chicanous régime her lord, and Sergine is free to wed the object of his secret affections. Of course this is not done without a struggle on his revenge on M. Charrier, by showing from the *Gazette des Tribunaux* that fifteen years ago he was a similar unfortunate circumstances with himself. To wipe off the stain Charrier determines to pay his old creditors in full. And thus ends this comic satire. It was capitally acted throughout.

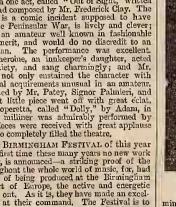
SCHIO.—A gentleman of the name of Mr. Richard Medlen a few weeks ago produced a sensation at this little theatre in the character of Virginius. We were, therefore, induced on Tuesday to visit it to witness his performance of Hamlet. We can speak well of his person and voice. His appearance is decidedly elegant, and his delivery lively and melodious. He has also extreme youth in his favour, and evidently feels very word he utters. But his judgment is not always equal to the occasion, and he frequently attempts too much. Experience will, of course, do something for him, but he must also help himself. He must acquire repose—it is only temperance in manner that makes either the actor or the artist great. The first production of the evening was a piece by Miss Kate Hodson, who likewise took the part of Gertrude in the subsequent farce, "The Loan of a Lover," and proved herself to be a well-practised and efficient actress.

THE COMET.

THE comet is still a most beautiful and conspicuous object in the northern hemisphere, though it has lost much of its brilliancy. A very small proportion as compared with its original splendour is all that is now visible, and that only to a practised observer. The comet will be seen by the accompanying diagram, which preserves the relative sizes as it appeared on July 4 and 10. On the former night the length of the tail of the comet was upwards of 80 deg., and it went off a little branch in the direction of Mu Bootis. The telescopic appearance on that night was very beautiful, the luminous sector being sharply defined and nearly of one colour. A bright branch appeared to pass from the nucleus to Mu Bootis, as well as the branch with Mr. Buckingham's excellent seven-foot reflector. On the night of July 10, when the sky was brilliantly clear, the appearance of the flashlight, as seen in my telescope of 3½-inch aperture and 5-feet focal length, was very interesting, and is given in the second figure, appeared like a comet within a comet. The luminous sector had become much smaller, but was still very bright. The comet will be favourably visible for some days—the R.A. on July 11, at midnight, being 14h. 28m., and the N.P.D. 93 deg. 50 min.; while on July 20, at midnight, the R.A. will be 14h. 40m., and the N.P.D. 38 deg. 15



July 4.



July 10.

RELATIVE DIMENSIONS OF THE COMET ON JULY 4 AND JULY 10 AT MIDNIGHT.

min. From two observations, on July 8 and 9, made by Mr. Bockings here and myself, with his new reflector, and one made at Cambridge on June 30, I have deduced the following elements of the comet:—Perihelion passage, June 11, 67760; longitude of perihelion, 249 deg. 10 min. 20 sec.; longitude of ascending node, 274 deg. 30 min. 32.3 sec.; inclination to the ecliptic, 85 deg. 30 min. 26 sec.; log. least distance, 9.9147284. Motion direct, which proves that it is not the periodical comet of Charles V. On July 11, at midnight, the distance of the comet from the earth will be found to be 97 millions of miles, and on July 20 about 93 millions, or eight millions of miles.

J. BEEBY.

July 8—midnight.

TELESCOPIC APPEARANCE OF THE COMET'S NUCLEUS.

In Monday's sitting of the French Academy of Sciences, M. Leverrier expressed himself as follows:—

"We do not know this comet; it is the first time it visits us, and those who have endeavoured to predict its course, determine its distance from the earth, and measure its tail, have either deceived themselves or the public. Three elements are necessary to calculate the orbit of a comet: first, the time of its passage by the star; then, its velocity; and, lastly, the variation of velocity

produced by the mass of the sun. I carried the comet to be observed on the 30th of June, and then on the night of the 1st and morning of the 2nd instant, in order to determine the variation of velocity. Now, this variation is very small, and the calculations upon such other for the calculation to be attempted, were it not that the comet moves very rapidly. On the 3rd, at two o'clock, we brought me the result of his calculations, and we then obtained an insight into the orbit of the comet. Mr. Hind has since sent me the orbit calculated by Mr. Buckingham, which perfectly agrees in all but two minutes with our results."

THE VOLUNTEER MOVEMENT.

The 20th Middlesex (H.M. Customs) Volunteers was inspected in Victoria Park, on Saturday last, by Col. Lord Elcho, M.P. The attendance on this occasion were quite through mass creditably.

The second annual inspection of the London Irish Rifles assembled at Somerset House, and, under the command of Lieutenant-Colonel Vernon and Major Nugent, marched to the Queen's Bench Barracks, Portman-square, where they were inspected by Colonel M'Murrough Kavanagh, M.P., and Colonel M'Mahon, the Marquis of Donegal joining his regiment on the ground during the inspection. The preliminary movements having been gone through, the regiment was formed into square, and Colonel M'Mahon complimented the Majors of Brigade, Captain Hamilton, and Lieutenant Hamilton, on the way in which they had performed their duties on this their first inspection.

The first portion of marching and review of the Queen's Westminster rifles took place on Friday, June 28, in Hyde-park, the residence of Viscount Hill, near the Serpentine, consisting of the south front of the mansion, one flat artillery, a lady's purse for volunteers and artillerymen, and a handsome silver cup, to all which competition was open. The rain did not have more less than 20,000 people present, the number of volunteers being 1000. Shortly before the arrival of the royal party on the ground, Lord Viscount Hill. At a quarter to one the contest for the principal prizes commenced, and the first competitor was Colonel Gough, on his retirement from the command of the regiment, which he has held for the last six years.

The officers and members of the Lincoln, Gatcombe, Market Rasen, Louth, Barton-on-Humber, Alford, Spilsby, and Horncastle Rifle Corps recently encamped on the 1st Lincolnshire Rifle Ground, at Lincoln, for the prize offered by the Earl and Lieutenant of Lincolnshire and the Countess of Yarborough. The shooting for the cup given by the Countess resulted in the amongst three competitors—viz., Dr. Lowe, Mr. Marshall, and Mr. Wilson. In shooting off, Mr. Lowe won. The Wentworth rifle, given by the Countess of Yarborough, was won by Sergeant Bourne, of the Lincoln third company.

THE NATIONAL RIFLE ASSOCIATION.

THE whole tents and gay flags of the National Rifle Association have again been set up on Wimbledon Common. Considerable changes have taken this year in the arrangement of the booths and temporary offices of the association. Instead of, as last year, being about the centre of the common, they are now placed more to the north, and but a short distance from the old windmill, which has more than once marked the spot where a sanguinary duel has taken place. The ground has been levelled and improved, and the targets have been examined most carefully by a thorough coating of white and black paint, while several additional ones have been erected. Quite a formidable array of butts has been established in front of the entrance to the ground, prettily decorated with the flags of various nations, and commodious tents for the staff, and to the members of the committee, the secretary, and the officers and the representatives of the press. Large refreshment booths, under the superintendence of Mr. Mansell, of the St. Jermyn's Hall, stood in the immediate neighbourhood, so that all the arrangements were perfect for a successful and pleasant meeting. At a few minutes before one o'clock white tents indicated the locality of a detachment of the Foot Guards, to whom, with the Lancashire Rifles, Lord Ranelagh duly was allotted, and the remainder of the vast space was given up to the riflemen and their "Pet."

The opening day of the second meeting of the National Rifle Association on Thursday week, though attended with none of the ceremonial that graced the first meeting, by the presence of the leading men, of the nation in every respect as gratifying as the most earnest of its patriotic promoters could have desired. Above one hundred and fifty competitors represented the Wimbledon, and the muster about the shooting station of those interested in their success was very large indeed. Among the honour of this meeting, their native town or county, showed that the interest which England has taken in the volunteer movement, in the establishment of which Scotland was foremost. The firing commenced, soon after twelve o'clock, with the first stage of the competition for the Prince of Wales's prize, the value and general value, at a range of 200 yards. The twenty winners in the preliminary contest win twenty Whitworth rifles, and each, with a silver medal to be had also of all. The wind and weather took easily on all their efforts, and, as a whole, the shooting was not up to the mark that was expected. The highest score gained during the day was by Mr. Dickins, of the Victoria Rifles, who marked 11 in five shots. The greatest number of bulls-eyes in succession was obtained by Mr. Ross, of the Queen's Edinburgh Rifles, who had five successive bulls, and eight in seven shots. Every one who had ever took to the rifle must have known how easily by several. It should, however, in justice be said that Mr. Ross was unfortunate in the termination of the eye. When the Middlesex regiment went in to take their turn at all the marks the weather became so boisterous that it was obviously out of the question to continue the firing. Colonel Gough, with the exacerbance of the other members of the committee, ordered the firing to cease, among the spectators, and the Lancashire Rifles, Queen's Surrey, and Victoria Rifles, in which every one on the ground, volunteer or not, was allowed to engage on payment of a guinea, were in a similar fix. As those who left the ground before the pool there was an immense number of entries, and the firing at these targets was indeed, and in every respect, a most spirited affair.

On Friday the wind still blew complexly across the range, and the shooting was much affected by it. The competition for the Queen's prize, which was the shooting at 200 yards for the Queen's Prize, broken off by the stormy weather of Thursday, the highest score made on Friday was 12. After that, the competitors proceeded to shoot for what may almost be called the second stage of the same prize, at 500 yards. The highest score at the range at the Prince of Wales's Prize, at 200 yards, began their practice. In this last-named prize-competition Mr. Ross, of the Queen's Edinburgh Rifles, with eleven shots at last year, Mr. Ross, just reckoned his best position of the previous day by scoring 14 points. The electric telegraph was finally brought into requisition. Instrument to communicate the shots, was again very attractive.

On the second day the weather was good. The shooting commenced at nine o'clock by the various corps appearing at the 600 yards range to shoot for the Queen's prize. The number of shots was the same as on the twenty Whitworth rifles—the latter being awarded to the twenty who had made the best number of points at 200, 500, and 600 yards (or third parts; within the next twenty highest (making in all forty), who, having obtained the position of the first twenty, were entitled to the first had made the forty largest scores, have thereby become qualified to shoot at the Queen's Prize, which is the grand prize of the year. The list of scores shows the names of forty-three persons. A large number of them made 17. Those who made 17 were also entitled to the right to decide which of them were entitled to be presented with a rifle; and the Queen's Prize was decided by the number of shots which they had made were to come out of the list. The most successful competitor for the great prize up to this evening was Mr. Dickins, of the Victoria Rifles, who had won be having made 23 points, and won the silver medal of the association. Mr. Ross, the Queen's Edinburgh, had made 19 points, which was not high enough to make him one of the forty qualified to shoot for the £250 or Queen's Prize. The Wimbledon Rifles had made very good shots. The Prince of Wales's, and the Post and Sighting Targets.

The competition was throughout a most powerful of interest thus during any former period of the meeting, inasmuch as it was to determine who were to be the forty that would be allowed to shoot for the final trial for the Queen's Prize. In the course of the day the forty gentlemen standing in the list of successful marksmen presided with the highest marks, twenty-two from absolutely, and twenty to use them in the course of the competition. The process of shooting off for the first prize of the Queen's Prize excited great interest. The performers of one tought contest (as given by the *Morning Post* correspondent) at the Queen's Prize was a most triumphant. This was the struggle between Mr. Beasley and Mr. Woodford for the last Whitworth rifle. The contest was first between Mr. Beasley and Mr. Woodford, who remained in the standy as a rock, fired for the honour of Warwickshire. A white flag, I. Mr. Beasley, who was also entitled to his rifle; the signal was hoisted; pill, pat; out came the white flag, I again. Here were two hits, and only one wanted. Then Beasley, who was accordingly entitled to his Whitworth rifle, but it did not hit, and Burls was off the list. Then came the final struggle between Mr. Beasley and Mr. Woodford, exciting indeed—and the last flag appeared to the excited representatives of Warwick, for it was no longer Beasley in the field. Mr. Woodford had very nearly made it. Woodford fired, and came the white flag and down came Woodford's hopes with it; and as Beasley was up to the last shot he was entitled to a Whitworth rifle "in an ocean cave," and Woodford heads the 20 who are permitted to compete for the prize." The standing of the first prize of Sidney Herbert £400 was commenced, the distance that day being 600 yards, and was carried on with considerable spirit, and was won by Private John Pitt, Dublin, who was armed for the Queen's Prize last year, has this year succeeded in winning by a score of 21 points, the Prince of Wales's Prize, and has passed first out of his first shots at the 600 yards range, and only marked 1 at the fifth, thus reducing his score to 21. There were five prizes in this list, and stated in. The shooting throughout was splendid.

The programme for Friday concluded the reserved contests for the Alt Corner Prize, and the extra prizes, and the commencement of the contest for the Duke of Cambridge's Prize of £100. The last-named prize, at 600 yards, 1000 yards, 1 shot at range of 800, 900, and 1000 yards; and after that the Public Schools Prize of a £20 Whitworth rifle, at 600 yards, 5 shots at the first 20 second, at 800 and 900 yards range. There were also small contests going on for the Queen's Prize, and the Duke of Cambridge's Prize. The contest for the latter began, those represented being Harrow, Eton, and Rugby, eleven from each, to the sliding only to seven shots at 600 yards, the conditions of which it was maintained. The shooting commenced at 200 yards, and increased the range to 500 yards, and then to 600 yards. The result of the range there was a tie as regards numbers between Harrow and Rugby; but as Rugby obtained a majority of two in the first range, it was declared to be the Wood School—they were declared to be the winners of the prize. With a view of stimulating competition between the Public Schools, Lord Ranelagh offers at £20 to be shot for by the best boy of each respective school, 7 shots at a distance of 500 yards. At 600 yards the contest was for the Duke of Cambridge's Spencer's Prize. These school prizes were most ably contested, and the competitors were all boys who were under the age of fifteen years, and were duly collected on a similar occasion. The firing for the Duke of Cambridge's Prize was conducted, as a matter of course, with the greatest spirit, and the shooting at the stedelion with

SKETCHES IN PARLIAMENT.

THERE are many symptoms of the beginning of the end. There is weariness in the aspect of all persons about the Houses of Parliament, and the steps of members, and especially of Government members, are slow and heavy as they come in from divisions, as if even the walk through the lobbies was a trial of strength. Even the committee-less members are tiring of the never-ending still-beginning sittings. The business men, who are seeing out the Session, are going through the cold routine: they are in their places at twelve o'clock, are available for discussion and division till four, between that and six get a rest to their lodgings or their clubs to look over their correspondence: are in their places again at six, taking questions or cheering the answers till eleven, when they plunge into the dinner-hour for a brief gypseptic refreshment; and between eight p.m. and two or three a.m. are assiduously about the House and getting through business. The dashing clubs are getting into the habit of Parliamentary discontent in these awful working times. Imagine a head of a department replying to a question as to what hour the evening he would bring on an important measure replying that he would not say: it after two o'clock the next morning. There has, however, been some result this week, for the Estimates have been couched along at a good pace, and there is every prospect of their being finished next week; after that the Government have a new thing but the Appropriation Bill; and the only serious subject of discussion is whether the proposition to-day is to be the 8th or 22nd of August. When it is said that the debating class is prostrate, that term is used in its strict sense, and is by no means intended to imply that talking has practically diminished. There has been a flood of talk in all conscience, and the prodigies thereof, although comparatively few in number, multiply themselves in the discussions in committee much in the manner in which the components of stage processions manage by passing across the eyes of the audience each half a dozen times to lengthen out the spectacle. Neither is the work of the Session at an end for incidents such as we are accustomed to best out in this column, much as the gallery reporters dislike the labour.

The first matter that strikes our memory relates to the Irish member whose peculiarities we attempted to sketch last week. This really good-natured and self-sacrificing gentleman is continuing to his own statement, given us the last taste of his quality for the year, and in doing so has given a conspicuous lesson to the House on how its absence would probably tend towards the abbreviation of the Session. He then proceeded, with an air of considerable confidence in himself, and to deliver a speech which was judiciously full of all his chief characteristics, and which was a curious instance of the invariable effect on a naturally-impetuous people of the habit of the use of the manner for once seized a man. The only parallel to it that occurs to us is that which nudges the genius of the late Sir Joseph Paxton in the speeches of George III. had recorded in the case of Romeo Coates and Percy Fitzgerald. With the departure of the member for Cork, the total foreground of the subject of the Irish Fisheries, Public Works, and the grievance of not admitting the public into the Botanic Gardens in Dublin, which nonsense was puffed up into a great trade delusion, and brought out some truculent Orangeism from a certain ex-Attorney-General for the sister kingdom, and so gave one a glimmering of the antagonistic elements into which the country would dissolve on no sedate reality, it is to be hoped that we have had the less of the Irish row for the year. In this connection there will be a great deal of the union.

A long time has elapsed since the House has been asked to assist in the expulsion of those foreign-affairs nests for which the member for Bridgwater has rendered himself famous. Every one has smiled at the sudden and unexpected appearance of Urbino Caldesi

NATIONAL SPORTS.

THE July Meeting at Newmarket continued to betterits prospects considerably as the week progressed. Diophantes was in his Two Thousand tune on Thursday, and gave 5lb. and a beating to Rosiley over the Rutlandmile. Things were exactly reversed between the two great stables in the Chesterfield Stakes, and Canta (11lb. ex.) landed the yellow jacket very cleverly by a neck, against Rosiley (8st. 7lb.), who was first favourite for a shilling. Fairwater, who gave an immense amount of weight to everything in the race, except Mare Mora, won the Worcestershire Handicap, for which Von Senden's chance was nullified by running inside a flag. The Coventry Stakes, which fell to Fairwater, had not, previously, produced a winner but in an awkward *contretemps* in the shape of a "scamon" that the mare did not add the Northamptonshire Plate to her other year's great victory at Doncaster with Bloomsbury. Tuesday and Wednesday produced some very excellent racing at Abingdon, which was successful in the main, although as it was patronised by a large majority of our most popular and spirited sportsmen. There, as in all turf circles throughout the country, one of the chief topics of conversation was the lamented retirement of Mr. Ten Broeck from the turf, which appeared in a weekly concemporary usually considered to be well informed on the subject, but which a gentleman of a characteristic flesh from the gentleman himself in the *Times* of Tuesday completely subsides.

The race meetings for next week are confined to the midland counties. Nottingham occupies Tuesday and Wednesday, and Stamford takes the last two days. Thursday and Friday are a blank, but a tale of six brood mares and sixteen yearlings is fixed for the latter day. Eight of the yearlings are by Andoversford, among them is Adamantine, half-brother to Stockwell, Hastapian, Knight of Kars, and King Tom.

The twenty blood sires which were furnished to the East India Company, under the auspices, by Mr. Henry Phillips, of Knightsbridge, the celebrated dealer, sailed for Calcutta on Wednesday last in care of Mr. Charles Boyce, the Indian Agent. Sir Joshua Reynolds, accompanied by Mr. Jaques, V.S. of the 1st Life Guards, were appointed to examine and pass them, and on Tuesday were by the President of the Board of Control, accompanied by several of the Indian Council, drove down to Mr. Phillips's paddocks at Willesden to inspect them. Two remembrances were taken away by the visitors, and had all eleven been of four browns, and five chestnuts, and were selected by Mr. Phillips from nearly 200 which were offered to him. They are as follows:—Young Pyrrhus, Alcibiades, Harkaway, The Duke of Daby, by Pyrrhus the First; Young Marston (h.h.), by Marston; Garibaldi and Volcano, by Gladiator; Young Sir Joshua, by Sydney; Young Emilius, by the Hermit; Bumble Bee (brother to Lord George); Young Sir Francis, by Sir Francis: the Alderman, by Alcibiades, late the property of the (brother to the late Lord Derby); Professor Dick, by Professor Buck; Lord Nelson, by Colinsword; Nanne (bred in Belgium), by Corbeau; Jasper, by Bonebreaker; Chinaboy, by Robert de Gorham; Sorrow, by Surplice; Eyedale by John o' Gaunt or Vatican; and Ashworth (the pick of the bunch), by Sir Hercules—young enough to be entered in the hundred days, and the horses, which are under the charge of four grooms, are stabled on deck in two rows of boxes, five feet wide, with a gangway between. The period of their long voyage is exercised in fine weather. The voyage allowances for each horse is 8lb. of oats, 10lb. of compressed hay, 7lb. of bran, and 11 bushel of bran per diem. Carrots, when ready, and, in case of great fatigue or illness, can be supported by straps.

Yellowplush and Mr Willesden Paddocks on Wednesday week, and on the following day Sir Edwin Landseer (who had never seen him before) paid him a visit. On his first appearance in the Row the Countess of Cardigan, and on Saturday he commenced his journeys to the stadia at St. Johns Wood. His favourite companion, a terrier-like animal, answering to the name of Jacko, will be introduced into the picture. It invariably lies on his back, but it refuses to stay there unless he has a sheet on, a fancy which it demonstrates when forcibly put to Sir Edwin during his visit.

The match between the Eleven Gentlemen of England and The Players was concluded on Saturday, in favour of The Players in one innings by 68 runs. On the part of The Gentlemen, John Wisden's bowling was the best, he obtaining 7 wickets for 54 and the second, 22. Mr. Dowson is the first innings scored 35, and in the second Mr. V. E. Walker obtained 17, and Mr. A. H. Walker 14. The Players also had 6 in their innings, of which Mr. Box, Cambridgeshire players, R. Carpenter and T. Hayward, scored respectively 19 and 33. Monday and Tuesday, the first days at Lord's, were that of Kent proved themselves too strong for the Eleven of England, having won their match in one innings and 4 runs to spare. The result was owing chiefly to the excellent bowling of Willsher and Bennett. In the second innings Sewell was great, Carpenter hung caught by the first ball. The fielding on the part of Kent was likewise good. Many Kentish veteran lovers of cricket were there to witness the match, and no doubt their native "Fum" was sweetened by the success of their county. The ground was also graced by the attendance of a numerous and fashionable assemblage of spectators, notwithstanding the many attractions in the vicinity of the London metropolis.

The North v. The South on Monday, and the M. C. C. and Ground v. South Wales on Thursday, are the issues to be tried at Lord's. The Gentlemen of Sussex v. Gentlemen of Kent is fixed for the former day at Brighton, and the Gentlemen of the Surrey Club v. South Wales Club at The Oval, where Surrey v. North 'of England is to be played on Thursday.

LIVERPOOL RACES.—TUESDAY.

Croxteth Trial Stakes.—Ellen, 1. Hesper, 2.
Great Lancashire Produce Stakes.—Pas de Zoe, 1. Sister to Stafford, 2. Sir Monjoy.—Yorkshireman, 3. Kenalcid, 4.
Bestiack Testimonial.—Trashall, 1. Sir William, 2.
Sefton Stakes.—Brown Duchess 1. Dollsdevice.

WEDNESDAY.

Handicap Sweepstake of 60 sovs.—Trashall, 1. Ellen, 2.
Liverpool Cup.—Beadsman, 1. Ivanhoe, 2.
A Selling Stakes of 3 sovs.—First lunings walked over.
Mersey Stakes.—Ballerina walked over.
Post Stakes.—Starlight walked over.

THURSDAY.

£50 Handicap Plate.—Hesper, 1. Cumberland, 2.
Liverpool Mile Cup.—Starlight walks over, and the stakes divided.
Sunday Stakes.—Brown Duchess, 1. Hesper, 2.
Molyneux Stakes.—Mystery, 1. Lava, 2.
Welter Cup.—Wynestay, 1. Harriet, 2.
Handicap of 5 sovs.—Lisdillon, 1. Harriet, 2.
Selling Race.—Isla, 1. Carouba, 2.

ABINGDON RACES.—WEDNESDAY.

The Stand Plate.—Dr. Nichol, 1. Rose of Cashiero, 2.
The Stakes.—Hi Diavolo 1. 1. Rose d'Amour, 2.
The Oulton Handicap.—Mystery 1. Cannonade, 2.
A Handicap Sweepstakes of 3 sovs.—Canada, 1. Mermaid, 2.
A Handicap Sweepstakes of 3 sovs.—Pascal, 1. Sharpshooter, 2.

FORTESCUE RACES.—THURSDAY.

Knottingley Stakes.—Lapidist, 1. Truss, 2.
Londesborough Stakes.—Mystery, 1. Lava, 2.
Members' Plate.—Vessel, 1. Flexible, 2.

CRICKET.—The Gentlemen v. the Players: This match was concluded last Saturday at the Surrey Ground, Kennington Oval, the Players winning in one innings, with 68 runs over. Score:—Players, 308; Gentlemen, 104 and 136.

Eleven Gentlemen of the Government side of the House of Commons v. Eleven Gentlemen of the Opposition side: This match, played at Lord's Ground on Saturday, proved a very attractive affair, a vast number of the nobility and gentry being present. The battle was given on each side. The "Opposition" proved victorious, as the following score will illustrate:—Government, 93 and 51; Opposition, 128 and 14.

Eleven of England v. Fifteen of the County of Kent: This match took place on Monday and Tuesday last, at Lord's Ground, and was a most even and interesting one. The Fifteen of Kent bore off the victory in one innings by 74 runs. Score:—Eleven of England, 78—Kent, 241; England, 75.

Gentlemen of the Surrey Club v. The Gentlemen of the Midland Counties: In this match, which was played on Monday and Tuesday, at the Surrey ground, Kennington Oval, Surrey won in one innings, with 705 runs over. Score:—Surrey, 705; Midland Counties, 194 and 96.

Officers of 3rd Battalion v. Officers of 2nd Battalion Grenadier Guards: This match was played at Windsor on the 8th inst., and, being a one day's match, was decided in favour of the 3rd Battalion by 82 runs. The following is the score:—3rd Battalion, 184 and 115; 2nd Battalion, 94; 123.

AQUATICS.—The most exciting contest of the season at Eton terminated on Monday evening, the race being for the possession of the grand challenge cup, value 25 guineas, presented by Mr. Ellis, and rowed on Thursday week by the "house four," for which there were six entries. The Etonians were not the first boat to make their appearance on the Eton Brook's crew won by three lengths. On Friday there was a second-heat between Mr. Hoare's crew and Mr. Brook's crew, which Mr. Hoare's crew won. Mr. Hoare's crew, consisting of Messrs. Brook, Hoare, Bowlby, and Mr. Meet the Brookes respectively, Brook's winning by half a boat only. Saturday was a day of excitement, and Gulliver's crew, which Gulliver's was the winner; and on Monday night the final race came off between Brook's and Gulliver's crews for the cup. The distance was from the Brakes to Windsor bridge, about a mile and a half, rowed in eight minutes and thirty-five seconds, Gulliver's crew being the victors. Lord Kenlis, Gurney, Seymour, Barney (coxswain); Brook's crew—Eaglaker (stroke), Brook, Hoare, Bowlby, Meet the Brookes (coxswain); Gulliver's crew had the lead, which they maintained throughout the contest, winning by two lengths. Gulliver's crew were the first boat to make their appearance, and crew had the disadvantage of having a substitute for their host man, Captain Gulliver, who was unwell.

The boat race between John H. Clasper, the son of the renowned Harry of that name, and Messenger, of Newcastle, for the sum of £50 a side, at Lambeth, came off on Tuesday for £50 aside. Clasper won by four lengths.

A vacancy has occurred in the office of Deputy Keeper of her Majesty's documents in Scotland, by the death of Mr. Robert Lamb.

The National Life-boat Institution transmitted on Wednesday one of its boat stage-basked life-boats and transporting carriage, with steers, to the Isle Tresco, Scilly, to replace the one lost on the Retarrier Ledge, a coercise of life, here taken place. The cost of the life-boat (£180) was presented by the Right Hon. Thomas Agar Robartes, M.P. for Cornwall. The boat had previously paid the society the expenses of the life-boat stationed at Newquay, in Cornwall; Boston, in Scotland; and Tynsla, in Ireland.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The dividend payments falling due yesterday at the Bank of England, money for commercial purposes has become rather more abundant, and somewhat increased supply of money has been created by the activity in the English market, while the Unfunded Debt has shown more buoyancy than for some time past, the Exchequer Bills having nearly 1s. gain; but the best market has marked tendency towards improvement.

Notwithstanding the Bank rate of discount remains unchanged, and the public continue to purchase Consols at the present high rate of interest, there is no doubt that in the course of a few months, some advance will take place.

The Stock Exchange has been very dull and business to a small amount.

	Per cent.		Per cent.
Short bills	2½	Four months' bills	2½
Three months' bills	2½	Six months' bills	2½

Money is also very abundant in the Stock Exchange, at 2½ per cent for short periods on Consols.

With the exception of Brazils, money is in full average supply on the Continent, as the annexed quotations show:—

	Bank rate.	Per cent.		Open market.	Per cent.
Paris	4	.....		3	
Berlin	4	.....		4	
Frankfort	4	.....		4	
Amsterdam	3	.....		2½	
Hamburgh	4	.....		4	
Vienna	5	.....		5	
Hamburg	4	.....		4	

A meeting of the shareholders in the Union Bank of London has been held, at which a dividend at the rate per share was declared for the past six months. Over £80,000 has been carried to the reserve fund.

The English gold coin now in circulation is £23,300,000 in number—have been issued. Forty francs are to be put at once, and 100f. every three months from the 30th inst.; Rothschild's loan of the 18th of July, 1851.

Parcels of foreign gold still continue to be disposed of to the Bank of England; but the amount is considerably reduced. The total sum received at New York has been set £189,761, making a total drain since last November of £6,139,111, £1,000,000 more than the previous year, from the United States. The export to the Brazils is £7868 in gold, and £14,500 in silver.

Advices from Australia to the 7th of April have been received. In a commercial sense they are very unfavourable, numerous large firms having stopped payment, and the general depression is very great in every branch.

There was only a limited business doing in National Securities on Monday, and most Indian Bonds were heavy. The Three per Cents Reduced and Consols were 89 8⅞ | Consols for Money, 89⅞ | Ditto for Account, 89⅞ | Long Annuities, 1860, 9 1-16; New Three per Cents, 89⅞; Bank Stock, 211; Exchequer Bills, 1s. dis.; Bonds, 1s. dis.; India Bonds, 1s. dis.; Ditto, New, 1s. dis.; Ditto, Enfaced Paper, 1s. dis.; Ditto, Small, 1s. dis.; Ditto, Bills, 1s. dis.; Ditto, Debentures, 96; Ditto, 5 per Cent, 103; Ditto, 4 per Cent, 99; Ditto, 3 per Cent, 89; Ditto, 3½ per Cent, 99; Ditto, New, 4½ per Cent, 103; Ditto, New, 4 per Cent, 99; Ditto, New, 3½ per Cent, 89; Ditto, New, 3 per Cent, 89; Ditto, Annuities, 1859, 89; Ditto, Annuities, 1874, 89; Ditto, Annuities, 1885, 89; Ditto, Annuities, 1903, 89; Ditto, Annuities, 1926, 89; Ditto, Annuities, 1947, 89; Ditto, Annuities, 1955, 89; Ditto, Annuities, 1956, 89; Ditto, Annuities, 1957, 89; Ditto, Annuities, 1958, 89; Ditto, Annuities, 1959, 89; Ditto, Annuities, 1960, 89; Ditto, Annuities, 1961, 89; Ditto, Annuities, 1962, 89; Ditto, Annuities, 1963, 89; Ditto, Annuities, 1964, 89; Ditto, Annuities,

MAJOR CHARLES NASMYTH.

THE obituary of the journals of June 7 contained a short paragraph, touching in its simplicity, which recorded the death of a very estimable man and a gallant soldier, Major Charles Nasmyth. The name is well known in art and also in science, and to a relative of the celebrated artist is the honour due of making it equally well known in war. Events, however, in our modern life succeed each other with such rapidity that it is probable that with some the gallant defence of Silistria—the first and most marked repulse sustained by the Russians, and the turning-point of the whole campaign—is almost forgotten. It is not too much to say that to the gallant officers Butler and Nasmyth, and at a later period to Lieutenant (now Lieutenant-Colonel) Ballard, the Turks owed much of that spirit and determination which enabled them to support a long and arduous war against an enemy so much superior to them in discipline, material, and all the appliances of war.

Major Nasmyth was born in Edinburgh, in September, 1820. He was in 1843 nominated a Cadet in the East India Company's service. In 1845 he passed an examination for the artillery cadetship. He went out in the same year to Bombay, and served till 1853, when, his health declining through the effects of the climate and hard work, he was sent to England under a medical certificate. Proceeding to the Mediterranean for his health, he joined Omar Pacha's camp at Schumla, whence his letters as correspondent to the *Times* created great interest, and were widely read and approved.

From Schumla he visited the Dobrudscha, after it was vacated by the Turks, supplying information to Lord Stratford de Redcliffe regarding the state of the country. In May he arrived at Silistria to find the garrison in immediate expectation of being attacked by the Russians; and it was here that he and Butler so nobly sustained the honour of their country. Continuous were the attacks made upon Arab Tahia, a weak outwork of Silistria, but rightly considered as the key to the position, and constant were the sorties of the garrison, under their two gallant leaders, to drive the enemy back, till at length the Russians, though vastly outnumbering the garrison, were forced to raise the siege and retire.

The way in which Silistria was defended was greatly owing to Nasmyth, who herein showed how much he owed to his education at Addiscombe. The ramparts and parapets, menaced by the approaches of the Russians, were "retrenched," so that their exertions were rendered futile, and their advances not secured. The same stratagem was used by John of Ghisbala in his wild and fanatic defence of Jerusalem, when besieged by Titus; but with Nasmyth, and Butler, and the Turks, the result was far different, and successful.

Towards the end of the memorable siege Butler was struck by a musket ball, and his colleague's health was so broken by continual surprises, anxieties, and hardships, that he was for some time obliged to lay by at Constantinople. So unremitting had been the efforts of the two Englishmen that during the siege hardly a day or night passed in which one of them had not to head a sortie against their numerous and active invaders.

When the Russians had drawn away their defeated and harassed troops, and Silistria was saved, the services of both officers were acknowledged by the Turkish and English Governments, and Nasmyth, who had lost all his property, was transferred to the Royal Army. With that he served in the Crimea, and was present at the Alma and Inkerman; but his health, which he had only partially recovered again, failed, and he was invalided to England. He was appointed Assistant Adjutant-General in the Kilkenny district, and afterwards Brigade Major at the Curragh and Brigade Major and Deputy Assistant Adjutant-General in Dublin. At the Curragh his health was further damaged, and, not rallying in Dublin, he was transferred as Brigade Major to Sydney. The change, however, did not restore him, and he was invalided home in the end of 1859.

THE LATE MAJOR CHARLES NASMYTH.

He reached Pau, in the south of France, where he retired from the Army, and some expectation was formed of his rallying, but his constitution had been too severely tested, and he died on the 2nd ult., in the 36th year of his age, meeting death with the same composure as when he had faced it before another and a weaker enemy.

Major Nasmyth had the Order of the Medjidie; the gold medal for his campaign of the Danube and siege of Silistria; English and Turkish medals for the Crimea, with clasps for Alma, Inkerman, and Sebastopol; and in acknowledgment of his services he had been presented with the freedom of his native city of Edinburgh. He was one of the many Englishmen who exhibited the true strength and worth of the race, nobly and modestly, as a hero should do.

The Portrait we engrave is from a photograph by Lock and Whitfield, of Regent-street.

KING'S COLLEGE HOSPITAL.

THE new works at the King's College Hospital are now drawing to a close. The second contract will thus be carried out. The friends of the institution will subsequently once more have to bestir themselves, and furnish the sinews of building, in order to rebuild upon a uniform plan the old block at the corner of Portugal-street.

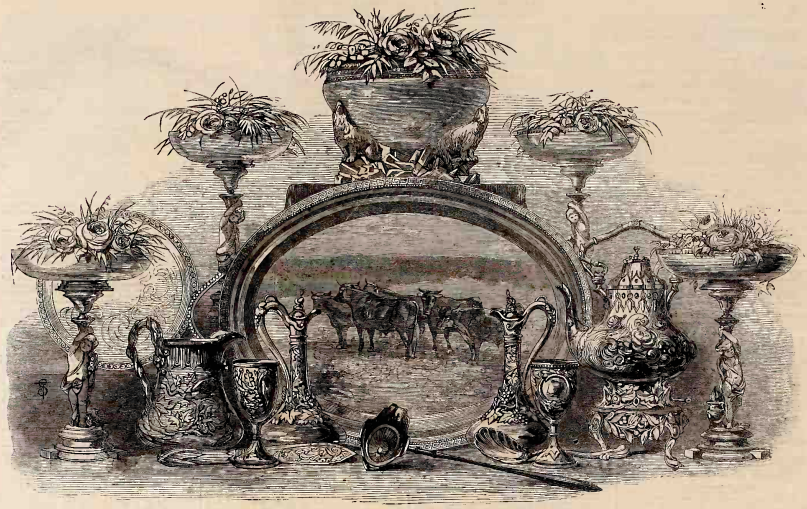
We gather from the *Building News* some particulars of the new building:—

The elevation towards Portugal street is very plain, and built principally of brick. It is altogether six stories high, including basement. The windows are simple openings with bonded arches and flat gauged arches. The keys of the arches are stone, as also are the quoins, strings, and the block modillion cornice over the fourth story. A flight of some eight or ten Portland stone rounded steps leads to the entrance, which is flanked by 4 Doric columns and pilasters, with vermiculated bands. These columns and pilasters are elevated on pedestals; over each of them, in the frieze, there is a shield with the hospital initials, and on the friezes between them the respective records of the foundation, incorporation, and rebuilding of the hospital—1830, 1851, and 1861.

Passing through the principal doorway, we find ourselves in a hall 23 ft. 6 in. by 20 ft.; it is very quietly and becomingly decorated; the single incised line on the sides of the trusses are evidence as sure of an educated hand as if they were extensively elaborated. The three arches in front mark the line of a corridor which runs 8 ft. wide to the right and left of them. The floor of this corridor is laid with square slabs of Warwickshire blue lias, bordered with York stone. On the opposite side of the corridor to the hall there are a series of reception rooms for patients, with 6 bath-rooms, and two lifts which communicate with the wards on every story above, and by which means a patient is gently transported to the locality assigned to him. To the left of the entrance hall entered from the corridor before mentioned are rooms which will be devoted to the clerks' and secretary's offices; the space to the right of it will be appropriated to the board room, 26 ft. 6 in. by 23 ft. 6 in. This board room has an oval panel ceiling; the enrichments show no marked originality, but, instead thereof, a general elegance in every line and moulding which is, perhaps, even more pleasing. The corridor leads, on the right, to a suite of two or three rooms appropriated to one or other of the hospital officers. This arrangement is repeated on each floor, so that the chaplain, the resident surgeon, the lady superintendent, &c., inhabit respective floors in the western wing of the building. There is a bath room attached to each suite of rooms.

The corridor leads, on turning to the left from the entrance hall, to a vast hall and staircase, 42 ft. by 31 ft. 6 in. As the stairs, 6 ft. 6 in. wide, rise next the wall on one side, the whole extent of the hall is at once exposed to the visitor. At the first glance, a good deal of space appears lost in this hall; but on a more detailed survey we find that it is the centre of communication between the several portions of the hospital; one door leads to the old buildings at the corner of Portugal-street; another opening conducts us to the block rebuilt in Carey street; another to the out-patients' department and to the lecture and operating theatre in Theron, which skirts on Grange-court. Besides the facilities this affords, stone galleries, carried on trusses and let into the walls, are continued along the remaining three walls, and are connected on each floor with the principal stairs. Thence access is gained to the different wards, with the advantage of open instead of close corridors. This feature is

KING'S COLLEGE HOSPITAL, PORTUGAL STREET, LINCOLN'S INN.

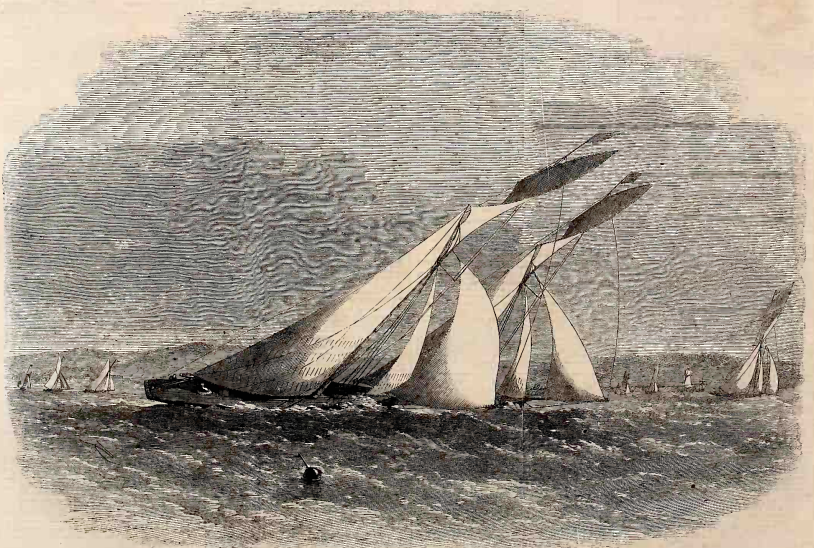


TESTIMONIAL TO C. J. BRIDGES, ESQ., MANAGING DIRECTOR OF THE GREAT WESTERN RAILWAY OF CANADA.

preserved on each story, for, apparently, a very sensible reason—that there was the same requirement for it, each of the three upper floors being planned in a precisely similar manner. They each consist of a long ward over the reception-rooms which we noticed on the ground floor, 85 feet long by 24 feet wide, lighted by nine windows in the rear. On the opposite side of this ward—i.e., over the entrance-hall, board-room, and secretary's offices—are three large rooms, one 33 feet long by 29 feet wide, and two each 30 feet long by 26 feet wide.

TESTIMONIAL TO MR. BRIDGES.

THE splendid testimonial of which we here present our readers with an Engraving was recently presented to Mr. Bridges, managing director of the Great Western Railway of Canada, on his return from England, by the citizens of Hamilton, Canada West, and the employés of the railway. The Great Western Railway of Canada is one of the most important lines of communication on the North American continent, being a portion of the principal through route from New York to the Far West. It is connected with the American system of railways by a remarkable engineering work, the Niagara Suspension Bridge, which crosses the gorge and rapids of the Niagara just below the Great Falls. The Great Western Railway is considered by all travellers to be the most complete and best-managed railway on the western continent, as on this line the peculiarities and advantages of the American and English systems are skilfully combined.



PHANTOM. QUEEN. CHRYSTABEL.

ROYAL LONDON YACHT CLUB MATCH: THE STRUGGLE AT COALHOUSE POINT.—SEE SUPPLEMENT, PAGE 12.

*** *The charge for the insertion of Births, Marriages, and Deaths, is Five Shillings for each announcement.*

THE NATIONAL COMPANY FOR BOAT-BUILDING BY MACHINERY (Limited).

Office, 31, Southampton-buildings, Chancery-lane, E.C. London.

The Company has been formed for the purpose of purchasing and working the valuable patents of Messrs. Ericsson and Winans, of Baltimore, Maryland, United States, and Mr. Thompson, marine engineer, of New York, for the greater facilities and economy in the building of iron steamers, both for the mercantile and the steam-ship application of the mechanical skill, the perfected system of the most simple and effective character for constructing iron vessels at one-half the cost now paid, and in a much quicker time, and with the greatest ease of building them by unskilled workmen, and with the greatest speed and strength and solidity for sea-going purposes.

Full copies of the prospectus, forms of application, with appendix containing all that is necessary to be known as to the practical working of the Bills and "Daily News" of the 10th June, to which reference is made in the Prospectus, may be had at the Offices, or at the Secretary, No. 31, Southampton-street, W.C.

THE NATIONAL COMPANY FOR BOAT-BUILDING BY MACHINERY (Limited).

From the prospectus—sufficiently explained by the Bill—it must be clear to everybody that the practical operations of the Company cannot be completed within three

Months.

16, Bridge-street, Westminster, S.W., } GEO. GRANT, Secretary.
July 9, 1861.

THE NATIONAL COMPANY FOR BOAT-BUILDING BY MACHINERY (Limited).

NEW BOOKS.

Now ready, 4 vols, post 8vo, cloth, price 28s.

AGONY POINT; or, the Groans of Gentility. By the late JAMES PICKERT, R.A. Author of "Young Years in the Church," "Election Recipes?" "Boys and Words of Men of Letters," &c.

"This is a capital story, with an excellent and useful moral. Mrs. Pickert has done well in publishing her husband's posthumous tale, and we can only add our hearty wishes that the work may 'Come to non anything else.'"—Observer, June 23.

"The author of 'Young Years in the Church' proves by this present book one decidedly clever, and 'Agony Point' must be pronounced a good novel. The plot is developed in very good taste, and depends for its interest on natural incidents."—Literary Gazette, June 22.

"The present work we have already obtained for him a high reputation, which the work before us, in its moral sense, will extend still further."—Sun, June 23.

DR. DE JONGH'S

(Knight of the Order of Leopold of Belgium)

LIGHT-BROWN COD-LIVER OIL,

prescribed by the most eminent Medical Men as the safest, purest, and most efficacious.

CONVINCING PROOF of its SUPERIORITY, ACCEPTANCE, PREPARATION, GENERAL PURITY, DIGESTIVE POWER, and REMARKABLE CURATIVE EFFECTS in ALL SCROFULOUS AFFECTIONS.

Is invariably prescribed by all the Faculty.

Opinion of R. M. LAWRANCE, Esq., M.D., M.R.C.P., Physician to the Hospital for Sick Children, and Author, &c., &c.

"I have frequently tested Dr. De Jongh's Cod-liver Oil, and no other oil has come under my notice which so completely possesses in a perfect manner the various characters that I have mentioned as necessary to, and constituting, a pure, safe, and a manufactured compound which the efficacy of the Cod-liver medicine is destroyed."

Sold only in Imperial half-pints, 2s. 6d.; pints, 4s. 9d.; quarts, 9d.; capsuled and labelled Dr. De Jongh's stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable Chemists and Druggists.

SOLE CONSIGNEES,

ANSAR, HARFORD, and CO., 77, Strand, LONDON, W.C.

"GALLANT ACT OF COMMANDER W. N. HEWETT BEFORE SEBASTOPOL," BY DESANGES, IN THE VICTORIA CROSS GALLERY.

THE VICTORIA CROSS GALLERY.

M. DESANGES has, for the third season, reopened his Victoria Cross Gallery at the Egyptian Hall, illustrating the acts of heroism which have won the Victoria Cross, with several new subjects of considerable historic interest. No. 10 represents a party, consisting of Major Hodson, Major C. Gough, V.C., Captain Hugh Gough, V.C., and Captain Ward, disledging a party of rebels from a house in Khurkowla, where they had taken up a position on the 15th of August, 1857, in which action Captain H. Gough, receiving a wound, fell, and would have lost his life but for his brother's intervention. No. 15, a well-painted picture, commemorates the gallant conduct of Sergeant O'Connor, V.C., 23rd Royal Welsh Fusiliers, at the Alma, in setting up the colours of his regiment after Lieutenant Anstruther, who had borne them, was mortally wounded, and persisting in carrying them till the termination of the battle, notwithstanding he had been shot in the breast; for which service he received a commission. No. 16 commemorates the interesting scene where Mr. Ross L. Mangles, of the Bengal Civil Service, who had volunteered to serve with the troops dispatched to the relief of Arrah, persisted (notwithstanding a wound he himself had received) in carrying for several miles a wounded soldier of the 37th Regiment, and, after binding his wounds under a murderous fire, bearing him safely to the boats. No. 17 exhibits the dashing feat of Lieutenant and Adjutant Arthur Moore, V.C., and Lieutenant John Grant Malcolmson, V.C., 3rd Bombay Light Cavalry, on the occasion of the breaking of the Persian square at the battle of Kooshab on Feb. 8, 1857. No. 18 shows the gallant conduct of Colour-Sergeant H. M'Donald, Royal Engineers, V.C., Knight of the Legion of Honour, on the 19th of April, 1856, in persisting in carrying on the sap against the Russian rifle-pits in front of Sebastopol, in spite of the repeated attacks of the enemy. No. 35 represents the memorable act of self-devotion of Thomas Henry Kavanagh, Esq., V.C., Assistant Commissioner of Oude, on Nov. 9, 1857, when, serving under the orders of Lieutenant-General Sir James Outram at Lucknow, he volunteered on the dangerous duty of passing through the city to the camp of Sir Colin Campbell for the purpose of guiding the relieving force under the latter to the Residency—a feat which mainly contributed to the successful issue of that momentous expedition.

The subject which we have selected for engraving is (No. 21) that representing an act of bravery by Commander William Nathan Hewett, V.C., R.N., before Sebastopol. On the occasion of a repulse of a sortie of Russians by Sir De Lacy Evans's division on Oct. 26, 1854, Mr. Hewett, then acting Mate of her Majesty's ship Beagle, was in charge of the right Lancaster Battery before Sebastopol. The advance of the Russians placed the gun in great jeopardy, their skirmishers approaching within 300 yards of the battery, and pouring in a sharp fire from their Minié rifles. By some misapprehension the word was passed to spike the gun and retreat; but Mr. Hewett, taking upon himself the responsibility of disregarding the order, replied that "Such orders did not come from Captain Loshington, and he would not do it till it did." Mr. Hewett then pulled down the parapet of the battery, and, with the assistance of some soldiers, got his gun round, and poured upon the advancing column of Russians a most destructive and effective fire. For the gallantry exhibited on this occasion the Board of Admiralty promoted him to the rank of Lieutenant. On the 5th of November, 1854, at the battle of Inkerman, Captain Loshington again brought before the notice." battle of Inkerman, Captain Loshington again brought before the Commander-in-Chief the services of Mr. Hewett, saying, "I have much pleasure in again bringing Mr. Hewett's gallant conduct to your

"THE LAGO D'ORTA." BY W. C. SMITH.

ONE of the noblest efforts of poetic landscape-painting that has ever been achieved through the medium of water colours is that of the "Lago d'Orta," by Mr. W. C. Smith, now in the exhibition of the Water-colour Society (Old), in Pall-mall. In grandeur of effect, both as to outline and atmospheric medium, it more than realises the poetic account of Byron; it comes up to Nature itself in its most stupendous forms:—

> I saw their thousand years of snow
> On high—their wide long lake below;
> I saw the white-walled distant town,
> And whiter sails go skimming down;
> And then there was a little isle,
> Which on my very face did smile—
> The only one in view.

The bold Alpine range, with Monte Rosa towering above all in the background, carries the eye away through a nicely-graduated distance to the right, whence, travelling homeward, it at length reaches a delicious terrace foreground, shaded by a few trees, and peopled by a few picturesque groups of figures amongst which is one most striking

of some women kneeling in devotion before a rudely-carved effigy of the Madonna and Child. In the midst of the picture is the little island town of San Giulio, resting calmly on the bosom of the lucent lake, whose blue translucent waters reflect the buildings with the sharpness and accuracy of a mirror; the cone-shell being one of fairylike beauty. The Church of San Giulio, which is built on a rock rising out of the deep lake, is of high antiquity, having been built on the spot rendered sacred by the residence of San Giulio, in the fourth century, whose remains are preserved in a subterranean vault. The scene, taken as whole, is one which combines the eminent degree the beautiful and the picturesque—Nature in her wildest savagery and sternness, and in her sunniest and calmest repose. This gorgeous work has fitly found a purchaser in one of our most liberal patrons of art, the Earl of Ellesmere.

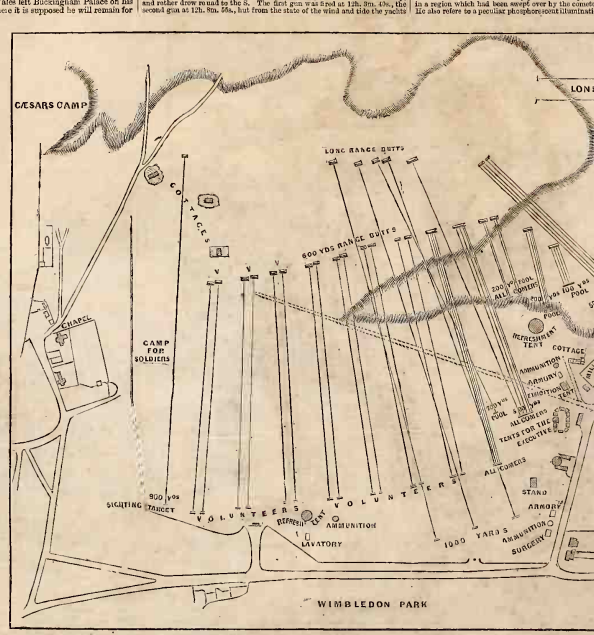
"A REHEARSAL, CAIRO." BY CARL HAAG.

This clever and artistic cabinet picture presents an interior of a coffee-shop at Cairo, in which are assembled a group of musicians rehearsing a new piece of music. The figures are full of character, aptly illustrating the many varieties of race which live under the Mohammedan rule. The man with the long pipe is a capital figure; so, too, is that of the laughing negro with the timbrel; and that of the boy with the triangle. At the back of the apartment is an old Turk smoking a narghile, whose gravity contrasts well with the droll expression of the principal group. Those who know Mr. Haag's work may imagine with what careful and brilliant touch and fulness of colour he has finished all the details of this admirable little work, of which Mr. Wm. Leaf has become the purchaser.

THE PRINCE OF WALES IN IRELAND.

On Saturday week the Prince of Wales left Buckingham Palace on his visit to the Viceroy of Kildare, where it is supposed he will remain for six weeks. His Royal Highness arrived at Kingstown in the evening, where he was enthusiastically received. The Duke of Cathlaise, accompanied by Lord St. Lawrence, Sir George Brown, Lord Gough, Chief Justice Monaghan, and others, was in waiting to receive him. On the appearance of the Connaught with the Prince on board, rounding the pier head, salutes were fired simultaneously from the Ajax man-of-war and the Pigeon-house Fort, near Dublin, and loud cheers were given by the crowd, which were responded to by the Prince, who waved his hat and bowed from the bridge of the steamer. As soon as the packet was alongside of the pier the Lord Lieutenant went on board to meet his Royal Highness, who, after receiving and replying to an address from the Kingstown Commissioners, entered his Excellency's carriage, and drove to the Westland-row station, amidst the enthusiastic cheers of the multitude. On Sunday morning the Prince attended the Chapel Royal, where the Dean of Down preached. On Monday the Corporation presented his Royal Highness with an address in St. Patrick's Hall, Dublin Castle, and he visited the Exhibition of Arts and Manufactures.

On Tuesday the Prince proceeded to the Curragh camp, where he was received by the Commander-in-Chief, Sir George Brown, and a Royal salute was fired by a field battery of Horse Artillery. A grand review took place on Wednesday, and yesterday week there was a brigade review. The quarters of the Prince of Wales, which are those formerly occupied by Lord Seaton, when Commander of the Forces in Ireland, can be seen by anyone passing on the road through the Curragh to the encampment, from which road they are only a few yards distant. Two men of the Grenadier Guards are placed on sentry outside the entrance and on the grounds inside, which are tastefully laid out, two small tents have been erected. His Royal Highness goes through the routine of military duties every morning with as much exactness as any other officer in the camp. When his morning exercises are over he usually, after lunch, plays some games of cricket.



NATIONAL RIFLE ASSOCIATION: PLAN OF THE GROUNDS AT WIMBLEDON COMMON, AS ARRANGED FOR THE SHOOTING.

ROYAL LONDON YACHT CLUB.

This fine-looking club concluded their season on Wednesday, the 3rd inst., with one of the most exciting races that has taken place on the Thames this year. The course used was for the first class yachts above 20 tons—first prize, a cup and silver claret-jug, value £50; second prize, £10. For second-class yachts of 15 and 20 tons—first prize, a handsome silver tankard, value £30; second prize, £16. Time for passage, half a minute a ton in each class. The following vessels contended:—

FIRST CLASS.		
Yachts.	Tons.	Owner.
Queen	161	Capt. Allhusen, R.N.
Phantom	142	H. M. Forward.
Ino	81	W. H. Gee.
Phantom	87	S. Lees.
SECOND CLASS.		
Whisper	20	J. Cruickshank.
Dolcoa	20	J. H. Hewson.

The morning was fine, exhilarating warm, and at the time of the start there was a strong wind about N.W. The vessels started at 11h. 48m. 50s., Phantom and Ino till and wore before she hoisted her mainsail. Of course, before the shuffle was hooey-jabbo got up and set the sails, what he occupied nearly 20 minutes. The vessels were soon in British Sound, and about half-way down Chrysalis stretched off, went clean through the lee of the two vessels ahead of her, and led the first place. Off Northfleet the wind veered round to the west, and they went through Gravesend Reach before it. After passing Gravesend the wind further reduced her distance, and Chrysalis increased her lead, and seemed likely to be a hotter winner. After an exciting struggle, Chrysalis, the latter passed her youthful enemy, the wind having freshened, and giving them as much as they could hang on to. On rounding a flag-boat off Greenhithe for the small class, which they rounded—

	H. M. S.		H. M. S.
Queen	2 10 0	Whisper	2 25 0

The other vessels rounded the Nore Light-ship in the following order:—

	H. M. S.		H. M. S.
Chrysalis	2 0 0	Queen	2 0 0
Phantom	2 5 0	Ino	2 0 0

Ride still ebbing. Phantom and Queen now shifted for jib-headed topsails, and soon afterwards Chrysalis's foe had gentle gave way—an unusual accident, which was soon repaired. Now began the serious work of beating back, at which Phantom showed her noticed speed and skill; and, after a hard fight, a short distance above Southend passed to windward of the Chrysalis; and then got well away, and kept a good lead till near Gravesend. Here Chrysalis began to gain, and came close up to Phantom, which, of course, could not keep to carry her clear. Off Northfleet, however, Chrysalis took the lead. Off the mills, the time given, Phantom was sure to win the prize still, however, the fight was hard, and they arrived at Erith with falling wind as follows:—

	H. M. S.		H. M. S.
Chrysalis	5 3 0	Phantom	5 3 0

In the meantime Whisper, after rounding, had some close up to Oberon, and a splendid struggle ensued, Oberon cautiously sailing Whisper and stopping her from taking the lead. The distances were as well managed that these little boats arrived at Erith immediately after the others.

	H. M. S.		H. M. S.
Oberon	2 11 0	Whisper	2 17 0

Soon after they had come to Mr. Arnoldcrew, the Commodore of the Club, presented the first prize in the first class to Mr. Lees, this making the fortyfifth prize won by him in the Phantom; the second prize to the Chrysalis. The first prize of the second class to the Oberon. The second prize was not given, as only two started. The Queen of the Thames was engaged by the club, and was satisfactorily filled. The day was sunny, bright, and pleasant, and the matches very well contested. Dancing began soon after the vessels had rounded the Nore, and the keel up till the close of the day, which the falling wind rendered rather too late. A considerable number of yachts were under way, and accompanied the race.

ROYAL THAMES YACHT CLUB.

THE last match of the season of this important club took place on Thursday, the 4th inst., in Gravesend-reach and Sea, time "according to Archer" sails, course from Rosherville to the Mouse and back to Greenhithe. The prize was a magnificent silver gilt salver, by Messrs. Garrard, of the Haymarket, the handsomest £100 prize we ever saw. A second prize of £50 was offered, but no conditions that four vessels started. The following yachts entered and started:—

YACHT.	O.M.	C.M.	OWNER.
Galatea	224	147	T. Brocklebank, jun.
Gracehithe	153	111	Capt. Webb.
Albertine	153	111	Lord Londesborough.

The morning was gloomy and threatening, and about half an hour before the start it had been a quite hard from the S.W., insomuch that the Alarm had rounded down a reef-sail before the start; however, the wind fell considerably, and rather drew round to the S. The first gun was fired at 10h. 30m. 45s., the second gun at 11h. 30m. 56s., but from the state of the wind and tide the yachts did not exhibit the usually beautiful sight of vast expanse of snowy canvas, rising simultaneously, but were compelled to haste head sails first, and then slowly swing. Albertine did not seem to have understood the signal, and did not begin to beat sail for some seconds. Alarm prudently did not touch her mainsail till she had swung and was on the other side, and then got round quicker than the others, and at once took the lead. Her huge sails, however, occupy a long time as set, and both the others were before her.

Before Greenhithe topsails were got up, and near Coalhouse Point Alarm set her kimgsail. She was then leading by two or three lengths. Albertine had now passed Galatea, and all three rounded abeir at a tremendous pace, every stitch of canvas drawing and doing its work. In the Lower Hope the wind was dead set, and here Alarm shook out her reef. Whilst she was engaged in this, Albertine came up very near, and the numerous backers of the Alarm, not knowing what was going on, began to feel nervous. On entering Sea Reach the wind was rather lighter, but the Alarm soon began to draw steadily away.

The Nore was rounded at 3h. 31m., nearly twenty-two miles from Rosherville, in the 22mn. or fifteen miles an hour—Alarm sailing on Albertine, and Albertine sailing fast on Galatea.

A fine day for such a match could not be conceived. In an incredibly short time the famed Mouse Light came in sight, and was rounded:—

	H. M. S.		H. M. S.
Alarm	3 6 20	Albertine	3 7 15
Galatea	3 7 50	Gracehithe	3 8 30

The run of thirty miles having been done in 2h. 6m. 20s., and the sails hoisted in the time! The Rosalind in 1853 took 2h. 26m., the Zoosave in 1856 2h. 9m., the fastest on record. On the run down the Alarm had, with good judgment, shifted jibs, lowered foretopsail, and set a smaller mainsail; and the others had shifted sails, but not quite so soon. By rounding the Mouse, and to make the tide easy and comfortably, the Alarm took a great sweep, trimmed her sails immediately, and went off on the return nearly close-hauled. At Mucking the tide was slack, and how Alarm took in her foretopsail for the last up the Lower Hope, Albertine now a long way astern. Rosherville was passed at 5h. 39m. 5s., tide still slack, and Gracehithe reached at

	H. M. S.		H. M. S.
Alarm	5 38 30	Albertine	5 39 0
Galatea	5 38 30	Galatea	5 39 30

Soon after the Albertine had come in the victress Mr. Weld, who is, we believe, eighty-four years of age, came on board the steamer, amidst loud and genuine cheers, and received the prize from Gren Green, the Vice-Commodore, the noble Commodore being prevented by illness in his family from officiating. In answer to the deserved compliment paid by the Vice-Commodore, Mr. Weld said, "Whenever the club wanted a vessel to win a prize they had only to send to him."

The Eagle accompanied the match, with the members of the club on board, followed by the Sea Swallow, with another large party; both vessels getting back to London in good time.

SCIENTIFIC NEWS.

THE COMET.—In our last week's Impression (pp. 3 and 22) we gave a condensed summary of the notes made by various observers, which we now resume. In the *Athenæum* we find it stated that Mr. Hind, of Herschel (dated July 2), accompanying drawings of the nucleus and envelope and of the invisible tail. As to remarks, the comet is retreating from us with immense rapidity. He graphically compares the tail to a "short and full dress-tail driver, as if by the wind, to the left, and approaching very boldly and definite upon the right side, just above the nucleus, his ragged and indistinct on the left side to a considerable distance from the nucleus." Mr. Warren De la Rue (in the same journal) corroborates the statements we gave last week as to the actual of the tail on July 2, giving its distance as 1° 30′ ninety degrees. On July 3, he says, "the fan-shape of the tail was more distinct and more generally filled with light than on several previous days, and it never rays within it. The light of the comet and nucleus is much more diffuse and less brilliant than Donati's." Unfortunately the cloudiness of the sky in June has not others to photograph the comet have been unsuccessful. The contagious has left a strong impression, but not a trace of the comet appeared on the prepared glass. He adds, "As Donati's comet was photographed in seven seconds, it follows that the present comet is considerably less actinic." In a letter, dated July 5, Mr. Hind expresses his opinion that it is not only possible, but even probable, that in the course of Sunday, June 30, the earth passed through the tail of the comet at a distance of perhaps two-thirds or its length from the nucleus. At 4 p.m., June 28, the head was distant from the earth's orbit 13,600,000 miles. Judging from its position then, and the rate of velocity at which it was travelling, and the amount of curvature of the tail, and the direction of its motion, he thinks that the earth very probably encountered the tail in the early part of that day, or was at least sufficiently in a region which had been swept over by the cometary matter shortly before. He also refers to a peculiar phosphorescent illuminative of the sky at the time,

SCIENTIFIC NOTES.

The contagious has left a strong impression, but not a trace of the comet appeared on the prepared glass. He adds, "As Donati's comet was photographed in seven seconds, it follows that the present comet is considerably less actinic." In a letter, dated July 5, Mr. Hind expresses his opinion that it is not only possible, but even probable, that in the course of Sunday, June 30, the earth passed through the tail of the comet at a distance of perhaps two-thirds or its length from the nucleus. At 4 p.m., June 28, the head was distant from the earth's orbit 13,600,000 miles. Judging from its position then, and the rate of velocity at which it was travelling, and the amount of curvature of the tail, and the direction of its motion, he thinks that the earth very probably encountered the tail in the early part of that day, or was at least sufficiently in a region which had been swept over by the cometary matter shortly before. He also refers to a peculiar phosphorescent illuminative of the sky at the time,

A SPOT ON THE SUN was seen with the naked eye by M. Tissot, on June 20 last, at the Observatory of the Polytechnic School, Paris. It appeared to be 94 seconds in length, and 46 in mean width, with, sidereally expanding and contracting. These dimensions correspond to an apparent length of 2′ 49″, which two such spots as the Earth could simultaneously cover. In the night of June 26 to 27 this spot passed beyond the western edge of the sun's disc. From 1612 to 1722, only seven observations of spots have been recorded as having been made with the naked eye—viz., by Gallion, Mossler, D'Arquier, Methuen, and Wm. Herschel. But Alex. Humboldt says that such observations could be made much more frequently, if attention were directed to them. Schwabe, who has observed the sun's disc for twenty years most assiduously, states that he considers those spots to be large which attain to the size of 50 seconds in diameter, and that they can only be seen by the aid of a telescope. M. Tissot thinks that they would be visible at the size of 36 seconds.

PHOTOGENIC (OR ILLUMINATING) POWDER.—M. Gentily, a German chemist, states that he has given small quantities of this substance to various animals with fatal consequences. These grains administered to a rabbit caused instant death; the same dose made a dog perish after four days of extreme agony. The oil of petroleum, he adds, does not possess this poisonous quality.

AUGRENDER'S WHITE GUNPOWDER.—To the Editor.]—Under your notice of "Scientific News," in your Impression of July 6, you give a quotation from the *Philosophical Magazine* with reference to the subject above, and as interesting the party there named to be the inventor. Without wishing to detract from his merits, permit me to say that for some years past the gunpowder in question has been made and used by a working man named Paine in this parish, but whose circumstances have not enabled him to secure the general publicity and attention necessary for success. In the autumn of last year he submitted his invention to the Government authorities at Woolwich, who declined a trial, and he has since taken out a patent for it. Should this come to a poor though ingenious Englishman may perhaps induce you to insert this communication.—JEFFERIES W. MURRAY, St. Ken, Cornwall, July 8, 1861.

OBITUARY OF EMINENT PERSONS.

MRS. BARRETT BROWNING.

Elizabeth Barrett Browning, the wife of a great poet, and herself a poetess of the highest reputation, was a native of affluent circumstances, and the and while she was young, her family was in affluent circumstances, and the was educated with great care. Her father, however, like other West Indian was educated with great care. Her father, however, like other West Indian proprietors, saw his fortune reduced from almost princely proportions not, indeed, by the emancipation of the slaves, but still to something indeed, by the emancipation of the slaves, but still to something much less than a competency. His son, Edward, and his daughter Elizabeth, have very different traits his former wealth. His son has devoted almost before her fortune to the study of literature. At the age of nine, Miss Barrett, with her eyes, in the waters of Torquay, both in prose and verse, and at the age Barrett, began to attempt composition, which was to give her fame. Before she of fifteen her powers as a writer were known to her friends. "Prometheus Bound," of fifteen her powers as a writer were known to her friends. "Prometheus Bound," and this was followed by work was published in 1833. Mrs. Barrett was now fairly launched into "The Seraphim and other Poems," succeeded, through illness, by a brilliant opening career. But ill-health was partially relieved, and the long period of suffering. When Mr. Barrett Browning, the author of "Paracelsus" was married in 1846, he had already taken his place among the leading poets of his and of other poems, which have established her as one of the leading poets of her time. The subject of her poetry is generally of a spiritual character, and is often highly metaphysical. Her own, wrought with fine sensibility, and is the creation of all who knew and loved her, for to know her was to hold her in affection. Her demise is a public loss to the literature of her country.

GENERAL W. H. CONNOLLY, R.M.

General William Holmes Connolly, of the Royal Marines, who died on the 26th ult., at his residence, No. 8, Rodney-terrace, Pembroke, in the 80th year of his age, was brother to the late Captain Matthew Connolly, R.N.; to the late Lieutenant Peter Connolly, R.N.; to the late Captain George Shea Connolly, of the Army; to the late Commander John Bell Connolly, R.N.; and Commander Richard Jack Connolly, R.N. Twelve years after he entered the Marines he served a few months in the Royal Navy, during which time he was engaged in several affairs with the French privateers, and was present at the action as Second Lieutenant of Marines on May 8, 1793, and was present in Lord Bridport's division with the French fleet on June 17th, 1795, when the latter encounters that followed. In 1795 he was frequently engaged with the Spanish gunboats and gun-boat off Cape Gata, and was at the bombardment of Fuenle's squadron of three frigates and two brigs off Tenlon, on June 19, 1796. At the siege of Algeciras he was severely wounded, and made prisoner. After obtaining his liberty he was soon again actively employed, and was at the siege of Copenhagen and the capture of the Danish fleet. At the Basque, in 1814, the Royal Marines arrived to protect the inhabitants from the attempts of the French, and this place was held possession of by them until the arrival of other troops from England. During their stay at the Basque, Connolly, who was still very young, was frequently engaged with the enemy in affairs of gun-boats and batteries. He received a reward from the Patriotic Fund, and the silver medal with two clasps for his services. He was at altogether sixty-six years in the Army. He became a Captain August 15, 1805; a Brevet-Major, April 16, 1821; a Lieutenant-Colonel, Jan. 10, 1837; a General, June, 1855. General Connolly's eldest son is Lieutenant-Colonel R. G. Connolly, of the Royal Marines. His other sons are Captain Matthew Connolly, R.N.; Captain J. B. Connolly, Royal Marines; and Captain Henry C. Connolly, of the 2nd Battalion Rifle Brigade. His brother, Captain Peter Connolly, R.N., died May 14, 1855. His second daughter, Silea, was married, October 25, 1838, to Charles S. Trulloe, Esq., of Ashford, Kent, and his youngest daughter, Laura, was married to Captain M. J. Hall, of the 6th Regiment.

C. K. MAINWARING, ESQ.

Charles Knyaston Mainwaring, Esq., of Oteley Park, in the county of Salop, and Berrington Hall, in the county of Chester, died on the 17th of June, 1861, aged 79. Mr. Mainwaring was the eldest son of the late Rev. Charles Mainwaring, of Oteley Park, and was born on the 16th of September, 1782. He married, the 2nd of August, 1842, Frances, second daughter of the late Sir Thomas Hesketh, Bart., of Galtfaenau, in the county of Denbigh, and leaves a son this successor, Salusbury Knyaston Mainwaring, late now of Oteley Park, born on the 8th of September, 1844. This family of Mainwaring directly descends in the male line from the great Welsh Prince Mredydd ap Owen, who was contemporary with the Conqueror, and received the grant of fifteen lordships in Cheshire. James Mainwaring, grandfather of the deceased gentleman, was a Groom of the Bedchamber to the Barons of the Exchequer, and was the third son of James Mainwaring, Esquire, of Peover Superior, in the county of Chester, by Elizabeth Leycester, whilst in the army of King Charles I., married Mary, daughter and coheir, of Charles Lloyd, of Oteley Park, in Shropshire. Many of the Mainwarings is distinguished alike by antiquity of descent, high alliances, and historic renown; particularly the learned Roger Coke, Lord of Mochnant, in Powysland, and through him from the Royal tribe of Powys.

WILLS AND BEQUESTS.

The will and codicil of the Hon. Thomas Edward Mostyn Lloyd Mostyn, M.P. for Flintshire, of Gloddaith, Carnarvon, were administered to in the principal registry, on the 20th inst., by Lady Henrietta Mostyn, the widow, and Col. Edward Lloyd Mostyn, her barrister-at-law, and the Rev. Ralph Pelham Nevill, of Bettisfield, Salop, the executors. The testator died at Gloddaith on the 28th ult. The personalty is sworn under £15,000. The gentleman, who died at a premature age of considerable property, was the only son of Mr. He has bequeathed to his uncle a legacy of £10,000 in addition to her marriage settlement, and with the exception of his executors, he leaves the residue to his eldest son (a minor) and his issue he leaves in trust his estates; but should he have no other children, then £20,000 each to his younger sons and £30,000 additional is given. The testator leaves the enjoyment of Hengit Hall, which he purchased for £40,000, to his widow, Lord Wrottesley, and a sum of £10,000 to be raised as marriage portions for his sisters. There are bequests to all who participated in the testator's household, to the corporations of the borough magistrate and Deputy-Lieutenant for Merioneshire, and died an unmarried man, aged 26.

The will and codicil of Somerset House, Ealing, Middlesex; Antiquities Hall, Islington, and

"A REHEARSAL, CAIRO," BY CARL HAAG, IN THE EXHIBITION OF THE SOCIETY OF PAINTERS IN WATER COLOURS.—SEE PAGE 42.

FINE ARTS.

BATTLE OF THE STYLES.—PUBLIC PATRONAGE OF ART.

THE "Battle of the Styles" was fought out—let us hope definitively—on Monday last in the House of Commons, where the Palladian or modern classic style beat the Gothic by two to one—188 votes against 95—in the case of the projected new building for the Foreign Offices. We have no profound a veneration as any Cromlan enthusiast for Gothic architecture, but we would see it in its proper place—that is, in the time-honoured cathedral or abbey church. In England, at any rate, and to a very large extent throughout the Continent, Gothic architecture has always been exclusively appropriated to ecclesiastical purposes, and it has been considered almost an act of desecration to apply it to secular uses—with the exception occasionally of a stately public hall or library. Indeed, the very genius of the style is diametrically opposite to that of classic architecture, its beauty and grandeur consisting in the mighty sweep of vertical lines from base to apex of the lofty windows in the Greek and Roman structure the charm is in the vast perspective of horizontal lines, the eye being carried to the level, or broken by tasteful fenestration. The one is a type of the heaven, or broken by tasteful fenestration. The one is a type of the heaven, the other of the earth, earthy; but both admirable in their respective spheres. Walpole very sensibly remarks the distinction between the two when he says:—"One must have taste to be sensible of the beauties of Grecian architecture; one only wants passion to feel the Gothic." But passion should have nothing to do with State affairs. In point of economy of space, also, the Gothic, in its proportions, is at an illiberal disadvantage in comparison with the Classic style—the superimposition of floor above floor being directly inconsistent with the former, and applicable to any extent to the latter. In respect to the essentials of ventilation and lighting, the disparity between the two styles, when considered as applied to domestic purposes, is still more palpable, and this alone would account for Gothic not having been generally used for secular purposes. In early times, when feudal architecture displayed the height of its splendour in secular edifices, the palace and the mansion were of castellated architecture. It was not till after the termination of the wars of the Roses that the latter style was abandoned, and an attempt was made to apply some of the elements of Gothic architecture to palatial and domestic residences, resulting in the Tudor style, a modification of the Burgundian style, derived from Flanders. Of the Burgundian style, somewhat modified, the best surviving example in England is still Somerset House, removed in 1774-80. As to the Tudor style, it was but little used in its own day for secular purposes. Elsewhere I soon emphatically; and the very attempt to carry it out on an extensive scale has been in the case of the new Palace at Westminster, the experience of which has been by no means encouraging to the offices. As was remarked by a facetious member, the maximum of expense with the minimum of convenience—Gothic in an elevation is lights and abundance of "passages that lead to nothing." That this style is not to prevail further in our public buildings over the demands of convenience, propriety, and economy, we may well thank the majority in the division on Monday last.

The story of this affair should not be very lightly passed over. It affords a striking illustration of the precarious and uncertain principle of action which affects all public works in this country. It is due only to the fact of Lord Palmerston and Mr. Gregory, in office for the first of a new set of Government offices is to be built in national Palladian style instead of detestable Gothic. The decision of the Lord John Manners had happened to be in power the result would have been directly the reverse: Gothic would have claimed all the sites, and probably all the rest would have followed suit. And, indeed, as it is, the successful carrying out of the opinion of the House of Commons as stated on Monday last depends on the future contingency of the duration of the Ministry; for a change of Government before the work was well commenced and carried a certain stage beyond completion would probably be followed by a reversal of the verdict of the collected wisdom of the nation and the triumph of Gothic tracery and Gothic darkness over the elegance and propriety of Palladian architecture and the Renaissance. This is a bad state of things. Is it not time the matters of public taste, displayed in the erection of national edifices, should be regulated by some competent authority, wholly distinct and apart from the occupants for the time being of Downing-street and the Treasury?

Another example of the utter vanity and uncertainty of Parliamentary authority in these matters, and the inconsistency of the unconscious bureaucracy in carrying out any job it may have taken in hand, was afforded in the case of the projected series of statues of kings from an individual early period to George the Third, which, after having been over-decorated but innately unornamental House of Parliament. Last year the Commons distinctly negatived the proposal of Mr. Layard as it was to the production of a couple of Royal effigies per annum till the whole nine should be exhausted. This year they yield to a demand in a way *de haut en bas* manner by voting the necessary funds for four marble kings, without any pledge that the dose should not be repeated ad infinitum till the whole cycle of dozen Plantagenets, who is getting very funny in his old age, ridiculed the notion of any other subjects being appropriate to the purpose. Let us have gallery filled with effigies of Englishmen. He asked whether they would have subjects from heathen mythology or classic fable; and thought perhaps that nothing was more appropriate to place in the new Houses of Parliament, than the sculptor's art in this country always restricted to the production of monumental effigies. He suggested that there are many subjects which, treated allegorically, might have proved extremely appropriate to the locality, and upon which the genius of our sculptors might have been employed with credit and advantage. Justice, Mercy, and Religion, as personal attributes of Royalty, have, perhaps, been more frequently represented than necessary, but we are not concerned; but, as especially suitable to the present age, might not such subjects as "Industry" as the source of internal wealth and strength; "Peace," as the rule of foreign policy; "Electoral Suffrage," as the foundation of all governmental authority; "Public Opinion," as the guide of official proceedings, not be worthy of treatment in sculptural treatment? But, these considerations apart, the four Royal images recently adopted by the House as the only fitting memorials for the Royal Gallery, and, when a modest request was preferred that the names of the illustrious dead whose virtues and achievements it was proposed in its turn to commemorate should be mentioned, it was met by a official reply, based very much upon certain old maxims about people minding their own business, and asking no questions in order to avoid being told lies.

This last mention of statuary suggests some not very comforting facts as to the status of British sculpture. It is but lately announced that the execution of the statues of Stephenson and Brunel, which are to be placed in the gardens attached to St. Margaret's Church, Westminster, are to be executed by Baron Marochetti; and that the committee report that they "did not choose to give this great work to a foreigner instead of an Englishman, as they might have wished." Cause the artists of England are little beholden to Court favour or Government patronage for encouragement. Very different is their treatment to that of their brother artists in France, where the Minister of Beaux Arts annually, on the first day, on the occasion of the distribution of prizes at the Palais de l'Industrie, made an address full of fulsome eulogy upon the a s of France, in the course of which he said such things as these:—"It would appear that it has been given to France to take the lead once more in the arts of elegance, and I shall not be afraid to say, as on a late occasion, surrounded Greece by the glory of her theatre—ancient Rome by that of her victories, the splendour of her monuments, and the authority of her so widely-spread language—that it is also around the Italian renaissance by the éclat of her schools of painting and of sculpture. Yes, France is now the nation which attracts the eyes of others both theory and example." After this let our artists hide their "dimished heads," and be content with any crumbs that may fall from the tables of the great and powerful.

"THE NATIVITY OF OUR LORD." BY P. VAN SCHENDEL.

The picture of "The Nativity of Our Lord," by Pierre Van Schendel, of Brussels, which was finished in 1858, has been brought over to this country, and is now being exhibited at the Auction Mart in the City. It is a work of the largest class, measuring about 14 feet high and 8 feet wide, and displays all the peculiarities of the modern Flemish school. In the composition the artist displays considerable originality, and has departed from the conventional modes of treatment in one or two essential particulars. The great and auspicious event is supposed to take place in the ruins of a temple of classic architecture which had been conveyed temporarily to the sacs of a caravanserai, the ordinary accommodation of the town being fully taken up. The principal light comes from a torch held by Joseph, involving a trick of art which, as we all know, marked its declining period, and which in the present case we are not disposed to approve of. The scene is still supervised by the inevitable Mahometan flambeau, borne by an attendant or watchman in the mid distance on the right, the eye being thus unconformably distracted from the principal object. The Virgin is represented lying in a manger, admirably foreshortened. Looking at him in alocution on one side is the Virgin, and on the other Joseph, who has laid by his carpenter's rule and headed old man, as most representations we has been heretofore, stands before us a handsome man in the prime of life. The figures which surround the Holy Family are well grouped, and evince various expressions of admiration, awe, devotion, and veneration. The Virgin's countenance is full of the repose of an admirable figure; so is the young Jewish maiden who, with her hands crossed upon her breast, kneels to offer her homage to the infant of a superior race. Others, which need not be particularised, are equally good. A pyramidal arrangement of the composition is attained by the introduction of the group of camels in the extreme street population, standing on the steps of the portico lookour on, but they are hardly to be seen to the prejudice of the principal and artistic requirement which brought them there is a little too obvious. The broad rays of a star high out of sight fall upon the pillars and architrave of the picture, giving, unfortunately, a false light of the figures, a rather peculiar effect. The picture in all its parts is highly finished, and of an impressive character; but the great defect is that of gloom and opacity, which, as we think, might have been obviated by the introduction of a fine distant perspective, with some glimpse of the heavens, which is here entirely excluded.

W. BELL SCOTT'S PICTURES, ILLUSTRATIVE OF THE HISTORY OF THE ENGLISH BORDER.

A very interesting series of eight pictures, by Mr. W. Bell Scott, has been added to the stock in trade of Mr. Pennell's Gallery, in Pall-mall, being illustrative of "The History of the English Border," and of the memorable events connected with it. The gallery in question hall at Wallington they are intended to decorate. The subjects selected are highly susceptible of pictorial treatment, and abound in incidents of a romantic and picturesque character, which the artist has to account with admirable effect by the artist. As we intend giving Engravings from two of the pictures in the forthcoming volume of the present content ourselves by giving a brief statement of the subjects in the order of their date, from which mere enumeration the reader will perceive that Mr. Scott has at the varied historic associations which are involved in them. "The Building of the Border Keep" is the first in point of time, and illustrates the following history; St. Cuthbert in his hermitage in the small and naked island, the nearest of the Farne group, to the coast of Northumberland, the rocky cave, and the Venerable Bede, finishing his book and his life, living up to the dawn of the Christian period; Egbert, King of the Picts, in the Isle of Iona, building churches, affording the highest opportunities for the painter, and a most striking picture of the Dark Ages. The Pict, in the fourth generation, the caxton, somewhat confined, in the raid life of the border, intended to suggest the necessity for a foray to supply the larder. Bernard Gilpin in the Lake-district, preaching to the Cumberland dalesmen, having a name associated with a remarkable act of female heroism within our own time, when a lady, Miss Gilpin, giving, at the risk of her own life, one of the nineteenth century are hospitably commemorated in a striking picture in which coal, iron, electricity, and their marvellous results are all to be found. The completion of the series will be a most interesting addition of these pictures display ingenuity and skill, combined with vigorous painting, in the best style of modern art, and are a valuable contribution to art, as they are interesting as regards the history of this country.

BARKER'S PICTURE, "THE INTELLECT AND VALOUR OF ENGLAND."

The production of pictures by the new process of engraving and publishing has become a regular business of late years, and one which calls for a little looking after on the part of the art-critic. The subject of the picture before us has been regarded in the most favourable manner by the public attention is more or less engrossed, and the picture is completed and the impressions are ready for distribution. The picture itself, being got up with no higher aim than to serve as a handsome print to hang over the sofa in the drawing-room, or, as a scene, quasi a painting, pretensions of the most ordinary kind; and, as a work of art, it is not to be seriously criticised by the painters. Like the scenery of a pantomime which has had its "run." Now, we cannot consider this a wholesome state of things, or one calculated to promote the interests of the fine arts in this country, within the extent to which it expresses the sufferings of the miscellaneous art-patrons may be regarded as of the last importance to the welfare of the community amongst us.

There is no living artist who has contributed more materials of this kind to the enormous, or whose labours have been attended with more success, than Mr. T. Jones Barker; and perhaps he never produced a picture calculated to excite more interest than the present one of persons in all classes of society and walks of life, and to be of more enduring interest amongst them, than that which he has now given to the We illustrated, at page 28, 6th last.-street, entitled "The Intellect and Valour of England." This picture consists of portraits, thirty-five in number, of some of the most distinguished men of the present century of the day, in every walk of public life, ingeniously arranged in groups, with the Queen and Prince Consort in the centre, in the Throne Room of the apartment somewhere in the neighbourhood of Carlton House-terrace, with a view of the new Houses of Parliament in the background. One of the groups is that of Sir Robert Peel, Lord Palmerston, Mr. Gladstone, and Mr. Cobden, discussing the proposed commercial treaty with France, another that of Sir Robert Peel, Mr. Gladstone, and enfolding his new gun to General Sir Archibald Wilson, Lord Raglan, General Sir Charles Napier, Lord Gough, Sir Edward Codrington, and Sir Robert Brewster displaying the application of the principle of the stereoscope to Professor Faraday, Professor Owen, and others. The rest of the groups are distributed as follows:—Literature by Lords Brougham and Lyndhurst; Indian Valour and Statesmanship by Sir John Lawrence, Sir Herbert Edwardes, Sir Henry Havelock, Lord Gough, Sir Hope Grant and Sir James Outram; the Navy by Lord Dundonald and Sir William Peel. Literature by Lord Macaulay, Tennyson, Thackeray, Dickens, Bulwer Lytton, and Sheridan Knowles. Civil Machine; Architecture by Sir Charles Barry; Civil Engineering by Robert Stephenson. Statesmanship by the Prime Minister, Lord Derby, Lord Stanley, Sir Roderick Murchison, and Robert Livingstone being the remaining portraits. Presiding over all, and marking the Queen's reign as the Augustan age of the British Empire, Considering the difficulty of the subject, owing to the number and variety of the portraits required to be introduced, the artist must be said to have acquitted himself most satisfactorily of his task. The groups are skilfully massed, the management of the perspective is level the whole being really excellent. The portraits for the most part are good likenesses, though in some instances display a want of that finish and delicacy of touch which, in a picture of this kind, is perhaps, to more distinct and ready identification. To all who take an interest in the progress of the fine arts in this country, and especially in the higher duties of the age this production, when the engraving (which has been intrusted to Mr. C. G. Lewis) is finished, will afford a favourable opportunity of gratifying their wishes.

The Earl of Shaftesbury is to deliver the address at the inauguration of Dr. Isaac Watts's statue at Southampton on the 17th inst.

TREASURE TROVE.—During the past week some workmen were employed cutting a drive in the hanging woods of Leigh, the manor seat of Captain Turton, near Whitby, Yorkshire. Suddenly one of them came upon the remains of some wooden tankers, and upon stirring it observed two hundred coins, consisting mostly of silver crowns, florins, shillings, and groats, of the reigns of Charles I., Charles II., James I., Edward VI., Elizabeth, Mary, Henry VIII., and some few of much anterior date. As the workmen at once took them to Mr. Ferne, Captain Turton's agent, on the nature having become invested above, a claim was lodged on the part of the lord of the manor, Mr. Cholmeley.

LITERATURE AND ART.

"PAN, Pan is dead!" sang Elizabeth Barrett—not then Elizabeth Barrett Browning—years ago. Alas! it is now the gifted poetess herself who has reached the bourne whence no traveller returns. The earnest, eloquent, soulful woman who wrote "The Cry of the Children" and "Aurora Leigh," whose strong sympathies with truth and freedom burned low with dazzling brightness in the "Sonnets from the Portuguese," the ardent student who, when recovering from a dangerous illness and scarcely prohibited by her physicians from reading any work that taxed the mental faculties, absolutely had a Greek testament boxed up as a novel to deceive her watchful nurses; the tender, plaintive songstress whose almost last song warbled forth "to the great god Pan," and in the pages of the *Cornhill* told how he made and broke the spell—is dead. Down by the woods in the river—Mrs. Barrett Browning is dead. The fair climate of Italy could not wait of the streets of Florence. Flowers and sunshine, blue skies and purple hills, fruits and purling streams—what were they all against Death; and are not all human things subject to that Mutability

Which mantles moon and man and life and state,
And love of things so vain to cast away,
Whom yesterday took royal blood and to-day
Sheet Thrue shall soon cut down with his consuming sickle?

So Spenser sings; but the hard of "The Fairy Queene" gives us the antidote as well as the bane when he tells us of the time when no more change shall be, but steadfast rest of all things firmly stayed upon the pillars of Eternity—

Which is contrate to Mutability.
For all that moveth doth in change delight:
But thenceforth all shall rest eternally
With Him who is the God of Sabaoth hight:
O! that great Sabaoth God, grant me that Sabaoth sight.

Death has taken away from us, too, this week, a learned, laborious, clear-minded man, Sir Francis Palgrave, Deputy Keeper of the Public Records, and the author of many works connected with the proper department of the British Museum. He was seventy-three years of age, and had been ill for some time, and was not long ago "his services to constitutional and parliamentary literature." Sir Francis took an active part in the unhappy controversies awakened by the "old correctors" pseudonymous publication, "Junius Identified."

The public records have been this week the subject of a grave legal trial. The Master of the Rolls, the guardian of these records, belonging to the Marian and Elizabethan periods, and whose resignation of, or rather removal from, his office has given rise to so much panegyrising, pamphleteering, and letter-writing, was the plaintiff in a suit which has brought an action for libel against Mr. Bird, secretary to the Protestant Alliance, for having, in a very strong article, in the form of review of the indictment against Mr. Turnbull being that he had edited the original work of Mr. Charles Wylie, entitled "Anti Pope," and frequently expressed his admiration of the genius and learning of the followers of Ignatius Loyola; and that there was, consequently, *primâ facie* reason for the charge of libel. It is hardly fair, in a matter appearing with the records be calendared, and giving the abstracts so prepared a legal character, that it is hardly fair, I say, for the Court of Queen's Bench to allow Mr. Turnbull's theological tenets as opposed to those of Lord Shaftesbury and of Mr. Bird as representing the Protestant Alliance. Now, I am not personally interested in the matter one way or the other. Mr. Turnbull is a ripe scholar, and peculiarly fitted for the task intrusted to him. The documentaries calendared by Mr. Bird in the matter to have to abridge an Italian sermon by Cardinal Pole, or put into common sense the long-winded Latin protocols of Ambassadors who, in the days of Queen Mary, were sent about "to look after the good of their country." With regard to the Jesuits, how much is there not to be said on both sides! Is there not room for the highest order of enthusiastic on their industry, their erudition, and their varied accomplishments; but, then, Lord Shaftesbury cannot refrain from commencing their sketches with "proverbial double dealing." What marvellous compendiums "Jesuits' Perspective"! How would our artists, engineers, and architects appreciate the "Jesuits' Horizontal Instrument for Distance"? We rise from its perusal full of amusement and admiration, and then we turn to Mr. Bird's pamphlet, and find that Lord Shaftesbury is double the tenacious and dangerous doctrine the great satirist address in the demolition of the H. R. P. P. But for the Jesuits science and literature would be where they were in the middle of the the peace and comfort of the world would have gained a great deal.

The Art Treasures Exhibition at Manchester has been the theme of Fine Arts just held at the Palais de l'Industrie, Paris. Her Imperial and Bindhearted Highness the Princess Matilde is among the fair artists of whom mention is made as having sent some of her work to the recent solemnity in order to compliment M. le Comte Walewski on his success as an organiser, and a generous contributor to the exhibition in felicitous locutions. In his address, and touching on the architectural improvements in Paris, M. Walewski called them "miracles of utility." Among the "miracles of utility" is the miraculous *Halle*! On our own side of the Channel we find the Commissioners of the Exhibition of 1851 have purchased from the Brompton estate new for an addition to Captain Fowke's building. The palace at South Kensington is to have an "annexe." Now, what is an "annexe"? It is a "decoration" or "appendage," as you please? For the exhibition of machinery. Industrial exhibitions have already an architecture, an organisation, and a style of construction of their own, and cannot grudge them an exclusive language.

The Belgian Government is further palaistaking in improving the Art-Museum of the State. Two pictures of "Adam and Eve," by the famous brothers Van Eyck—is not Jan van Eyck styled the inventor of painting?—have been purchased for the sum of 12,000 francs Royal at Brussels, by an arrangement with the "fabrique" or church committee in Ghent. Jan van Eyck's picture of "The Lamb of Adam and Eve" the Government give six panel pictures, painted by Michael Coxie, after Hubert van Eyck; and also agree to have executed within six months copies of the "Lamb" by Jan van Eyck, the latter picture as the Church authorities shall suggest. These "modifications" are to be made, it is said, in consequence of the work having been shocked at the al fresco costume of the "grand old gardener" and his wife. The Ghent and Brussels bargain is considered a good one for the latter, as the Government are to contribute 50,000f. towards the cost of stained glass windows over the high altar and in the transept of the Church of St. Bavon, in which the "Lamb" stands. Our National Gallery we might make an exchange highly gratifying to the bourgeois if we were to give up a Raphael cartoon in exchange—say the Elymas, representing the patron saint of Ghent refusing one of the Roman Emperors admission to the cathedral. What will the Government propose to be the price to be set on the "Lamb"? We could persuade ourselves to part with any picture from the pencil of one who, as the Van Eyck's Sandyes, belongs to our own Art-History, and is one of its glories.

"A free library and museum for the city of London, to be established without delay." Such is the resolution, Liverpool, Birmingham, and a score of English towns have free libraries, say the promoters of the contemplated institution, why not London? The free libraries brought against a free library for London is that the population resident in the City is small, and the number of readers will not be large, that it will involve a new rate, and that the great ratepayers and employers are against it. To these it is answered that there are 112,242 persons resident in the City of whom thousands are merchants and artisans who have no access to books; that the provincial libraries and those established in London are open only in the evening and the well-conducted standards; that it is only intended to ask for an addition of one farthing in the pound on the consolidated rate; and, finally, that as a matter of fact, the ratepayers are anxious for the free library scheme. Leaf and Co., Pawson and Co., Crosley and Sons, Read and Taylor, Cadwell, of which and Mr. Spottiswoode, Chancellor—each house a clerk as *remarkable* names in commerce—and numerous others, are all in favour of a City Library. It is time. What has become of the good old libraries of Sion and Gresham Colleges and Guildhall? The clerks of the Bank of England and those of the Post Office have their reading-rooms: why not the great army of mercantile clerks, assistants, and artisans?

The general architectural dispute between Gothic and Italian as applied to the construction of the new Foreign Office has been settled in Parliament. Our new bureaux are to be "Palladian," Mr. Gilbert Scott has been compelled to retrace his steps, although we have no doubt that he will be quite as dexterous among the Italians as among the Goths.

THE ILLUSTRATED LONDON NEWS

No. 1099.—VOL. XXXIX.] SATURDAY, JULY 20, 1861. [WITH A SUPPLEMENT, FIVEPENCE

FRANCE AND THE SLAVE TRADE.

FOR some time past the Government of Napoleon III., while professing, and, no doubt, quite sincerely, to hold the slave trade in abhorrence, and, in fact, to treat it as piracy, have pursued a system of procuring labourers for the French colonies which almost equalled that infernal traffic in its baneful results. The affair of the Charles et Georges suddenly rent the veil which screened from the gaze of Europe, and probably from the knowledge of the Emperor himself, the hideous resemblance which this immigration scheme bore to the trade which France had concurred with Great Britain and America in reprobating as piracy. While many English journalists thought they could detect in the facts of that celebrated case a design on the part of our neighbour to revive the African slave trade under specious and flimsy pretences, and, under illusory forms and regulations, to legalise a crime which she had publicly denounced, the Emperor himself remitted the whole subject to the searching investigation of a commission of inquiry, and it is upon their report, we imagine, that he bases his letter to his Minister of Marine and of the Colonies, dated Fontainebleau, July 1, 1861, in which he has finally abolished the immigration of African labourers into the French colonial possessions, except from those parts of Africa which, belonging to the Empire of France, are under the restraints of French law. The Emperor announces in the same letter that he has signed a treaty with her Majesty Queen Victoria, by which labourers for the French colonies may henceforth be procured from India on the same terms and under the same restrictions as regulate our own coolie immigration.

The beneficial character of this act is far greater than appears upon the face of it. Whatever may have been the intention of the Emperor in giving his sanction to the immigration scheme which was being carried into operation on the eastern coast of Africa, there can now be no doubt whatever that its effect was to stimulate all along that coast all the atrocious evils which accompany the slave trade, *pur et simple*. The immigrants, it is true, were not purchased: the term of servitude for which engagements were made with them or in their behalf was limited to five or seven years at most; and the colonial employer who got possession of these labourers was bound to restore them to their native soil at the close of their term of hiring, at his own cost. The wants of the French colonies are probably too contracted to require a very extensive supply of hands; and to the credit of French planters it must be admitted that their treatment of their negroes is more humane than is that of either Anglo-Saxons, Spaniards, or Dutch. With all these abatements, however, the cruelty of the system did not fail to exhibit itself. Fraud and violence often presided over the origin of the contract; insufficient sustenance and overcrowded ships produced many of the revolting agonies of the mid-passage; and avarice in the masters too often prompted them to evade their undertakings when the limit of their engagements had been reached. The evil may not have attained to such frightful proportions as distinguish it in Cuba, and as formerly characterised it in Brazil. But it had already developed into a tolerable, or rather intolerable, approximation to the condemned slave trade; and, had no other consideration prevailed, a mere regard to the inhumanity inherent in the system may well have sufficed to induce Napoleon to decree its total and permanent suppression.

But, in reality, the immigration from the eastern coast of Africa, even if it could have been carried out with little personal suffering by, and less personal wrong to, the immigrants themselves, became responsible for practices along the coast and reaching far into the interior which are justly looked upon as constituting the direst curse which cleaves to the slave trade itself. The premium paid for a limited contract, putting the negro into the planter's possession for a term of years, was precisely the same in amount as the purchase-money paid down by the Spaniard or Portuguese for a slave outright; and it can hardly be matter of surprise that the swarthy natives, wholly unskilled in drawing fine distinctions, failed to detect the difference between the one transaction and the other. The French immi-

THE CIVIL WAR IN AMERICA: ATTACK ON THE PICKETS OF THE GARIBALDI GUARD ON THE EAST BRANCH OF THE POTOMAC.—FROM A SKETCH BY OUR SPECIAL ARTIST.—SEE NEXT PAGE.

grant was, to their apprehension, identical with the Spanish slave, and the one consequently was to be obtained by the same means, carried to the coast by the same machinery, and made over to his master in the same unceremonious fashion, and for the same amount of profit, as the other. Now, we unhappily know too well what this process invariably and inevitably implies. It involves bitter hostilities between tribe and tribe, sudden attacks on village by village, a normal condition of habitual war fare, in which each man's hand is against his brother, one, and everyone's hand against him. It implies a perpetual reign of suspicion and terror, the neglect of all legitimate trade, and in the long run the perpetration of probably a dozen murders for every living and healthy victim handed over to the slave-dealer. This terrible social disorganisation was as actively promoted by the French system of contract as by the more open system of slave dealing. The one became in effect as operative as the other in keeping alive this internal commotion, and hence, with whatever innocent, or even beneficent, intentions it was primarily adopted, it could not be persevered in without bringing upon the Emperor and the Government of France the guilt of actively exciting and fomenting some of the worst horrors connected with the slave trade. Napoleon III., instructed by the report of his commission, no doubt saw it in this light, and gave orders for its immediate discontinuance accordingly.

There was, however, a moral disability resulting to France from her immigration policy which probably influenced the Emperor's gratifying decision. The truth is, it was impossible that France, whilst committed to a quasi and spurious traffic in man, could obtain credit with the rest of Europe for sincerity in her professions of desire to put an end to the slave trade. Her position became altogether a false one. It discouraged Governments which, like our own, were honestly intent upon ridding the world of this pest, for it suggested likelihoods of an extensive and, perhaps, a universal revival of it, in a slightly modified but hardly an improved form of existence and activity. It was like a wink of approbation to Governments like those of Spain, or the Confederated States of America, the interests of which are supposed to be identified with at least a covert supply of labour by illicit means. And it offered a great temptation to Governments which, like that of the Brazils, have only recently put a stop to the importation of slaves from Africa, and continue to odious but highly remunerative business, and to venture afresh on kidnapping enterprises, rendered respectable by the sanction and example of one of the foremost European Powers. France might protest in vain so long as her own acts could be quoted against her. A general suspicion as to the real desire of the great Powers to put an end to one of the cruelest scourges of mankind would have diffused itself through European society had the Emperor persisted much longer in upholding the recent immigration policy, and under shelter of that scepticism who would venture to anticipate a renewal of the slave trade on a scale of odious but highly remunerative business, and to venture afresh on kidnapping enterprises, rendered respectable by the sanction and example of one of the foremost European Powers. France might protest in vain so long as her own acts could be quoted against her. A general suspicion as to the real desire of the great Powers to put an end to one of the cruelest scourges of mankind would have diffused itself through European society had the Emperor persisted much longer in upholding the recent immigration policy, and under shelter of that scepticism who would venture to anticipate a renewal of the slave trade on a scale of

With glowing and grateful heart, therefore, did we peruse the Emperor's letter in the columns of the *Moniteur*. No act he has performed since his accession to the Imperial throne will shed a serener lustre upon his name, will more firmly affords stronger proof of his loyalty to the Anglo-French alliance. Last year he boldly entered, not without some peril to himself, the path of commercial freedom in which we had preceded him, thus proclaiming to the world that, in the wide domain of political economy, the policy of France and England would proceed in the same direction. This year he gives another and more splendid proof of his desire that the two great empires should, as far as differing circumstances will admit of it, pursue the same course, cultivate the same sentiments, and adopt the same methods of action. France is now not merely in public profession, but in actual position and in material strength, in the van of the great question of the slave trade and its suppression. There is scarcely any single object of general policy on which the Government and people of England have so steadily set their hearts as the extinction of this accursed traffic—none for which we have made greater sacrifices—none which we have shown greater facilities to thwart and mortify us. When Napoleon III. takes common ground with us on this question, and resolves to prohibit whatever we prohibit, and to do what we do, he gives us evidence not merely of what we are apt to regard as political wisdom, but of what we place far more highly—namely, his friendly sympathy with us in a matter which most deeply interests us. The change of policy announced in his letter to the Minister of Marine will be accepted by England as complimentary to herself as well as beneficial to humanity, and we, on this side of the Channel, cordially thank and bless the Emperor, besides doing an act commendable in itself on grounds of justice, has chosen to do it in the most graceful and flattering spirit towards his British ally.

The treaty with Great Britain, of which Napoleon makes mention in his letter, will no doubt contain some more highly-namely, his friendly sympathy with us in a matter which most deeply interests us. The change of policy announced in his letter to the Minister of Marine will be accepted by England as complimentary to herself as well as beneficial to humanity, and we, on this side of the Channel, cordially thank and bless the Emperor, besides doing an act commendable in itself on grounds of justice, has chosen to do it in the most graceful and flattering spirit towards his British ally.

The treaty with Great Britain, of which Napoleon makes mention in his letter, will no doubt contain some more highly-

pencil of a coolie; but, at any rate, we both hope and believe it is a sufficient representation of actual facts to justify us in regarding the system it is designed to illustrate as essentially and in principle different from the slave trade. Such defence we cleave to it it is in our own power to remove, and it will be our interest to remove as effectually and speedily as possible. Meanwhile it is a satisfaction to us to know that whatever advantages the system can be made to yield will be as much at the disposal of our neighbour as our own. It is an additional strand in the tie which binds France to great Britain—a further proof and pledge of international amity.

ATTACK ON THE PICKETS OF THE GARIBALDI BRIGADE, NEAR THE POTOMAC.

Our Special Artist writes as follows respecting the illustration on the preceding page:—"A few nights since I was sleeping in a tent close by the quarters of the Garibaldi Guard, when there was an alarm. A party of Secessionists had crossed the river under favour of darkness, and were firing on the pickets. I turned out with the rest, and came up with the supports in time to see the Secessionists retire to the woods. One of the Garibaldi Guard received a bullet wound in his leg. This corps is composed of Germans, Italians, Spanish, and Swiss, with a few Hungarians. Their uniform is a close imitation of the Sardinian bersaglieri."

FOREIGN AND COLONIAL NEWS.

FRANCE.

The Emperor continues to derive much benefit from the waters of Vichy. There is no truth in a report that Dr. Rayer has been summoned to all haste to Vichy, as Dr. Rayer has not left Paris.

The *Moniteur* announces that General Fleury left on Sunday for Turin, with an autograph letter to the King of Italy from the Emperor, replying to the autograph letter sent by Count Arese.

Thursday's *Moniteur* contains a decree declaring the works for the improvement of the port of Dunkirk to be of public utility, and opening a credit of 15,000,000f. for this purpose.

The Toulon squadron has been ordered round to Cherbourg.

Tuesday's *Moniteur* contains an Imperial decree modifying the import duties on foreign sugar, either refined or unrefined; on coffee, and on foreign iron, and suppressing the premium on the exportation of soap.

The *Pays* says that France will be divided into seven zones, for the purposes of the measure for promoting communication among the Prefects.

The *Moniteur* confirms the rumours respecting the director of a great public establishment, and announces the appointment of M. Anselme Petetin to the post of director of the printing-office, in the place of M. de St. Georges, "called to other functions."

Prince Adam Czartoryski, the patriarch of Polish patriots, who fought in the Russian ranks when Kosciusko raised the second partition of Poland, and who was President of the National Government established by the Poles in 1831, died on Monday evening in Paris, in his ninety-second year.

SPAIN.

The Queen received on Monday the Ambassadors of England and America, and afterwards left for Santander.

Rumours asserting that fresh disturbances have taken place in the provinces continue to circulate. The Ministerial journals reply to these rumours that full guarantees have been taken for the maintenance of tranquillity.

ITALY.

The Italian Parliament has virtually, although not formally, concluded its Session. Some unimportant Bills have been passed, as well as the Senate has passed some railway and financial measures sent up from the Lower House. The Chamber will reassemble in November. The bill for the construction of a naval and military arsenal at Spezzia, and several railway bills, passed the Chamber of Deputies yesterday week. In the former the Government had a majority of 45 against 3 votes.

The resignation of Count Sin Marino has been accepted, and General Cialdini appointed in his place, with the title of Lieutenant-General of Naples. The Royal troops have been engaged in several conflicts with the brigands in the southern provinces, and inflicted on them very great losses.

AUSTRIA.

A letter from Corfu states that there is an Austrian frigate and a steamer in attendance on the Empress of Austria at Corfu, and that the frequent visits of Austrian officers to the island of Ithaca should be considered as unalarming. It is stated the Hungarians have given up all idea of a union or personal union between Hungary and Austria.

From Arras we learn that the extreme Croatian national party has triumphed, the Diet having adopted the proposal for the separation of Croatia from Hungary by 120 against 3 votes.

Archduke Rainer, Minister of Public Works, has been relieved of his functions as Governor of the Tyrol and Vorarberg, and Prince Charles Lothowski has been appointed in his place.

The Austrian Government has given orders to various manufactories in Bohemia for 30,000 iron camp-bedsteads, which are to be sent within a short time to the confines of Croatia, Slavonia, and Dalmatia.

PRUSSIA.

At Baden-Baden on Sunday morning an attempt was made on the life of the King of Prussia with a pistol while he was walking on the promenade. His Majesty was not hit, but received no injury beyond a slight contusion on the neck, and returned to his residence on foot. The assassin was immediately arrested, and proves to be a student from Leipsic, and a native of Odessa, named Becker, aged twenty-one. He does not belong to any society, and is thought to be insane. A letter was found upon him stating that he esteems the King of Prussia personally, but "does not consider him competent to deal with the German question." He declared that he has no accomplices. The Queen of Prussia, on hearing of the attempt, fainted.

It is stated that the King has remitted to General Muntenfel the rest of his three months' imprisonment.

TURKEY.

The installation of the new Sultan took place on the 4th inst. at the Seraglio Point, and was accompanied with extraordinary pomp and splendour and parade.

The Sultan has commuted a great number of punishments, and great economies have been effected in the war budget. Aali Pacha has been appointed Minister for Foreign Affairs, and Fuad Pacha Professor of Law at the Court of Justice and of the Tanzimat. The elaboration of laws, the administration of the interior, and the revision of judicial sentences, Djevdet Pacha are to be directed. Mahmoud Bey has been appointed Minister of the Civil List, in place of Hasib Pacha. The new Sultan, among other reforms, is turning his attention to a new organization of the Ottoman fleet, and has decided on sending two superior officers to England and France to examine all the latest improvements in shipbuilding. He has given an instance of his liberal views by appointing two Christians to important offices at Constantinople.

INDIA.

Heavy rains have fallen in Bengal, the North-west Provinces, and the Punjaub; and it is hoped that the coming crops will be good, and that the dearth will be terminated.

CHINA.

Matters in China are very quiet. Great hopes are entertained of the results to arise from the new trade with Hankow and the towns on the Yang-Tse-Kiang.

AUSTRALASIA.

The bill for the abolition of State aid to religion has passed the Victoria Legislature by a majority of fifty to ten. On the 15th of May a banquet was given at Melbourne to Major-General Pratt by the volunteers of Victoria on the occasion of the General's return from the scene of the war in New Zealand. The castle disease known as the pleuro-pneumonia is spreading sad ravages in certain districts.

The principal event of the month in New South Wales is the decease of the Legislative Council on May 13. There have been heavy rains, All the rivers of the interior have risen above their banks, and much property has been destroyed. A new gold-field has been discovered at Warrumbungle and the Nadie Dog Creek tributaries. Sir John Young received his commission as Governor-in-Chief in June last, and was formally installed in the office and took the usual oaths on the 15th, at Government House, Sydney, on the 22nd of that month. Beautiful copper have been found near Penrith. The foundation-stone of the Sailors' Home was laid on May 16, by Lady Young, in presence of a large concourse of people.

Advices from Queensland to the 15th of May have been received. Parliament met on April 30. Some land bills have been introduced, or promised, by the Government; amongst others, one to legalise marriage with a deceased wife's sister. The Budget has been introduced, and the country is shown thereby to be in a healthy financial condition. The estimates are as sanguine as ever on the capabilities of their soil and climate to produce any quantity of gold.

At South Australia a Ministerial crisis, which is generally the only thing to disturb the equanimity of the unusually quiet colony, has occured. The Government resigned; and, on the formation of a new Ministry, Parliament was, on May 21, prorogued. Ministerial explanation was made, the estimates were laid on the table, and another adjournment for a week took place. The Census returns, which have just been made up, give the population of South Australia proper as 127,000 souls, of which 65,000 are males and 62,000 females. There is an increase, as compared with the returns of last Census, of only 9,000 souls.

Tasmania has been taken by surprise at the conduct of the Governor is dissolving the Parliament. There are already several candidates in the field for the new Parliament.

By advices from Auckland to May 11 we learn that the New Zealanders are preparing to renew hostilities. A general native insurrection is anticipated.

COUNTRY NEWS.

A brother and sister, named Griffin, of Cullen, in the county of Tipperary, have been committed on the charge of having poisoned their brother.

At the Shire Assizes for Cheshire Miss Mary Ann Wright, who has just obtained a verdict for £1000 for breach of promise of marriage against a gentleman, was awarded a further £600 or £700 by way of solatium.

A few days ago a violent thunderstorm passed over the village of Lowtham, Carlton, &c., Nottinghamshire, and during the storm the electric fluid struck the parish church and shattered the tablets of the Ten Commandments.

The South-Western Railway Company are laying down a double line between Woking and Weybridge, on the Chertsey line, and building a handsome waiting-room at the Poole station on the same line.

An explosion took place at Monk wearmouth colliery on Monday night, which resulted in the death of one man and injuries to three others.

Mr. Lascelles Cox, the Dean of the Faculty has presented the donation of £300 towards liquidating the temporary difficulties of the Queen's College, Birmingham. Liberal donations have been received from the Lord Lieutenant of the county, from the duke of Devonshire, and others.

Johann Carl Franz, the German who has been in custody for some time on suspicion of having murdered a man named Wm. Bowyer, at Kingwood Patsenage, was on Monday brought before the Reigate bench of magistrates and discharged from custody.

The great Orange anniversary, on the 12th of July, has passed off quite peaceably in Ulster. There were Orange processions, with music, banners, and flourishing of sticks, but the Roman Catholics did not interfere.

At the York Assizes, on Monday, James Windle, the lodger in a widow's house at Darnall, near Sheffield, who, after being rejected by her, put "Battle's Vermin-killer" into her beer, which the woman found out before she tasted it, was sentenced to seven years' penal servitude for life.

An inquiry is being held at Cambridge into the circumstances attending the death of a Jewish hawker, whose body was found on a few days ago in the River Cam. It appears that another youth, named Pilsen, is suspected of causing the death by a blow given in a fight they had together, and he is in custody, the magistrates refusing bail.

At Chelmsford Assizes, on Tuesday, a boy, eleven years of age, named Charles Wright, was put to the bar to be tried for the crime of setting fire to two stacks of wheat. The value of the property destroyed was £200, and the prisoner had confessed that he had committed the act on fire, although there appeared to be an absence of any motive except sheer love of mischief. He is to be sent to a reformatory.

An inquiry is being held at Cambridge into the circumstances attending the death of a Jewish hawker, whose body was found on a few days ago in the River Cam. It appears that another youth, named Pilsen, is suspected of causing the death by a blow given in a fight they had together, and he is in custody, the magistrates refusing bail.

At Chelmsford Assizes, on Tuesday, a boy, eleven years of age, named Charles Wright, was put to the bar to be tried for the crime of setting fire to two stacks of wheat. The value of the property destroyed was £200, and the prisoner had confessed that he had committed the act on fire, although there appeared to be an absence of any motive except sheer love of mischief. He is to be sent to a reformatory.

The inauguration of the statue of Dr. Watts took place at Southampton on Wednesday. The 15th anniversary of the opening of the proceedings were of a peculiarly interesting character, and attracted a very large assemblage of persons. The statue was unveiled by Lord Palmerston, and delivered an address, and the Mayor and the civic authorities also attended to do honour to their honorary townsman.

The Liverpool magistrates on Monday committed Captain Wilson, of the ship Severn, for trial, on the charge of having caused the death of one of his crew, named Flynn. The evidence showed that Flynn had been fully described in our columns) had been remanded on several other charges of a similar character, and that on the 27th of March last the steward of a ship which he commanded before he was transferred to the Severn, and of having thus caused the death of the unfortunate man.

At Westwoodside, near Epworth, in Lincolnshire, Mrs. Wilson, one day last week, drowned her three children in a cistern, and then left for a place in Yorkshire, leaving a letter behind her, in which she stated the act that had taken place. A Coroner's jury has returned a verdict of "Wilful murder against the mother." The woman is in custody, and will "take her trial at the coming assizes."

A FASCINATING LOTHARIO.—At the Hertford Assizes, yesterday week, a young man, named Hedge, residing in the neighbourhood of Watford, brought an action for breach of promise of marriage against a young lady, named Smith. The plaintiff was much older than Miss Hedge, but he seems for a time to have been resolved on acquiring her "for better, for worse," by means of a special licence. The defendant, it appears, was much courtship he withdrew from his engagement. When the plaintiff was being cross-examined, Mr. Giffard asked him what was the age of the lady? Hedge, the jury bore, with a forty-red head of hair, and whose general appearance certainly did not indicate the possession of very much knowledge of affection in a good-looking girl of eighteen, and asked whether he was the defendant who invited testimonials from the ex-sweethearts of the young lady in question, immediately turned upon the party indicated, and when the witness replied that he was the defendant, he (Hedge) said he was a scoundrel. The learned Judge could not refrain from joining. The jury gave a verdict for the plaintiff, damages, £100.

Monday's *Moniteur* publishes the letter addressed by M. Grand, President of the Institute, to M. Thiers, informing him that they had sanctioned the association's proposition to erect their deceased colleague at 20,000 francs on his "History of the Consulate and the Empire." The *Moniteur* publishes M. Thiers's reply, expressing his high sense of the honours, but stating that he had requested the academy to devote the money to the encouragement of letters.

In the metropolis of Saxe-Coburg-Gotha there has been a very remarkable meeting of the German shooting guilds and of the Turnvereine, or gymnastic associations, which has resulted in this fraction of the German people evincing themselves of the opportunity to consolidate, as it were, their own nationality, and to express their gratitude for the services rendered by the Duke of Saxe-Coburg-Gotha to Germany by the military reunion with Prussia. At the final meeting the Duke was in the chair.

GOOD TIMES FOR "GENTLEMEN."—The *Presse* of Vienna, of the 7th, says:—"A quarrel lately arose at Marsch, in Hungary, between a gentleman engineer and a Jewish butcher, who would not furnish him with meat on credit, and the former threatened the latter to beat his ears. The butcher replied that if he attempted such a thing he would throw a five-pound weight at his head. The engineer made a complaint to the authorities, and the butcher was condemned to pay a fine of 100 florins. Servus, a Jew, he had insulted a gentleman and refused to give him credit."

THE CIVIL WAR IN AMERICA.

THE WAYS AND MEANS THEREOF.

President Lincoln having, in his Message to Congress, called for 400,000 men to enable him to restore the seceded States to the Union, Mr. Salmon P. Chase, of Ohio, the Secretary of the Treasury (an official whose functions correspond with those of the British Chancellor of the Exchequer), presented to Congress on the 5th inst. an interesting written report, or budget, the substance of which we record in a few words. The present (the fiscal year of the United States commences on July 1 of each year. The total estimates for the current fiscal year (July 1, 1861, to June 30, 1862) are 318,519,582 dols. (omitting fractions of a dollar), or about £65,000,000. To meet this expenditure Mr. Chase thinks it advisable to raise 320,000,000 dols. "With great defences and no little distrust of his own judgment," he recommends that 80,000,000 dols. should be raised by taxation, and that 240,000,000 dols. should be sought through loans. The question, then, is how to raise this 80,000,000 dols. His chains to fall on imports, direct taxes, internal duties, and excise duties. The principal advantages of the system of direct taxes are found in the sensibility with which they are felt and observed in the motives that accompany for economy and fidelity in the administration; and in the manifest supply of distributing burdens in proportion to means rather than in proportion to consumption. On the other hand, the advantages of indirect taxation by duties on imports are found in the economy of collection, in the facility of payment, in the adaptability to the resources of industry, and, above all, in the powerful aid to Federal interference with the finances of the States, whose main reliance for revenue for all objects of State administration must continue to be upon levies on property. These considerations have doubtless determined the preference which has always been evinced by the people of the United States for duties on imports as the useful source of national revenue. Only on occasions of special exigency has a resort been had to direct taxes or to internal duties or excise.

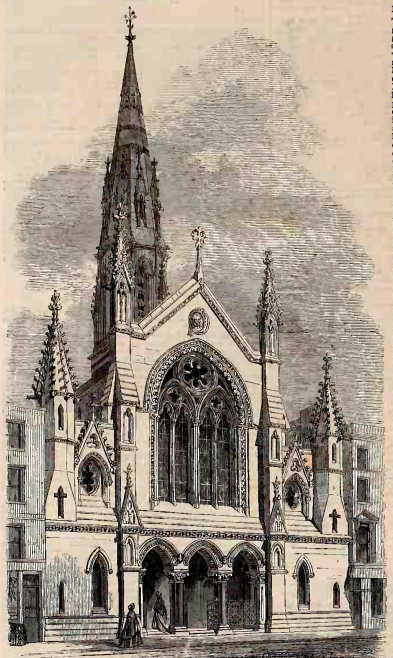
But the present "Morrill" tariff will not produce anything like the 80,000,000 dols. required during the first quarter of the year. In the year the receipts on imports were only 5,537,000 dols. This sources of revenue most promptly to be made available must be sought in the articles now exempt or liable to a duty of 5 per cent., because these are heretofore been taxed, and were only exempted when the debts contracted in former years would be paid off. Tea, coffee, sugar, molasses, raw sugar, and of these wholly free, tea and coffee, are the most important. The Secretary proposes that a duty of 2 cents per pound be laid on brown sugar, 3 cents on clayed sugar, and 4 cents on loaf and refined sugar; corresponding duties on syrup, candy, and molasses; on coffee, 5 cents per pound; on tea 15 cents per pound; on wine, 20 cents per gallon; and on spirits, 20 cents (10d.). These duties will produce an additional revenue of 20,000,000 dols. On other minor reforms of the tariff he hopes to raise 7,000,000 dols. more, and that the whole customs revenue for the year will reach 37,000,000 dols. The sale of public lands and miscellaneous items will be good for 3,000,000 dols., making the total 60,000,000 dols. He still wants 20,000,000 dols. more from taxes. He must resort to direct taxes or to direct taxes or to excises. The Constitution requires that the former be apportioned among the States, in the ratio of the Federal population: the latter need only be uniform throughout the States. The Secretary is the opinion that to be guided by Congress as to which source of taxation he shall tap. The value of the real and personal property of the people of the United States, according to the Census of 1860, is omitting fractions, sixteen thousand millions of dols. The value of real property is estimated at 11,272,000,000 dols., and of personal, at 4,811,000,000 dols. The proportion of property of both descriptions in the loyal States is—of real, 7,500,000,000 dols., of personal, 2,270,000,000 dols. A tax of one fifth of one per cent on the real and personal property of the loyal States would produce 20,000,000 dols., and a tax of three tenths of one per cent on the real property alone in those States would produce 22,932,000 dols., either sum being largely in excess of that required. The difficulty in the way of a direct tax is not in the constitution, for no State violations and no State machinery for collecting direct taxes on property exists. In States it would be necessary to create an extensive and complicated Federal machinery. The constitutional objection arising from the non-incidence of the tax on the instrumentionary labour is, therefore, nothing. The tax will be levied by all the States alike, and the difficulty of collection cannot vitiate the legality of the tax itself.

Excise duties have this to recommend them—they may be collected more cheaply than direct taxes, by fewer agents, and with less interference with the habits of the States. They tax only what is used or bear hard upon the luxurious classes. If Congress should prefer excise duties to direct taxes, and like to confine the tax to articles of use, the Secretary recommends duties on stills and distilled liquors, on ale and beer, on tobacco, on snuff, on cotton, on spring carriages, on silver ware and jewellery, and on legacies.

One other source Mr. Chase indicates with delight. The property of "rebels and traitors" can be confiscated to the public use.

Congress may also retrench. Let 10 per cent be deducted from all salaries paid by the Federal Government, and let the members abolish the franking privilege and reduce the postal expenses.

Lastly, as to the 240,000,000 dols. which is to be raised by loan. The Secretary recommends on the 1st inst. to pay 6 per cent. He says: "It is hardly thinks the rate of interest too high, the Secretary can only say that capitalists will not be asked to take stock in the war is a people's war he will appeal direct to the people. He proposes to open a national loan for 100,000,000 dollars, and for any amount which may be issued in the form of Treasury notes or Exchequer bills, bearing a yearly interest of 7 3-10ths per cent, to be paid half-yearly. Should other than these securities be issued, the interest will be equal to a cent a day on fifty dollars, and the loan will be issued for 50 dols., and so on, multiples thereof. The amount of interest for specified periods will be endorsed on the back of the note. If anybody



ST. PETER'S CHURCH, GREAT WINDMILL-STREET.—SEE PAGE 38.

STATUE OF MR. ROBT. HALL.

THE memory of this gentleman, whose great abilities and social and public virtues are held in merited esteem by his townsmen and constituents in Leeds, has been handed down to posterity by the erection of a statue in the Victoria Hall, at the Leeds Town-hall. The work is colossal in size, is of the purest white Carrara marble, and has been executed by Messrs. Lee and Welsh, sculptors, of Leeds. It is, perhaps, the largest and finest statue yet executed in the provinces. The deceased member is represented in his official costume, his right hand stretched out, in the act of speaking, while his left holds a roll of paper. At his feet, one of the principal acts of his life is represented in the Reformatories Bill laid upon a volume of the statutes. The pedestal is of red Aberdeen granite, and bears the simple inscription "ROBERT HALL, M.P., Leeds, 1857."

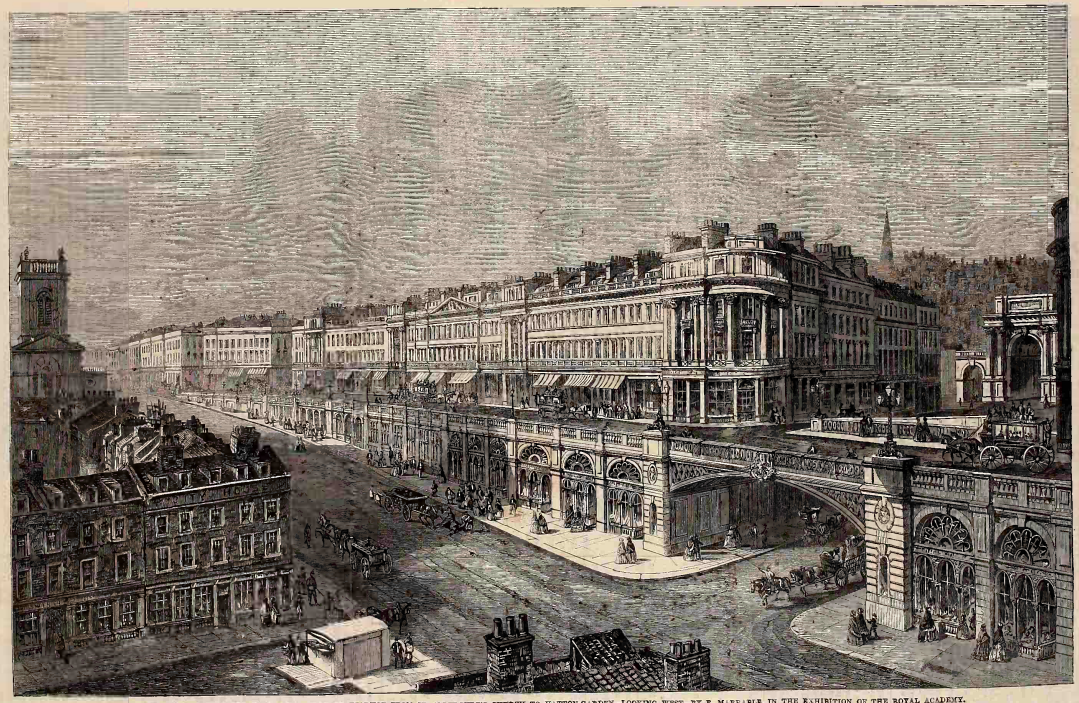
The statue was presented to the Municipal Council, on behalf of the subscribers, on the 12th instant, by George Skirrow Beecroft, Esq., M.P., one of the present members for Leeds, who succeed Mr. Hall upon that gentleman's sudden and lamented decease in 1857.

STATUE OF THE LATE MR. ROBERT HALL, M.P. FOR LEEDS, AND RECORDER OF DONCASTER.

BOATS IN REGENT'S PARK.

THE attractions of Regent's Park have recently been increased by the addition of pleasure-boats for hire, which have been placed on the ornamental water with the approval of the first Commissioner of her Majesty's Works. A floating pier has been constructed for the convenience of those who wish to avail themselves of this new source of health and recreation. The boats may be hired every day (Sunday excepted) at a charge of one shilling an hour for skiffs, and eightpence an hour for party boats, or half-a-crown with a man. Each boat is provided with a life-preserver, and those of the lighter sort are not to carry more than two persons, so that the safety as well as the amusement of the public is duly provided for.

PLEASURE-BOATS ON THE ORNAMENTAL WATER IN REGENT'S PARK.



VIEW OF THE PROPOSED HIGH-LEVEL ROAD OR VIADUCT FROM ST. SEPULCHRE'S CHURCH TO HATTON-GARDEN—LOOKING WEST—BY F. MARRABLE, IN THE EXHIBITION OF THE ROYAL ACADEMY.

PROPOSED VIADUCT FROM ST. SEPULCHRE'S CHURCH TO HATTON-GARDEN. BY F. MARRABLE.

THE inconvenience, loss, and danger, attendant upon the present condition of Holborn-hill on the one side of Farringdon-street, and of Skinner-street on the other, have long been complained of and generally acknowledged. To judge of the extent of the evil it may be stated that the present gradient of Holborn-hill varies from about 1 in 23 to 1 in 17, the steepest point being opposite Ely-place. Compare this with what has been considered the steepest unobjectionable gradient in plans for railways laid before Parliament—namely, 1 in 40, and the weighty claims of the case will be at once suggested. The waste of horse-labour, the wear and tear of hoofs&c., and the losses occasioned by accidents constantly occurring are too well known, and need hardly be descanted upon. All must agree that the removal of this nuisance can be only a matter of time, and a question as to the arrangement under which it is to be accomplished; and the proximate establishment of a central railway terminus in Farringdon-street seems to be an event which prescribes that some arrangement of the kind should not much longer be delayed.

Before proceeding to give a description of the plan now proposed for the purpose by Mr. F. Marrable, as shown in his design now exhibiting at the Royal Academy, and of which we give an Engraving, it may be as well briefly to state the main features of the plans of others, which from time to time have been brought under notice and received more or less consideration.

Foremost in importance amongst these was that of Mr. Bunning, the City architect, put forward some years ago, and which proposed to mitigate and divide the evil as follows. He proposed to fill up the lower level of the valley between Holborn-hill and Skinner-street to the height of about twelve feet, thereby proportionally diminishing the gradient complained of in them; but at the same time elevating the level of Farringdon-street to be covered by an ascent and descent of about equal gradient to that resulting between Holborn-hill and Skinner-street. To accommodate this arrangement of the surface to the adjacent house frontages in Holborn-hill, Skinner-street, and Farringdon-street, Mr. Bunning proposed to convert the first floors into shops, and the present shops into basement stories, adding new stories to the top, with the alternative of entirely rebuilding all these premises in accordance with the new requirements of the position. The cost of these improvements, after making allowance for improved value, was estimated at £350,000, or, supposing the houses to be pulled down and rebuilt, to £650,000.

Other proposals have been made, one of them by Mr. Yorke, for a viaduct running down the centre of the present roadway, for the through traffic, leaving a sufficient space below on either side for the local traffic; but these plans are open to many and serious objections, as only partly meeting the difficulty and destroying a great deal of local traffic, without substituting any other local interest to be benefited by the change.

Finally, Mr. Turner proposed a scheme for a high-level bridge, something similar to that since projected by Mr. Marrable, but differing in this main particular—that it contemplated running on the south side of the roadway, instead of the north. This plan, while it left the carriage way as it at

present is free to the use of those who have occasion to resort to it, was open to the objection that it would very seriously obstruct the thoroughfares northwards from Fetter-lane, Shoe-lane, Farringdon-lane, &c., and was available from Farringdon-street only to foot-passengers by means of steps, as in the case of the approaches to New London Bridge from Thames-street.

Mr. Marnable, in the plan now before us, proposes to build a highlevel viaduct, on the north side of Holborn-hill and Skinner-street, from the south approach to St. Sepulchre's Church, which are coincident in height; setting back the fronting about sixty feet; an arch being thrown across Victoria-street, in continuation of Farringdon-street, having a clear headway of twenty-two feet. An important recommendation in the plan is that the house property would be set back to as less value than that on the southern side of the road, whilst it will not interfere to the same extent with the business of the shops between there would. Fetter-lane, Shoe-lane, and all the thoroughfares debouching from the south will be left undisturbed, whilst, from the nature of the site, Hatton-garden and Ely-place will open at once upon the proposed northern viaduct, and King-street, Smithfield, would be made to connect with it without any gradient, with regard to the traffic north and south. Victoria-street, after passing under the archway, with second northern arch by a gradient of about 1 in 30 for a distance of 445 feet, to a point supposed to be the site of the intended Central Metropolitan Railway Station. At this point the level attained would be about half the height of the archway; and from it roads flanking Victoria-street on either side would ascend in a southerly direction, by a similar gradient of about 1 in 30, to the level of and upon upon the viaduct. Thus, whilst the direct traffic north and south would be unimpeded, that coming from the north down Victoria-street, and from the proposed railway station, would have an opportunity by means of an easy ascent, of proceeding west or east by the new high-level road, and, vice versâ, of traffic coming from the west or east. Moreover, even the traffic coming from the south and destine for the east or west might, at option, by a very slight detour northward, be made to take advantage of the improved gradient afforded by this plan, therefore, it seems that new and improved facilities for transit are afforded for traffic from every point of the compass, without at all interrupting the present means of communication, either during the progress of the works or at any time for local traffic generally after the existing roadway being left in *statu quo*.

The gross estimated cost of these improvements is £320,000; but as a set-off to this would be the value of the new frontages, which it is considered would be amongst the best in London, and of the spaces under the new roadways, which would be available for purposes of trade, either as retail shops or as warehouses. Putting the estimated return from these and other sources at £135,000, the net actual outlay for the proposed works would be reduced to £185,000.

CALENDAR FOR THE WEEK.

SUNDAY, July 21.—8th Sunday after Trinity.
MONDAY, 22.—Magdalen. Full Moon, 11m. 4m.
TUESDAY, 23.—Gibraltar taken, 1704.
WEDNESDAY, 24.—Grand Duke of Tuscany abdicated, 1859.
THURSDAY, 25.—Coleridge died, 1834.
FRIDAY, 26.—St. Anne. Battle of Aboukir, 1799.
SATURDAY, 27.—French Revolution commenced, 1830.

TIMES OF HIGH WATER AT LONDON-BRIDGE,
FOR THE WEEK ENDING JULY 27, 1861.

Sunday.	Monday.	Tuesday.	Wednesday.	Thursday.	Friday.	Saturday.
M. A. M.	M. A. M.	M. A. M.	M. A. M.	M. A. M.	M. A. M.	M. A. M.
0 30	1 0	1 30	2 0	2 30	3 0	3 30
12 50	1 20	1 50	2 20	2 50	3 20	3 50

THEATRE ROYAL, HAYMARKET.—Great success of the new Comedy, MY LORD AND MY LADY.—Monday, July 21, and during the Week, performances every night with the new Drama, BACHELOR AND MARRIED, after which, at Quarter to Eight, a new Comedy, MY LORD AND MY LADY; or, It Might Have Been Worse. Mr. Buckstone, Mr. Compton, Mr. Howe, Mr. Chippendale, Mr. Clark, Mr. Rogers, Mr. Lionel Brough, Mr. J. Rogers, Mr. Lacy, and Mr. Charles Mathews. Concluding with TURNING THE TABLES.—Mr. Compton.

THEATRE ROYAL, ADELPHI.—On Monday and during the Week, the Great Sensation Drama, A WOMAN HATER, by Watts Phillips. Mr. Wigan, Mr. Leclercq, Mr. Billington, Mr. Paul Bedford, Mr. Toole, Mr. Wilkinson, Mr. Mackay, Mr. Wilmot, Miss Woolgar, Miss Oliver, and Mrs. Keeley. Concluding with THE PRETTY HOUSEBREAKERS.—Mrs. J. R. Davis, Mrs. Rodwell, Miss Woolgar, Miss Oliver, and Mrs. Keeley. Commence at Seven.

CRYSTAL PALACE.—Arrangements for Week ending Saturday, July 27:—
Tuesday: Review of Great Yeomanry and other Sections of Worcestershire at 3.
Thursday: GREAT NATIONAL BRASS-BAND CONTEST. First day.
Wednesday and Saturday: Performances by the LOWE ORATORIO PARTY. This will not be repeated by M. Besozzi.
Friday: GREAT NATIONAL BRASS-BAND CONTEST. Last day. Open at Nine, which each day.
The arrangements for Friday and Saturday will be duly announced.
Orchestral Band, Organ Performances, and Display of the Fountains daily. Mr. Blitzer in Motion, Fleture Gallery, and all the usual attractions.
Admission—Wednesday, Half-a-Crown; Monday, Tuesday, and Saturday, Shilling; other days by Sixpence. Season Tickets, Five Shillings each. Children under Twelve, Sixpence.
The Monthly Issues, Also Gold with Gemstones, are in the best order, the whole presenting a perfect of unusual beauty.
Admission—Wednesday, Half-a-Crown; Monday, Tuesday, and Thursday, Shilling; Saturday, Sixpence. Children under Twelve, Sixpence.
Sunday: Open at 12 o'clock. Admission, exceptionally by tickets.

CRYSTAL PALACE.—M. BLONDIN.—It is with much pleasure it is announced that arrangements have been made with M. Blondin to give his extraordinary PERFORMANCES on the WIRE TIGHTROPE, on Wednesday next, on the grounds of those truly instructions from which he performed at the private display in the Surrey Gardens, on Friday, June 21, and which delighted the numerous assembly present and elicited such extraordinary and unanimous marks of approval from the representatives of the Press. In order to afford the public an opportunity of witnessing these performances, it is proposed to repeat the entertainment on WEDNESDAY next, July 24, and on each succeeding Thursday, terminating before Five o'Clock. Admission by Season Tickets, or by Day Tickets, or on payment at the Crown-gate. Season Tickets will be issued for the Wednesday and for the stage, or in the Side Galleries, Five Shillings each. Unprecedented Reserved Seats in front of the Stage, Ten Shillings each. Day Tickets, Half-a-Crown each. Children under Twelve, half-price. Applications for the Contest to be forwarded to M. Blondin, Crystal Palace, or at the Crown-gate.
*** The persons save, will not be repeated by M. Blondin. Those who desire to witness it are requested to make early application for Tickets, particularly for Stalls, which must be limited in number.

CRYSTAL PALACE.—GREAT BRASS-BAND CONTEST.—THE GREAT NATIONAL BRASS-BAND CONTEST will take place at the CRYSTAL PALACE, on THURSDAY NEXT, the 25th and 26th of July.
Upwards of Twenty Bands, including parts of England and Wales, to take part in the 1st Grand Musical Contest. The Contest will commence in the Grounds each day at Ten o'Clock, and will be continued in the Palace at Three o'Clock. Conductors—Mr. Alfred Ousley, Leeds; Mr. Godfrey, Coldstream Guards; Mr. Distin, late Queen's Private Band; the Grand "Crescendo, March," "Rule, Britannia," and the National Anthem. After which they will perform the Contest in the Grounds till Dusk.
Valuable Prizes in Money and Cups will be given by the Crystal Palace Company; and, in addition to the Prizes, Gold Medals will be awarded to the Bands and Conductors who may secure the highest number of Points.
Special Trains at low fares are arranged to run from all parts of England; and Trains will leave Kensington and Victoria Stations for the Crystal Palace every Ten Minutes.
Doors open at Nine. Admission, One Shilling; Children under Twelve, Sixpence.

CRYSTAL PALACE.—GREAT FOUNTAINS.—The First Display of the GREAT FOUNTAINS on Saturday next, at Half-past Four o'Clock. Wednesday will take place on MONDAY, July 22, at Half-past Four o'Clock. This display will include the Display of Fireworks, and the Performance of the Overture to "Zampa" and Rossini's "La Gazza Ladra," and the Overture to "Guillaume Tell," and the Overture to "Le Prophète," and the Overture to "Le Prophète," and the Overture to "Le Prophète

LITERATURE AND ART.

'Twelve hundred pounds a year! The sum is, of course, not an extravagant one; yet it is all that the State can spare for the reward and relief of men and women of learning and genius in their old age. When the great Condé—Louis Quatorze's Condé, of whom Lord Stanhope wrote so dignified a life—when the victor of Rocroy died, his family, anxious that the name of so military a warrior should be duly commemorated, offered a prize of one hundred *ecus* (an *ecu* is three francs) for the best poetical panegyric on his character and his exploits. The successful poem took the form of an epigram, and ran thus:—

Cent ecus pour tant de gloire?
Or bien pas un sou par victoire!

"What," asks the incorruptible, "is a hundred francs for the celebration of so much glory? Why, it isn't a halfpenny per victory." The witty prince brought, however, its reward, and we believe that the poet was instructed to write a Pindaric eulogium, and was paid at the rate of *ecus* for it.

Were we to take the one thousand two hundred pounds annually doled out from the Civil List as representing so much literary, scientific, and artistic merit, it might be assumed that Government reckoned each life of literature as being worth just seventeen pence three farthings penny. However, it is well not to look the gift-horse in the mouth too narrowly, lest some rapid political economist should propose some fine evening, and in a fit of virtuous indignation, to take the grant away altogether. There is less reason to grumble at pensions, for the list of persons just honoured by Lord Beaconsfield's Ministry shows that the homely, meagre as it is, has been distributed with tact and discrimination. No one can take exception to the sum granted to such deserving persons as Miss Mary Ann Jerrold (daughter of the illustrious Douglas Jerrold), to Mrs. Hayda (widow of the author of the invaluable "Dictionary of Dates"), to that most industrious veteran of light literature Mr. Dudley Costello, to Miss Julia Hind (the widow of the late editor of *Bell's Life*), and to the late editor of the *Examiner*), to the sisters of Mr. Jameson, the art-critic, and to Mr. Curtis, the well-known entomologist. It was but right, and, certainly, that some fund more appropriate had been found to require the services of the late gallant Sir Gabriel Bretton, and those of Mr. Barham, who died at Naples, and to bestow pensions on the widows; but there is a screw loose, we presume, in our system of military, naval, and diplomatic rewards, and it is better that the matter in question should be quartered on literature than that they should not be relieved at all.

A week or two since we advised our readers that the carved chair designed by William Hogarth for David Garrick was to be sold at Puttick & Simpson's. It was duly knocked down last week, and brought the amazing price of three hundred guineas. We are delighted to hear that the admirers of painting and the drama, even in these mimetest moments, are so numerous—and so wealthy. The Hogarth chair was, we believe, purchased for the account of a great lady, whose munificence is only equalled by her refinement, and whose fair hearer her sympathies with all that is liberal in art and letters, she seems only to live for the fine arts. Her name will still more add to the glory of a "four-leaved shamrock." How many aching hearts has not the daughter of Sir Francis Burdett comforted, and how many tears has she not wiped away!

"Great Expectations," which has almost run its race in *All The Year Round* appears to be destined to be one of the most successful of the stories which Mr. Dickens has written for the circulating libraries. This story is beyond question as powerfully written and as skilfully constructed as any of the author's former previous productions in fiction; and it contains, besides, as many of those meteoric flashes of humour, as many of those wonderful bits of word-painting of character, as could be put together in a volume, as the most ardent believer in the old glories of "Pickwick" and "Chuzzlewit" could wish. Mr. John Wilson Croker, "I went up like a rocket, and will come down like the stick;" but the smart was uttered before the invention of rockets without sticks and rockets which do not descend upwards are not as yet known showers of brilliant sparks. Let us, however, have our snarl. We cannot relish a bit in Mr. Charles Dickens's last story which is to be Sir Bulwer Lytton's fiction, "A Strange Story." A new novel by Mr. Anthony Trollope is always welcome, the stereotyped epithet—the anvil for the *Cornhill*, and is to bear the title of "Jones, Brown, and Robinson."

A question as to the ultimate destination of the centre of Leicester-square—that casement of London localities—has been asked in the House of Commons. It would be, indeed, a pity if the most picturesque, dioramical, panoramical palace is to be pulled down, and the multifarious collection of curiosities dispersed. What is to become of the area? What, indeed, is to become of Leicester-square altogether? Are the cloud-capped towers of the Alhambra, the gorgeous pinnacles, the riotous fretwork of the pleasure-palace and café chantant, the Great Globe itself—all to dissolve, and, like the baseless fabric of a vision, leave nothing but a wisp of Hyalopsis? It may be asked, how behind? The inhabitants of Leicester-square wish, we believe, the space in the centre to be kept clear, and laid out in pleasant walks and parterres; but there are those who have other intent on turning it to account as the site of a new hotel, a new music-hall, a new theatre, or even a new railway terminus. The last is a very valuable hint, although it does with the middle of Leicester-square, we trust that it will never revert to the locomotive spectacle it presented before 1851, when it was the species of Desert of Bahara in miniature—a *lieue carr* for vagrant sparrows, and a bunting-ground for dissipated cats.

The trial of Arthur Orton, about to be, or about to make a trenchant onslaught—whether in poetry, prose, or person we are not informed—on the claims of the Tichborne family. That gentleman is declared able to hold his own, and there will be pretty sport to enliven the dullness of the autumnal season. Mr. Austin had much better leave well, or ill, alone, for we did not good come out of unlucky exercise. For one little David who hits Goliath of Gath in the centre of the forehead there are a dozen Davids who get their own brains between his thumb and finger and cracks to death.

Did Lord Penzance find the institution of grand juries? The *Times*, on the authority of Blackstone, assumes that he did. The *Saturday* doubts the fact, says that Hengist and Horsa might have been the first to find the institution, and leaves the question to the *Times* on its historical inaccuracies. Then a learned pundit, signing himself "Historicus," writes to the *Times* in reply, and says that Ethelred theory, and girds at the *Saturday* as the "Superfine Review." "And behold, my son," once wrote a (literary) Ozymandias (not the Chancellor), "which was the quarrel that first began the controversy conducted." Whoever founded grand juries—whether King Arthur or King Ethelred—they have proved—there is little doubt that they will be relished during the reign of her present gracious Majesty.

In our glance at the items in the Session End we omitted to state that £470 per annum was granted to Mr. Alexander Munro. So the venerable artist shall come last, but not least, in our column. Mr. Munro was born at Bonnington, near Edinburgh, in the first decade of years ago as an admirable painter in oils; he has been one of the very first of our British sculptors; he is the author of a most graphic and interesting "Life of Rembrandt." After long and valuable services to art and literature, and at an almost patriarchal age, Mr. Burnet and Mr. Munro have had their dignity even so trifling an instalment of the national bounty as £70 a year.

The Master of the Rolls has appointed Mr. T. Duffus Hardy Assistant-Keeper of the Public Records, in the room of Mr. Bruce, deceased.

M. Meyerbeer and M. Auber have acceded to the request made to them by the Commissioners of the London Exhibition of 1862 to supply a musical composition to be executed at the opening.

A gold pocket chronometer, of exquisite workmanship, has been presented to the Rev. W. B. Scott, Incumbent of St. Mary Magdalene Hackney, in acknowledgment of his courageous and successful efforts in rescuing a large quantity of gold from the wreck of the steamer Eagle, off Gothland, in November, 1857.

Intelligence from Alexandria of the 12th states that the Viceroy of Egypt had decided on the construction at Suez of a floating dock similar to those recently built in France.—The Viceroy has published a decree abolishing the bastinado in Egypt, both for the army and navy. The most rigid orders have been given for the strict execution of this decree.

FINE ARTS.

"CROMWELL REFUSING THE CROWN OF ENGLAND." By T. H. MAGNUS.

Mr. Magnus's large picture of "Cromwell Refusing the Crown of England," now on view at Messrs. Jennings', in Cheapside, illustrates one of the grandest incidents in the one of the most glorious of our history. It was in the year 1657, towards the end of the Protector's career, that the House of Commons by repeated instances endeavoured to persuade him to take the title and office of King. On April 11 a deputation of ninety-nine members waited upon His Highness with an address to that effect, when he replied in these memorable words:—"I am ready to serve, not as a King, but as a Constable, if you like; for I think by my place I serve God, other thought that I could not tell what my business was, nor what I was in the place I stood in, save compare myself to a good constable set to keep the peace. Say I am prepared to return this answer to you, that I cannot undertake this Government with the title of King."

This is the particular occasion which the artist has chosen for the subject of his picture, and he has treated it with considerable ability. The Protector is seated in the middle of the picture, in front of a large table, on which rest the proffered insignia of Royalty, which he magnanimously repudiates. Surrounding him on either side, skilfully grouped, are the various leaders who are receiving, or may be supposed, to have taken part in the deputation—Sir John Glynn (Chancellor), Lenthall, Whitelocke, Sir Hen. Vane, Fleetwood, and many eminent on the one side, and Sir Thomas Widdrington (the Speaker), Lord Broghill, and Lord General Lambert on the other. All the notable are seated John Milton (Latin secretary to Cromwell) and Sir Richard Onslow, the former writing, the latter examining a book. The background is filled in with a line of Cromwell's Ironsides, with their halberts.

The general effect, in short, is that of a well-filled canvas, occupied by figures assembled for some purpose of overwhelming import. Unfortunately the figure of Cromwell, spite of its elevated position, is the least commanding in the whole. Low in stature, it is not even dignified, but not dignified in bearing, there is this further defect in the attitude—the Protector is made to appear as if he were addressing the spectator, the address in the right hand, and pressing the breast with the left. Cromwell in fact, would have been far more in character, as he most ardent believer in the old glories of "Pickwick" and "Chuzzlewit" could wish, had Mr. John Wilson Croker, "I went up like a rocket, and will come down like the stick;" but the smart was uttered before the invention of rockets without sticks and rockets which do not descend upwards are not as yet known showers of brilliant sparks. Let us, however, have our snarl. We cannot relish a bit in Mr. Charles Dickens's last story which is to be Sir Bulwer Lytton's fiction, "A Strange Story." A new novel by Mr. Anthony Trollope is always welcome, the stereotyped epithet—the anvil for the *Cornhill*, and is to bear the title of "Jones, Brown, and Robinson."

A question as to the ultimate destination of the centre of Leicester-square—that casement of London localities—has been asked in the House of Commons. It would be, indeed, a pity if the most picturesque, dioramical, panoramical palace is to be pulled down, and the multifarious collection of curiosities dispersed. What is to become of the area? What, indeed, is to become of Leicester-square altogether? The most rigid orders have been given for the strict execution of this decree.

MUSIC.

The season of the ROYAL ITALIAN OPERA is drawing to its end. The last performances on Saturday the 23rd of August. On Saturday last Mdlle. Patti appeared in the character of Violetta, in Flotow's "Martha," and again achieved a triumphant success. Contrary to the usual custom, the Italian version was sung, the audience very popular by poor Bosio's charming performance of the Traviata. It is by no means easy to find a possible companion in the part, which is both comic and romantic, than to its music, which is not entitled to any higher praise than that of being light and tuneful. Mdlle. Patti did not fail short of Bosio, either in her acting or singing of the part. In all the various phases of the character—except the last—she was equally good, and in the representation of high life; then as the pretended country girl, rejoicing in her escape from the tyranny of the intrigante she put herself into, and lastly, in the scene, which called forth the greatest display of her powers, when she is overcome by the sudden recognition of her husband, she was equally successful. The other principal parts were sustained by Signor Graziani as Plunkett, and Tagliafico Sir Tristram—all excellent; and, indeed, the opera could not have been better performed or got up in every respect. The scene of the Fair, with Richings, Mdlle. Rosetta Vitale, and the dances, and rustic pastimes, was one of the prettiest things we have seen on the operatic stage. The chorus was excellent, and the orchestra stalls presented a brilliant array of rank and distinction. This, indeed, has generally been the case throughout the season, which, to all appearance, has been a highly successful one.

Mdme. DE VAUCHERAN'S concert, on Wednesday last week was of more than ordinary interest. This lady is a first-rate pianist, and her performance of Beethoven's famous "Kreutzer Sonata," in which she was excellently accompanied by Herr Hegar, a young violinist from the Conservatoire of Leipsic, displayed powers of a high order. Among the vocal performers was Miss Alice Dodd, whom we heard on this occasion for the first time, and who delighted the audience by the remarkable sweetness of voice, taste, and feeling with which she sang Dussek's favourite canzonet, "Name the glad day," and the Irish melody, "The harp that once in Tara's halls." This last air was vehemently encored. Vocal and instrumental pieces were performed by Miss Palmer, Mr. Perren, Miss Grace Alleyne, Herr Ganz, and M. Paque. The room was full of fashionable company.

Mdme. CORINNE DE LUIGI gave a concert at Willis's Rooms on Wednesday last, which also attracted a numerous and distinguished audience. This lady, who has received vocal instruction from no less a person than Rossini, is not unworthy of the interest taken by the great master in her success. She is indeed a most accomplished singer, possessed of a voice of the finest quality and of extensive compass, together with perfect purity of style and great brilliancy of execution. Her principal performances were a new dramatic air called "La Speranza," composed by Rossini expressly for her; and a new dramatic scene entitled "Circe," composed also expressly for her by the illustrious amateur Prince Poniatowski. From her impassioned delivery of these pieces (especially the last) it was evident that Mdme. de Luigi possesses no ordinary powers as an actress, in which capacity we hope to have an opportunity of seeing her.

A joint-stock company is in the course of being formed under the title of "The Royal Italian Opera Association." A prospectus has just been issued, from which we learn that it is to be incorporated under the *Limited Liability Act*; that its capital is to be £50,000, in shares of £2 each; and that the preliminary arrangements are now being made by a provisional committee, whose names are announced. Among these are Messrs. Bellis, Wallace, Barnett, Mori, Stuart, Wing Cooper, Weiss, and other eminent composers and performers. The object of the association, to use the language of the prospectus, is "to advance the English art by establishing a national opera on a scale commensurate with the qualifications of the English artists, the requirements of the public, and the dignity of the country." The affairs of the association are to be managed by an executive council; and the positions of musical director, stage-manager, principal scenic artist, &c., are to be assigned to competent persons, who will be entrusted with the entire control of his department, and held responsible for its efficiency. But the decision of works to be performed, and the engagement of artists, will belong to the executive council. Such is a brief outline of the plan, more fully developed in the prospectus, of which we have not room to-day to say more than that it is of great importance to every one who takes an interest in the fortunes of the English musical stage; but it is difficult as well as important; and much caution as well as energy will be required to bring the scheme to a successful issue.

THE THEATRES.

ADELPHI.—On Saturday "Colleen Bawn" concluded its extraordinary run. Here and in the country Mr. and Mrs. Boucicault had performed the piece consecutively for the extraordinary 430 nights, but the memory of such task-work required relief, and they have wisely sought a diversion. Mr. Webster made an appropriate speech on the occasion, in which the manager himself appeared in the drama of "The Dead Heart." A new farce was produced, called "The Pretty Horsebreaker," which included some comic situations from Berlioz's well-known "Damnation," at last few weeks echoing in the journals, and was, in the measure due to such comic pieces, successful.

HAYMARKET.—A new comedy from the pen of Mr. Planché's is always sure to be welcome. The present, produced on Friday week for Mr. Buckstone's benefit, entitled "Which is It?" My Lord and My Lady?" or, It Might Have Been Worse;" and is freely adapted from Alexander Dumas' "Un Mariage sous Louis XV." The piece adopts the style as illustrating the conditions of matrimonial felicity in our own country in the eighteenth century. Truly, English manners were then not remarkably pure, and the dramatist would have well been employed in London. Love in My Lord and Lady's marriage had nothing to do—it was the last thing to be considered as necessary. The dramatist shows how it grew subsequently, and acquired such strength as to carry both husband and wife safely and honourably through their troubles. Lord Lovelace, the husband, is in indifference, their relation ripened not only into affection but into fidelity. Mr. and Mrs. Buckstone were well suited in the characters of the husband and wife, as Lord and Lady Fitzpatrick, have to pass through this probation, and personated the characters with ease. In contrast to these is a vulgar cast of the lady, performed by Mrs. Wilkinson with great animation and force. Mr. Buckstone, too, has a suitable part; a retired sea-captain, who, from his knowledge of the habits of a court, but, being jealously inclined, is afraid of leaving his wife alone. He makes to lose her virtue by inducing her former lover to cause his attentions towards her; the result of which is satisfactory, though the process is ridiculously painful. After the play Mr. Buckstone delivered his annual address, the theatre remaining closed on his account.

PRINCESS'.—A young lady from the United States, Miss Mary Provost, made her first appearance in England last week, in the character of Rosalind, in Shakspeare's "As You Like It," and played it. The debutante had fair success, and manifested considerable intelligence. Her voice is pleasing, and considered in general, correctly it lacks the delicacy and refinement to which we are accustomed in the part. Mr. Phelps was the Jaques, and played admirably; and Mr. Widdicomb, as Touchstone, was decidedly droll.

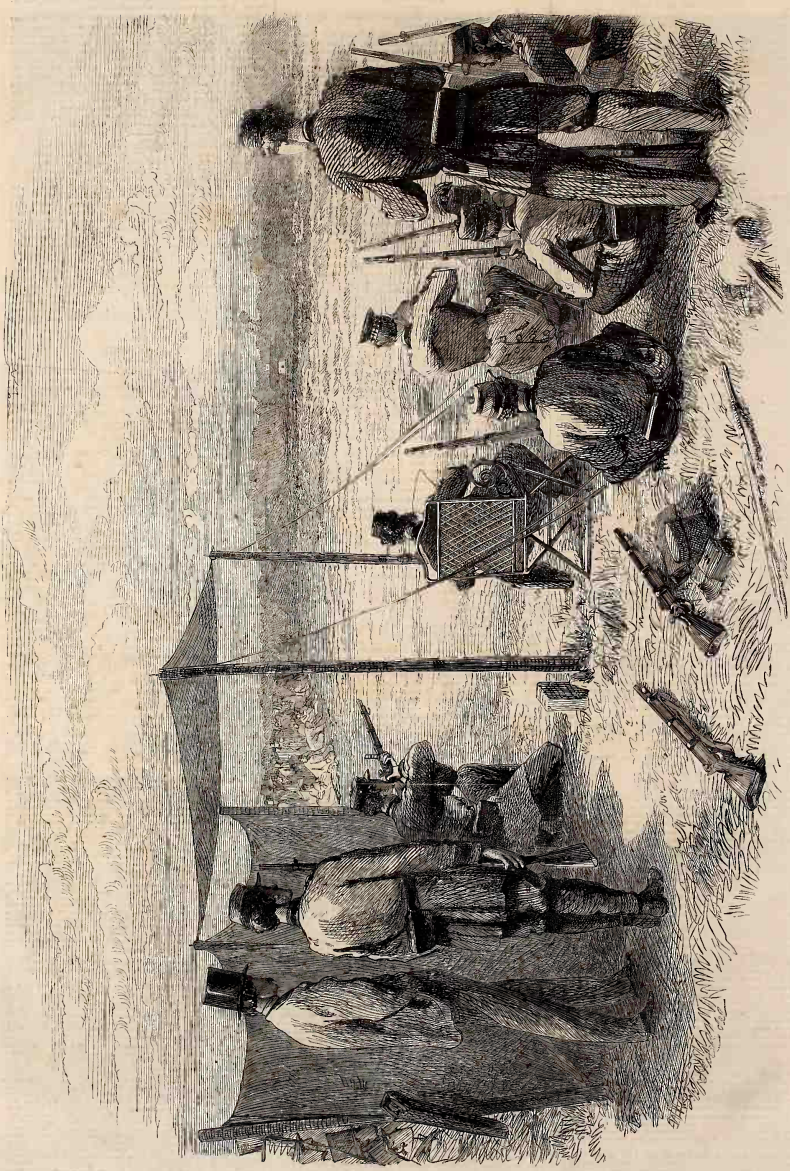
STRAND.—A new version of "The Little Treasure," under the title of "More Precious Than Gold," from the pen of Mr. C. S. Hartman, has been effectively produced. Miss Ada Swanborough appearing in a new and attractive rôle, in which she is very successful.

WHITTINGTON CLUB.—The great hall of this institution was occupied on Monday evening with an interesting experiment which, combining all circumstances, was successful. The ordinary business of "Patients," by Cardinal Wiseman, which enjoys considerable celebrity among the members of the Catholic community, had been entrusted to the Amateurs, and was placed on the stage and acted by an amateur dramatic company, in the presence of the Cardinal himself, with a very considerable success. Nothing to raise funds in aid of some Catholic schools. The two principal characters, Philip Neri and Cardinal Pallavicini, were taken by Mr. Lucas particularly well supported by Mrs. and Miss Lucas. To this young lady, we believe, the performance was entrusted, and certainly it cannot be acknowledged that, with the assistance of Messrs. Simmons and Son, she succeeded admirably. The whole of the temporary stage was set and arranged by any means; for, as complicated and ambitious is the drama, that it required no only scenery but accessories, and these were found in the club premises where were abundantly supplied. The story relates to the conversion of a noble lady of the Court of Queen Elizabeth to the faith she held, and the murder of martyrdom instituted by some of its primitive professors. The conduct of the drama in the early scenes was rather slow, but it was the fault of the performers in its action. Nor were all the performers equal to their business, although many displayed much ability as well as training for the duties and gestures! Notwithstanding all deficiences, however, the piety and pulses of the main incidents were fully developed, and the music by Mr. Lucas and Mendelssohn's music, a refined and rational entertainment was the result.

The electric light over the principal entrance to the Palais Royal has been reorganised for permanent use, and shines out most brilliantly upon the vast intersection of streets.

AN ELEPHANT IN CLOVER.—At Arles, a short time ago, a company of travelling equestrian performers, called the Troupe Americaine, had their grand exhibition in a garden on a grand scale. The proprietor, placed the animal at night in a stable next to a stud in which a large quantity of new-cut clover had been deposited. Unfortunately for some of the troupe the elephant broke down the woodwork which separated the two stables, and helped himself to the clover. The consequence was that he soon became dreadfully restless and died in a few hours.

PRINCIPAL ANTIQUITIES.—Excavations for the past three months considerable progress has been made in exploring the ruins of the ancient cities of Pteruda. In January, 1881, the Egyptian Antiquities commenced by Mr. and M. Ernest Renan at Sour, and the operations at these places are now complete, and the exception of the excavations at the Temple of Eschmoun, near Sidon. In these places, remains of the Crusaders were found at both places, but none above ground of the Phœnician or Roman periods. Fragments of granite, however, the limits of the ancient port of Sidon, still remain; also, on the plain to the east of the site of the old city, a subterranean Sidon has been discovered. Here, in 1855, the sarcophagus of Eschmounzar, in the cavern of Apollo, was found. This is the only great inscribed Phœnician sarcophagus hitherto discovered. Portions of another have been found in the same place by M. Renan. Also in the rock caves of Sidon, some of which are anterior to the time of Alexander, sarcophagi of various forms, some of terra cotta, ornamented with garlands, have been discovered. Other remains of different epochs have been examined, and portions have been brought to Paris. Some of the sculptures, &c., resemble those of Egypt, others those of Nineveh and Persepolis. Among the articles found in the excavations brought home are many articles of dress and common use, Phœnician coins, and a beauteous sarcophagus of good work manship.



THE NATIONAL RIFLE ASSOCIATION MEETING ON WIMBLEDON COMMON: SHOOTING FOR THE QUEEN'S PRIZE ON WEDNESDAY WEEK.—SEE SUPPLEMENT, PAGE 65.

"DINAH'S PRAYER," BY J. BOSTOCK, IN THE EXHIBITION OF THE ROYAL ACADEMY.

MR. BOSTOCK has in this little picture given an impressive rendering of one of the most striking and pathetic incidents in the able and popular romance of "Adam Bede," which cannot but be familiar to most of our readers. They will immediately recognise the scene where the high-purposed and pious Dinah comes to her friend Hetty in the midst of her trouble, and brings her to a proper feeling of her situation. The passage runs:—"Hetty obeyed Dinah's movement, and sank on her knees. Then Dinah said, 'Hetty, we are now before God. He is waiting for you to tell the truth.' Still there was silence. At last Hetty spoke in a tone of beseeching, 'Dinah, help me; I can't feel anything like you; my heart is hard.' Dinah held the clinging hand, and all her soul went forth in her voice."

The little group is full of fervour and passion—of dismal, heart-rending grief and humiliation and of bright hope in heaven. The upturned gaze of the single-hearted, earnest Dinah is charming—none the less that the artist has adhered in it to the homely character of the author's creation. We have seldom seen a little incident of the kind more artistically and at the same time more naturally treated.

SKETCHES IN PARLIAMENT.

Never now, as in usual at this time of the year, the entity of the British Constitution is undergoing the process of vivisection, by the Upper House coming into play. The House of Lords is what is technically called full on most evenings; that is, in addition to the steady attendance of seventeen elderly Peers, ten middle-aged and eight or nine young ones are absolutely induced to stay till a quarter to seven o'clock doing the business of the nation; after which the patient members of the Government, and Lord Monteagle, who, when he is not sitting in the cock-pit, passes into the Peers' seat in the Commons and spends the remainder of his evenings there, finish up the rest, so get a speedy hale (for the Upper House) at a quarter to a little past eight. While they are in Session their Lordships, or a few of them, take up the subject with the Commons, who are calculated, in their usual savage fashion, and constitutionally repeat all the argument, good or bad, which has been set the listeners in, and make a force of error, the other House. The most unsuspicious observer will see by which the Lords take up a subject as it it had suddenly come into being, and not as if there was an intense consciousness of it. Constitutionally speaking, the action is akin to stage asides, inasmuch as the Lords are supposed never to know what has passed in the Commons, and thereupon proceed to keeping up this delusion to the dreary repetition of commonplace, with the inevitable result of something approaching to twaddle. Why do not the Lords try to dine before the day, and assemble at, say, half-past seven by being interesting? The lenient outside public rather looks to its Legislature for a large amount of its amusement, and loves to study rational specimens—alas! too brief and contracted—it would seem as if the Lords could be as absurd as the Commons if they would only try. It is true, it may be expected of them that they should expend their physical strength in sittings of fourteen hours' duration without coming to any single definite conclusion; and if they do not keep pace with the other House in the attainment of the ludicrous they must get rid of their habit of devoting the day to the day's business, and publish through the press in some manner so as to enable their most working members to obtain their natural rest; and if they indulge in recreation, not to take it in most of the afternoons of the Lower House at short periodic intervals, and with the effect at a dose of opium.

Last Monday one of these representatives of the people seemed suddenly to have awakened to the consciousness that it was time that the business of the Session should begin. The variest plain-dummy talkers, the most profound interpreters of the public time, being the only gentlemen present between the going into Committee of Supply with grievances such as why the Bankruptcy Court in Basinghall Street, which had been docked of three farthings a day of his pension by the misinterpretation of a Royal warrant by an inefficient and unjust Secretary for the Treasury petitioners about the designs of Priam on the Island of Monte Christo, *et ipsum anon*—were among the first and most pressing in their interrogations in the Government as to the probable time when they were to give up. Nothing could exceed the blankness of Sir George Lewis's stare, or the comic incredulity of Lord Palmerston's countenance, at the wish questions of the Session. Naturally enough, they replied, "God bless you, we have none to yield." Out of nothing can anything come? And, looking at the calendar of this Session, it is clear enough to say what bills are to be devoted to the sacrificial pruning-hook. Is passing, let it be said that about apropos of it (which is not enough), the Lords put an a stitt sock, cocked his hat slightly on one side, and squared his shoulders in a manner which suggested two or three hours of a drill-sergeant. These were taken to be symptoms of training for under taking the conduct of the military affairs of the country. But, no! Whether or no the right hon. gentleman had imbibed the naval unbuttered easiness of attire, and resumed his comfortable slouch and slowness of gait; and the House slided so fast into the state of somnolency that it supposed that there was nothing in it. If it be true that Lord John Russell is going to the Upper House, and that Lord Granville is to succeed the accession of Mr. Roundell Palmer to the Solicitor-Generalship has been officially announced by the right hon. gentleman at the Treasury, who has been obliged to seek the aid of a pair of crutches. To be sure it is said to be only post— not the rich port-wine sort. But the new vigour of the Government halting by the hand-rail, suggests that it is not a foreshadowing, of weakness of another description. Returning to the matter which has been interrupted in a supposed way, it is also desirable to note that some of these persons above described as demanding from the Government a statement of the period at which they were to receive their Parliamentary fiddle-de-dee, have already plunged into a discussion of a subject which has been already before the House once, if not more, this year, without a result—namely, Endowed Education in Ireland; and the same round of recrimination, without the merit of spirit or point, was gone through for two weary hours, when enough vote-in Supply could have been got through to have shortened the Session a week.

Oh! what a tell tale is a miserable dreariness of this sort of thing in July! One might lookers-on grind to catch a gleam of malicious interest from a little episode—like that in which, during the last the question of National Education in Ireland, Mr. Henley sat about with a grim air of satisfaction to crush an ex-colleague of his, Sir John Pakington, with a shrinkable skin, and in language which for the purpose, insinuating much and uttering little, he contrived to make it evident that there was on earth a person whom he considered to be the priggiest of prigs, it was his right honourable friend; and there who watch the proceedings of Parliament with the eye of a critic, below the surface beyond the situation, and keenly appreciated the truth and the nastiness of the castigation which was being administered. Talking of castigation, there has been notable evidence given of the application of the rod to one member. The borough of Brighton is happy in having two remarkable sons for its members. One is a man of intensely Radical, their idiosyncrasies in other respects are curiously opponent. Both can talk, above the height of ordinary men; but one is robust, and the other delicate, and ruminant, and, as becomes a man in habit of body, he is genial and jolly, sufficiently good-natured, and, though of the extreme Conservative school, a sound Conservative. He is fonder, is never bitter, and does not seem to possess the faculty of hurting any one's feelings, for even while he blames he is tolerant. The other is the reverse of this, nervous, fidgety, sarcastic, pugnacious, probably, and gifted with such a delivery and manner that his choicest blessings seem curses. Naturally enough, this gentleman does not think it to be his mission to show up personal matters; and one night he was labouring in his inimitable manner to show that the Income-tax rebate and a rebuke from Mr. Baring, the Under Secretary for War, for of point and spirit, and which caught at once the sympathies of the House. One would have thought that the unmistakable feeling which was then evinced would have prevented an immediate pursuit of the same line, but the very next night this member of Parliament got up and presented a petition full of libellous matter on another member, and that without any examination into the bona fides of the allegations, and, above all, without notice to the accused member. Mr. Harvey was not a good deal in the statements—it was about the Galway contract—which threw a fearful light on the character of the person at the head of it. Indeed, the violent indignation of two members—one of whom was an original director of the Galway Company, and the other one who has taken up the question now with great energy, and has made not a little political capital of it—rather tended to prove that, although there may have been some doubt as to the propriety of the petition, there was something more than a germ of truth in it. If not, why the anxiety to point out its libellous handiest on of the House, the effect of which, of course, would have been to stop all further explanation. At once, too, there was a demand for the re-committal of the Galway Bill (oh! that each would not tear the belief out of us that it was a sham private bill designation) that this was a wicked device of their enemies to influence the decision of the Select Committee which was even then considering the report. But the main feature of the matter on this occasion was what the Americans call the "enormously stumping" of the poor member for Brighton, who always—why, it is impossible to say—suggests to one's mind the first lines of the old song, "The frog he would a-wooing go?" or else brings up the recollection of Don Quixote tilting at the windmills, or some equally semi-comic idea.

It is to be observed that Mr. Gladstone has a long time since recovered the prostration which followed his great struggle on the Budget, and he is always about the House, staying till impossible hours in the morning, with his eager eye and restless movement, watching for something to do, to say, or to suffer. He has concocted a small pro-Bardeen, with which he proposes to agitation the waiting hours of the Session. Twice, too, he has contrived to give issue to his pent-up energies by coming in with a rush at the last stage of a bill to enable the constituencies of the Universities to carry on their election by means of voting-papers, and which the Tories strenuously opposed on the ground that they found that their opponents. The Chancellor of the Exchequer, opposed it; and they carried it in their usual head-over-heels manner, quite tormenting, or not heeding, that they were not in the Committee of the ballot.

Every one knows how long, how late, how never-ceasing, have been the sittings of the House of Commons. It is only necessary to refer to one to recollect that there is one member of the House who is a manner that is to say, a person who spends all his evenings in an inconceivable apoplexy-generating head-dress, in an uneasy chair, which is too large to allow of an unconstrained attitude, and whose business it is to be always awake, and always to be ready to the task of listening to all the dross (and what the July dross is no pen can describe). This unenviable wretch—for Mr. Speaker is not he has not even the privilege, which the clerks have, of walking in and out of the House at intervals. Five minutes in the course of two so protracted a sitting is all that the stern rule of Parliament allow to the *physique* of the gentleman who presides in the office of Sergeant-at-Arms. In the Lords, Lord Chancellor, who, of course, call one of the Deputy Speakers, and be relieved for the night, if he likes. Well, one morning the Commons had sat until half-past three; every member had gone; the lamps had departed from Palace-yard, when a belated individual who was hissing from the House the conscience of a hiss, with a peculiar piercingness about the legs, wrapped in a cloak, pacing up and down in front of that side of the Sergeant-at-Arms' room which the Clerk's room is on the Speaker, who, without waiting to change those nether integuments which seem to be in some way connected with the British Constitution, had sat up all night, and was pulling on his boots in the first case of air in London before seeking that repose which he had so hardly earned.

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—MONDAY.

The Tadcaster Schools Bill was read a second time.

The Lord Chancellor announced that Her Majesty had appointed Mr. Russell Gurney to be Recorder of the City of London.

The Attorney-General moved a resolution in favour of the appointment of a Royal Commission to inquire into the practice of the Court of Chancery, and to report as to the best means of remedying the evils complained of.

Lord Cranworth thought that the Government should have taken some steps to remedy the evils complained of before appointing a Commission to inquire into them.

The Lord Chancellor said that the Government had taken the proper measures to be taken respecting the gifts and bequests of pictures of Turner and Vernon, and to relieve the Court of Chancery.

The Resolution was then agreed to.

Lord Stratheden moved a resolution in favour of the appointment of a Royal Commission to inquire into the practice of capital punishment, and to report as to the best means of remedying the evils complained of.

Lord Monteagle of Brandon opposed the motion.

After some observations from Lord Chelmsford and the Earl of Carnarvon, the Resolution was

NATIONAL SPORTS.

The veterinary examination thinned down the ranks of the blood sires and hunters at Leeds to very small dimensions, and hence spectators who did not happen to meet one of the horse-bench were sorely puzzled, as many apparently meritorious animals were passed over without even a mention. For instance, seven hunter brood-mares were entered for three prizes, and out of these four had spavin, and one navicular disease, and at last the only one sound was passed over, and another with a huge spavin second, while the third prize was withheld. One of the owners of blood sires was immensely annoyed, and declared that his old horse had been almost lamed for life by never hunting: he had received to try whether he was a whistler. Another sire, of European fame, was refused for the same complaint, and a third for a spark in his eye. All this may be very proper, but if the society set up for such shaming regeneration of their cattle will breed no more sires. The prize mare and foal were Mr. Cookson's chestnut, twenty years old, and quite of the old sort; Aster, the winner of the large pony prize, was a rare brown beauty, but only just under the 14-hand standard. Mr. Bowlby's bay, Jupiter Boy, Perfect, and Mr. George Holmes's grey, Charley, were also highly commended. The prize mare, Little Wonder, of twelve hands, was a delightful little grey; and two commended skewbalds, Jessy and Bessy, in this class never looked a bery for fair maids and matrons of Corkshire. Lord Londesborough's handsome cob prize was won by a chestnut "Overplus," by Aaron, with very fine substance for his years; but perhaps the finest cob of the show was to be found among the five-year-old hunters, in Mr. Holdforth's great raking chestnut, Burgundy, the winner, up to a Dick Gurney in any country, and Mr. Holmes's brown (by Welton, out of Melbourne), with not perhaps the same substance, but more style and quality throughout. We have seldom, if ever, seen a better cob with more beautiful back. For the hunters' prize Canute, whose mare neck and forehand is unworthy of his back and hind quarters, was first; Yorkshire Lass, Inglewhite

BUST OF OLIVER CROMWELL.

BY M. NOBLE.

THERE have been almost as much controversy and uncertainty about the portraiture of Oliver Cromwell, the great Protector, as about that of Shakspeare; for although several portraits exist of him by Walker and Marcall, and one by Lely, none of them are considered exactly to fulfil traditional descriptions of the countenance of this extraordinary man. As a general observation, it may be stated that in the opinion of those who admire the character of the man the portraits of him surviving hardly do justice to his grander qualities.

Hume wrote an epigram on one of these portraits by Walker, running—

By lines of th' face and language of the eye,
We find him thoughtful, resolute, and sly.

And, as evidence of the grossness and vulgarity of taste attributed to him by his enemies, it is recorded of him that he ordered one of the artists who was about to paint him to represent every pimple, hair, and other excrescence, under penalty of receiving nothing for his labour on default.

Under these circumstances an attempt to produce an ideal presentment of the hero of our Republican period conformably with all the written accounts of him, assisted by existing portraits, was a task both of interest and difficulty; and such Mr. Noble has attempted in the bust before us, which is now exhibiting at the Royal Academy. In this head, which displays a noble breadth of treatment, the artist has endeavoured to combine the wisdom of the legislator, the firmness of the ruler, and the heroism of the soldier, and yet preserves the general type of acknowledged likeness—the whole effect being such as, we think, will be satisfactory to all the admirers of the great original.

This bust is the result of a commission from Mr. T. B. Potter, of Manchester, who intends to present it to the Peel Museum at Salford.

BUST OF OLIVER CROMWELL, BY M. NOBLE, IN THE EXHIBITION OF THE ROYAL ACADEMY.

ST. PETER'S CHURCH, GREAT WINDMILL-STREET.

YESTERDAY week the Bishop of London consecrated the new district church of St. Peter, Westminster, in the presence of the Earl of Derby, Lord Stanley, M.P., the Duke of Marlborough, and a large number of the nobility and gentry of St. James's, in which parish it is situated. The Bishop, who was attended by the Rev. W. H. Freemantle, M.A., Vicar of Lewkenor, his recently-appointed chaplain, arrived at the church shortly after eleven o'clock, and was received by the Rev. J. E. Kempe, M.A., Rector of St. James's; the Rev. Dr. Scott, Incumbent of St. James's Chapel; the Rev. Nugent Wade, M.A., Rector of St. Anne's, Soho, and a large number of the local clergy. This spacious and convenient structure, which is one result of a scheme of church extension in the parish of St. James, inaugurated a few years ago by the Rector, owes its erection mainly to the munificence of the Earl of Derby, who gave £5000 towards building, and £1000 towards the site. Among other liberal contributors to the fund are her Majesty and the Prince Consort. The church is situate in Great Windmill-street, and the district which has been assigned, has been taken out of the parish of St. James, and contains a population of 4000, by far the greater portion of whom are of the poorer class. The Rev. George Smith, M.A., has been appointed to the incumbency.

The church is entered at the west end through a triple arcaded porch, communicating right and left with an inclosed lobby so as to prevent as much as possible cold draughts of air. It is divided into chancel with apsidal end, nave, north and south aisles; a small south transept, in which it is proposed to place the organ; a west gallery for children, and two vestry-rooms; and will afford accommodation for about eight hundred and fifty worshippers. The general dimensions of the church are one hundred by fifty feet; total height, fifty-five feet. The style of architecture is that known as Early Decorated. The roofs are all what are termed open timber roofs—that is to say, all the timbers are seen from within the building, and are wrought, moulded, carved, and framed so as to blend and harmonise with the architecture. The walls, generally, are constructed of brick. The west end is faced with Bath stone; and all windows, doorways, piers, arches, mouldings, copings, crosses, pinnels, strings, spires, and finials are constructed in the same material. The contractor, Mr. George Myers, has carried out the works from the designs and under the superintendence of Mr. Raphael Brandon.

THE LONG BRIDGE OVER THE POTOMAC AT WASHINGTON.

THIS bridge, which connects Washington with the Virginia shore, is a mile long, and about a quarter of a mile of the centre part is built of masonry, with low parapets, and resembles a country road. The remainder of the bridge is of wood. It is sufficiently wide to take three carriages abreast, and has two draws—one on the Washington and one on the Virginia side. These are nearly always open for the passage of small armed propellers, with which the Potomac swarms. A company of flying artillery is stationed on the bridge every night near the Virginia shore, with the draw raised in front of them. By day the passage across the bridge is unobstructed, and waggons are constantly passing and repassing, although, for form's sake, a company of soldiers is stationed at the extremity of the bridge, and sentinels parade to and fro.

THE FIRST BISHOP OF THE NEW DIOCESE OF ONTARIO, IN CANADA.

THE great British province of Canada, which now contains some two millions and a half of inhabitants, is divided into five Church of England bishoprics—Quebec, Montreal, Ontario, Toronto, and Huron. The bishoprics of Huron and Ontario are of recent origin, and are both situated in Upper Canada. The diocese of Huron takes in the western portions of the upper province, including the city of London, the seat of the new see. The diocese of Ontario is formed from its eastern division, and which includes the cities of Kingston and Ottawa, and the towns of Brockville, Belleville, Perth, Cornwall, and Prescott. Until lately these dioceses formed part of the diocese of Toronto; but the rapid growth of the population and the still (in proportion) more rapid increase of the membership of the Church of England rendered the formation of two new bishoprics an absolute necessity. They were both endowed by voluntary subscriptions, the interest of which will produce a clear income of £1000 currency per annum. The

THE CIVIL WAR IN AMERICA: THE LONG BRIDGE OVER THE POTOMAC AT WASHINGTON, GUARDED BY UNITED STATES' ARTILLERY.

THE RIGHT REV. JAMES TRAVERS LEWIS, LL.D., FIRST BISHOP OF ONTARIO, UPPER CANADA.

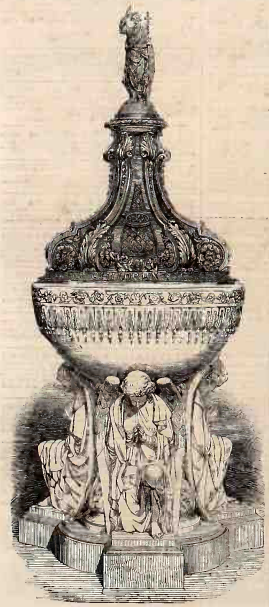
Bishops of these dioceses are elective, and chosen by a diocesan synod composed of the clergy and laity, who vote in separate chambers, a majority of each chamber being necessary to a choice. Some ten years since the Rev. Dr. Cronyn, a native of the city of Kilkenny, in Ireland, was elected to fill the see of Huron. On Thursday, the 13th of last June, the synod of the diocese of Ontario, assembled at the city of Kingston, chose the Rev. Dr. Lewis, Rector of Brockville, as their Bishop. The vote was almost unanimous, only one clergyman dissenting.

The Rev. Dr. Lewis, like the Rev. Dr. Cronyn, graduated at Trinity College, Dublin, and from which he obtained his degree of LL.D. about five years since. He is now thirty-four years of age, and is probably the youngest of all the Church of England Bishops. He is a native of the county of Cork, in Ireland, where his father was formerly Rector of St. Anne's, Shandon. He graduated as Senior Moderator in Ethics and Logic, and held the distinguished position of Gold Medalist. He was ordained Deacon in Cambridge by the Bishop of Chester in 1848, was subsequently priested by the Bishop of Down, and appointed to the curacy of Newtown Butler, in the county of Fermanagh. On his arrival in Canada he was appointed to the county parish of Hawkesbury, on the Ottawa River, by the Bishop of Toronto. In 1854 he was translated to the Rectory of Brockville, where he has distinguished himself as a faithful and efficient minister. His election as Bishop has given great satisfaction in the diocese of Ontario to Protestants of all denominations. On his return to Brockville, after the synod had adjourned, the bells of the town rang out a joyous peal, and he was escorted to his home by a large number of his parishioners.

"THE DESCENT OF THE DANES," BY MR. BELL SCOTT.—SEE SUPPLEMENT, PAGE 64.

MARBLE FONT FOR WITLEY CHURCH.

WITLEY CHURCH adjoins Witley Court, the princely residence of the Earl of Dudley. In the restorations and additions which have been made in the church his Lordship has spared no expense. The walls, and especially the ceiling, are covered with paintings and gilded ornaments in relief. It has been entirely roseated with richly-carved wainscot oak, cushioned, and French polished. The Font,—the subject of our Illustration—is executed by Mr. James Forsyth, of Edward-street, Hampstead-road, who is also doing sculptured subjects in oak for the pulpit. The angles and bowl of the font are in pure statuary marble; the plinth is of black Irish marble; the bowl is nearly semi-circular in form. The entire decorations are renaissance in character, to be in harmony with the style of the church. On the top of the cover, instead of a finial, is a figure of John the Baptist. The whole of the works in Witley Church have been designed and carried out under the superintendence of Mr. S. W. Dawkes.



NEW FONT FOR WITLEY CHURCH.

"THE SPUR IN THE DISH," BY MR. BELL SCOTT.—SEE SUPPLEMENT, PAGE 64.

*** *The charge for the insertion of Births, Marriages, and Deaths, is Five Shillings for each Announcement.*

Anglers, owners, and gentlemen interested in Fisheries, and desirous of promoting the objects of the Association, are invited to take part in the formation of local committees, and communicate with the Fisheries Preservation Association, with a view of obtaining the name of the Secretary, and his address, by legislative enactment, maps, and such other means as may be deemed necessary to prevent the destruction of the fry of fish of all descriptions in the rivers of Great Britain and Ireland.

The Association consists of 10s. ordinary, and honorary members, Banners of 21 guineas. Associates are considered life members, and have no further subscription to pay. Ordinary members are entitled to a full set of the Association publications, and to receive the Annual Reports of the Association, or to the business.

DR. DE JONGH'S
(Knight of the Order of Leopold of Belgium)
LIGHT-BROWN COD-LIVER OIL,
prescribed by the most eminent Medical Men as the safest, speediest, and most effectual remedy for
CONSUMPTION, BRONCHITIS, ASTHMA, GOUT, RHEUMATISM, GENERAL DEBILITY, DISEASES OF THE SKIN, GLANDULAR AFFECTIONS, AND ALL SCROFULOUS AFFECTIONS,
Is strongly recommended by the Faculty under the title of
Opinion of R. M. LAWRANCE, Esq., M.D., M.R.C.P., Physician to H.R.H. the Duke of Sussex-colonel and Suffolk, &c., &c.
"I have frequently tested Dr. de Jongh's Cod-liver Oil, and so highly do I appreciate its medicinal virtues that I have invariably had it prescribed in my own family and practice. I can pronounce it to be a pure, genuine article, and not a manufactured compound in which the nauseous flavour of the oil is destroyed."
Sold only in imperial half-pints, 2s. 6d.; pints, 4s. 9d.; quarts, 9s.; capsuled and labelled with Dr. de Jongh's stamp and signature, without which no GENUINE MUCH SOLD CAN POSSIBLY BE OBTAINED, by respectable Chemists and Druggists.

Heal and Son, Bedding Manufacturers, 196, Tottenham-court-road. Illustrated Catalogue, with prices, sent by post on application.—Heal and Son, 196, Tottenham-court-road.

CAUTION.—SMEE'S SPRING MATTRESS, Truckers Patent, or Sommier Tucker. Comfortable, cleanly, and economical. Requires no stuffing, and is not liable to get out of order. Recommended and supplied by the leading upholsterers. Observe the name and address of the sole manufacturer, or you may be supplied with spurious imitations. SMEE'S SPRING MATTRESS is quickly and correctly made to any size, and forwarded to any part of the country. Sold wholesale and retail by the inventor and manufacturer, 3, Finsbury-pavement, London, E.C.

FAU-DE-VIE.—This pure PALE BRANDY, 18s. per gallon, is demonstrated, upon analysis, to be free from fusel oil, and other deleterious matter. Sold in bottles, 2s. each, and in casks of five gallons and upwards, by HENRY HUNT and SON, 65, New Oxford-street, London, W.C. Established 1770.

A LLSOPP'S PALE ALE, in bottles, as recommended by Baron Liebig and all the Faculty, may now be had on the finest conditions of Messrs BASS, HODGSON, PARKER, and Co., 94, Pall-mall, S.W.

F RY'S COCOA— PURE CONCENTRATED BREAKFAST COCOA. Price 1s. 6d. per lb. Fry Four Cocoa. Fry Four Cocoa is homœopathic and many other varieties. Sold by Grocers and Druggists. J. S. FRY and SONS, Bristol and London.

FLUOR Warranted, free to Families in and round London, at per bushel—Whites, 10s.; Household, 8s. 6d.; Seconds, 7s. 6d.; Bran, 5s. 6d. Sacks, 2s. each. CATCHPOOL, Bushel Mill, Essex; and 6, Queen-street, Cheapside.

The Original and Only Genuine Established 1848. UNITED STATES OF AMERICA. KINGSFORD'S

OSWEGO PREPARED OOBN, for pudding, blancmange, &c., delicacy and purity, possessed by any of the English imitations. Sold by all Grocers and Oilmen. ROBINSON, BELLVILLE, and Co. 64, Finsbury-pavement, London.

ROBINSON'S PATENT BARLEY, for making gruel and a small cup of genuine Barley Water, and **ROBINSON'S PATENT GROATS,** for making thick gruel, and for thickening soups, broths, &c., are the purest and most economical. Prepared from the finest Scotch barley and groats only. Sold by grocers and oilmen in packets and canisters, and wholesale by ROBINSON, BELLVILLE, and Co., 64, Finsbury-pavement, London. Established 1774.

BROWN and POLSON'S

PATENT CORN FLOUR, in Packets, 2d., 4d., 8d., and 1lb., 2s., 4s., and 7s. 6d. Brown and Polson, Paisley, Edinburgh, and London.

WHEN YOU ASK FOR

GLENFIELD PATENT STARCH, see that you get it, as inferior kinds are often substituted. WOTHERSPOON and Co., Glasgow and London.

RED SPIDER, Mealy Bug, Mildew, Thrip, Scale, Grubs and Brown Fly, American Blight, Ants, and Slugs, prevented and destroyed by GISHURST COMPOUND. See "Gardener's Chronicle," "Cottage Gardener," and "Field." In boxes, 1s. 6d. each; and of larger sizes; wholesale from Potter Clarke Canville Court, London.

THE NATIONAL RIFLE ASSOCIATION MEETING ON WIMBLEDON COMMON.

MR. JOPLING, WINNER OF THE QUEEN'S PRIZE.

OUR last Number contained an abstract of the proceedings at Wimbledon Common of the National Rifle Match to Wednesday week, on which day the final struggle for the Queen's Prize took place. We give on page 61 an Engraving of the exciting event, and annexed is a portrait of the victor, Mr. Jopling. This gentleman, who, in gaining the Queen's Prize, receives with it the Gold Medal of the association, thus taking his "double-double," and becoming the champion shot of England, unlike his predecessor, Mr. Ross, is one who owes his inspiration and training entirely to the volunteer movement. His instructor, in common with Lord Bury, who so nearly obtained the first place, was Sergeant Potter, attached to the Hythe School of Musketry. Mr. Jopling, it may be interesting to add, holds office in the Adjutant-General's Department, and belongs to the 10th (War Office) company of the 2nd South Middlesex. His successes, it would appear, are not confined to the rifle range; for the picture which, as an amateur artist, he contributed to this year's exhibition was criticised in a favourable spirit.

The events of the preceding days, however interesting in themselves, were but a prelude to the crowning contest on Wednesday week, in which the less efficient marksmen being gradually distanced, the more fortunate competitors assumed positions of greater prominence. The order of the day's proceedings was as follows:—Each of the forty competitors for the Queen's Prize shot finally with Whitworth rifles at 800, 900, and 1000 yards' range. The Whitworth rifle was adopted at these long ranges, partly because it was more reliable than the Enfield at all distances above 600 yards, and partly because, being a weapon new to most volunteers, the practice they were enabled to make with it would be an additional test of their skill and judgment. One of the competitors being absent, the remaining thirty-nine were formed into two squads and fired at different targets. Five of the candidates retired during the contest, and the interest of the match lay practically with the following gentlemen, who all made excellent scores:—Mr. Jopling (2nd South Middlesex), Mr. Bingham (Bestol), Lord Bury (Civil Service), Mr. Brooks (17th Middlesex), and Mr. Rowe (1st Devon). Mr. Dougan and Mr. Moir, who at shorter ranges were the favourites in public estimation, fell completely behind; but it is right to state that Mr. Dougan had never previously fired at a range exceeding 600 yards. In the last round the interest was keenly excited to discover whether the five leaders would retain their foremost places. Mr. Brooks and Mr. Rowe each lost a point, and were thereby reduced to the second rank; but time after time the signal-flags responded to the shots of Mr. Jopling, Mr. Bingham, and Lord Bury; and at the close of the match their scores exhibited a triple "tie" of eighteen. The appreciation evinced by the spectators of the skill of the competitors was such that during the closing rounds their anxiety became almost feverish. The suspense, apparently interminable, which stretches on "Derby Day" between the rush of horses and the winning-post affords the only simile at all comparable to the excitement prevailing. Ultimately, when General Hay came forward and declared that, according to the rules of the association, Mr. Jopling, having distanced his present compeers at the previous ranges, was entitled to the coveted distinction, popular enthusiasm broke all bounds, and, not satisfied with an outburst of cheering, for which even Wimbledon Common seemed too broad an area, his friends, relatives, and admirers swept down on the successful candidate, and bore him off in triumph. The following comparative statement of the shooting made by the four competitors whose names head the list puts the superiority of Mr. Jopling in a very clear light, and exhibits the grounds on which the award of the Council was made. At the long ranges, as already stated, the total score of three of these gentlemen amounted to 18. In the earlier stages the points obtained by them had been:—

	500 Yds.	800 Yds.	900 Yds.	Total.
Jopling	11	5	4	20
Bingham	7	5	7	19
Bury (Lord)	6	5	6	17
Rowe	6	8	4	18

Adding those 20 points to the 18 obtained on Wednesday week Mr. Jopling's score mounts up to 38—a number of which Mr. Bingham's score, the next highest, falls short by one point.

Wimbledon presented on Thursday but little upon which comment is necessary. The firing for the All Comers' Prize was concluded, and that for the Duke of Cambridge's and the Duke of Wellington's continued. The firing for the Prince Consort's Prize, which was commenced, was really excellent, and the score for the Association Cup was also very good. During the day Lord Elcho addressed the volunteer officers on the ground, congratulating them on the success of the meeting about to terminate, but, at the same time, urging them to continue and even increase their efforts in support of the National Association.

Friday was the winding-up day at the butts. The proceedings of the day were extremely interesting, the results being as follow:—Prince Consort's Cup: Major Moir, Hitchin, first, with 21 points; Newsworthy, Oxford University, second 20; and Brooke, 17th Middlesex, 20. Duke of Cambridge's Prize: Capt. Rose, 6th Kincardine, was the winner, having scored 16 points; Ensign Dunlop, Royal London Scottish, marked 15, and Captain Heaton, 3rd Manchester, 14. The Duke of Wellington's Prize: Sergeant Potter, of the School of Musketry, was the winner, for 7 points. The Association Cup was won by Captain Rose, 6th Kincardine, who scored 14, Captain Wigram, Coldstream Guards, scored 13, and Colonel Lindsay, St. George's, the same number. Rifle Derby: 170 entries at £2 each: Mr. Gibbs, of Bristol, scoring 26; Mr. Ross (ex-champion), Cambridge University, scored 24; and Ryrie, 2nd Cumberland, 23. Mr. Gibbs won the tie. The winner gets half the amount of the entries; the second gets three-fifths of the remainder, and the third two-fifths. Lord Dudley's Prize of £50 for winners was carried off by Rowe, 1st Devon, who marked 10; Viscount Fielding scored 9; Simmons, Victoria, 9; Greig, 8; Dougan, 8; Gibbs, 8; and Ross, 7. This was, perhaps, the most exciting feature of the meeting. Seven centres were made during one round, and the general accuracy at such a long range excited universal admiration.

The highly successful meeting was brought to a close on Saturday. In the morning the prizes were delivered to the successful competitors by the Duke of Cambridge. A good deal of interest was excited by an impromptu match got up somewhat on the public schools plan between the Universities of Oxford and Cambridge. Two men were selected to represent each seat of learning—Mr. Ross, the champion of last year, being one of the two Cambridge competitors. Cambridge won the prize by immense odds. The two Oxonians only made a combined score of 37, while Mr. Ross marked 20, and his fellow Cantab, Mr. Peterkin, 31. A field-day—in which upwards of 12,000 volunteers took part—was held in the afternoon, under the eye of the Commander-in-Chief. The proceedings finished with a "march past," which the General Commanding-in Chief watched with a scrutinising eye. The number of spectators has been estimated at sixty thousand. We give, from different sources, details of the chief events of the day:—

THE DISTRIBUTION OF PRIZES.

The ceremony of presenting the prizes in front of the Grand Stand went off remarkably well. A platform covered with crimson cloth was placed in front of the seats, and a company of the 2nd Middlesex, to which Mr. Jopling belongs, was stationed as a guard of honour on the flank of this dais. Each man wore in his cap a laurel leaf, in token of their comrade's pre-eminence among the shooters for the chief prize. The ground was kept by the London Scottish, who made a splendid muster, and looked as firm and stalwart a corps as need be met in field. Shortly after three the Royal ensign was raised, the band of the Hon. Artillery Company played a few strains of "God Save the Queen," and the Duke of Cambridge stepped upon the dais. Ranged in a long line beyond, and facing his Royal Highness as well as the Grand

PRESENTATION OF THE PRIZES BY THE DUKE OF CAMBRIDGE IN FRONT OF THE GRAND STAND.

Stand, were the successful competitors, who awaited their prizes. The diversity of figure and dress gave some force to the idea that our national marksmen have gathered from far and wide. Here was an active Lancashire lad in the serviceable grey uniform of his corps; there an unfortunate young man in faultless morning costume; here an Australian riflemen with his plain felt helmet; here a kilted Highlander with his claymore girded on his side, and there a smart and rather elegant-looking officer in the scarlet regimentals of a volunteer corps which emulates the Line. To each and all, in proportion to their respective deserts, a tribute of applause was given by the lookers-on. The veteran dare-devil, Captain Horatio Ross, who bore away two large silver cups, received shouts of hearty welcome as did Major Fenwick, of the Sky, Jedgrove. To this latter distinguished marksman the Duke of Cambridge addressed some congratulatory remarks, in which the fact of the Queen's Prize having been won by a member of the civil service was especially dwelt upon. His Royal Highness, in speaking generally of the success of the meeting, and particularly of the rifle competitions, observed that the competition throughout had been wonderfully close, and that no one had won prizes who had not proved themselves worthy sisters to be excellent shots.

The following is the list of those who had the honour of receiving, from the hands of the Commander-in-Chief, tokens of their various degrees of skill:—

M. Lenox Conyngham—Mr. Campbell's Henry Rifle.
Major Muir, Stirling—London Armoury Company's Rifle.
R. Ross, Dunsyre, Lanarkshire—Engraving by Mr. Gurney.
M'Pachar, Australia—Engraving by Mr. Gurney.
Yeoman, Aldershot—Telescope given by Messrs. Darrow, of Great Malvern.
Sergeant Jenton, Civil Service—Lady Abbotsford Henry Rifle.
R. F. Dickens, Victoria Rifles—London Armoury Company's Revolver.
J. Conyngham, South Middlesex—Engraving by Mr. Gurney.
Captain Wigram, Cobbleman Guards—Engraving, by Mr. Gurney.
Private Bentley, Victoria Rifles—Westley Richards's Rifle (Silver).
Mr. Thwaite, 4th West York—Lord Vernon's Henry Rifle.
Edgar Harding, Victoria Rifles—Patent Breech Rifle, by Mr. Prior.
Mr. Simcock, South Middlesex—Engraving, by Mr. Gurn's Revolver.
Captain Bigg, West Middlesex—Engraving, by Mr. Gurney Browne.
Captain Ick, Lancashire—Field-glasses, by Messrs. Burrow.
Captain Bigg, West Middlesex—Engraving, by Mr. Gurney Browne.
Captain White, 1st East York—Stone's Breech-loading Rifle.
Canon Conyngham, Royal Lancashire—Engraving, by Mr. Gurn Browne.
H. Hitchcock, 5th Wilts—Engraving, by Mr. Gurn Browne.
Hon. Hugh Lowry Corry, Tunbridge—London Armoury Company's Rifle.
Sergeant Gibbs, Bristol—1st Share, Rifle Derby.
Lt. E. R. Young, Cambridge University—Derby Rifle Derby.
Mr. Ryde, 2nd Cumberland—2nd Share, Rifle Derby.
Mr. H. Mayo, 2nd Worcestershire—Westley Richards's Rifle (£20), with Plate of £25.
Sergeant Deegan, 20th Lancashire—Westley Richards's Rifle (£20).
Private Wilson, 20th Lancashire—Engraving, by Mr. Gurney Browne.
Sergeant Stephen, Cobbleman Guards—Mr. Bennett's Watch (Value £40).
Sergeant Mott, 1st Surrey—Fall Gunsley's Purse of £5.
Sault Sergt. Potter—School of Musketry—Duke of Wellington's Rifle of £50.
Captain H. M. Kincaid-Lennox, Aberdeen—Mr. Prior.
Mr. Howard, Truro—Public Schools, Earl Spencer's Cup.
Bugler Bellfield, 1st Lancashire—Lord Ashburton's Shield.
Captain Wigram, Cobbleman Guards; R. Brown, Norwich; Captain Bridger, 1st Surrey; Cambridge University; Major Muir, Stirling; Colonel Hon. H. Rowe, Scots Fusilier Guards—All Comers' Cup, 200 yards. Engraving, by Mr. Gurney Browne.
Captain M'Gregor, Midlothian—All Comers' 200 yards. *Army and Navy Gazette*.
G. Brooke, 19th Middlesex; Mr. Hendrie, 7th Ayrshire; A. Smith, Midlothian; G. M'Intosh, Argyle Highlanders, 13th Stafford; Sergeant Hadden, 7th West York—All Comers', 200 yards. 400 yards.
Mr. Dalton, Victoria Rifles; Sergeant Hall, 2nd Surrey; Private Miller; Mr. Gosnell, Edinburgh; Sergeant Norsworthy, Oxford University—All Comers', 500 yards. Mr. Gurn Browne.
E. Ross, Cambridge University; G. Young, 1st; London; Lieutenant Hartley, 1st Cumberland; Cambridge University; Mr. Jervis, Manchester; Mr. J. Goldsmith, 5th Dragoon Guards; Mr. J. Lees, Manchester—All Comers', 600 yards. Gold Cup.
Mr. Bidder, late of Corry; Mr. Billett, 3rd Cheshire; Mr. Greig, 37th Cheshire; Mr. Young, Cambridge University; Major Murphy—All Comers', 200 yards. Engravings, given by Mr. Gurn Browne.
Sergeant Sandeman, Artillery Bunday, London, Assault; E. Ross, Cambridge University; Ensign Halliday, Civil Service; Mr. Dickens, Victoria Rifles; Mr. Hall, 4th Surrey; Viscount Fielding, 4th Flints—All Comers', 500 yards. 600 yards.
Private Smith, 19th WRV; Captain Reed, 3rd West York; Sergeant Marriott, 4th West York; Sergeant Bentley, 1st Warwick; Sergeant Hall, 2nd Surrey; Sergeant Wilkinson, 2nd Surrey; Private Pimbolt, 21st Middlesex; Sergeant Stewart, 11th Middlesex; Sergeant Rowe, 1st Surrey; Private Robinson, 1st Surrey; Sergeant Burgess, 1st Surrey; Private Bingham, Bristol; Private Goodhall, 11th Herts; Private Brown, 1st Surrey; Private Bryant, Civil Service; Sergeant Hall, 2nd Surrey; Private Miller, Private Rickwood, Rochdale; Major Muir, Stirling; Private Hill, 1st Surrey; Sergeant Bagnall, 1st Cumberland—Whitworth Rifle (Silver).
Sergeant Duggan, 20th Lancashire—Association Medal (Silver).
Mr. Cuthbert, Lincolnshire—Duke of Wellington's Prize.
Captain Robertson, Perthshire—Prince of Wales's Prize.
Major Muir, Stirling—Prince Consort's Prize.
Mr. Sopping, South Middlesex—Queen's Cup and Gold Medal.

THE REVIEW.

Soon after six o'clock the Duke of Cambridge took the command on the review began with the movements of the first division, which, after a few simple evolutions, formed a line across the plateau nearly three-quarters of a mile in length. The Line of Corry, the Line of the English Regions, were thrown out as skirmishers, with reserves in support. The latter followed at the pace of the usual walk, and placed themselves down at full length in the soaked grass with the most perfect indifference. On the extreme left, near thick and rather rough ground, the Cambridge Wood, the 19th Artillery Volunteers took up their four pieces of ordnance, which, as the skirmishers advanced, opened a rapid and well-sustained cannonade. The next move was proposed to be advancing in force across the south side of the common from between the rifle-butts, and in this direction the advance was accordingly made.

The Line of Court and London Rifles went out in beautiful order, and on the ground at a little white line of posts which now marked the front and great extent of the whole position. The ground up to the butts was beautifully level, but beyond this it became broken and uneven, and was studded with groups of furze, each group of which, the skirmishers seemed to convert into a regular fortress, from which their quick fire was maintained in successful rapidity. Nothing now had been very gallant, but apparently they had an equally determined enemy to deal with, for, after keeping up a continued hailstorm for some time, the bugle at last sounded for the skirmishers to retire, but to obey the summons and leave the wet ground on which they had been lying was by no means a pleasant task, and it was some time ere they ceased to sound. Their addition to the cracking musketry and fuss was not a little, but all the skirmishers gained ground, and, after a protracted struggle, the whole of the first division, under Sir Richard Airey, resolved orders to move forward. The advance of the line of the line was beautifully regular, and still at length the centre—in their anxiety, we presume, to close with the enemy—came a little in advance of the right and left wings, and the butt was called while the line was dressed. It was only a delay of a minute, and with a fire of such immense length the same thing repeatedly occurred with regular troops. Even the Adjutant-General's patience is by no means unfrequent. The instant the line was dressed the advance was made in perfect order, and more rapidly forward with a solidity and evenness that deserved the very highest praise. The butts were soon passed at the rear of the rows of spectators, at last broke up the level plain into a series of rough, rugged ground, over which the line passed by regiments in sections of four. Beyond this the ground was uneven, and dumped with furze; but, despite all obstacles, the line re-formed in beautiful order, and continued their advance.

It was now supposed that the enemy were in great force, and especially strong in cavalry, for the skirmishers were recalled in haste, while a tremendous fire was opened along the whole line of the butts, meantime, seeing that it was to be a general action—and a very hot one, the three brigades forming the second division, under General Sir Yorke Scarlett, hastily formed up and advanced in quarter-distance columns in support. Apparently their aid, though promptly rendered, came too late; for the whole line of the first division began a retreat. Out of deference to the feelings of volunteers, however, this retrograde movement must be regarded only in the light of a clever military manœuvre to "draw" the enemy. It was, however, accomplished rapidly and in good order, the Line of Court and London Rifles disputing beautifully to cover the movement. Suddenly the skirmishers were called in, while the first line, wheeling into sections of four, passed rapidly between the intervals of the advancing second division. The reason for this hasty withdrawal of the skirmishers was apparent. A cavalry attack was threatened, and, as the columns of the first division prepared to re-form, under cover of the second, the latter were instantly formed into a chain of massive bristling squares that stretched across the plain in a series of most formidable live redoubts. These squares were really impregnable forces, and with a rapidity that was astonishing. As the squadrons of the enemy were supposed to sweep down, each square paused in its victorious and imposing career, and, despite the chins of marksmen that formed their ranks, would have sufficed, had any enemy really been present, to have emptied the saddles of a whole division. The cavalry charge was, indeed, a dilatory affair. The enemy were there, but the difference only arose from some five rings from all four faces, while the others on the left of the line fired from two only. The fact was, the enemy was imagined on the extreme left to have been held in check by the guns and difficult nature of the ground, and therefore to have been unable to bring their cavalry to bear upon the second line on the right flank of the second division.

The cavalry made a desperate charge of front on the part of the whole second line, and this, in real action, most difficult and dangerous manœuvre, being unopposed at Wimbledon, was of course got through with safety, and, indeed, it may be said with a rather unnecessary flourish elicited the approbation of all officers on the ground. The steadiness of the Scots Fusilier Guards on the left centre was above all praise. The line was formed across the ground facing the grand stand, and exactly at the moment when the enemy's cavalry were within 200 yards, a deafening volley was given which rang and echoed through the whole plain with a crash that was instantly commenced with a sustained deafening roar that shook the ground tremendous, and seemed to shake the very air. From this the faithful arbiter and umpire changed to the heavy sounding and continuous roll of volleys, and some of these were given with such a solidity and singleness that I could not discover one instance the discharge of a single enormous piece of artillery than a simultaneous fire from 500 muskets.

These repeated volleys were at last supposed to have the desired effect upon the enemy, and the Scots Fusilier Guards were ordered to fix bayonets, the jingling rattle ran along the line, softening into a mere clink in the distance, as the order was passed from front to rear, the sergeants saluting, and the line swept grandly on, gradually getting into double time, as the words "Prepare to charge!" were passed along from rank to rank. In another minute the bayonets were lowered, and the charge was made, the whole mass passed over the plain with a rush so resistless, apparently, as the sweep of destiny. This last grand charge concluded the movements of the day.

VOLUNTEERS ON THE GROUND.

THE FIRST DIVISION.

Under command of Major-General Sir Richard Airey.

1st BRIGADE.—Lieutenant-Colonel Corry, C.B., Tower Hamlets, Brigade Major Victoria Rifles—6 companies, 350 men, under command of Major Elliott; 1st Middlesex—8 companies, 500 men, under command of Lieutenant-Colonel Vincent Fenhill. Irish Corps—Line of Corry—6 companies, 400 men, under command of Major Sir David Baird; 19th Middlesex—8 companies, 500 men, under command of Major Sir David Baird; 19th Middlesex—8 companies, 500 men, under command of Major Sir David Baird. Total, 2900 men.

2nd BRIGADE.—Lieutenant-Colonel Hicks, London Rifles, Brigadier; Major Reilly, R.A., Brigade Major. London Rifle Brigade—12 companies, 760 men, under command of Lieutenant-Colonel Clive; Queen's Westminster—London Irish—6 companies, 350 strong, under command of Lieutenant-Colonel the Honourable Augustus Vernon Harcourt; 1st Middlesex—7 companies, 770, under command of Major Cochrane. St. George's—4 companies, 220 men, under command of Lieutenant-Colonel Lord Ranelagh. Civil Service—8 companies, —100 men, under command of Lieutenant-Colonel Wood; battalioned with the Queen's Westminster. Victoria Rifles—8 companies, under command of Lieutenant-Colonel Cooper. 49th Centre (London)—6 companies, 360 men. Total, 3,000 men. Total strength of the first division, 5,900 men.

3rd BRIGADE.—Lord Grosvenor, Brigadier; Captain Vigors, Brigade Major. Queen's Westminster—8 companies, 500 men, under command of Major Yeakes. 20th Middlesex—8 companies, 500 men, under command of Lieutenant-Colonel Lord Elcho. 1st Surrey—8 companies, 500 men, under command of Lord Henry. Artists' Corps—2 companies, 80 men, under command of Captain Wyatt. 1st Cumberland—8 companies, 500 men, under command of Major Russell and Lord Gerald Fitzgerald. Strength of the 3rd Brigade, 2400 men.

SECOND DIVISION.

Under command of Major-General Sir James Yorke Scarlett, K.C.B.

4th BRIGADE.—Lieutenant-Colonel Lord Ranelagh, Brigadier; Major Hon. Artillery Company, consisting of 4 batteries. Horse Artillery—4 guns, 150 men, under command of Captain Hon. Artillery Company, commanded by Major Robertson. 1st Middlesex Engineers—6 companies, 300 men, under command of Captain Fraser. 1st Middlesex Engineers—6 companies, 300 men, under command of Captain the Hon. T. G. Bruce. 7th Surrey—6 companies, 360 men, under command of Lieutenant-Colonel Lord Ranelagh. 1st Middlesex, 500 men, under command of Lieut-Colonel M'Donald. 9th Essex—2 companies, 150 men, under command of Captain Hon. T. G. Bruce.

5th BRIGADE.—Lord Rosslough, Brigadier. 1st Middlesex Artillery—8 companies, 500 men, under command of Lieutenant-Colonel Lord Rosslough. 1st Middlesex (Finsbury)—8 companies, 400 men, under command of Colonel Middlesex (Finsbury)—8 companies, 400 men, under command of Colonel Lord Rosslough. 1st Middlesex (Finsbury)—8 companies, 400 men, under command of Major Grey. 2nd City of London (Spottiswoode)—2 companies, 110 men. 2nd City of London (Spottiswoode)—2 companies, 110 men. 2nd Middlesex—4 companies, 150 men, under Major Wilkinson. 2nd and 4th Tower Hamlets—4 companies, 150 men, under Major Wilkinson. 2nd and 4th Tower Hamlets—4 companies, 150 men, under Major Wilkinson. Total, 2,900 men. Total Administrative Battalion (Horse, Scotch Lock, and Tottenham)—5 companies, 300 men. Total strength of the 2nd Division, 5,200 men. Aggregate strength of Brigade, 2500 men.

Total approximate number of volunteers on the ground, 12,000 men.

THE MARKERS AT THE BUTTS.

By an ingenious application of electricity a target has been constructed so that the result of successful shots may be recorded on a dial-plate, which will tell the marker not only the number of shots but the number of one shot. This kind of target was made use of at Wimbledon on the Queen's Jubilee Rally of pool Saturday. In the contests for the prizes the hits were indicated by markers, who, ensconced near the butts, in their low or stone strongholds (as depicted in our engraving of July 22), could see where the shots struck, and, by means of coloured flags, signal the intelligence to the marksman and the scorers. The target consisted of a circular disc, divided into 5 targets for volunteers, at 200 yards' range, with iron mantlets attached to each, protected in which are a series of small discs, one of which looks at the word of command, steps to the front, passes to the left, and then to the right, and finally returns to the centre. The ringing of the bullet is heard; a moment, half a moment—not more—yet how long it seems before the flag denotes what is to be scored. A red-and-white flag is used for the bull's-eye, and one where all the marker censored in perilous proximity to the fatal White bullet—with a corresponding number of counters—denotes a miss. Quick as thought, as half deploring the congratulations of those of his own regiment who form a little party about to watch the shots, the marker, peering his next shot. If a blue flag shoots forth, then he is conquered; if a white flag shows, he draws a long breath, and is pleased at having escaped the flag a second time. Forth, then, after a brief pause of a second, he nods sure that the marker has been vigilant and is not mistaken, he half shakes his head, steps to the rear, sometimes looks down the barrel of his rifle as if in remonstrative inquiry, or "comes to the order," and gives the butt-end a hard knock on the ground as if "somebody's head ought to be punched, and he should like to do it." The vast increase in the list of entries at Wimbledon this year was met by additions in the facilities for shooting. Several new butts were erected; and in particular may be mentioned a butt target, or pair of targets, made to change position after every shot, so that width one was presented to the marksmen the other was being plastered for another aim.

MR. W. BELL SCOTT'S PICTURES ILLUSTRATIVE OF ENGLISH BORDER LIFE.

We have already briefly noticed the series of eight pictures by Mr. W. Bell Scott illustrative of the history of the English border now on view at the French Gallery. We take the opportunity of giving Engravings of two of them to illustrate a little further on the subject.

The circumstances under which these pictures have been produced are highly creditable to the discrimination and spirit of the gentleman who commissioned their execution, and if we might hope for a like example followed, would hold out a cheering prospect for English historic art. We may add that, should such commissions, supposing them to be renewed, should be carried out with the ability and success displayed on the present occasion, our artists might fearlessly claim the very highest rank amongst the schools of Europe.

It was some years ago that Sir Walter Trevelyan, Bart., of Wallington, Northumberland, commissioned Mr. W. B. Scott to paint the series of historical subjects, derived from the history of the country at various periods, and particularly in reference to the incidents which had occurred on the border, in the lives of border chiefs. These pictures, which are intended to decorate the central hall or saloon of Sir Walter's mansion above mentioned, having been completed in the locality which they serve to illustrate, and, in some instances, on the very spots where the incidents occurred, naturally present a freshness and an originality which would perhaps have been attained by an artist less acquainted with the country and its by-gone history and manners. In our previous two-paged notice of these pictures, Mr. Scott will, we opine, by this performance invest the local art of Northumberland with a dignity and celebrity which have not been yet surpassed by any provincial artists of the age, and with a spirit of emulation between the North and the South—such as exists already in matters of horticulture and sporting—will be found to lead to results upon which, in the true interests of art, the country may one day have strong reasons to congratulate itself.

The series begins with "The Building of the Roman Wall, under Hadrian," to keep out the savage Scots. Next comes "St. Cuthbert in his Island Cell," which is followed by "The South of the Firth—Edinburgh;" "The Dotheid of the Dames" a local incident described in a poetical entitled "The Spur in the Head, or, Sir Ralph Delaval;" another illustration of savage border life: "Grace Darling" rescuing the crew and passengers of the Forfarshire steamer in 1842; and, lastly, a picture of Northumbrian industry, in the present century, under the combined influence of coal, iron, and telegraphy. We have selected for engraving the two pictures which we have named, as lying in the list.

In "The Descent of the Danes on the Coast of Northumberland" we see, through the mist of a summer's morning, the host of the single-sailed ships of the sea-rovers approaching the land, within view, from the point of Tynemouth, now, in our own days, surmounted by a monastic ruin and a white lighthouse. The ships "from the Naze" and "from Gronguna," as the Danish ships were called, are already running ashore, and with what fierce energy may be seen in the Scandinavian figures collecting for a resistance evidently hopeless. In the foreground a temporary fortification is being erected, up to which women with their children and valuables are hurrying. Among these appears a priest carrying his candles, books, and other altar furniture. This composition displays great power of grouping and much skill in the concentration of much and various material within so limited a surface. The contrast between the elevated foreground and the distant vista of the sea below, studded with the dark sails of the fleets of the Danes, is perfect, is admirably conceived and most successfully realised.

"The Dotheid of the Dames" is a picturesque form of border customs in the days of moss-troopers and strong-handed reivers, when the maxim was pretty well carried out—

> Let him take who has the power,
> And let him keep who can.

The scene is supposed to be laid in the peel house of the Charltons, of Hesleyside, on the Tarset Burn. At the head of the banquet is the wife of one of the retainers, sturdy and daring fellows, as seated at the board, and on the stairs behind her, they undoubtedly were when they sat to their usual substantial fare, when the lady of the house enters with the great dish—empty, however, except that it contains a spur, a sign that the last riders and dashers have been there, and that they are in readiness for a ride for further supplies. The men sitting on the elevated steps see what is in the dish, but the lady herself, carrying the dish in her hand, looks at his wife with an inquiring gaze, as if he absent husbandest something was wrong; whilst she, with much assurance for a female, points to the spur as the sufficient answer. It would be for a moment to place the change on the board before him till she observes how he is disposed to take the joke. The combination of this group is highly dramatic not the least important figure—supposing it to be the wife of the master—being the well-favoured cook on the right hand of the master, who, being on a pilgrimage, is a guest for the day, and is little disposed to be put off contentedly with short commons. The low roof of the hall, suspended to which, and glaring down upon the company, completes the drollery of the situation. It is some seconds before the wife of the host, through the passage on the left, an attendant damsel, with a knowing smile on her face, is advancing with a goodly mess of soup or porridge. The rude fare of the host's table is in keeping with rushes, the homely furniture, and the quaint but not unpicturesque costume of the admirable housewife, with her long hanging basket of keys suspended at her side, give an air of great realness to this truly capital performance.

Mr. B. Scott's style of handling is bold and vigorous, his colouring always clear and forcible. He fails a little, perhaps, in respect of aerial medium, and therefore in perspective, in the due subduing of colours; but these are faults which would be less observable in pictures intended for wall-decoration than for the qualified lights of peculiar situations, than in ordinary easel paintings.

CIVIL LIST PENSIONS.

A list of all pensions granted between the 20th day of June, 1860, and the 20th day of June, 1865, has been laid before Parliament (by command of Her, e. 2), published on Monday, shows a total of £1100, which has been distributed as follows:—

Mrs Barbara Bell—In consideration of the eminence of her late father, Professor of Law in the University of Edinburgh, as a writer on a few of the brilliant circumstances, £50.

Mr. John Bourne—In consideration of the services rendered by him to art as a line engraver and author, and his advanced age, £75.

Mrs. Elizabeth Bowring—In consideration of the talents and intelligence evinced by her husband, the late Mr. L. Bowring, as Vice-Consul at Naples, especially in obtaining the release of certain British subjects unjustly detained by the Neapolitan Government, £50.

Mr. Edward Bradley—In consideration of his literary merit, £75 (in addition to his former pension of £100).

Dame Harriet Burdett-Coutts—In consideration of the late Sir Jubilee Benton's meritorious and gallant services in her Majesty's Navy, £100.

The Rev. Charles F. L. Cox—In consideration of his scientific attainments, the merits of his work a neo entomology, and of the injury to his sight from his literary labours, £75.

Mr. Dudley Costello—In consideration of the many years devoted by him to the public service, and the high character of his services, £100.

Mr. John Donaldson—In acknowledgment of the services rendered by him to the cause of scientific agriculture, £50.

Miss H. E. Fourdrinier, Miss M. A. S. Fourdrinier—On account of the valuable inventions of their father, the late Mr. Henry Fourdrinier, and of the manufacture of paper, and the destitute circumstances in which they are placed, £100.

Miss Mary Haydn (in addition to her two former pensions of £35 each—In consideration of the literary merits of her father, the late Mr. Joseph Haydn, author of "Dictionary of Dates," "Book of Dignities," and other works, £35.

Miss Julia Hall—On account of the favourable representations of her father, the late Mr. Leigh Hunt, to English literature, £75.

Miss Mary Ann Jerrold—In consideration of the literary merit of her father, the late Mr. Douglas Jerrold, £70.

Mrs. Ann Jessop—On account of her long and successful services in the work of education, £35.

The Rev. William Barnes—On account of his eminence as a linguist and author, and his advanced age, £70.

Relics of the Past.

COMETS OF OLD.

Comets, importing change of times and states,
Brandish your crystal tresses in the sky.
"Henry VI.," 1st pt., act. i., s. 1.

THE inherent prescience of the human mind to connect celestial phenomena with terrestrial events is strikingly evident in the history of all nations. Even in the Bible the stars are spoken of as instruments and ministers for the execution of the will of God. Moses predicted to the people of Israel, that the sudden appearance of a star in distinctly alludes to the belief that the sudden appearance of a star in the vault of heaven reflected the influence upon the fortunes of men and nations:—"There shall come a star out of Jacob, and a sceptre shall rise out of Israel, and shall smite the corners of Moab, and destroy all the children of Sheth." In like manner the birth of Christ is foretold by Matthew:—"There came wise men from the East to Jerusalem, saying, 'Where is he that is born King of the Jews? for we have seen his star in the East, and are come to worship him.'" From Isaiah we learn that there were "stargazers," and "monthly prognosticators" at Babylon and among the Chaldeans; and other writers inform us that the prediction of events in a person's history from the relative position of the chief planets at his birth was very common among the Jews. The word *comet*, however, does not occur in the sacred writings. The ancient Hebrews apparently had no conception of the now prevalent classification of the heavenly bodies into fixed stars, planets, satellites, and comets. But in Jude we have mention of "wandering stars," which it is highly probable refers to the comets, or "wandering light-clouds," as they were designated by Xenophanes. Diodorus Siculus also observes that the Egyptians could foretell earthquakes inundations, and "the return of wandering stars or comets."

In former times the influence of comets on mundane matters was supposed to be exhibited mainly in two forms—namely, as prognosticating the birth or death of great men, and as pestilential, or sometimes accompanying calamitous events:—

Gloucester. Give me leave
To tell you once again, that at my birth
The front of heaven was full of fiery shapes.
Shakespeare's "Henry IV.," 1st pt., s. iii., s. 1.

And the same author, speaking of the signs which are said to have heralded the death of Julius Cæsar, makes Calphurnia remark:—

When beggars die there are no comets seen.
The heavens themselves blaze forth the death of princes.
"Julius Cæsar," act ii., s. 2.

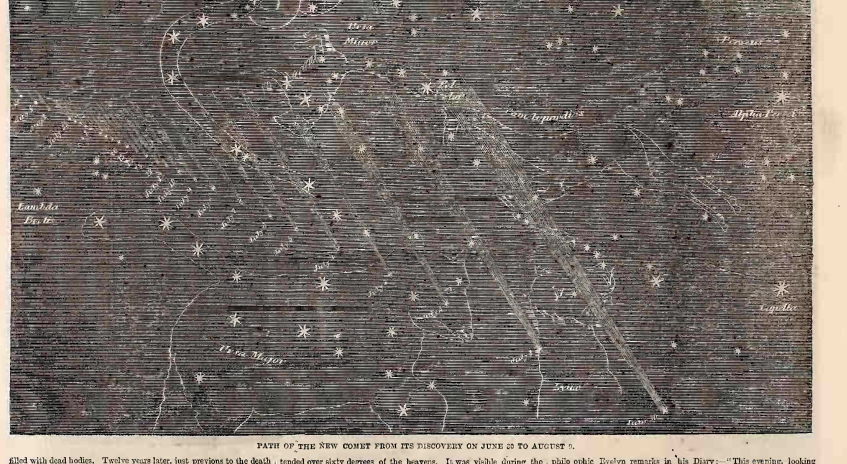
Among the evils ascribed to these ill-omened bodies were plagues and pestilence. Thus Hesiod—

Like the red star, that from his flaming hair
Shakes down diseases, pestilence, and war.
Pope's Translation ("Iliad," b. xix.)

So Milton, in "Paradise Lost":—

. . . . . and, like the comet, burns
In the arctic sky; and from his horrid hair
Shakes pestilence and war.

Such influence is attributed to them by many ancient writers. All historians record the occurrence of a terrific comet before the battle of Salamis, followed by a dreadful pestilence, which destroyed great part of the remaining army of Xerxes. The awful plague which desolated Athens in the second year of the Peloponnesian War, the symptoms of which are so admirably described by Thucydides, was likewise preceded by a comet. Such also is said to have been the case with the great plague of Rome, A.U.C. 353, when the Sibylline oracles were consulted, and, towards the close of the pestilential season, the festival of the Lectisternia was instituted to appease the wrath of Heaven. Other instances of plagues appearing in conjunction with comets are recorded by Livy, Justin, and Pliny. About thirty years B.C. Jerusalem was devastated by a pestilence which, according to Dion Cassius, followed the appearance of a comet. At the same time there was an overflowing of the Tiber, and an epidemic at Rome, following upon the severe winter and the phenomena of the heavens, to which Horace's well-known ode, beginning "Jam satis terris nivis," &c., alludes. The brilliant comet seen on the death of Julius Cæsar, and which popular superstition held to be the soul of the departed hero, appears by no less to have been the forerunner of a coming plague. Soon after the reign of Augustus a pestilence swept the Syrian provinces of Asia Minor, and during its prevalence an earthquake completed the destruction it began. The spirit of these calamities was supposed to have been a comet which visited the earth at that time, whose tail, it is reported, burnt down a dozen fine cities at one sweep. To this catastrophe Tacitus alludes in *Ann.*, ii., 47. Another still larger comet appeared A.D. 60 and on terrified Caligula that he fled in haste from Sicily. This comical wanderer was the precursor of an eruption of Mount Ætna, and of a famine and a pestilence which raged from Italy almost to India. The next great comet was seen A.D. 67, in the reign of Nero. Its appearance, according to Tacitus, was speedily succeeded by a frightful epidemic which carried off thirty thousand persons in so short a time that many of the houses were re



PATH OF THE NEW COMET FROM ITS DISCOVERY ON JUNE 30 TO AUGUST 9.

filled with dead bodies. Twelve years later, just previous to the death of Vespasian, another great comet, with an ominous length of tail, made its appearance, and was followed by the tremendous eruption of Vesuvius, which caused the destruction of Herculaneum and Pompeii.*

The spread of Christianity it may be thought must have diminished the belief in the portentous character of comets and "blazing stars." That such was not the effect the early Christian writers bear eloquent testimony. They tell us that in the year 590 a dreadful comet brought in its train a pestilence of which Pope Pelagius died, and that the half century following was signalized by innumerable comets, and all but universal plague. Eckhard asserts that St. Gregory at this time instituted a procession at Rome, and that, during its solemn march, upwards of eighty individuals composing it fell dead in the streets.

The more immediate token of a person being attacked by plague, according to Paulus Diaconus, was a fit of sneezing, and hence arose the custom of saying "God bless you!" to any one who sneezed. Gaping, also, was looked upon as a mortal sign, and it became a practice, which is still prevalent in Germany, for every person after gaping to cross himself.

About the period in question comets are frequently mentioned as inflicting dire disease on England. The one of 771 is said to have brought the plague to this country, of which in Chichester alone no less than thirty-four persons perished. That of 1097 is affirmed to have produced the earthquake of Syracuse and that disastrous inundation which formed the Goodwin Sands. A flaming meteor of 1101, we are taught, produced a "most destructive agueass of humanity," while one in 1264 was "fatal to the cats in Westphalia." The comet now so familiarly known as Halley's comet, and whose last re-appearance took place in 1835, was regarded with intense interest and apprehension when in 1305 it broke with unexampled splendour upon the world. This magnificent phenomenon paid a visit to our solar system in 14-6, when it is described as of unheard-of magnitude, and as having a tail which extended over sixty degrees of the heavens. It was visible during the month of June, and spread consternation throughout the whole of Europe. By the Christian world it was considered to presage the total success of the Turks under Mohammed II., who had just then taken Constantinople, and were advancing on Vienna. Pope Calixtus II., terrified for the fate of Christianity, directed the thunders of the Vatican against the baleful enemies of the Church, terrestrial and celestial; and in the same bull excommunicated both the Turks and the comet!† In order to perpetuate this solemn manifestation of the Church's power he, at the same time, ordained that its bells should be rung at noon, a custom still observed in most Roman Catholic countries. If we are to believe some Continental writers, it was to the comet on its visit in 1456 that we owe the devastating scourge called the "sweating sickness," or, *Sudor Anglicus!* The author of an old French treatise entitled "Traité de la peste" declares that this plague attacked in particular those who felt well and were in robust health, and that there did not occur a single instance of its killing a Scotchman, which he attributes to their "prudent way of feeding."

There is no doubt, however, that comets sometimes really did produce fatal effects. In June, 1402, one appeared in Italy which literally killed the famous John Galeas Visconti. The astrologers of the Prince had predicted that his death would be announced by a comet of extraordinary magnitude, and the celestial phenomenon had no sooner become visible than his illegitimate, proclaim from fright, sank to the ground and died. A fate somewhat similar befell Duke Sforza, of Milan on the appearance of the great comet of 1532. There are historians who have asserted that the Emperor Charles V. also died of fear upon the coming of the comet of 1556, but the statement has never been substantiated. It is probable, however, since these luminous apparitions were generally looked upon by Roman Catholics as warnings from Heaven against the dangers of Protestantism, that Charles V. was deeply stirred by their appearance. The Protestants of Germany, on the other hand, were equally alarmed from the belief that the comet of 1664 was directed against their faith. "So strongly was this felt, that to appease the anger of Heaven they had a medal struck bearing the representation of a comet and the words—'Ach, Herr, send uns nicht in deinem zorn!' (Oh, Lord, punish us not in thy wrath), on one side; and the inscription—'Dieser schreckliche Komstetern pusher ward den 16th Dec. 1664' (This fearful comet-star was seen Dec. 16, 1664), on the reverse. Some of these "comet-dollars" still exist in Germany, and are held of sovereign efficacy (when worn round the neck) against affections of the brain.

The belief in the supernatural influence of comets which formerly prevailed in this country was much the same as that of the ancients and of other modern nations in Europe. Under the date Dec. 12, 1680, the philosophic Evelyn remarks in his Diary:—"This evening, looking out of my window towards the west, I saw a meteor of an obscure bright colour, very much in shape like the blaze of a sword; the rest of the sky very serene and clear. What this may portend God only knows; but another phenomenon I remember to have seen in 1640, about the trial of the great Earl of Stratford, preceding our horrid rebellion. I pray God avert his judgments! We have had of late several comets, which though I believe appear from natural causes, and of themselves operate not, yet I cannot despise them. They may be warnings from God, as they commonly are forerunners of his animadversion." Nor is the present "enlightened age," exempt from the same superstitious apprehension of their influence. On the appearance of the comet of 1858, the Madrid journals announced that it had excited great alarm in that city, where it was considered a manifestation of Divine wrath, and a presage of war, pestilence, and affliction. In the New York correspondence of the *Sun*, alluding to the same comet, we read:—"The entire appearance is brilliant and dazzling, and, while it engrosses the attention and investigation of the scientific, it excites the alarm of the superstitious, who, as in ancient times, regard it as the concomitant of pestilence and the herald of war. Again, the Turkish correspondent of the *Morning Herald* wrote:—"The splendid comet now visible after sunset in the western horizon has attracted the attention of everybody. The public impression is that the celestial phenomenon is to be considered as a sign of war, and the astrologers, to whom appeal is made for an interpretation, make the most absurd declarations." Finally, the *Berlin Correspondent of the Times* informs us that the comet "served a priest not far from Warsaw with materials for a very curious sermon. After having summoned his congregation together, although it was neither Sunday nor festival, and shown them the comet, he told them that this was the same star that had appeared to the Magi at the birth of our Saviour, and that it was only visible now in the Russian empire. Its appearance on this occasion was to intimate to the Russian people that the time was come for it to spread over its wings and embrace all mankind in one orthodox and sanctifying Church. He showed them the star now standing immediately over Constantinople, and explained that the dull light of the nucleus indicated its sorrow at the delay of the Russian army in proceeding to its destination."

* The appearance of a comet was not, however, invariably believed to be the forerunner of evil. Seneca, "Nat. Quæst.," vii. 17 and 21, writes thus of the comet:—"Quem nec Neronis principatus letissimo valitudo ei qui comtes detexit infirmior."

† So called from an erroneous belief that the period when it was first observed by Halley was its original and only well-attested appearance. This comet was the first that has been calculated solely from European observations: the earliest comets of whose orbits we have any knowledge were calculated from Chinese observations, which extend back more than five hundred years before the Christian era. See Arago, in the *Annuaire*, 1836, p. 204.

‡ The contemporary description of this luminary, as usual, ascribes to it a malignant influence:—"Cometa horrendo magnitudinis visus est circa finis paschatis, quem secuta est pestilentia maxima."

The degree of LL.D. has been conferred on President Lincoln by Columbia College.

Mr. J. O. Fitzgerald, barrister of the Temple, has been appointed Judge in British Kaffraria. Mr. T. J. Hadelston, formerly Consul at Fernando Po, has been appointed consul at Rosario in the River Plate.

THE ROYAL AGRICULTURAL SOCIETY AT LEEDS—THE CATTLE AND IMPLEMENTS SEEN AT WORK FOR AWARD.—FROM A SKETCH BY OUR SPECIAL ARTIST.—SEE PAGE 68.

THE ROYAL AGRICULTURAL SOCIETY'S MEETING AT LEEDS.

ENGLISH agriculture has just celebrated its twenty-third carnival; and, when we find that 43,938 was offered in prizes, that the implement catalogue occupied 400 closely-printed demy octavo pages, and that there were a mile and a quarter of cattle sheds, we may well look back with wonder to its opening day, when only twenty-six shorthorns were marshalled on the Oxford meadow, when Earl Spencer took up the College chorus of

Here's to the cow,
And the two-bushelled plough,
And here's to the farm and the fork;

and the tones of Daniel Webster re-echoed through the quadrangle of Queen's. There was, however, one remarkable coincidence between the meetings. Twenty-three years swept the Isis from 39, and there were a mile and a quarter of cattle sheds, we may well look back with wonder to its opening day, when only twenty-six shorthorns were marshalled on the Oxford meadow, when Earl Spencer took up the College chorus of

Here's to the cow,
And the two-bushelled plough,
And here's to the farm and the fork;

and the tones of Daniel Webster re-echoed through the quadrangle of Queen's. There was, however, one remarkable coincidence between the meetings. Twenty-three years swept the Isis from 39, and the meetings. Twenty-three years swept the Isis from 39, and this week the Yorkshire Duchesses and the Oxfords had it all their own way. Mr. Booth had to bow to Mr. Douglas's herd in the former class, and Colonel Towneley, for reasons which were not concealed, declined to send any of his twelve entries. Upon 180 shorthorns came to their stalls; but, although the female formed a very memorable array, there was not one really striking animal among the bulls. Some of the decision-seen is always the case—were hastily cavilled at; but these who knew the judges felt sure that handling would be preferred to form, and gained the keenness of the decisions at once. Their task was so unique that when half-past one arrived two out of the seven classes remained unjudged, and the stewards were on the horns of a dilemma. Dinner—the first of the twenty-eight yearling heifers on parade before them, and watched every movement of hand and eye till the books came out. In the first of the twenty-eight yearling heifers on parade before them, and watched every movement of hand and eye till the books came out. In the first of the series were seen another long interesting trouble between the heifer calves, in which eight took part; while the Hereford men had a similar day of nervousness. No difficulty of any kind occurred to a cord and a policeman at each end of the row kept the judges from all intrusion; and we are glad to find that the experiment of placing the judges upon the course has gone far to allay the hobgoblin which has haunted them, and that the show on the first day may in future really receive itself into a great school of public criticism. The judges, who would gladly pay more, are anxious for it, because under the secret system they lose a chief of the interest; and judges are specially anxious because they hate to be misunderstood and "crabbed," as they always will be so long as the critics cannot see the cards "pulled out" and the scores in motion.

The aged shorthorn bulls numbered thirty-two; but Prince of Peascliffe, the second of last year, was absent, and Duke Airey and Lord Feversham's Skyrocket, who has never been at a great show before, followed in the footsteps of Sir Bibby, Fifth Duke of Oxford, Lancaster, and Knight of Kars among the reputed cracks. He has improved wonderfully since we saw him last August, and has rare quarters and handsome and great depth before; and, although he does not possess the grandeur of the Salisbury "big bull" John o' Groat, he quite overpowered the shortlegged Duke of York when they met in a direct class. The latter is one of the most beautiful heads we have ever met with, has one of the best backs we have seen, and is a fine handler; but his loin and back were not liked. The Duke of the Havens, was rewarded; and a brother of Prince of Prussia, who defeated the Royal winner, Field Marshal Duke of Cambridge, stepped to the front place. Mr. Jonas Webb's Earl of Hardwicke, who had been somewhat disfigured by an unavoidable operation, but who is a fine bull, and Mr. Hareus, and Mr. Cunningham's sons of Mr. Banks Stanhope, M.P., George I., earned the H. Cas; and among the six commendations were the wide-backed Scottish Grandeur, Prince Consort, Prince Arthur, and Prince Talegrand had no mention at all. Only two out of the forty yearling bulls were absent from the Bull Show-yard—Mr. Stratton's, which was beaten before the Duke of Oxford's, and Mr. Foster's, with Oxford's, and Mr. Foster's, with Oxford's, and with Oxford's, and with Oxford's, and

DEADLY AFFRAY IN NORTHUMBERLAND-STREET, STRAND.

An extraordinary affair, likely to end in the death of one person and shaking the life of another in prospect, startled the neighbourhood of Northumberland-street, Strand, yesterday week. The occurrence is as yet surrounded with much mystery which a judicial investigation will doubtless remove. The facts are so remarkable that we give them more in detail than is our wont in cases of violence.

About midday last Friday a man, bleeding from the neck and head, leapt from a first-floor window of No. 16, Northumberland-street, Strand, into a yard below, in which there are two privies. The man, who was but little hurt by his fall, thought himself not to risk his life, and flung to fetch a hackney coach. Before he brought him not to the police-station, he was charged with the murder of a woman in the room on the first floor of a house in the same yard. The woman was discovered still alive, but with her throat cut from ear to ear. The surgeon who was summoned, and attempted to secure him; but he broke away from them, and rushed into the passage of No. 15, from which he fled. He was overtaken, however, intent on capturing the supposed delinquent, passed into the passage of the house next door, and, coming out at the front door of No. 16, met him as he emerged from the entrance. They soon saw how severely he was wounded, and he very soon fainted from the effusion of blood. In a state of insensibility the wounded man—now known to be named Murray, to have been formerly a Major in the Army, and described as a discarded officer—was carried to Charing-cross Hospital, but the house was only one of ten directors, and that he could say nothing to a prescription from one of the surgeons. It was in this hall, at his request, that he gave him his name and address, he would take care to make his proposition known to his friends. The stranger however, remarked that the hackney coach was close at hand, and that, if Mr. Murray would accompany him thither, he would at once give him a decided answer. To this Mr. Murray readily assented, and Murray consented to accompany him, and was led by the stranger to a house not six doors off, known as Northumberland-chambers, Northumberland-street. According to the first floor, the stranger introduced Major Murray to the back room of some chambers in the occupation of Mr. Alfred Ubsdell, a young solicitor, appeared. Here he requested Major Murray to be seated. The Major seated himself on a sofa, and he opposite to him, and commenced writing on some papers. In a few moments he observed the stranger approaching him from behind, and he turned round, and discovered a stranger standing over him, a tall forward on the floor. His consciousness was not destroyed by the concussion, but he was powerless to prevent the stranger from cutting his throat. He kept silent. A lapse of time, brief though terrible, occurred at this juncture, and, before he could act, the fatal power of motion had been restored to his frame, and his consciousness of a severe blow upon his chestbone. At this juncture he made some exclamation, and the stranger, as if to stun him, struck him. The paralysed sensation caused by the first bullet, for such it was, that had struck the back of his neck and entered his throat, and the vertebral column passed off in a short time, and Major Murray, still lying on the floor, recovered sufficient strength to know that would prove his only chance of an instant when he perceived his assailant's back to be turned towards him, to rise hastily, and, springing to his feet, to fly at the fellow a blow on the back of his head which felled him to the ground. The struggle, as might be well imagined, was very severe, and ended in a long and fierce struggle for the possession of the tongs. Major Murray, badly wounded and bleeding profusely, was nearly a match for his powerful opponent, and at length, feeling his hold on the tongs relaxing, he caught up an empty decanter, which he struck with such unbridled as to invert a blow on the forehead as once more to fell him to the ground. Snatching the tongs from the prostrate man, Major Murray left the room, and, having first bolstered the wretched man with such force as effectually to render him powerless for further mischief, he had by unbolted and bleeding on the floor. Major Murray next endeavoured to effect his escape, but he found the door locked and withheld. He then made the sash of a window open, and, with the roar of the house and leaped into the yard below.

The *Morning Post* puts the following as the substance of a statement said to have been volunteered by Roberts. He admits that he had never before Friday last visited the Major's room, and adds that his conversation with that gentleman was commenced by himself in Hungerford Market, and that in fact, according to his account, the Major was the first company which he was anxious to engage on behalf of a client. He admits having invited Major Murray to his chambers, and stated that on his arrival there he (Roberts) shut himself in the back of the neck, and then attacked him with the tongs. On being asked whether the gentleman had given any provocation to Major Murray "shooting himself," Roberts says distinctly, "No." This is all that has been elicited from Roberts, for he has refused to sign the statement taken in connection with documents discovered in his chambers, no doubt to be said to be necessary for the police authorities to do so before the affair can has been ascertained.

Mr. Bodenger's chambers in Northumberland-street are on the first floor, and consist of a front and back drawing room, communicating by folding doors. A description of these rooms will read rather like a page from a French novel. The front room has originally been furnished in the most luxurious and costly style. On the walls are handsome drawings, and hanging on gilt cornices some brackets, supporting statuettes and copies from the antique. Round the room are ranged costly cabinets and inlaid tables, on which are all sorts of ornaments under large glass shades. It is not, however, until one has been in the room long enough to take stock of the furniture that the richness, for glasses, pictures, statuettes, and vases, even the very cabinets themselves, are discovered to be of the second-hand order. The gilding, the shades and ornaments are conveyed in this as if coated with a positive dye, and every highly polished figure which glitters on a copy of the Portland vase that stands on a sideboard in a corner are hardly distinguishable under the thick coat of dust that lies on the surface of the furniture, and the taste that has been bestowed upon its arrangement in the room. In a word, the room never been cleaned or dusted for years, since the things were first placed there many years ago. In the centre of the room is the table used by Mr. Bodenger's clerk to work, with his desk at the right hand, having an exceedingly handsome white marble marble-piece, which is marked with the dust. Almost immediately under the fireplace, and making a great mound that stretches out into the centre of the floor, are the waste papers piled up to the height of nearly two feet, and extending from the fire-rail, to accumulate uninterrupted. It appears to have been the habit of Mr. Roberts to allow the waste to enter his room, and there to accumulate with the dust and dirt have collected till the former half fill the front room and the the latter of which the room is full. Besides the waste papers, letters and papers scattered about, there is very little sign of a stranger in the room, and the only articles we can notice are a hat-brush and as dirty as the front. But the dust has here been beaten down and the glass and ornaments have been polished up. The mantelpiece is the centre—a centre where strong and angry men struggle to tear and beat each other from the room, and where they can solve the fatal question. The two wild beasts had been turned loose to kill each other in this apartment it could not be more marked traces of a struggle between two powerful men it does. The furniture is broken and overturned in hideous confusion; the walls, the glass shades, the vases, and dirty floor are all splashed with blood, and streaked and smeared with bloody fingers. One may almost trace where blows were struck and the blood splashed and spurted. Here and there all over the glass shades of the ornaments and doors of the cabinets it has fallen like rain, as if a bloody mop had been trundled round and round there.

General Schmaltzer, one of the defenders of Gaeta, has gained, at the late election in Basle, in Switzerland, one of the prizes of honour consisting of a magnificently-chased cup.

The *Austrian Gazette* says that the gold rose enriched with diamonds which the Pope offers to one of the Roman-born Empress in this year destined for the young Queen of Naples.

Letters Patent have been granted for the reversion of a great fire at Oxton, near the former post, on the 18th ult. One hundred and four houses and shops, seven chapels, one school, one Inn, the Governor's house, and the custom house, were destroyed.

THE MASSACRES IN SYRIA.—A letter from Damascus gives the following account of the Druse and Christian conflict on the 30th ult.:—"Proceeding down the street which was called 'Straight,' we turned into Dandelet's House, and, passing through the court-yard, we commenced running forth again into the same street, we continued a short distance on our way till we came to a house, which, standing isolated, appeared to open out passing into the Christian quarter. We, however, managed to get by him, and then a wide street, with a fine fountain in the centre, lay before us. And as the eye could reach it fell upon a heap of blackened ruins. We walked for a mile with charred skeletons of houses on each side of us; then, turning into side street, the same utter ruin met our gaze. We saw not a soul, except here and there a bag Arab driving his donkey before him, laden with the debris of the fallen houses. This is what the Turks call re-building a quarter! Through out the length and breadth of what has a year ago was for the handsomest part of the city not one single house is now standing. Greek, Latin, and Syriac churches and convents, European consulates, &c., were mingled in one common destruction. There were still remaining many traces of the former magnificence of the houses. Broken marble columns, and bits of sculptured pavements were thickly scattered about in the courtyards, and the walls in many places were richly inlaid with mother-of pearl and gold. Many houses still up buried under the ruins."

CHESS.

TO CORRESPONDENTS.

A. V. of Brussels.—An unexampled competition! Before the Black Pawns could have reached the extreme they would have made them occupy they must have captured thirteen at least of the adversary's men; and, as White still retains eight men and Black only four, there would be a total of twenty-five men.

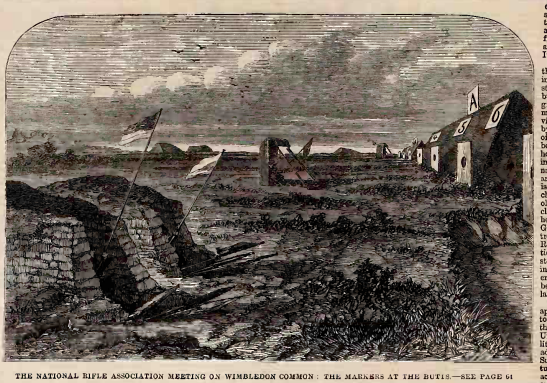
INAUGURATION OF CAVOUR'S MONUMENT AT PISA.

FUNERAL ceremonies and other such like modes of expressing the feelings of the people for the loss of the great Italian Statesman have been common, almost universal, in all parts of the peninsula. There is scarcely a little obscure townlet among the wood slopes of the Apennines—in those parts of Italy where Italians can so speak their thoughts—which has not sought to honour itself by some formal participation in the national honours paid to Cavour's memory. But nowhere has the feeling of the people shown itself in so picturesquely significant a form as in the time-honoured university city of Pisa. In no part of Italy, not even in his own Piedmont, has the departed Statesman been mourned with more true and genuinely popular sympathy than in Tuscany. That privileged and choice garden of Italy, the true heart and kernel of the country, and of strictly Italian feeling, has never been much trembled by the turbulence and mischievous theories and excitations of the red party. The superior cultivation and proverbial Tuscan good sense of that part of Italy has instinctively rejected them. But special circumstances have concurred to render the Pisan ceremonial especially remarkable. Pisa has an ancient university, with a large body of professors and teachers attached to it; it has, also, one of the finest cathedrals in Italy, and a Cardinal Archbishop; and lastly, though very far from least in importance on this occasion, Pisa possesses in her celebrated Campo Santo the most storied, the most remarkable, and the most beautiful burying-place in Europe. And all these peculiarities in different ways contributed to the remarkable character of the Pisan ceremony on the 21st of June.



THE NATIONAL RIFLE ASSOCIATION MEETING ON WIMBLEDON COMMON: THE MARKERS AT THE BUTTS.—SEE PAGE 61

When the university and city of Pisa manifested the intention of honouring the memory of Cavour by a public ceremonial the Archbishop declared that no function of any kind should be performed in the Cathedral, or in the next largest and most important church of the city. On remonstrance being made, and a reason demanded for a refusal to permit so ordinary a religious function as a mass for the soul of a person who had died with due administration of the sacraments of the Church, the Archbishop answered that, as he had reason to believe that Count Cavour had died a Christian, he would permit a mass to be celebrated in the little church of the Carmine. The theory on which a decision that a mass might, under such circumstances, be said in a small church and not in a big one can rest must be left to the learned in canon law. Such was the Archbishop's decree; coupled, however, with the condition that neither the university nor the municipality should attend the function in their corporate and public capacities. The two bodies in question declared their determination to act in defiance of this prohibition. In that case, responded the Prelate, the celebrating priests will have orders to abstain from pronouncing the blessing, with accompaniment of holy water, incense, &c., in the public manner usual on similar occasions. On further demand for the motives of this privation, the two corporations were told that, as being sabres and shedders of the doings which had deprived the Pope of his temporal dominions, they must be held to be excommunicated persons. With this decision the university and the municipality seem to have been quite contented. The funeral service was performed in the little church of the Carmine, the professorial body of the university in their black gowns, and the corporation in their scarlet gowns, with their respective beadles, and all other State appurtenances, did attend, and did retire at the end of the service unblessed, un-holy-watered, and unincensed.

But, if the Cardinal had it all his own way at church, the two unblessed corporations determined to have a far more striking and significant celebration of their own at the Campo Santo—a celebration which should be in no wise ecclesiastical but wholly civil in its nature.

Few persons have ever been in Italy without seeing the Campo Santo of Pisa; and, assuredly, not one who has ever seen it will have forgotten it. It is far too well known for it to be necessary that we should describe the unique building. This largest, most magnificent, and most beautiful of all the cloisters ever built was a place of special sanctity to mediæval Italy from the fact that the soil within its quadrangle was brought by the old Pisan galleys from the Holy Land that the citizens of the Republic might lay their bones in that hallowed earth. And to modern Italy the spot is hardly less venerable from the inestimable treasures of early art which adorn its walls, and from the presence there of the ashes and memorials of many of Italy's greatest men.

But henceforward, as long as those gloriously-painted walls and inimitably graceful arches shall stand, the most sacred spot in the building so wondrously filled with great memories of all sorts, the most frequently and most fondly visited by every son of Italy, and by every lover of his kind, be he of what clime or race he may, will be that bit of westward wall which holds the bust of Cavour, and is inscribed with the record of a nation's gratitude for his services and desolation at his loss. There is the place, well and significantly chosen, just underneath those huge old chains, which once served to close the Port of Pisa against her neighbouring enemies; which Genoa victoriously carried off as a trophy of her triumph over a sister Republic, and which, as an inscription testifies, were solemnly restored to Pisa by her former enemy, in token and celebration of the new era of Italian unity and friendship between all the children of the land.

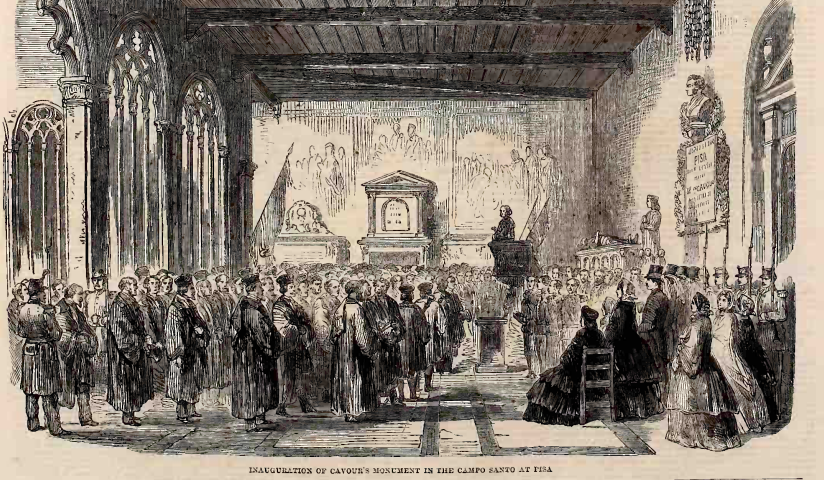
The task of pronouncing an appropriate oration was intrusted to Signor Villari, the Professor of the Philosophy of History in the University, and well known to the literary world of Europe by his admirable history of Savonarola. Such a man might be trusted to turn such an occasion to the best account. His oration was much applauded, but the passage which kindles from an ardinoe com-

drew forth the most enthusiastic

posed mainly, it is to be observed, of university professors and city magistrates, was that in which he spoke of the great statesman's efforts in favour of liberty of conscience.

That such an occasion, so celebrated in such a place, must have been in no ordinary degree striking and moving will be easily felt and understood. For the coup-d'œil as it presented itself to a looker-on we must refer our readers to the Engraving from the sketch taken on the spot by our artist. He has chosen the moment when the long procession of academical and civic dignitaries, passing up the centre of that matchless cloister, defiled, on turning into the western corridor, into the places prepared for them in front of the speaker's rostrum. On his left hand, as he stood facing eastward, is the newly-placed bust, with its inscription beneath it. Around, on the walls, or isolated on pavement, are the thickly-placed memorials, mortuary or other, of the every epoch of Italy's past life and past greatness in every department.

It must in truth have been an uninspiring speaker who should have failed in eloquence in such circumstances, and a dull and unimaginative audience which should not have been deeply moved by his words, and the associations of the time and place. But neither one nor the other marred the full significance of this truly unique ceremony, and few of those who had the good fortune to be present will ever forget the placing of Cavour's bust in the Campo Santo of Pisa.



INAUGURATION OF CAVOUR'S MONUMENT IN THE CAMPO SANTO AT PISA

LONDON: Printed and Published at the Office, 198, Strand, in the Parish of St. Clement Danes, in the County of Middlesex, by GEORGE C. LEIGHTON, 198, Strand, aforesaid.—SATURDAY, JULY 20, 1861.

THE ILLUSTRATED LONDON NEWS.

No. 1100.—VOL. XXXIX.] SATURDAY, JULY 27, 1861. [TWO SHEETS, FIVEPENCE

THE PRESIDENT'S MESSAGE.

EUROPE is suffering from an overproduction of Presidents' Messages. Instead of the ordinary rate of one a year, the last seven months have brought us three Messages and one Inaugural Address, all on the same theme, and each one differing materially in its conclusions from all the rest. First, there was Mr. Buchanan's Message, declaring against the constitutional right of secession, but favouring the right of revolution, and elaborately proving that the Constitution gave no power to either President or Congress to "coerce" a State. Secondly, there was Mr. Lincoln's Inaugural, denying both the constitutional and revolutionary right of secession, affirming the right of using force to regain possession of the forts and arsenals, but disclaiming any intention of subjugating a State or transcending by a hair's breadth those limits which the Constitution imposed on the executive branch of Government. Third in order came Mr. Jefferson Davis's Message to his Congress, repudiating the idea that there was any revolution (much less rebellion) at all. According to him, Secession was a reserved right, and its exercise had been as legal and constitutional as any normal operation of Government. Latest of all, we have Mr. Lincoln's second manifesto, in which he admits having ventured upon measures which, "whether legal or not, were ventured upon under what appeared to be a popular demand and a public necessity, trusting then, as now, that Congress would readily ratify them." There is no longer any squeamishness about not invading or subjugating a State, and there is an entirely new view of the relations between the States and the Union—namely, that the latter created the former, and not the former the latter, as was the universal previous opinion. Nor is this all. On the 20th inst. the Confederate Congress met at Richmond, unless, indeed, the sanguine anticipations of the Northerners have been realised and Richmond was then in their hands. The reassembling of this Congress will have extracted another Message from Mr. Davis, who will hardly fail to improve the opportunity to demolish in the eyes of the world the novel constitutional theory of Mr. Lincoln. In the complicated and interminable suit of "Jarndyce v. Jarndyce" none of the advocates retained could speak for five minutes on the case without being irremediably at issue with every other advocate on every point of fact and law. It is the same in the complicated and costly suit of South v. North, only that in this there seems to be superadded an inability in any leading counsel to be consistent even with himself.

However much they may differ in their premises and conclusions, all these constitutional argumentations have a wonder-

THE CIVIL WAR IN AMERICA: CAPTURE OF A UNITED STATES' DRAGOON BY GUERRILLA HORSEMEN OF VIRGINIA.—FROM A SKETCH BY OUR SPECIAL ARTIST.—SEE PAGE

ful family likeness to each other. They are all evidently the offspring of the legal mind. They are all plentifully charged with splendid humour against the representatives of the other side. Their utterers seem willing to go over the same ground again and again, but the court of public opinion to which they appeal is fast settling down to the conviction that this part of the case has been dwelt on long enough.

The allusion of the President to the foreign relations of the country will be reassuring to the soberer portion of the Americans of the North, and is couched in terms not offensive to the nations most nearly connected with the United States. The inkling he gives of his future policy towards the Slave States is hardly definite enough to satisfy anybody. As it is, perhaps, the most important passage in his Message, we quote it entire:—

Lest there be some uneasiness in the minds of candid men as to what is to be the course of the Government toward the Southern States after the rebellion shall have been suppressed, the Executive deems it proper to say it will be his purpose then, as ever, to be guided by the Constitution and the laws, and that he probably will have no different understanding of the powers and duties of the Federal Government relatively to the rights of the States and the people under the Constitution than that expressed in the Inaugural Address.

That "probably" will appear ominous to the Southerners and their sympathisers in the neutral and Northern States. It looks as if Mr. Lincoln felt that another "popular demand and public necessity" might arise which would compel him to act differently towards the defeated rebels than his unbiased judgment would prompt, and he has lately received a lesson on the inexpedience of making unqualified pledges which the storm of popular passion and the march of events render him unable to abide by. Quite as significant as anything he says is his utter silence about slavery. The word does not occur from beginning to end. This silence harmonises with other symptoms of Northern public opinion, from which we gather that the war is not to have any anti-slavery tendency. The Republicans have made a tacit compromise with the Democrats. The latter will continue to support the war, provided it remain strictly one for the Union, for the flag, for territory, for empire; and, as a price of this indispensable support, the Republicans consent not to give an anti-slavery character to their policy. The disappointed parties will be those Abolitionists proper who grave countenance to the war, not because they wish to reduce the Union within narrower limits than they had always denounced, but because they indulged the hope that the war must inevitably terminate in the liberation of the enslaved race.

The departmental reports which accompany the President's Message are more than usually interesting. The Secretary of War states that there are 235,000 men in the field. For proper exultation with which he makes the following confession is no more than what is warranted by the facts of the last three months:—

At the present moment the Government presents the startling anomaly of being embarrassed by the generous outpouring of volunteers to support its action. Instead of labouring under the difficulty of remunerative inducements, the want of which has in former times in other countries rendered it necessary to resort to forced conscription, one of its main difficulties is to keep down the proportions of the force which it from swelling dimensions would make the force required.

There is manifestly not only no lack, but a superabundance, of men. But what as to money? For this we must consult the lucid report of the Secretary of the Treasury. He wants for the current fiscal year 320,000,000 dollars. Of this he proposes to raise by taxation only one-fourth; the other three-fourths are to be supplied by loans. This would be deemed an improvident way of beginning a war in Europe; but, considering that the National Debt of the United States is only 90,000,000 dollars, the Northerners are, perhaps, entitled to more latitude in the way of borrowing than could decently be claimed by any more prodigal nation whose ancestors had long since sown all the wild oats there were to sow. The Secretary of the Treasury of his own free will does not anticipate the necessity of a single new tax; but the Financial Secretary does not proclaim any plethora of cash. On the contrary, the multitude of shapes which he gives to his loan proposals, the desire to make them popular, the high rate of interest offered—amounting in the case of the "national loan" to seven and three-tenths per cent—show that he is far from confident in the strength of his position. Scrutinising the report more closely, we discover a confession that the capitalists have failed him. United States' Six per Cents are now selling at fifteen per cent discount, and the Secretary owns that he has been unable to get any bids for a new loan at par, and only very small quantities at rates varying from eighty-five to ninety. "It needs no further argument to work the conviction that, under the existing laws, little or nothing of the required sum can be realised." The moneyed men having failed him, he appeals to those of small means. He proposes a national bank on the European pattern, in Exchequer bills of the low figure of fifty dollars. He also hopes to draw upon the resources of British capitalists by offering to issue bonds in sterling money to bear seven per cent interest, payable in London. It must have gone hard with a patriotic Secretary before he could have brought himself to apply so high a rate; but it is another indication of the low estimate he places on the patriotism of the men who, with a larger amount of money in their banks wanting investment than was ever known before, demanded on a recent occasion twelve and even seventeen per cent from their Government at a moment of danger, and when it was at their mercy.

The present war is a people's war, and must be supported, if at all, by the people's money. Will it be so supported? This is the great question of the day. Will the popular loan be as successful in the United States as in France? It remains to be seen. But if it shall prove a failure the exhibition of northern patriotism will have been partial and incomplete. Severe critics will say myriads were eager to fight, but few were willing to pay. They will account for the multitude of recruits by pointing to the state of the American labour market. A very busy population suddenly found its ordinary employments stopped by a political crisis. That crisis, instead of coming to an end, only became more severe and widely extended. The working classes became moody, and began to suffer. Suddenly the Government called the unwillingly idle and suffering people to arms. What wonder that they rushed to this recruiting depôts? What other resource had they left? This is the construction cynical critics will put upon the popular uprising if the national loan fails; and even candid and friendly minds will be unable to distinguish to how great an extent the genuine patriotism which caused an army of 400,000 volunteers in three months was alloyed by less chivalric impulses.

FOREIGN AND COLONIAL NEWS.

FRANCE.

The *Moniteur* of Thursday publishes a decree appointing commanders for ten men-of-war.

The *Paris Monitor* contains a semi-official article refuting the assertions of the *Patrie*, in reference to the cession of Sardinia, which, it says, "has already been so many times denied." It concludes thus:—"The *Patrie* disseminates ideas which are altogether personal, and has not received, nor does receive, any communication from the Government."

The Duke de Broglie has dropped the action which he had commenced against the Prefect of Police, all the copies of his pamphlet seized by the police having been restored to him.

Mires has lodged an appeal against his sentence. It will be heard on the 12th of August.

The funeral of Prince Adam Czartoryski took place at noon on Monday in the midst of a large crowd of spectators.

SPAIN.

The Queen has arrived at Valladolid, and has been warmly received. The daughter of the Duke of Montpensier is ill at San Lucar.

PORTUGAL.

The Cortes have commenced the discussion of the Budget.

The Patriotic Society is still continuing to hold its meetings for the purpose of political agitation.

The Emperor has expressed his intention of being present at the coming exhibition at Oporto.

The recent rains and damp weather have done considerable damage to the grapes throughout Portugal.

ITALY.

King Victor Emmanuel gave an audience to Count Fleury on Thursday morning, when he had read the Pope's letter brought by the Count, the King is reported to have said, "I am happy to see that my august ally approves the line of policy which my Government has followed. The good will last year displayed by the Emperor in favour of Italy will joy." The Count has been decorated with the Grand Cordon, the municipality of Turin has ordered a procession and a torchlight procession in his honour, and a visit has been paid to him by the Premier, Baron Ricasoli.

General Cialdini is taking active measures with the bandits or insurgents in the Neapolitan provinces. He has ordered 15,000 volunteers from the National Guard to Naples. Cavalotti, the well-known several Garibaldian officers have accepted appointments. Thirty thousand rifles have been ordered to be distributed to the National Guard. The brigands concentrated at Montefalcone have been hunted.

The Pope held a Consistory on Tuesday, and delivered a short allocution, in which he complained of the conduct adopted by France for her maintenance of the army of occupation in Rome, but, at the same time, refused to declare which Power whom he alluded as "the enemies of order" will make of the course which France has pursued in recognising the kingdom of Italy. The despatch which contained this information does not say what is to the state of the Pope's health.

PRUSSIA.

Deputations are constantly arriving at Baden to congratulate the King on his escape, and some of the neighbouring German Courts have sent special missions, among which that of Prince Napoleon sent an autograph letter. A Te Deum has been ordered to be celebrated in all the churches in the kingdom. It still appears that Becker had no accomplice, and that a morbid wish for notoriety prompted the attempt. He does not want for intelligence: a short time since he was rewarded for his gallantry in the fire with a medal and administrative matters. The King's health continues good. He has given a sum of 5000 florins to the poor of Baden as a thank-offering, and it is said desires that Becker should not be executed.

AUSTRIA.

Count Moriz Esterhazy has been appointed Minister without portfolio.

The Emperor Francis Joseph's rescript in reply to the Hungarian Diet's address was read on Monday to both Houses at Pesth. In the Lower House, which was crowded with members, it was followed by with manifest impatience, and a resolution was passed ordering the rescript to be printed, by the Upper House only a few members were present, it was read amid profound silence.

The rescript commences by stating that the relation of Hungary to the whole monarchy is and for three centuries has been, *de facto*, a real union, as far as war, finance, and foreign affairs are concerned; and that when the Pragmatic Sanction was granted to the entire constitutional necessities of the whole monarchy were naturally taken into consideration. The independent internal administration of Hungary, he says, is not in the least endangered, but on the contrary, will be strengthened. The laws of 1848 cannot be re-established, because they are incompatible with the present institutions. The Emperor proposes to proceed to a revision of these laws; to send representatives to the Council of the Empire in time to take part in the financial discussions, which will occur in October; to come to an understanding with the Croatian Diet in reference to the relation of Croatia to Hungary; and finally, to grant to the Serbs and Wallachs the use of their national language and the development of the non-Hungarian inhabitants. The rescript declares the union of Hungary with Transylvania to be final. "At present impracticable," and says:—"The affairs of Servia shall be arranged on the basis of the resolutions of the Servian National Congress. I am willing to renew the act of succession to the Hungarian Ferdinand, because Hungary is comprised in Austria." In conclusion, the rescript announces the approaching the occasion of the coronation of Francis Joseph as King of Hungary.

An Imperial decree was published on Thursday dissolving the Diet of Hirza on account of its refusal to send representatives to the Council of the Empire, notwithstanding the repeated request of the Government. The same decree orders new elections for the Diet.

RUSSIA.

General Ouchakoff, in reviewing some of the regiments of Volhynia is reported to have addressed them in a speech of a singularly inflammatory and hostile character. He announced that "a revolution was at hand," reminded them that to do the will of the Sovereign is the soldier's duty, and threatened the punishment of the "seditious" papers, such as the *Kolokol*, the organ of Russian liberalism, published in London. The General alluded to the recent massacres in Warsaw as "merited chastisements."

The opening of the united sections of the new Polish Council of State has taken place at the Palace of Warsaw. General Sukhozanetzki introduced the proceedings by a discourse, in which he expressed a hope that "a new era of prosperity" is about to dawn upon the country.

The Russian Government exercise new celebrations in the churches of Warsaw in honour of the late Prince Adam Czartoryski, and the demonstration of popular feeling was intense and universal.

Great crowds of people assembled on Sunday before the residence of the English Consul at Warsaw, and deposited bouquets of flowers, amid shouts of "Long live Queen Victoria!"

CANADA.

The elections for the Canadian Parliament are nearly over. Parties are very equally balanced, but the Ministers so far have a slight majority.

The entire part of the province was visited by a sharp shock of earthquake on the 11th inst. It was felt severely at Ottawa city, chimneys being shaken down and walls split.

LATEST NEWS FROM ABROAD.

The following telegrams were received at Mr. Reuter's office yesterday (*Friday*):—

ITALY.—Naples, July 24.—A Bourbon committee, presided over by Monsignore Cicentampo, has been discovered at Pontlipo. Letter registers, containing the names of the confederates, and a large sum of money, have been seized. The Monsignore and five accomplices have been arrested. The Naples journals affirm that the news from Calabria is serious.

TURIN, July 25.—The article relative to the loan, which appeared yesterday in the *Opinione*, was not inspired by the Government. The news is confirmed that General Cialdini has ordered the troops to shoot only those insurgents who are taken with arms in their hands.

THE CIVIL WAR IN AMERICA.

By the arrival of the Bina at Queenstown, and the Nova Scotian at Londonderry, we have received news to the 13th inst.

BELLIGERENT OPERATIONS ON SEA AND LAND.

The Confederate ship-of-war Sumter ran the blockade off the port of Charleston, and escaped to sea. The privateer Jefferson Davis has captured five Northern vessels off Cape Hatteras, and sent them into unblockaded Southern ports. Six revenue-cutters have been dispatched from New York and Boston in pursuit of these marauders.

On land the fighting has been confined to General M'Lellan's division in Western Virginia, and General Lyon's in Missouri. The former division attacked the intrenched camp of the Confederates, numbering 3000 men, at Beth Monticatty, near Beverley. The Confederates were routed, and all their guns, camp equipage, and waggons were captured. Sixty Confederates and twenty Unionists were killed in the encounter. In Missouri a battle occurred at Carthage on the 5th inst., 2500 Federalists attacked 4000 State troops, and retired with a loss of eight men and forty-five wounded.

On the 12th Colonel Smith rested another body of State troops at Monroe, Missouri.

General Patterson is still at Martinsburg, where he has received large reinforcements. General Johnson, at the head of 16,000 Confederates, is stationed at Bunker's Hill, a place seven miles south of Martinsburg.

CONFEDERATE STATES.

No one is allowed to leave Richmond in any direction without a passport.

Colonel Taylor, who had been sent with despatches from Mr. Davis to Mr. Lincoln under the protection of a flag of truce, was sent back without an answer, his communication being of too frivolous a nature. It is supposed that it related to an exchange of prisoners.

WASHINGTON.

Congress reassembled on the 4th inst., Senator Johnson, of Tennessee, and five representatives from Western Virginia, were the only members present from any portion of the seceding States. The President's Message was received with cheers. We give this important State paper in full in the Supplement at page 96.

Both Houses of Congress are busy at work legislating everything the President did during the recess, and passing such measures as the necessities of what the Cabinet demanded. In pursuance of this policy Congress has determined to confine nothing at this Session but the naval and military appropriations, and the financial measures connected therewith.

A resolution passed the House of Representatives calling on the President for the correspondence which has taken place in consequence of the recent arrest of Messrs. Mason and Slidell, on board the steamer of San Domingo. The President replied that it was not advisable to produce the correspondence at present.

On the motion of Mr. Lovejoy, of Illinois, a man of Radical Anti-Slavery opinions, the House passed, by a vote of 92 against 58, the following resolution:—"That in the present contest it is not in fact in the part of the duty of the soldiers of the United States to capture or return fugitive slaves." 2. "That the Committee on the Judiciary be instituted to inquire into the expediency of repealing the law called the 'Fugitive Slave Law.'"

NEUTRAL STATES.

A State Convention of the people of Delaware, held at Dover, to consider the position of that State towards the contending Powers, passed resolutions favouring a recognition of the independence of the Confederate States as preferable to the continuance of civil war, and expressing a fear lest the decisions and measures of the war party should lead to the subversion of the State Governments, and the erection of a consolidated Government on the ruins of the Federal Constitution.

The Baltimoreans are awed into quiet by the military occupation of their city by General Butler's troops.

In St. Louis the printing material of a States-rights' journal has been seized by General Lyon, the Federal commander.

NORTHERN STATES.

The New York merchants have held a meeting to petition Congress to pass a bankrupt law.

The Connecticut Legislature has refused to ratify a constitutional amendment, passed by a previous Legislature, which conferred the right of suffrage on coloured citizens. The amendment is consequently lost.

The wife of Professor Longfellow, the poet, was burnt to death at Boston on the 10th.

At Madrid two warehouses at the Madrid Station of the Northern Railway were destroyed by a bombshell. The Royal trade and army carriages were burnt.

The Second Chamber of Holland, in its sitting of Tuesday, unanimously agreed to the bill authorising the Government to pay to Hanover the sum of 840,000 German thalers for the claims of that State.

The French exploring expedition, which left Panama in April to cross the Isthmus of Darien from the Pacific side, to make investigation as to opening a ship canal, has returned to Panama on Juan Diaz, unsuccessful in its object, owing to heavy rains.

A magnificent sword, value £300, brought by the Pera as a gift from the inhabitants of Melbourne, Australia, to Garibaldi, was forwarded by the last Italy steamer to Sir James Hudson, at Turin, to be sent to Caprera.

A Parliamentary return gives the estimate of the sum required to be voted in the year ending March 31, 1862, for the military operations on the late naval and military operations in China, beyond the ordinary grants for navy and army services, at £1,000,000.

A fire broke out yesterday week in the property-rooms of the Grand Opera, Paris, and destroyed property the value of which is estimated at one million of francs. Several persons received slight injuries or lost clothes. The performances of the season will not, however, be interrupted, as all the scenery required for the performances has been conveyed to the Théâtre Royal Italien.

The Argenta, of Carlill, bound from the Cape to Matilla, foundered at sea on Lady Day, from a leak. Just as she was making the Straits of Sunda, Captain Hunter, knowing that the vessel must sink off the coast of Sumatra, got his boats ready, and landed them all safe the following day. The sum of £610 was specially subscribed for the captain to purchase a schooner and medals, so as to present the latter with a gold chronometer.

The Great National Brass Band Contest was held on Tuesday and Thursday at the Crystal Palace. On the former days there were more than twelve thousand persons present, and on Thursday there were upwards of seven thousand from all parts of the country. After playing separately from seven o'clock in the morning until two in the afternoon, the bands were, under the leadership of Mr. Enderby Jackson, performed the Hallelujah Chorus, the Anvil Chorus, and the National Anthem. The prizes awarded were as follows:—The 1st prize to the 3rd West York Volunteers; the 2nd to the Leicestershire Volunteers; the 3rd to Mr. Harrison's band; the 4th to the 15th Durham Volunteers (the corset-playing of which was exceedingly good); and the 5th to the Stanhope band.

COMPENSATION FOR ACCIDENTS ON RAILWAYS.—On Tuesday there was a meeting of the representatives of the principal railway companies, to consider what steps shall be taken for accidents on railways. The Earl of Carnarvon, chairman of the Great Western Railway Company, was in the chair. After some discussion a resolution was passed appointing a committee of twenty-one of the principal shareholders of railway companies, three to be a quorum, to consider the whole subject, to prepare a bill for the amendment of the law of compensation for accidents, with a view to the amendment of the law next session, and to report thereon at a future meeting.

THE COURT.

The Queen received their Royal Highnesses the Duke and Duchess de Montpensier on a visit at Osborne at the close of last week.

The Crown Princess of Prussia has returned from Baden-Baden, whither he had gone to visit his father on the evening of the 18th inst.

On Saturday the Queen drove out, accompanied by Princess Helena, Princess Louise, and Prince Leopold, and attended by Lord de Ros and Prince Arthur rode on horseback. The Prince Consort, the Crown Prince and Princess of Prussia, and Princess Alice visited the Royal Military Hospital at Netley.

On Sunday Divine service was performed at Osborne by the Rev. C. Prothero, before her Majesty, the Prince Consort, the Crown Prince and Princess of Prussia, Princess Alice, Helena, and Louise, Prince Arthur, and Prince Leopold.

On Monday the Queen and the Royal family walked in the grounds of Osborne.

On Tuesday the Queen, accompanied by the Crown Princess of Prussia and Princess Helena, drove to Ryde. The Prince Consort, the Crown Prince, and Prince Arthur came over from Cowes in the Royal yacht Fairy, and went over the Gosport lines.

On Wednesday the Queen, the Prince Consort, the Crown Prince and Princess of Prussia, and Princess Alice drove over to Newport.

On Thursday the Queen held a Privy Council. There were present Her Prince Consort, Earl Granville, Viscount Palmerston, Sir G. Lewis, Sir G. Grey, the Right Hon. E. Cardwell, Earl St. Germans, Viscount Sydney, and Earl Spencer. At the Council Sir Robert Peel, Bart., was sworn in a Privy Councillor, and took his seat at the Board. Viscount Palmerston had an audience of her Majesty. Sir George Cornewall Lewis had an audience, and received from the Queen the Seals of the War Department, which he delivered up to her Majesty the Seals of the Home Department. Sir George Grey had an audience of her Majesty, and received from the hands of the Queen the Lancaster Sir George was sworn in Secretary of State, and received the seals of office. The Right Hon. Edward Cardwell had an audience, and received from the hands of the Queen the Seals of the Colonial Office. Earl Granville had an audience of her Majesty. After the Council the Ministers, accompanied by Lord Clarendon, left Osborne on the same afternoon, returned by special train on the South-Western Railway to town.

Their Royal Highnesses the Duchess of Cambridge and the Princess Mary have arrived at Baden-Baden. The Duchess of Hamilton has placed her children at the Duchess of Cambridge's disposal during her Royal Highness's sojourn at that watering place.

His Royal Highness the Duke of Cambridge, the General Commanding-in-Chief, held a levée on Monday afternoon at Horse Guards.

The Baroness Brunnow gave an elegant ball on the 19th inst. at Chesham House, in the noble apartments of which, furnished with Imperial magnificence, the Baroness received the Corps Diplomatique and a large number of the aristocracy of the metropolis.

The Duke of Buckingham is in a precarious state of health. The last accounts received gave a most favourable view of his Grace's illness, but only the night previous he was considered in his recovery.

The Earl of Wilton leaves town on Monday next for Cowes, Isle of Wight, for yachting season.

Viscountess Palmerston will have an assembly this evening (Saturday) at Cambridge House.

The Duke gave his annual dinner to the principal clerks and officers of the Board of Commissioners.

The marriage of Lady Katharine Grey Egerton and the Hon. Henry Glyn, eldest son of the Earl of Egerton, was solemnised on Monday at St. George's, Hanover-square. The marriage of Miss Fitzroy, eldest daughter of Sir John and Lady Elizabeth Fitzroy, to Lieutenant-Colonel Hamilton, of the Royal Artillery, to Major the Hon. Robert Baillie-Hamilton, second son of the Earl and Countess of Haddington, took place on the 18th inst. at St. George's Church.

Approaching marriages are announced between Miss Vavasseur, eldest daughter of Mr. William Vavasseur, M.P. for Windsor, and Mr. George Augustus Sala, of Langham-place, Regent-street; and between Miss Turton, C.B., R.N., lately in command of the Argonaut, and Miss Dundas, daughter of the late Admiral Dundas and Miss Dee Vernon, daughter of the late Lady Cecilia Dee Vernon, and Major Slade, son of the late Sir J. Slade, Bart.

Lord Lyttelton will go to the House of Lords as Earl Russell; the second title will be Lord Ampthill.

METROPOLITAN NEWS.

A Miss Cooper was killed in Eaton-square, last Saturday, by her horse running away with her. On turning the corner of Belgrave-place the animal reared upon some area spikes, was so terribly injured that she died in a few minutes.

The Bishop of London, upon the application of the Rev. A. Sweatman, B.A., has consented to preside over the Islington Youths' Institute, which has for its object the moral and social improvement of young men and apprentices.

The new and spacious ragged schools which have been erected in Lant-street, Southwark-bridge-road, were inaugurated on Monday evening by a numerous and public meeting held in the school-room, which was presided over by the Earl of Shaftesbury.

The Association for the Repeal of the Taxes on Knowledge having triumphantly accomplished its objects, it was dissolved on Thursday. Votes of thanks were passed, and a new association appointed to wait upon Mr. M. Gibson and Mr. Ewart, to specially convey the thanks of the meeting for the services they have rendered to the cause.

A fancy fair in aid of the funds of the Dramatic College took place at the Crystal Palace on Saturday. Many of our best-known actors and actresses presided at stalls, towards the amusements of the day. The several of our most popular actresses presided at the stalls. The fête, which was very successful in its pecuniary results, was kept open all day.

The births of 1819 children (905 boys and 914 girls) were registered last week in London, being ten corresponding weeks of the years 1851-60 the average number was 1274, being 455 below the number registered last week to 1121. The average number of deaths, during the same period of correspondent weeks in which ten years, 1851-60, and corrected for increase of population, is 1165.

THE FIRE AT LONDON BRIDGE.—On Tuesday morning the fire again broke out in the premises which had been previously destroyed, and was soon seen to be a serious conflagration. The whole of the warehouses on the ground, and filled with oils and tallow. The arch of one of the bridges had fallen in, and carried with it the cotton bales and dripping which had been stored, and, becoming saturated with oil, hung, owing to the intense heat, in large masses, which, as they fell, blazed with fierce fury on the piers and timbers below. During the previous night some persons had worked their way into the premises, and carried away several of Messrs. Price's candles, and, no doubt, others owned in stealing a ton of tallow and a quantity of pickled pork and lard.

The Derby week was again brought up at Bow-street yesterday, when a number of persons were apprehended associated and had been in the habit of frequenting the Derby week for the purpose of plundering. The magistrate remanded, and Mr. Pollock withdrew from the prosecution, placed at the bar. The six remaining defendants, one of whom is a boy, with whom placed in the witness-box on examination, and gave a long account of the manner in which he had been induced to join the gang by a man named Thomas Hall, of Twickenham who had come to London on the 23rd inst. for the purpose of robbing the public on the spot immediately after the races. After the testimony formerly adduced. The magistrate then committed the prisoners to Newgate for trial.

THE REPRESENTATION OF LONDON.—Lord John Russell took his farewell of the electors of London. There was a great crowd in Guildhall, including many of the most influential of his London supporters. Lord John Russell was received with great cheering on his appearance the cheering was renewed with great vigour. In the accompanying supplement, at page 89, his Lordship delivered address to his constituents is given in full. The letters by the honourable gentleman read by Lord John Russell to one of the great interest and importance. Mr. Kinnear, Mr. Hutchinson, brother of Vice-Chancellor Sir Page Wood, in the Liberal candidates, and Lord Mayor Cubitt came forward and spoke in the Conservative interest. The nomination will take place on Monday next.

LAW AND POLICE.—In Clarke v. Mitchell, an appeal which was heard by the House of Lords last week, the question in dispute was the signification to be given to the word "unmarried," the appellants contending that it meant "without having been married at all," and the respondents that it signified "without having a husband or wife living at the time of death." The Court below decided in favour of the respondents, when the present appeal was brought. Their Lordships being equally divided the decision of the Court below was affirmed, and the appeal dismissed with costs.

In a suit case in Vice-Chancellor Stuart's Court yesterday week, Buchanan v. Harrison, twenty-four counsel appeared for the parties interested.

THE FATAL AFFRAY IN NORTHUMBERLAND-STREET.—An inquest on the body of Thomas Rourke was opened on Monday. The son of the deceased identified the body, and said his father was a hall-porter. He was forty-five years of age. A surgical description of the various frightful wounds inflicted upon him completed the greater part of the day. The medical witnesses were of opinion that two weapons were used—they might have been a pair of tongs and a broken bottle. The witness, who lives in the same house with the deceased. He was Major Murray after the occurrence, and he ran down to the street. He saw deceased and prisoner in the basement which has been published. This witness also said that he saw Roberts strike deceased with a poker. The Tuesday after the occurrence he was very much agitated. A policeman, who broke into the room where Roberts was, stated that he found deceased lying on the floor, bleeding from the head. He produced the papers found had been examined, but there was no correspondence between deceased and Major Murray. He would not give up his father's effects to Major Murray, which has already been published: Roberts also spoke to him about it, saying that Major Murray was a bad man. Mr. Lewis, the solicitor, who had charge of this affair, became the witness's solicitor. Major Murray to him in the Strand some months ago, that he had seen him in a room next to his father's office. He went to his father's office door, and knew him before the occurrence took place. Two witnesses were called on behalf of Roberts, who stated that Major Murray had been in the habit of visiting deceased's wife. Deceased had declared he did not know him, and had threatened to kick him out of the house. Major Murray, it was stated, gave up the habit of constantly calling at his father's office, and that the ex was frequent correspondence between deceased and Major Murray. Roberts was then committed for trial, and the deceased had been seen with Mrs. Murray at the Crystal Palace and other places. Roberts, it was stated, was in the habit of writing anonymous letters, which seems to point to a predetermination of Roberts to do some mischief to Major Murray. Mr. Payne, solicitor for Major Murray, stated that on the night before the encounter, with a shilling, to the police. On the following day Roberts was removed, when Mr. Lamb, of 16, Northumberland-street, Dr. Cumming, Mr. Mountford, Mr. Hawkins, and Mr. Wade (Inspector) were examined. The principal witnesses, however, were Anna Maria Moody (known as Mrs. Murray), Major Murray, and Roberts, who had known Major Murray and the deceased together. Major Murray's wife had left him about three and four years, and had since resided with Major Murray and the deceased together. Mr. Roberts knew the Major and deceased together. Mr. Roberts knew the Major and deceased together. Mr. Roberts knew the Major and

MR. JOHN LAIRD, AND THE BIRKENHEAD IRONWORKS AND DOCKS.

MR. LAIRD has been connected with steam navigation since 1821, his father having been one of the originators of the St. George's Steam Packet Company, and the Dublin Steam Navigation Company, formed at that time. The Birkenhead Ironworks were commenced in 1824 by his father, the late Mr. William Laird, and the first iron vessel built at these works was in 1829. Great difficulties were experienced in persuading shipowners and the public to adopt iron vessels, and iron shipbuilding made but slow progress until 1839, when the Admiralty ordered the first iron steam-vessel for her Majesty's service from Mr. Laird. This vessel has been at work twenty years, has required very small repairs, and is now in most efficient condition.

At the Birkenhead Ironworks the first vessels for the United States of America, for the River Indus, for the Nile, Euphrates, Tigris, and other important rivers of the East, were built. The first steam-frigate ever constructed for the Admiralty was also built here—the Birkenhead, of 1400 tons and 560 horse-power. From 1829 up to this time nearly three hundred vessels, of a total gross tonnage of upwards of 100,000 tons, have been constructed at the above establishment. There are now from two to three thousand men employed there, a large number of vessels being in course of construction in addition to the Galway vessels, the Hibernia and Columbia, which are undergoing very heavy repairs.

A portion of the works is now set apart for engine and boiler making, and a large number of marine engines of various sizes, from 80 to 450 horse-power, are now being constructed.

Mr. Laird's brother, the late Mr. Macgregor Laird, was the first to take an iron vessel a sea voyage, the Ethelka, a vessel built by him, forming one of the African expedition vessels, with which he ascended the Niger in 1831. From that time it is well known that gentleman took a most lively interest in all that concerned the welfare of Africa, and originated the African Steam-ship Company, which is now working so successfully from Liverpool to the coast of Africa every month. He also planned and carried out, at his own cost and risk, with the assistance only of a very small subsidy from Government, the African Inland Navigation and Trading Company, in which he continued to take great interest until his death, which happened a few months ago.

The Birkenhead Docks were first projected by the late Mr. William Laird, father of Mr. John Laird, in 1827; but, the Corporation of Liverpool having purchased all the property to prevent his plans being carried out, no progress was made until 1844, when the commissioners of Birkenhead brought a bill into Parliament for constructing docks at Wallasey Pool. Many difficulties attended carrying out this scheme, but in 1857 Parliament decided to amalgamate the docks on both sides of the river in one trust, called the Mersey Docks and Harbour Board, giving power to the Government to nominate four members of that board. Mr. J. Laird was the first appointed by Government, and has continued in office since the Act came into force. The first Act for forming a local body for managing the affairs of Birkenhead was passed in 1833, Mr. J. Laird being one of the first commissioners named under that Act, and he has continued in office as a commissioner, with the exception of a very short time, since then. He was chairman of the commissioners repeatedly before, but he has occupied that post continuously for the last six years, and was an unanimously re-elected for the seventh time in succession a few weeks ago.

The commissioners are the owners of the ferry and ferry rights, of the gas and water works, the market, a great public park of 180 acres, a cemetery, a large quantity of land and other property in the township; and no doubt all these properties will be greatly enhanced in value in a few years, the receipts of the ferry alone last year being upwards of £30,000. The township rates received in 1851 amounted to £8300 per annum, and in 1861 to more than £17,000, showing an increase of upwards of 100 per cent in ten years.

For the last thirty-five years Mr. Laird has taken a most active part in all matters connected with the interests of Birkenhead, both as regards the docks and the township, and has by means of his shipbuilding and other works caused an enormous expenditure of money among the working classes during that period. Mr. Laird is a Deputy Lieutenant and magistrate for the county of Chester, a member of the council of the National Rifle Association, and Deputy Chairman of the County of Cheshire Rifle Association. He has taken an active part in the volunteer movement since its start in 1859, and has three artillery companies formed among his workmen, consisting of 70 men in each company, or 210 in all—his eldest son and partner, Mr. William Laird, being Captain Commandant.

In 1857 a presentation of plate of the value of £600 was made to him by subscription among all classes in the township, in testimony of the general approbation of the service he had rendered the township and neighbourhood.

Birkenhead, which had a population of only 200 in 1824, only 2563 in 1831, and of only 8223 in 1841, now numbers 36,000 inhabitants, and it is one of the proposed new boroughs. Mr. Laird is a candidate for its representation.

Our Portrait of Mr. Laird is from a photograph by Messrs. John and Charles Watkins.

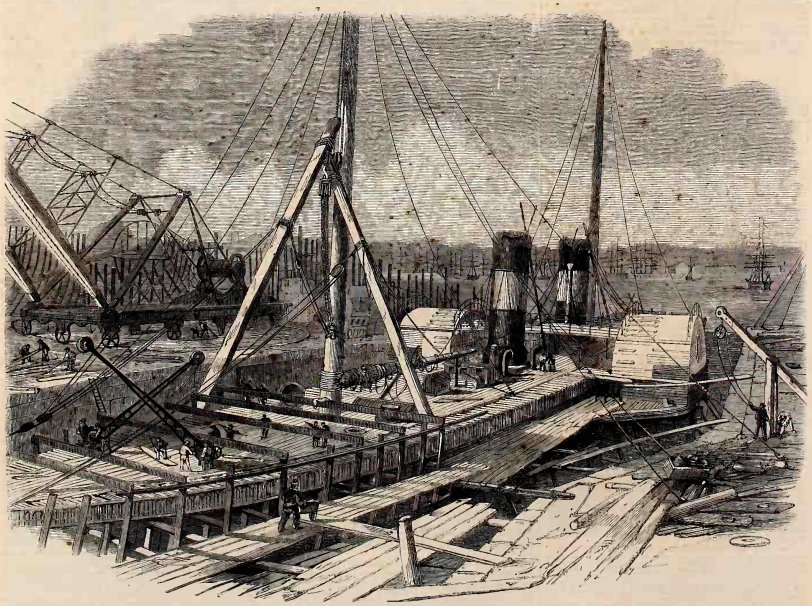
MR. JOHN LAIRD, OF BIRKENHEAD.

CHINESE GUNS.

THROUGH the kindness of Colonel Sir Henry James, R.E., F.R.S., Director of the Topographical Branch of the War Department, we are enabled to present our subscribers with an Engraving of a gun that was captured during the operations in China in August last. A consignment of between 200 and 300 of them arrived recently at the Royal Arsenal, Woolwich, in the transport Chesapeake. Many of these are highly interesting specimens of workmanship, as showing the progress made by the Celestials in the construction of heavy ordnance. The one which forms the subject of our illustration is a very large and heavy bronze gun, mounted on an imposing-looking siege-carriage. Its principal dimensions are as follow:—Length from muzzle to base ring, 10 ft.; ditto, extreme, 11 ft. 6 in.; diameter at breech, 20 in. Its calibre is 8·3 in., or as nearly as possible the same as one of our own 68-pounders; and it weighs not less than 5 tons 19 cwt. The construction of this gun is peculiar, as it has been cast upon a tube of wrought iron about 2 inches thick; and this latter now forms the interior of the bore.

The carriage upon which the gun is mounted is of teak; its construction is rough but substantial; and the wheels are decorated with a profusion of iron nails with large rounded heads. At the extremity of the trail there are small iron trucks, to enable the gun to be moved with greater ease.

Twenty-three of the guns are very similar in size and weight, though no two of them are exactly alike in pattern; and the metal of which



LAIRD'S GRAVING DOCKS AT BIRKENHEAD: THE HIBERNIA UNDER REPAIR.

they are made also varies, being, in some instances, almost pure copper.

One of the pieces affords a marked testimony to the accuracy of the practice of our own Armstrongs, as it shows traces of no less than seven shells having struck it, the graze produced by the first shock of the projectile being succeeded, at a distance of a few inches, by several sharp cuneiform indentations resulting from the segments of the shell.

There are about fifty small and very neatly-made brass pieces, each weighing about 30 lb. The remainder of the guns are of iron, and are very various in size and pattern, some of them being fastened in to wrought wooden beds. One of them is a rather remarkable specimen of a breech-loader; but the rest of the apparatus belonging to it is wanting. Another is furnished with two rings. A bamboo passed through each of these enables the gun to be easily carried by four men. The whole of these iron guns were found in the forts; but none of them appear to have been used in any of the late actions.

It is worthy of remark that among the guns captured were several British naval pieces which fell into the hands of the Chinese after the Peiho affair of June, 1859. These, it appears, were all mounted in the north Taku Fort, and took part in the defence.

THE ROYAL DAIRY.

THE new Royal dairy at Frogmore, near Windsor, just completed, is a perfect gem of taste and art. It is erected a short distance from the model farm. We are enabled, through the gracious permission of her Majesty the Queen, to present our readers with a view of the interior. It is 37 feet 7 inches long, 29 feet wide, and about 23 feet high to the centre of the roof, or rather ceiling, the side walls to the spring of the roof being 15 feet. The length is divided into a centre and two sides, formed by six octangular columns, having highly-enriched capitals, harmoniously coloured; the shafts are also delicately pencilled. Between these pillars, and around the sides of the walls, are arranged tables of white marble, supported by marble shafts, inlaid with English and Belgian marbles. Beneath them are reservoirs, composed of encaustic tiles, which are supplied by a clear running stream of cold water. The floor is of the same material, of rich red and yellow colours, but having a sunken pattern, and surrounded by a beautiful border. There are ten windows of richly-stained glass, composed of may-blossoms, primroses, daisies, and buttercups. Opposite the windows on one side are recesses, embellished to correspond, and fitted with elegant stands, to receive antique china. In the centre, between these recesses, is a fountain, composed of a niche in majolica, and an elegant figure of a nymph in white marble, holding a vase, from which flows a stream of water. The walls of the dairy are covered with encaustic tiles of a delicate colour and pattern, with borders round the windows of pale green, buff, and red. Between the windows and recesses are fourteen bas-reliefs in majolica, representing the Four Seasons, and various agricultural subjects. Above these is an elaborate frieze, in the Cinque Cento style, bearing medallions of her Majesty, the Prince Consort, and all the Royal family — including Prince and Princess Frederick William of Prussia. This frieze is further enriched by monograms in shields. Besides the fountains already described are two others, each formed by groups of flag-leaved plants; and a heron, with wings expanded, supporting a shell, within which is a Triton, bearing a smaller shell, from which issues the jet of water: both of these fountains are in majolica ware. The whole was designed by Mr. John Thomas, of Alpha-road, London, and ably carried out under the superintendance of Mr. Turnbull, of Windsor Castle. The majolica ware and encaustic tiles were manufactured expressly for this work by Messrs. Minton. This classic little work affords another proof of the delicate taste and refined judgment of the Queen and her Royal consort.

THE ROYAL DAIRY AT FROGMORE, NEAR WINDSOR.

CALENDAR FOR THE WEEK.

SUNDAY, July 24.—Ninth Sunday after Trinity. {7h. 51m. p.m.
MONDAY, 28.—Prince of Canino died, 1857. Mason's last quarter.

Admission by invitation or printed address cards.

OUR CONTINENTAL SUBSCRIBERS.—To suit the convenience of residents in Germany, Russia, and the eastern portion of Europe, we have appointed Mr. Ludwig Denicke, of Leipsic, Special Agent for this Journal.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, JULY 27, 1851.

THE appointment to Ministerial offices in this country seems for many years to have been regulated by as circular a law as that of storms. Out of a certain orbit there is no moving, and the consequence is that a personal accident commonly causes the collapse of a Government. This was notably the case when the accession of Lord Althorp to the House of Peers upset the Whig Ministry of the day. Just now the Administration is passing—to use hardly be said to have passed—through a crisis originating in a cognate cause. The enforced retirement of Lord Herbert from the War Office, though long expected, appears to have found Lord Palmerston unprepared for the exigency which would arise, aggravated as it has been by the determination of Lord John Russell to assert his claim to a precedency. The moves which have induced a statesman who has been so long identified with the House of Commons to seek what might have been supposed to be an uncongenial retirement into the Upper House are not very difficult to fathom. At sixty-eight Lord John, probably, considers himself a young statesman, as compared with Lord Palmerston at seventy-six, and calculates that in the course of nature he may yet be called on to succeed to the Premiership. This being so, there is little doubt that he has improved his chances in that respect by taking a peerage, for it is not to be disputed that the time has gone by when Lord John could lead a House of Commons, as Houses of Commons are now constituted, and which tax to the utmost the capabilities of Lord Palmerston, supreme as he is in that tact and in the possession of those purely personal qualities to which Lord John never had the slightest pretension. Taking the lead in the Lords, as of course, he will after a little while, he will fulfil exactly those requirements for a Premier which many persons have indicated as peculiarly attaching to a grave and reverend seignior in the Upper House, while, in such a case, the fever and turmoil and the free fighting of the Commons may be left to be encountered by Mr. Gladstone.

But leaving speculation on eventualities, and considering the actual situation, one is forcibly struck by the singular reluctance to enlarge the area of official responsibility which has been displayed. It would seem that when Lord Palmerston consented to admit Mr. Cobden and Mr. Milner Gibson to the Cabinet he had expended the measure of his trust in new blood, and now he merely goes through the process of the conjuror who shifts the relative position of pigeons and rabbits, causing the one to appear in the box of the other. Sir George Cornewall Lewis, at the head of the War Department, was and is treated as an anomaly. An able, painstaking, willing-to-learn man, there is probably no office for which he might not tolerably adapt himself except this very one for which he has been chosen. In these days the War Minister is expected to originate as well as to administer, and this necessarily implies previous study, if not previous experience, of military affairs, to neither of which can Sir George Lewis lay claim. Looking to past practice, and considering that he would have had a council of naval officers to assist him, it would have been better to have given him the place of First Lord of the Admiralty, and to have placed the Duke of Somerset, who has had a great deal to do with the consideration of reforms in our military administration, at the head of the War Department. The most significant sign of the inappropriateness of the present appointment is that there is said to be rejoicing at the War Office and the Horse Guards at the fact that Sir George Lewis is a Minister who is not likely to be able to meddle, as it is called, and therefore may be expected to allow the permanent officials to fall into their old courses.

Admitting the exigency which demanded the keeping of the existing number of Secretaries of State in the Commons as the necessary appointment of Minister for War, what is to be said of the selection of Sir George Grey for the Home Office? No one denies his qualifications, based as they are on long experience, for that office; but he declined it two years ago on the score of health, and, it is believed, of age. Is there any appearance in his case of anything like an acceptance of the post now? There may have been good reasons for Mr. Cardwell leaving the office of Irish Secretary, but why should he be relegated to the sinecure office of Chancellor of the Duchy of Lancaster, which was appropriately filled by a veteran statesman like Sir George Grey; and why not Mr. Cardwell, a working man of the first order, an educated lawyer, and an experienced official and member of Parliament no claim to the Home Department, on which the experience of this Session shows that the time unwilling to infuse new blood into his Ministry. He has, it is said, appointed Sir Robert Peel Secretary for Ireland. This is new blood; but it is also very hot blood, and has that the object is to silence a somewhat troublesome interrogator on foreign affairs in the House it is difficult to understand what is to be gained, except a certain quantity of caustic eccentricity, by this appointment. To be sure Mr. Horsman says the Irish Secretary has nothing to do; but in his time there were the two law officers, able and efficient men, in Parliament, who gladly did all the work, whereas at this moment neither the Attorney- nor Solicitor-General has a seat in the House.

On the whole it seems that, while nothing whatever has been gained in efficiency by the changes which have been made, a great deal of personal discontent and dissatisfaction will probably be generated among the comparatively minor occupants of office in the Ministry. It is not to be supposed that Lord Granville will consent to any other position in the Lords than that of Leader. He will thus at once displace Earl Granville from that post, while his presence will put an end to the prominent position which Lord Wodehouse has hitherto held as Under-Secretary for Foreign Affairs. Without overlooking of the claims of Lord Elgin, who gave up a Cabinet office to go to China, will probably add to the list of unavowed malcontents in the Lords. There can be no doubt that the changes which have occurred have placed Mr. Cardwell in a lower position in the political scale than he has hitherto occupied; while Sir George Lewis will put Mr. Baring, who, as Under-Secretary, has managed the War-Department in the Commons all this year, into decided eclipse. It is not very likely that the country will look with the most favourable eyes on the new arrangements; and this, added to the internal dissatisfaction which must ensue, can lead to but one exposition, and that is a collapse of the Government before very long, or at least about March next.

THE bright political star, John Russell, finally set in the lower hemisphere of legislation about seven o'clock on Thursday night, to rise, perhaps, in a short interval, in the upper hemisphere, under Corona, and henceforth to be known as Earl Russell. In other words, Lord John Russell took an informal leave of the Commons on the evening mentioned, and so ended a connection which began in 1813, when his Lordship was returned for Tavistock. On Wednesday it was announced that he had accepted one of the nominal offices of profit under the Crown, and we now wait to see whether the seat for the City thus vacated will be filled by the excellent Lord Mayor, Mr. Cubitt, whose politics are Liberal-Conservative, or by Mr. Wood, who is a Liberal. Mr. Gladstone declines to leave Oxford. Of the various Ministerial rearrangements mention has already been made.

Sardinia is a word of which we have not heard the last. The manly declaration of the Foreign Minister that England would not permit any further cession of Mediterranean territory to France has produced, as might have been expected, a great deal of comment in the French papers. It would not be easy for them, in presence of the solemn assurance by the diplomatic representatives of the Emperor and of the King of Italy to the contrary, to contend that the scheme was at all favoured by either Potentate; but there is a good deal of side-wind argument put forth touching the right of England to make any observations on the subject, touching the absurdity of making much about a mere island, touching the wishes of its inhabitants, and so forth. But Lord John has spoken with a distinctness that will make all equivocation very difficult work, and this may be one of the cases in which the abundance of such outspeaking is plainly demonstrated. One of the French journals ventures to declare that so small a matter as Sardinia is not worth contending for, but that France is certainly in a position to demand a large augmentation of territory "in another direction." From Italy itself we have little or no news this question, but much talk of the brigandage which is disturbing Naples. The ex-King and the Pope are pouring money and arms into the district and enlisting all that is dangerous and ruffianly; and the work which is cut out for Cialdini is by no means of a trifling kind, but he is the man to do it thoroughly, and he will make some severe examples as soon as he has organised what is really a police movement. Another protest from Cardinal Antonelli against the financial operations of the King's Government has been issued, but will not much perturb Baron Ricasoli.

Towards Hungary all must now look with increasing anxiety. The Emperor has returned the expected answer, and will not submit to the dismemberment of the empire, but urges the Hungarians to be satisfied with free internal administration, and to come into the National Council. There is so much to be said in defence both of the Hungarian and of the Imperial attitude, that the question, as it assumes more formidable proportions, continues to present itself as one which can never be settled by violence. And yet the Hungarian party on one hand, and the Imperial ascendancy party on the other, are drawing more and more distinctly apart and offering hostile demonstrations, and it is impossible to see the end or solution of this most important European difficulty. If ever there was a case in which the friendly mediation of other Powers should be invoked, it is this one, not only on account of the gravity of the question itself, but because a Hungarian uprising must inevitably precipitate other complications with Russia.

Much interest is felt all over Scotland, and in all English circles where topics connected with Church government are discussed, regarding the decision which a Scotch tribunal of law has given upon the claims of a Scotch tribunal of religion. The celebrated Gardner case has been decided by the Court before which he appealed to the law of the country against the despotism of the Free Kirk authorities has obtained a victory. The Scotch Judges refuse to recognise the right of the Free Kirk to insist that a compact shall preclude a citizen from the enforcement of his own rights. A difficulty question it, no doubt, is involved, and this is not the place for its discussion. But if the Kirk appeals to the House of Lords it will be hard for a non-polemical intellect to comprehend the principles on which Churchmen apply to a lay tribunal to assert the doctrine that lay tribunals have no claim to interfere. And suppose that the Lords, in 1861, decide that they will have no *imperia in imperio*, and that a minister shall be as free as any other man to call in question the deeds of his superiors, what course can the Kirk adopt? In presence of such a decision the irresponsibility of the Kirk tribunal cannot be again asserted, and yet to surrender it involves an abnegation of the most important doctrine on which the Scotch Church was split in twain. An English Bishop is unluckily placed at present, for if he does his duty and punishes a bad priest his Lordship has to bear the heavy expenses of putting the legal machine into action. But no point of principle is involved in the Scottish difficulty in the same one, and this Gardner decision will perplex and disturb thousands of consciences men.

Our railway interest is awakening to something like action upon a subject which it was foreseen must sooner or later come up. The enormous, yet we are not prepared to say the excessive, damages which juries are so prompt to award in cases of loss of life or of injury by railway travelling will begin to tell upon dividends, and the companies are growing restless at being made the constant mark for actions by which they are almost always heavy losers. They are talking of a committee to protect themselves against this system of wholesale fine, and they do not feel at all inclined to accept the amiable suggestion that when a jury gives a family £10,000 it is only as a compensation to the bereaved, not as a punishment to the company. They urge that the public demands a terrible, and in many cases a needless, penalty, which makes travelling more dangerous, and that it is unfit to fine the railway for accidents caused through the impatience of the people. There is much to be said, of course, on this view. It certainly is not necessary that a crowd of excursionists should be hurried away into some distant region at a rate of thirty miles an hour, in order that half a dozen hours in the middle of the day may be spent a hundred and fifty miles from town instead of at twenty miles distance. On the other hand, the mercantile and other interests of the country demand that in our high-pressure times all the resources of science should be brought in aid of locomotion; and, though the telegraph is a wonderful aid to business, it cannot do all that is required. It may be a fair question whether there may not be an arrangement for two kinds of travelling—one slow and cheap, under which system the present method of compensating those who suffer should unquestionably be maintained; the other rapid and more expensive, which those only will adopt who are obliged, or think themselves obliged, to travel at meteor-speed; and here, except in extraordinary cases, the liability of the company to punishment might be limited.

The Right Hon. T. Sotheron-Estcourt, M.P., has consented to preside at the next annual meeting of the Wiltshire Archæological and Natural History Society, which is to be held at Shaftesbury on the 7th of August and following days.

CHURCH AND UNIVERSITIES.

The members of the Essex Church Schools nature' Association have been entertained at Danbury Palace by the Bishop of Rochester.

The Dean and Chapter of Durham have contributed £131 to the restoration of the parish church of Holy Island.

The parish church of Cheadle, Cheshire, has been enriched by the erection of a fine east window, in harmony with the rest of the church.

Bishop Temple, formerly for the Bishop of Exeter, consecrated the parish church of St. Mary, Stoke, near Torquay, on Tuesday.

Mentham Church, near Reigate, was reopened by the Bishop of Winchester on the 17th inst., after having undergone a complete restoration. Open benches are substituted for the original pews.

Dowlish Wake is now closed for repairs. The Dean (Dr. Woodward) and Chapter are endeavouring to restore this venerable edifice, which is perhaps the finest remnant of Gothic architecture existing in Britain.

On Saturday last the memorial window of an old vicar was put up in the hall at Mathwick, Sisley, near Sudbridge, by Mr. John Harrison. The church will be restored throughout during the summer, and the style will be decorated, and will be dedicated to St. James.

The interesting old Church of Chale, near Black Gang Chine, Isle of Wight, which has stood the hostility of gales for centuries, has recently been restored through the exertions of the family of the Rector, and of the Rev. J. M. Nixon, the Curate, the congregation and friends generally having responded readily and very liberally to the proposal to restore the church.

An application has been formally made for promoting freedom of public worship in the Church of England by abolition of the pew system, and revival of the early discipline. The Hon. Colin Lindsay is president, and among the vice-presidents are the Earl of Dunraven, Lord Talbot de Malahide, Sir Benjamin B. Clyma, Bart., the Rector of Liverpool, Mr. W. Ewart, M.P., and Mr. Gilbert Greenall, M.P.

The following characteristic circular has been sent by Dr. Wolff to his friends and acquaintances:—"My dear friend,—Many years ago, at Isle Bewaer is now completed, and it will be consecrated on the 2nd of August next, by the Lord Bishop of Sodor and Man. How fast time flies! I now feed among you sixteen years. You have been very kind to me indeed, and I have not forgotten it. Many memories in all manner possible, have, therefore, reduce the heart of an Israelite of the seed of Abraham of the tribe of Levi by birth and of the Christian religion by faith, to erect a church which may be built by his exertions for the good of his parishioners at Isle Bewaer, and for the glory of God and of Jesus Christ, our God and Saviour. I am, my dear friend, yours, &c. Christ, Joseph Wolff, Vicar of Isle Bewaer, near Ramsey, an Israelite of the seed of Abraham."

CONVOCATION OF YORK.—The members of Convocation, governors of the College and Hall of Ripon, met in the Chapter House of York Cathedral on Wednesday. The President (the Archbishop of York) and the Vice-President were the only members of the Upper House present. In the Lower House there was a numerous attendance of the Archdeacons, with the prolocutor, president, in addition, that the Upper House be desired to agree to an address to Her Majesty, thanking her for the foundation of the See of Manchester, and expressing the earnest desire of the Convocation that a similar boon may be conferred upon the second populous district, which, it was resolved, also that pews in parish churches are a serious impediment to the efficient working of the Church system, and that the following be constituted of the Lower House, accompanied by the Bishop of Manchester, to consider and formally present to the Upper House the Act of Governor needs:—

PREFERMENTS AND APPOINTMENTS.—The Rev. J. Mee, Secretary of the British and Foreign Bible Society, to be Dean of Cape Town. Capel of Bath, Rector of Lyng, Somerset. The Rev. Lord Arthur Hervey, to Ripon Cathedral. *Rectories*: Rev. W.S. Baker to Hereford, Rock; Rev. H. W. Blackford to Ryton; Hall, Rev. Rev. H. Dawson to Letherington, Rev. Norfolk; Rev. R. G. Doughty to Martlesham, Suffolk; Rev. F. J. Leigh to Nympfield, Gloucestershire; Rev. J. Lowe to Hanwell, Oxfordshire; Rev. W. Mayor to Richmond, Yorkshire; Rev. J. M. Spurgeon to Twyford, Norfolk; *Vicarages*: Rev. W. Armstrong to Hedon, Rev. Rev. Bernard Lucas to Wildcombe-in-the-Moor, Devon; Rev. W. H. Sewell to Yaxley, Rev. Suffolk; Rev. W. Wilson to Sandbach, Cheshire; *Perpetual Curacies*: Rev. R. Jones to Llanfihangel, Trawsfynydd, Merionethshire; Rev. J. O. Sodgson, B.A., to Stonethwaite, Rev. Rev. J. Lloyd to Llanfyllin; Rev. Alfred Hope, Bolton, Somerset. We are requested to state that the Rev. C. Puller is not appointed Vicar of Hartlebury, but of Barley, and not of Barley, but of Vicar.]—*Guardian*.

UNIVERSITIES AND PUBLIC SCHOOLS.—Oxford: Messrs. W. H. Maddick and D. B. Parsonage have been admitted actual Fellows of St. John's. The election to a Fellowship at Magdalen for which there were eight candidates, has been unanimously given to Mr. Wade, B.A.

Cambridge: An election of minor scholars will take place in Downing College in November next. The examination will be in Classics and Mathematics, but some weight will be given to proficiency in modern languages.

The Master of Trinity College, Cambridge, has appointed the Rev. H. M. Ingram, late Fellow and Tutor of Trinity College, to be Under-Master of Westminster School, vacant by the resignation of the Rev. T. W. Weare.

The annual meeting of Rossall School will be held on the 25th inst. at which will be the distribution of the medals (the gift of her Majesty to the school) and of the prizes won in the various sciences and arts, and also the presence of a large assemblage of ladies, old Wykehamists, friends of the boys, and others. The Archbishop of Canterbury has visited the school on the 8th and returns. The gold medal for the Latin Essay was awarded by A. O. Prickard (now at Balliol) and the Rev. J. Y. Sprankling, who had also gained prizes for a Latin Speech to T. O. Marshall, and for an English speech to R. C. Moberly; a Latin Translation Prize for Greek Iambics to W. Peel, and for an English composition to Wordsworth, and for Latin verse to W. Moore. On the same day the bailiffs of Preston, by the gift of Lord Derby, held their annual luncheon. Here the Warden and Fellows entertained a large and distinguished circle of friends present at the college hall. The Warden was not celebrated for his zeal on account of the death of the late much-regretted Warden of Winchester. The Rev. Dr. Barnard, late head master of the Royal School, Bruton, and late Members of Rye and Winchester Colleges has recommended that the Rev. Nicholson Calkett, the present head master of the school, be appointed to the vacant condition, should he retain after the original design, and that, if the Governors of the school should not be inclined to do so, Messrs. Rowe and Co. be asked to take up and carry out the giving vigorous utterance in the old holiday song of "Dulce Domum."

The Rev. Arthur Hall, of Merton College, has been appointed to the Second Mastership of St. John's Foundation School, Clapham.

The Government Inspector of Railways has stated that the rate of speed on railways should not exceed forty miles an hour.

Mr. Edwin James, Q.C., was on Thursday week disbarred by the benchers of the Inner Temple, but was ordered not to be summarily treated to all the Judges of Law and Equity and the other three Inns of Court. Mr. James intends to appeal to the Judges against the order made by the benchers.

HOUSE OF LORDS.—COMMITTEE FOR PRIVILEGES.—On Tuesday the Committee for Privileges had before them the claim of Sir Robert Bruce, of Ireland, in right of the barony of Clive, conferred on his illustrious great-grandfather, Robert, first Lord Clive, of Plassey. Mr. Bovill, Q.C., appeared Baron appearing as counsel for the claimant. The claim of Robert Bruce, Esq., of Kennet, in the county of Clackmannan, to the title of Lord Bruce, of Stirley, and Lord Kilfinning, in the peerage of Scotland, was next heard; the Lord Advocate (Right Hon. Gordon Hunter), Mr. Bell, Q.C., and Mr. Forbes, Q.C., being the counsel engaged.—The peerage claim of Lord Dundonald has been revived, and the petition signed by the present Earl of Dundonald and Lady Dundonald, who is at Bologna, unable to be removed.

PONTOPPIDAN'S MEMOIRS.—Mr. Woodin is indefatigable in his exertions to please his patrons, and on occasions subjects his entertainment to alteration, as the case may require, or circumstances dictate. It was thus that while Mr. Hoare was the rage he gave an excellent imitation of the peculiar mannerisms of that favourite of the stage on Monday he performed for M. Fechter, and selected for the purpose the soliloquy in the "Merchant of Venice," "Hamlet," "Lear," and "Othello" being as well in the credit of Mr. Woodin that he imitates it matters little which, as he acts or sings them in a familiar style that enlivens and delights the actor's every look. Mr. Woodin has announced that on the night of August 3 his season will close.

After an uninterrupted season of six months Christy's Minstrels bring their St. James' season to a close this evening.

A letter from Salonica states that M. Heuzey, who has been charged by the Perpetual Secretary with a scientific mission to Macedonia, has discovered the site of the tombs of Philip, and made important excavations there. The town of Pydna was an ancient colony, and in the year 317 B.C., Olympias, wife of Philip II. of Macedon, and mother of Alexander the Great, marched in siege there against Cassander, son of Antipater. The latter, in spite of the engagement he had entered into to save the life of Olympias, caused, it is said among the relations of those persons whose massacre she had ordered, and she was murdered. In 168 Paulus Æmilius completely defeated Perseus there, and in 167 Quintus Metellus defeated Andriscus as well as Alexander, and after those victories Macedonia was reduced to a Roman province.

LITERATURE AND ART.

The British Museum and the National Gallery! The National Gallery and the British Museum! Whenever are we to hear the last of the squabbles about the artistic and scientific institutions just mentioned? This year we have had a quarrel about the Royal Dublin Society and the Botanic Gardens at Glasnevin added, by way of order, to the Gallery and the Museum disputes, and the result is a series of terrible scenes of town-talking and St. Stephen's turmoil, in which, of course, Lord Palmerston and Mr. Coningham, Mr. Layard and Mr. Tite, Lord H. Lennox and Lord Elcho, have all added their part to the general distraction.

We may summarise alphabetically the scope of the latest wrangle. A wants the national history collections at the Museum removed to South Kensington. B wants an upper floor added on to the building in Great Russell-street—as though it were not gloomy enough and grand enough already—for the display, we presume, of the stores of antiquity which at present are hidden in the cellars. C is for taking in Montague-place, and, for aught we know, the area of Bedford, Russell, and Bloomsbury squares, and adding them to the Museum. D wants the whole of the present edifice to be given up to the library and reading-room, and zoology, botany, and all the other "ologies" to shift for themselves. Finally, E would very much like the British Museum to be lit up with gas, and opened at night, *à la mode de* Brompton. Meanwhile, the proposition to tack on to that as additional story to the Great Russell-street palace would give it the same enormous and top-heavy appearance so much complained of in the façade of the Mansion House. Surely we have no right to enrail Mr. Smirke among the colleagues of those pedants of perpetuity, who might be applied the epitaph on the architect of Blenheim, Sir John Vanbrugh:—

> Lie heavy on him, earth, for he
> Laid many heavy loads on thee.

And, again, as to E's suggestion for gaslight and evening visiting, we should wish it to be remembered that the late Mr. Braidwood, a very short time before his death, strongly reported, when consulted by the trustees, upon the danger of lighting the Museum with gas.

With regard to that unhappy gallery in Trafalgar-square, the less said about it the better. Everybody, except Lord Palmerston, is shaving his nose every day, bridging over the old hall, and in the construction of which, with a supply of common sense and a few more bullfferent rooms, some £15,000 have been spent. There is a cry, too, of "Turn them out!" shouted against the Royal Academicians, who are themselves clamouring for the possession of the present gallery, and, or build, or borrow a new building for themselves at Burlington House. To do the Parliament justice, it has not yet sanctioned the latter, but where the pulled upon; only they do not go. Does not this general expression of readiness to quit resemble the system of tactics adopted by some people's household servants, who are always about to give warning, and who leave the house to-morrow morning, but, somehow, do not budge an inch from it for months and months to come?

How strangely the old historic names turn up by times, and what a thrill there was in the air when Lord Elcho burst suddenly in our world-day life! We see a Mr. Hubert de Burgh at the head of the Irish and straightway fall to thinking about wicked King John and poor Prince Arthur. We see a Lord Balfour of Burleigh appear, and we think of the wise Sir Geoffrey Hudson, of Clarebonse's Life Guards, and who died at the age of thirty, after having been with the King William's Dutch dragoons? Fancy the grim hero of "Old Mortality" making an appearance in the carved and gilt chamber of English peers!

The Royal Commissioners for the Exhibition of 1851 have purchased (£8300) for the work deemed most highly representative of French art, Meissonier's picture, which has so often awarded to M. Adolphe Thiers, historian of the French Revolution, of the Consulate, and of the Empire. But the eloquent little hermit of the Rue St. Georges has not yet finished his work, for he has since followed up his success and begged the Academy to apply it to some other purpose of literary distinction. The Academy proposed to borrow the manuscript temporarily on some other author or authoress. The chances oscillate between M. Jules Simon and Mdme. George Sand. Our suffrages—were they called for—would be for the latter.

Sir Benjamin Brodie, it is said, intends to retire from the presidency of the Royal Society, which he has so long filled for so many years, full with honour and distinction. Ill health more than old age has led the distinguished chemist to this decision. Who is to be his successor? General Sabine was talked of, a short time ago, as the probable successor of the P.R.S.s, when a whisper arose that Lord Brougham would accept the position. The Society, at the forthcoming meeting of its seventy-eighth year, but he is still hale and festive; his frame is still vigorous, and his brain is as active as it was in the days of his youth. The new spectacle is this of an almost nonagenarian still working, toiling, we may say, in the pursuit of knowledge and the advancement of wisdom—for such, surely, is the legitimate end and object of the Royal Society's motto! Years since Lord Brougham is said to have had inscribed over the gate of his chateau at Cannes the words—

> Invenit Portum. Spes et fortuna valete:
> Sat me lusistis; ludite nunc alios.

But he has taken, it would seem, a new lease of energy. His mental and bodily exertions since the famous Grantham oration have been enormous; and he has now on his hands, in addition to the presidency of the Royal Society, the functioning meeting of the Social Science Association to attend to. The celebration of the Social Scientists for 1861 is to take place at Dublin.

The case of the unpensioned "poet" Close has again been opened in the House of Commons, and Mr. Stirling made poor Mr. Close a peg on which to hang a long speech, in which he dwelt heavily on the bestowal of literary pensions. As to the general issue we agree with Mr. Stirling that it is a very important one, and we have no sympathy for complaint in this year's distribution of the twelve hundred pounds. Some of the pensioners, as his reputation in very good part, and promised that such a blunder as the Farnborough meeting of the Social Science Association to attend to. The celebration of the Social Scientists for 1861 is to take place at Dublin.

The case of the unpensioned "poet" Close has again been opened in the House of Commons, and Mr. Stirling made poor Mr. Close a peg on which to hang a long speech, in which he dwelt heavily on the bestowal of literary pensions. As to the general issue we agree with Mr. Stirling that it is a very important one, and we have no sympathy for complaint in this year's distribution of the twelve hundred pounds. Some of the pensioners, as his reputation in very good part, and promised that such a blunder as the Farnborough meeting of the Social Science Association to attend to. The celebration of the Social Scientists for 1861 is to take place at Dublin.

The dead body of a policeman named Lawler, a member of the constabulary force, and lately stationed at Blundell, six miles distant from Dalkey, was found on the railway line near the Dalkey station, a little from his station. The poor fellow had been shot through the heart. A coroner's inquest for the district, on the 17th inst., at which Lawler had some person shooting with unlicensed arms, and that on his attempting to make an arrest the gun was turned with fatal effect against himself. An inquest has been held and a verdict of "Wilful murder" returned against some person or persons unknown.

Two Liverpool boys, about fourteen years of age, named Roberts and Pitchinnicus, were playing at highway robbers, when the latter stabbed his companion in the chest, and he was conveyed to the hospital without hope of recovery. The magistrates, bearing in mind that in his deposition the dying boy had forgiven Pitchinnicus, saying, "I am quite sure he did not intend to injure me; he was not in earnest," decided that there was no ill-feeling evinced against Roberts by Pitchinnicus, and he was discharged.

MUSIC.

GRISI made her last appearance on our opera stage on Wednesday evening. The performance consisted of the first act of "Norma," and the first and third acts of the "Huguenots." As might be expected, there was an overflowing house. She was greeted on her entrance with loud and prolonged applause; and when the curtain fell on the first act of the latter opera, at the close of which the audience, there was a scene of extraordinary excitement. The house rang with acclamations; bouquets were showered upon the stage; and the ladies, as well as gentlemen, stood up and waved their hats and handkerchiefs. These demonstrations brought her three times before the curtain, and when she retired for the last time, she seemed quite overcome with emotion. She has, however, not yet taken her final leave of the public. It is announced that on Wednesday next there is to be a grand "Farewell Festival" at the Crystal Palace, when the musical performance will be under the direction of the full Royal Italian Opera, and the Crystal Palace Garden will give their Italian Opera and the Crystal Palace, and the chorus of the Royal Italian Opera, strengthened by a great number of additional voices, the whole forming a choral and instrumental orchestra three hundred strong. Several of the principal scenes of Rossini, Auber, and Meyerbeer will be performed; and Grisi will sing some of her most favourite pieces. Moreover, in the course of the autumn she is to make a tour through the provinces, on the occasion of which she will visit every principal city and town of the United Kingdom. London everywhere. This will then positively be her "Farewell to England," and the termination of her professional career.

The annual choral meeting at the Crystal Palace, of the Tonic Sol-fa Association took place on Wednesday week. The choir consisted of 3000 children, and 1000 tenors and basses, under the direction of Mr. John Hullah and Mr. J. L. Young. They sang an excellent selection of choruses, hymns, part-songs, glees, unaccompanied melodies, and other pieces, sacred and secular, and acquitted themselves in a manner which was highly creditable to the large musical assemblage of visitors. From an address to the public, printed in the back of the programme, we observe that the Tonic Sol-fa Association has a flourishing condition. There are at present not less than 700 teachers, with 100,000 pupils, who have adopted the method; and the *Tonic Sol-fa Reporter*—a cheap but well-printed periodical published by the association, containing music in the sol-fa notation and literary matter connected with the art—circulates among the 14,000 members. The efficacy of the Tonic Sol-fa method of notation and instruction in elementary and advanced knowledge of music is now, after an experience of ten years, placed beyond dispute; and the great effects will probably be as permanent as they have been rapid, provided that it is used only as an auxiliary, and without any attempt to supersede the established notation, which has been the growth of centuries, which is a marvel of ingenuity and adaptability to every purpose, and which cannot be shaken by any ill-judged antagonism.

We have received a communication of much interest to the musical public. It is a copy of a circular letter which has been addressed by several eminent individuals connected with music to a number of the principal nobility and gentry, and which invites them to express their wish that a national concert-room should be built. They are of opinion that the Royal Italian Opera is not to be supported by the musical public, as it ought not to be allowed to bring before the public such performances as "Lucrezia Borgia," while every new and attractive will be isolated in the continuance of the present system. The want of a proper musical performances, and also in the preparation of the concerts, and they think that it would be a great benefit to the art if a concert-room, in the character of a theatre, is contemplated that the concerts shall take place between the hours of four and seven in the afternoon. The proprietorship of the building is to be vested in the constitutional and English choral and orchestral societies, which will co-operate. The profits realised by the performances will be devoted to the furtherance of music. The building will be of sufficient dimensions to receive an audience of 3000 persons, and the orchestra 600 performers; and, if necessary, on certain occasions of great festivals, a much greater number of performers can be accommodated. The necessary capital will be raised by means of a guarantee fund, each guarantor to receive a certain rate of interest for the money advanced, and the leading features of the scheme, and, so we are promising the programme of the concerts will be drawn up, would feel obliged if you would kindly favour us with your opinion respecting the same, also whether we are disposed to support our proposed society in case it is carried out. Any future performances, subject to such conditions as may hereafter be agreed on.

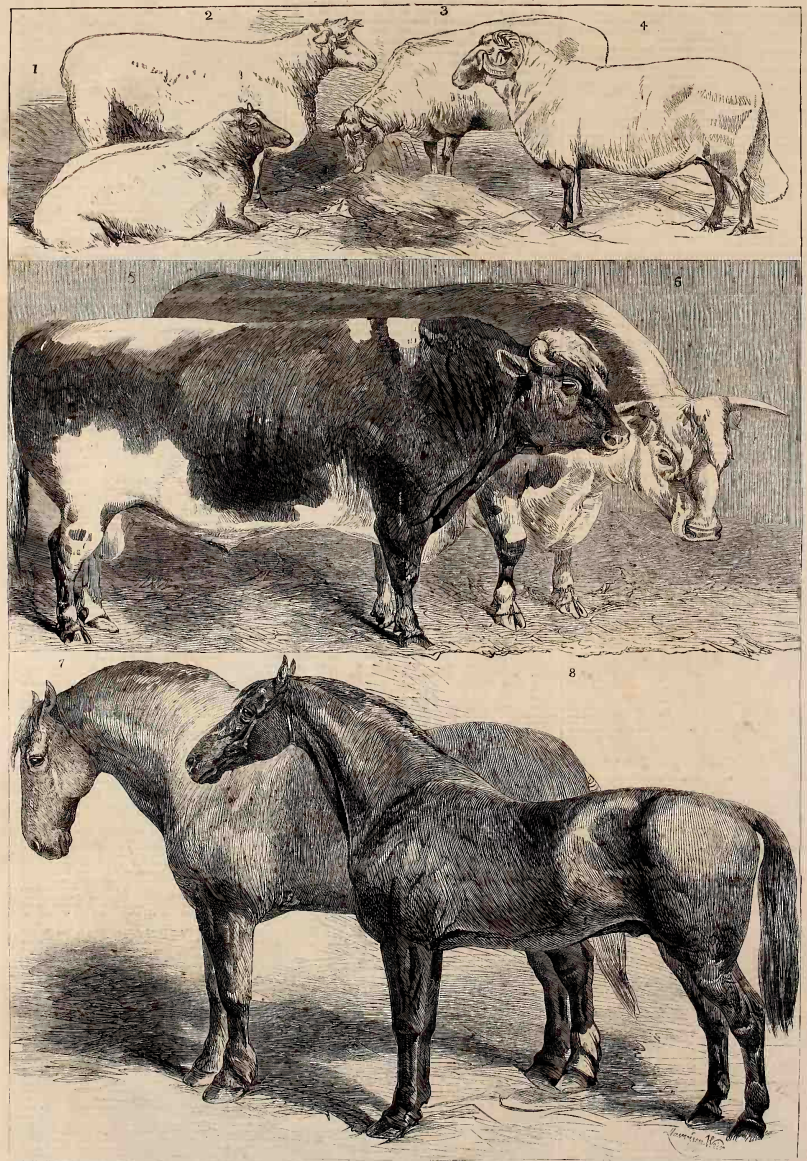
We are further informed that the subject is now under the consideration of the bodies to whom the above communication has been made, and that, in the meantime, an application has been made to her Majesty's Commissioners of Woods and Forests for the use of the back of the conservatory of the Royal Horticultural Society's Gardens, and that plans of the proposed International Concert-room have also been submitted. Such a hall would seat about 3000 persons. Upon the further proceedings of the projectors of the plan must depend on the success of the scheme. We shall be glad to hear that it is successful, as we hope to be able to give a favourable report, with the names of the gentlemen engaged in the accomplishment of a most desirable object.

THE THEATRES.

STANDARD.—The engagement of Mr. Creswick at this theatre is, it appears, proceeding prosperously. His greatest success has been in the character of Orange, in "The Flower Girl," which is now in the 23rd week of its performance at the Surrey. As Creswick's leading part becomes an impersonation of singular cleverness and effectiveness. He has not, however, been idle in other characters, as his "Hamlet" is good humour, and such a straightforward determination to carry his object, but he wins the sympathies of his audience. The play, in fact, has been immensely attractive, and affords a good opportunity for Mr. Marriott to exhibit some of the best qualities of her style of acting in the very interesting part of Ophelia. Altogether, Creswick is placed on the stage in a complete and picturesque manner, and reflects credit on Mr. Edgar's management. The scenes are first acquired to popularity at the Surrey Theatre, though it had been previously and long known with profit. Its success has led to the reproduction of another transpontine drama, "The Miller and his Men," which gives promise of a run. Display not only of the talents of Mr. Creswick and Miss Marriott, but of Mr. Edgar's.

GRECIAN.—Under the title of "The Home in the Heart," the new drama produced under that of "The Prestigiator" at the Adelphi, has, we understand, been favourably received at the close of the stage of this theatre. The modifications effected have very much facilitated the successful performance, by greatly relieving the incidents of a weight that originally pressed too heavily on the patience of the audience. In its present shape the piece is likely to prove very attractive, and to become ultimately popular.

ST. JAMES'S.—The reputation acquired by M. Fechter in the Shakspearean character of Hamlet has naturally excited emulation among Continental artists. Accordingly, Mdme. Rachel Felix and M. Rodrieux's arrival among us, as a competitor for the impersonation of the Danish prince, was announced as a fact quite settled, both of conceiving and acting the part is directly the opposite of M. Fechter's. M. Rouvière is from the Porte St. Martin, and we had reason therefore to expect a display of the "robust" style of acting in the dramatic vehemence in his delineation. We confess that he has exceeded our expectations. He is not the vassal and the slave to gesture and much of violence in gesture and delivery. M. Rouvière, however, had the advantage of speaking the character in his own language; the translation of the great tragedy by M. Alexandre Dumas and Paul Meurice being the version adopted. The performance was divided into acts and tableaux—five of the former and nine of the latter—which to an English mind lost an air of novelty to the elsewhere scenes. The company exerted themselves to give completeness to the representation. Ophelia was well played by Mlle. Anna Miller, and Mdlle. Camille Ernebois assumed much dignity in the Queen. Yet, on the whole, the result was unsatisfactory. There was, somehow, a want of harmony between the players and the parts, notwithstanding the utmost pains were evidently taken to secure efficiency.



1. Mr. Holland's first prize Shropshire ram.
2. Mr. W. Lund's first prize longwool ram.
3. Mr. Sunday's first prize Leicester ram.
4. Mr. Peel's prize Leek ram, Mountain King.
5. Lord Feversham's first prize shorthorn bull, Skyrocket.
6. Mr. Rea's first prize Hereford bull, Sir Richard.
7. Mr. James Webb's first prize agricultural cart sire, Rising Star.
8. Mr. H. Rickatson's first prize Cleveland sire, Golden Hero.

PRIZE ANIMALS AT THE ROYAL AGRICULTURAL SOCIETY'S SHOW AT LEEDS.—SEE SUPPLEMENT, PAGE 88.

THE IMPLEMENT-YARD AT THE ROYAL AGRICULTURAL SOCIETY'S SHOW AT LEEDS.

THE adjustment of the feud which raged last year between the implement-makers and the council rester[illegible] this part of the show to its pristine state at Leeds; and, judging from the numerous [illegible] of the exhibitors, it was never in such force before. The trial-ground was more than usually attractive, as the steam-cultivators were at last put to a thorough test, and the judges devoted no less than twelve days to their Search after Truth. Their verdict was unanimously in favour of Fowler's, and he received £175, while the Messrs. Howard had £25 for their steam-cultivator, to be worked by a common portable engine. "It is in ploughing and digging," says a well-known authority, "that Mr. Fowler is so pre-eminent. With his Cotgreave mould-boards he throws over the soil as completely as if it was done with spade husbandry." Many an order for his £900 engine and big tackle was booked by him in the course of the fortnight; and, in fact, there was hardly a stall on the ground which did not drive a brisk trade. They had everything to show, from the four-ton steam-mole down to the poppy-extirpator, and horse-hoe with revolving brushes to astonish "the nigger caterpillar." Tuxford's new steam-road locomotive on three wheels, the third being a propelling roller, driven by spur gear from the engine crank-shaft and the other two wheels for steering, was one of the most remarkable new inventions in the yard, and likely to come into general use for drawing combined machines from field to field. Seven miscellaneous medals were also awarded, and, amongst others, to Wilkinson, Wright, and Co. for a straw-elevator, and to R. and J. Reeves for a potent thistle-destroyer. There was no prize gate this year; and so we conclude that invention in this line is for the present exhausted.

SKETCHES IN PARLIAMENT.

On Wednesday, at six o'clock, just before the adjournment of one of the dreariest of day sittings, a brief ceremonial, performed much as a crier proclaims silence in any gathering of her Majesty's liege, intimated the departure from the House of Commons of a statesman who for forty-seven years had contrived in some way or the other always to keep himself prominently before that assembly—that is to say, a new writ was moved for the election of a member for the city of London, in the room of John Russell, now retired, preparatory to his passage into the House of Peers. Some expectation had been formed that Lord Palmerston would move the writ himself and pronounce a Parliamentary eulogy on the occasion. Nothing of the sort took place. It seemed as if the moment was chosen when not three of the dozen members who had formed the previous audience were left, and not the smallest demonstration was made, even if anyone was inclined to make it. On the evening before Lord John came into the House early, and, as Lord Palmerston was absent, he had the opportunity, on the 5th of June, of addressing a few words to the House. Soon after the business of the evening commenced he quietly shook hands with the Speaker, with Mr. Walpole, Mr. Henley, and one or two others of the Opposition, but with no one on his own side, and then disappeared through the door behind the Chair, and that secret portal closed on his right ever again to stand on the floor, or to occupy a bench within the Commons' House of Parliament. Thus quietly and unostentatiously was passed from the scene he had for so long loved so well, but in which during the last few years he has had many more attendants to encounter, and his absence ever which it should dwindle down to the zero of personal respect—a condition ill-according with his aspirations, and so he has gone to what is technically called another place, about the exact nature of which perhaps there still exists a doubt.

In truth, Lord John made his farewell speech on the last evening which found a House strong enough to be pronounced as usual. The "Arcadians you," Mr. Kinglake and Sir Robert Peel, appeared in their places with that portentous aspect, that sort of unusual calm, which they mean to assume when they have a duel to convoke Europe—with ironical laughter. Who can describe the rage of Hedgehog when he stands up folded arms and delivers a speech of attitude was appropriate to the defence of a Napoleon, and fifteen out his forelock behind his ears? Is he worth anything to know what Lord Derby thinks of the exhibition, for he happened to look in at the Commons that night when Mr. Kinglake was speaking. He gazed, put up his glass for a few moments, mused gloomily, and then walked out with a rapidity which augured the giving way to the brist of savage satire in the lobby which awaited the appearance within the House. The squire of the Knight of the fearful countenance, his friend Sancho, was hardly himself that night. Her Majesty's English was not turned sufficiently to play all sorts of conversational tricks with a speech of an hour, but there was a positive touch of reticence and even a tone of modesty in the address of Sir Robert Peel for which it is now easy to account. Already the shadow of official restraint was falling upon him; and the fact—not to say the fit—of the Lord Palmerston was preparing for a new state of existence. Foreign affairs, of which he will now take the management in the Lower House, were his delight at work. From this time he will have no Parliamentary liberty Sir Robert will sit silently on the Treasury bench during—I should say—the time he can point of sneering at—the foreign affairs meanderings of his old friend, and perhaps make a remote back bench. It would not be very surprising if, before next Session, Mr. Osborne and Mr. Kinglake, for a time, will be left to consider Europe—with ironical laughter. Who can describe the rage of Hedgehog when he stands up folded arms and delivers a speech of an hour, but there was a positive touch of reticence and even a tone of modesty in the address of Sir Robert Peel for which it is now easy to account. Already the shadow of official restraint was falling upon him; and the fact—not to say the fit—of the Lord Palmerston was preparing for a new state of existence. Foreign affairs, of which he will now take the management in the Lower House, were his delight at work. From this time he will have no Parliamentary liberty Sir Robert will sit silently on the Treasury bench during—I should say—the time he can point of sneering at—the foreign affairs meanderings of his old friend, and perhaps make a remote back bench. It would not be very surprising if, before next Session, Mr. Osborne and Mr. Kinglake, for a time, will be left to consider Europe—with ironical laughter.

Generally speaking, the state of things Parliamentary has not been so dull as might have been expected. The efforts to be amusing are galvanic, but there have been some things not unworthy of note. During June, in fact, people began to think of the first appearance of the law officers of the Crown—one in a new place and the other in his first session. It was perfectly right and proper that the then Solicitor-General should be promoted to the Attorney-Generalship when it became vacant on the change in the Chancellorship. The only thing to be seen was how the Solicitor-Generalship would fall into the hands of him who now has become of right Attorney-General. This question has been more than once, but, on the night when the Bankruptcy Bill came on, the surprise which was expressed by the old proverb which ends in "dans cette galère" culminated. In charity, all are to be said that no one grudged Lord Romilly his official well-earned elevation, and desired his return for an hour or two to that country which he has left. But the only lawyer since Follett who has gained the ear or held captive the understanding of the House at once, and indeed probable, however, that Mr. Roundell Palmer will do much to alter the opinion which he inspired in the course of that observation. The new Solicitor-General is a man of great ability and ripe scholarship as an accomplished lawyer, and gifted with no little eloquence, which is of the Gladstonian school. On this occasion he was not at his best in the debate, and thus he showed manliness and good disposition under which he was suffering, and this, perhaps, helped to make his success the greater as it was the more easily attained, although there were marks of nervousness that were not altogether physical, that he spoke argumentatively, illustratively, and in copious language, but that he was not, which is quite the reverse of, an able former Parliamentary addresses. He was listened to with evident attention by the House, and with much interest by the Treasury bench. It is not a little curious, however, that Mr. Gladstone, who had exhibited sympathy with him in the opening of his speech, when the middle of it dropped into a profound slumber. Gathering from this, too, as a man of the world who knows the value of time, had judiciously slept soundly all through the remainder of the speech in the early part of the evening, but who had paid Mr. Roundell Palmer the compliment of listening attentively to the first twenty minutes, also went off into that happy land of dreams which he can at all times place at the command of his will in the House. On the Opposition side Mr. Mallins, who had been a vigorous opponent of his brother when he began, also passed into a state of the deepest somnolency; and next most, if not quite, to the Premier, Mr. Kinglake was seen with hearing and was well said. Before leaving this subject of lawyers in Parliament it may be observed that the new Lord Chancellor delivered his first speech in the House of Lords on the same night as Mr. Roundell Palmer, and that he has retained office for exactly the same period as Mr. Roundell Palmer has retained office for exactly the same period as Mr. Roundell Palmer has retained office for exactly the same period as Mr. Roundell Palmer

NATIONAL SPORTS.

The absorption of the Yorkshire Show by the Royal has depleted us of one of the greatest horse feasts of the year; and the Cleveland Show has also allowed its 4100-premium idea to be filched from it this August by Lincoln, and intends to take its stand on forehand, fox-terrier, and horse-shoeing contests. As regards the arrangements for the blood horses at Leeds, they presented a very sorry contrast to those at Middlethorpe. In the one case the horses were located in comfortable wood-covered boxes, with the light beautifully thrown on them from the top of the passage along which the spectators were admitted to view them, when they were not in the ring; whereas at the Royal they were merely under canvas sheds, open to the wind on both sides, and barely rainproof. Few men who have really good horses will send them to encounter such a fearful risk, and one of them had to be removed last week from the Leeds Show-yard to a loose box at home there. These bad arrangements have for many years past confirmed the Yorkshire aristocracy in the very large share they have had in the array at Leeds would have been far stronger if their owners had not foreseen that there was no improvement on the cards. But it is unwarrantable in a magnificent society to deceive themselves, with their command of funds, be hesitant on this point by a mere county one. The showing of the horses in the ring was a great step in advance; and as Mr. Gibbs and the stewards of the yard have now felt their way, and found how easily such matters can be managed, not a plea for arrant judging remains. Not granting it really becomes tantamount to an insinuation that the spectators (many of them members of the council and the society) would intentionally connive at, or be a party to, what would object to it. The experience of the Yorkshire and all the northern society proves precisely the contrary. The public are not accustomed and like to do their work in public, as their reasons are made pretty patent at once, and many a heartburning and subsequent altercation will doubtless be prevented; and, if the public object to the exercise as much last another year in selecting judges as it has done this, it will be easy to show them to the public in the ring. Independently of the instruction which young men derive from watching the operations of their betters, who have been chosen for this post, publicity has a wonderful effect in weeding on the ranks, as exhibitors learn to keep their second and third rates at home when they have one or more of the preferred to stand side by side for the first prize. Four good-sized rings (they have three in Yorkshire, where Davons and Hereford cattle are also well represented) and the Cleveland system, which was forced on the stewards this year by being obliged to judge the shorthorn yearling heifers and heifer calves in public proved that a card and a pencil in the hands of the yeomen will do as well as pig and sheep judges perfectly unmolested. Publicity is now the order of the day. It is remarkable that constituents can now watch members if they stay in the gallery during a division has died out; and, although the Speaker is still bound to say "Strangers, withdraw," the usher in the corridor immediately after is not to be found in the land. It is high time that the rings at the Royal should furnish what they have not done elsewhere—pleasant spectacles to be got at with a public school of instruction as well.

Although the scales are dubious, and some chalk and a little board still does duty for the telegraph, Stamford had a nice meeting, and every one was delighted to see Markwell with the starter's flag, after the strange accident which he sustained last October by a fall from the top of the Jockey Club. The Lawyer, one of the very few Lords bred by Sir Stephen Glynne, and by Lapdog—Legacy mare, was the first to win; and Optimist, the first favourite for the Goodwood Cup, made slow running for nearly the whole of the three miles in the Cup, and fairly stalked the field. Only three of the Duke of Rutland's yearlings were sold; the highest price (600 gs.) was given by Lord Stamford for Antecedent, a son of Newminster and his Excellency the Turkish Empire, a couple more of the Ambroses—to wit, Arnaut (600 gs.), and Acomite (500 gs). Chandler, Windhouse, Saunterer, and Dundee are all advertised for sale at the Hôtel de Ville Maline to-day (July 27), Arnaut and his cat have completed their sittings at Sir Edwin Landseer's studio, and are destined for Aske; and these three superb specimens, and Sun Day, the celebrated ex-jockey, who has half the charge of some of the best of our hygeia exacks, has announced his wish to resume training operations.

Goodwood empties from Tuesday to Friday, and strong efforts have been made to secure the Wednesday's sport, which was so successful last year, by the shifting of the Findon Stakes which has a capital prize (300 sovs.) to that day. It is to be hoped the Committee of Cellarius in the Bentinck Memorial; and the Cup will possess rather more than its usual interest, owing to an anxiety to see The Wizard perform over the course. The large-priced Goodwood lots were not satisfied this year that the work is not likely to add much saleney to the St. Leger.

The glorious uncertainties of cricket were never displayed more strikingly than in the Surrey v. The North match. Surrey was left 108 behind on the first innings; but then the tide of luck so turned, and 239 of which Caffyn scored 98, Lockyer (not out) 60, Mr. Miller 30, and Griffith 28, against the bowlers of Tinley, Hayward, Daft, Parr, and Anderson lost their wickets for thirteen runs in all; and the howling of Mr. Miller, Stowell, and Mallett was so fatal to the Northern batting that they made but 131. The batting of The North in the first innings was very grand, and Carpenter, Daft, and Hayward made 53, 52, and 50 respectively. After the "drawn battle day" Surrey proceeded to Sheffield to meet Yorkshire, who won the toss, and went in first. The batting of Hodgson and Greenwood was very splendid; and the two Surrey innings, in which Griffith showed as steadily as ever, and Caffyn was twice caught by Anderson from Atkinson's bowling, as he was also caught by Greenwood on each 213. Anderson (59) was the most troublesome to Surrey in the first innings of Yorkshire, who were caught all out for 223. Surrey, in the but a most splendid running catch of thirty yards by Mr. Miller disposed of Daft early in the second. After some fluctuations in the play—the odds being at one time 10 to 8 on against Yorkshire—the match was won by the Yorkshiremen with two wickets to fall. Middlesex commenced a one day match with Sussex on Monday last, when they met the M.C.C. and Ground, and disposed of them in one innings, with 30 to spare. They were in for five hours and a half, and averaged seventy-six runs per hour! Surrey v. England, at the Oval; and the M.C.C. and Ground v. Hampshire, at Lord's, are the fixtures for to-day and to-morrow. The match Surrey v. Kent, at Maidstone; and the All England v. Twenty-Two of the Caledonian Club, at Glasgow.

SOUTHAMPTON RACES.—TUESDAY.

Trial Stakes.—Ashmore, 1; Lord, 2; Gaylad, 3.
Southampton Nursery Plate.—Ethel, 1; Miss Woolsey, 2, 3.
South Hampshire Stakes.—Shepherdess, 1; Fife Anna, 2.
Stewards' Plate.—Ethel, 1; Dioscon, 2.
Hand Plate.—Gaylad, 1; Ashmore, 2.
South-Western Stakes.—Gaylad, 1; British Grenadier, 2.

ASCOT RACES.—WEDNESDAY.

Trial Stakes.—Ashmore and 4, 1; Wizard, 2; Julia, 3.
Plate of 100 sovs.—Invitation, 1; Beaufoment, 2.
Handicap Plate of 200 sovs.—Sir Richard, 1; Woman in Red, 2, 3.
Plate of 50 sovs.—Lancelot, 1; Dactimor, 2.
Ascot Stakes.—Lambert, 1; Dundee, 2.
Welter Plate.—Redpoll, 1; Misty Morn, 2.

THURSDAY.

Handicap Sweepstakes of 10 sovs.—Prince Plausible, 1. Fortune, 2.
£100 Handicap Stakes.—Ethel, 1; Dioscon, 2.
Railway Plate.—Prairie Hen, 1; Dioscon, 2.
Forest Stakes.—Redpoll, 1; Rifle Pigeon, 2.
£50 Plate.—Cannstein, 1; Chilper, 2.
Queen's Stakes.—Prince Plausible, 1; British Princess, 2.
£10 Plate.—Gaylad, 1; Brown Stout, 2.

AQUATICS.—At a general meeting of the members of the Royal Yacht Squadron held at the Castle, Cowes, a few days ago, for general business, the following candidates were balloted for and elected members of the squadron:—Lord Aberdour, Merlin, schooner, 61 tons; James Edward Bradshaw, Bailey, schooner, 114 tons; W. J. Pascoe, Zoraide, schooner, 151 tons; and the following Captains of the Royal Navy, Thomas Symmons and James H. Cockburn, as honorary members. It was also ordered that an annual subscription of £10 be in future paid by the Royal Yacht Squadron to the National Life-boat Institution, instead of £5 as heretofore. Lord Henry Grosvenor, as a member of the committee of its management, and other gentlemen bearing their testimony at the same time to the great national importance of the operations of the Life-boat Institution. Four yachts were wrecked on our coasts last year. The Earl of Rosse and Lord Willoughby d'Eresby, who respectively subscribe £5 a year to the Life-boat Society, have, with other yacht-owners, recently supplied their yachts' crews with excellent cork jackets, similar to those worn by the crews of the life-boats of the institution.—The annual meeting of this club takes place on the Solent on the 6th, 7th, 8th, and 9th of August. On the 6th will be contested for the Prince Consort's Cup; on the 7th for Her Majesty's Cup; and on a day to be appointed, during the week, for the Queen's Cup. The Royal Victoria Yacht Club, at Ryde, has also fixed for the yachts to pass over with no considerably circumscribed in its dimensions.

The Royal Victoria Yacht Club (Metropolitan yachting season was on Thursday week brought to a close by the usual match for the Commodore's prize, which, however, was not decided by a great accession of members. The race was from Erith to the Chapman Sand and the following started, according to—

Yachts.	Tons.	Owners.	Yachts.	Tons.	Owners.
Wizard	40	Mr. R. Nicholls.	Sylvia	40	Mr. Gordon.
Sea Nymph	35	Lord de Ros.	Harmonet	37	Mr. P. Parker.
Sea Serf	40	Mr. C. H. Gray.	Rosalie	37	Mr. J. Bell Irving.

The Ocean steamer accompanied the race for the conveyance of members of the club and friends. The start was a capital one, and the yachts were well provided for by Captain Wheeler, her skipper. The Rosalie and Wiz Nee were now neck and neck, followed by the Sylvia, Sea Nymph, Harmonet, and the Enterprise had decorously acquired much fame. The prizes were a silver cup and a purse of £10 for the first, £5 for the second, and £3 for the third boat, and a silver cup for the second. The start took place at 10.30m.30s., the wind blowing very fresh from W.S.W. The race finished as follows:—

	h. m. s.
The Rosalie, winner of the first prize	6 0 53
Wizard, winner of the second prize	6 2 15

A great attraction to the yachting season in the Thames is the Regatta and Illuminations at Putney, and, as usual, the Commodore's barge, which was gaily decorated with Chinese lanterns, was the centre of attraction. The race was from Hammersmith Bridge to the Star and Garter, Richmond, and was rowed by the following crews:—

Thames Club	1	Mr. Hall	2
Argonaut Club	2	Mr. Hall	1
Thames Club	3	Mr. Hall	3

The Thames Club crew were the winners, and received the prize, a handsome silver cup, value 10 guineas, from the hands of Mrs. Hall, the wife of the Commodore. The Argonaut Club crew were second, and received a prize of £3 10s. The Thames Club crew were third, and received £2 10s. The Argonaut Club crew were fourth, and received £1 10s. The Thames Club crew were fifth, and received £1. The Argonaut Club crew were sixth, and received 10s. The Thames Club crew were seventh, and received 10s. The Argonaut Club crew were eighth, and received 10s. The Thames Club crew were ninth, and received 10s. The Argonaut Club crew were tenth, and received 10s. The Thames Club crew were eleventh, and received 10s. The Argonaut Club crew were twelfth, and received 10s. The Thames Club crew were thirteenth, and received 10s. The Argonaut Club crew were fourteenth, and received 10s. The Thames Club crew were fifteenth, and received 10s. The Argonaut Club crew were sixteenth, and received 10s. The Thames Club crew were seventeenth, and received 10s. The Argonaut Club crew were eighteenth, and received 10s. The Thames Club crew were nineteenth, and received 10s. The Argonaut Club crew were twentieth, and received 10s. The Thames Club crew were twenty-first, and received 10s. The Argonaut Club crew were twenty-second, and received 10s. The Thames Club crew were twenty-third, and received 10s. The Argonaut Club crew were twenty-fourth, and received 10s. The Thames Club crew were twenty-fifth, and received 10s. The Argonaut Club crew were twenty-sixth, and received 10s. The Thames Club crew were twenty-seventh, and received 10s. The Argonaut Club crew were twenty-eighth, and received 10s. The Thames Club crew were twenty-ninth, and received 10s. The Argonaut Club crew were thirtieth, and received 10s. The Thames Club crew were thirty-first, and received 10s. The Argonaut Club crew were thirty-second, and received 10s. The Thames Club crew were thirty-third, and received 10s. The Argonaut Club crew were thirty-fourth, and received 10s. The Thames Club crew were thirty-fifth, and received 10s. The Argonaut Club crew were thirty-sixth, and received 10s. The Thames Club crew were thirty-seventh, and received 10s. The Argonaut Club crew were thirty-eighth, and received 10s. The Thames Club crew were thirty-ninth, and received 10s. The Argonaut Club crew were fortieth, and received 10s. The Thames Club crew were forty-first, and received 10s. The Argonaut Club crew were forty-second, and received 10s. The Thames Club crew were forty-third, and received 10s. The Argonaut Club crew were forty-fourth, and received 10s. The Thames Club crew were forty-fifth, and received 10s. The Argonaut Club crew were forty-sixth, and received 10s. The Thames Club crew were forty-seventh, and received 10s. The Argonaut Club crew were forty-eighth, and received 10s. The Thames Club crew were forty-ninth, and received 10s. The Argonaut Club crew were fiftieth, and received 10s. The Thames Club crew were fifty-first, and received 10s. The Argonaut Club crew were fifty-second, and received 10s. The Thames Club crew were fifty-third, and received 10s. The Argonaut Club crew were fifty-fourth, and received 10s. The Thames Club crew were fifty-fifth, and received 10s. The Argonaut Club crew were fifty-sixth, and received 10s. The Thames Club crew were fifty-seventh, and received 10s. The Argonaut Club crew were fifty-eighth, and received 10s. The Thames Club crew were fifty-ninth, and received 10s. The Argonaut Club crew were sixtieth, and received 10s. The Thames Club crew were sixty-first, and received 10s. The Argonaut Club crew were sixty-second, and received 10s. The Thames Club crew were sixty-third, and received 10s. The Argonaut Club crew were sixty-fourth, and received 10s. The Thames Club crew were sixty-fifth, and received 10s. The Argonaut Club crew were sixty-sixth, and received 10s. The Thames Club crew were sixty-seventh, and received 10s. The Argonaut Club crew were sixty-eighth, and received 10s. The Thames Club crew were sixty-ninth, and received 10s. The Argonaut Club crew were seventieth, and received 10s. The Thames Club crew were seventy-first, and received 10s. The Argonaut Club crew were seventy-second, and received 10s. The Thames Club crew were seventy-third, and received 10s. The Argonaut Club crew were seventy-fourth, and received 10s. The Thames Club crew were seventy-fifth, and received 10s. The Argonaut Club crew were seventy-sixth, and received 10s. The Thames Club crew were seventy-seventh, and received 10s. The Argonaut Club crew were seventy-eighth, and received 10s. The Thames Club crew were seventy-ninth, and received 10s. The Argonaut Club crew were eightieth, and received 10s. The Thames Club crew were eighty-first, and received 10s. The Argonaut Club crew were eighty-second, and received 10s. The Thames Club crew were eighty-third, and received 10s. The Argonaut Club crew were eighty-fourth, and received 10s. The Thames Club crew were eighty-fifth, and received 10s. The Argonaut Club crew were eighty-sixth, and received 10s. The Thames Club crew were eighty-seventh, and received 10s. The Argonaut Club crew were eighty-eighth, and received 10s. The Thames Club crew were eighty-ninth, and received 10s. The Argonaut Club crew were ninetieth, and received 10s. The Thames Club crew were ninety-first, and received 10s. The Argonaut Club crew were ninety-second, and received 10s. The Thames Club crew were ninety-third, and received 10s. The Argonaut Club crew were ninety-fourth, and received 10s. The Thames Club crew were ninety-fifth, and received 10s. The Argonaut Club crew were ninety-sixth, and received 10s. The Thames Club crew were ninety-seventh, and received 10s. The Argonaut Club crew were ninety-eighth, and received 10s. The Thames Club crew were ninety-ninth, and received 10s. The Argonaut Club crew were hundredth, and received 10s.

THE WEATHER.

RESULTS OF METEOROLOGICAL OBSERVATIONS AT THE NEW OBSERVATORY AT THE ROYAL ARTILLERY INSTITUTION.

Lat. 51° 29′ 6″ N.; Long. 0° 18′ 45″ W.; Height above sea 34 feet.

A PLAN FOR PURIFYING THE THAMES (as an adjunct to Sir Joseph Paxton's embankment plan) has been forwarded to us by an old subscriber, which is to the effect that the sewage matter which the sewers of London has been carried beyond low-water mark through filtered culverts, a dam or wall should be constructed, commencing at Battersea Bridge and so dredged at intervals, and surface culverts on each side of the river to carry off the sewage matter. The dredging machinery should be worked by steam, the plan of London-bridge, if able to bear the pressure, with overflow-pipes, which would be found sufficient to carry off the water from the land, at which time they should be opened to admit vessels for inland navigation. The sewage matter thus dredged up would be found to be valuable as a well-forced beautiful, wholesome, and useful. Colonel Parkinson informs us that a similar plan has been carried out at Bombay, Jamaica, Manchester, who certainly is practical and facile in an engineering point of view.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

In having been officially intimated that it will be necessary to raise fresh loans for the service of the year, the Chancellor of the Exchequer has given a fresh impetus to the activity in the market for Eastern Securities, and the amount of business, which has been transacted in them during the week, has been unprecedentedly large, confined on a very moderate scale, but without tending to any important variation in the quotations.

At the Bank of England the applications for accommodation have fallen off to a trifling extent only, whereas the supply of bullion has increased to such an extent that the best commercial bills are readily taken at the following quotations:—

Three months'	3½ to 3¾
Four months'	3¾ to 4
Six months'	4 to 4½

The rates on the Continent have undergone little variety. At one period they were as low as from 2 to 2½ per cent; but some loans have been effected at higher rates, and the quotations are now:—

Paris	3 per cent.
Hamburg	3 per cent.
Frankfort	3 per cent.
Berlin	3 per cent.
Vienna	4 per cent.
Trieste	4 per cent.

The exchange at New York comes firm, at 102 for bankers' bills. At this port the supply of gold has been moderate, and 77s 9½d is the highest price that has been offered for sovereigns—the amount taken out by the last two packets having been £1,000,000 sterling. The gold coin and bullion in the Bank of England now amounts to £19,000,000 sterling. The great success of this loan has been the subject of much discussion here within the last few days.

At the Stock Exchange the business transacted has been very extensive, and the rate of 3 per cent per annum was declared. The gross profits during the past half-year have been £1,000,000 sterling.

On Monday Home Stocks were very flat, at about stationary prices:—Consols for Money were 92¼ to ¾, and for the Account 92¾ to ⅞; Reduced and New Three per Cents, 92¾ ¼; Exchequer Bills, March issue, 10s. to 8s. dis.; Ditto, June, 5s. to 3s. dis.; Ditto, July, 3s. to 2s. dis.; Bank Stock, 214 to 216; India Stock, 214 to 216; and the Five per Cent Loan, 99¾ ¼. The dealings on the following day were nothing—Consols for Money were 92¾ ⅞, and for the Account 92¾; Reduced and New Three per Cents, 92¾ ¼; Long Annuities, 18⅛; Exchequer Bills, March issue, 10s. to 8s. dis.; Ditto, June, 5s. to 3s. dis.; Ditto, July, 3s. to 2s. dis.; Bank Stock, 214 to 216; India Stock, 214 to 216; and the Five per Cent was 99¾ ¼. India Bonds sold at 2s. to 3s. dis. Wednesday was dull, and the closing prices of the quotations:—Consols for Money were 92¾ to 93; Ditto for Account, 93 to 93¼; Reduced and New Three per Cents, 92¾ ¼; Bank Stock, 214 to 216; Exchequer Bonds, 94¾; Ditto Five-and-a-Half per Cents, 100¾; India Debentures, 99¾; India Stock, 214 to 216; Exchequer Bills, 10s. to par; Ditto, June, 5s. to 3s. dis.; and Bank Stock, 229 to 231. On Thursday the market opened steadily, as felt that the Government would not require any loan at present, and the closing quotations for Consols being 93¼ to ⅜; and 93¾ to 94 for the Account; the Reduced and New Three per Cents, 92¾ ¼; and Exchequer Bills, 10s. to par.

The Irish Stock has continued in good demand, and, on the whole, prices have ruled firm. In other Foreign Bonds a fair business has been transacted, but without any important change in their value:—Buenos Ayres Six per Cents, Present Issue, 1868, have marked 87½; Buenos Ayres Six per Cents, 81; Ditto, Deferred, 56¾; Chilian Six per Cents, 1861; Chilian Four-and-a-Half per Cents, 81½; Dutch Two-and-a-Half per Cents, 63¾; Equador New Consolidated, 12½; Granadian Five per Cents, 63; Mexican Three per Cents, 21½; New Granada Active Three-and-a-Half per Cents, 14½; Ditto, Deferred, 5½; Peruvian Four-and-a-Half per Cents, 86½; Ditto, Debentures, 83½ ex div.; Portuguese Three per Cents, 44½ ex div.; Russian Four-and-a-Half per Cents, 91; Russian Five per Cents, 103; Sardinian Five per Cents, 78¾; Spanish Three per Cents, 48½; Turkish Old Six per Cents, 79¾; Ditto, New, 61; Ditto, £100 Bonds, 84¾; Turkish Four per Cents, 19½; Belgian Four-and-a-Half per Cents, 91; and Venezuela One-and-a-Half per Cent, Deferred, 9.

In Joint-stock Bank Shares only a moderate number of transactions have taken place:—Australasia have realised 61¾; British North American, 42¾; Chartered of India, Australia, and China, 20; Chartered Mercantile of India, London, and China, 28¾; City, 74½; English, Scottish, and Australian Chartered, 16½; London Chartered of Australia, 23½; Ditto, New, 12½; London and Westminster, 6¾; National Provincial of England, 19½; Ditto, New, 9½; Oriental, 59; Ottoman, 19½; Union of Australia, 37 ex div.; and Union of London, 29¼ ex div.

The leading quotations for shares in new undertakings are as follow:—Ocean Steam Navigation, 4 to 4¼ pms.; Thames and Mersey Marine, 15 to 15-16 pms.; Universal Marine Insurance, 2 to 3 dis.; London and Provincial Marine, 2 to 3 dis.; China and Japan, par to 1 pm.; Brunswick Copper, 5-16 to par; Natal Land, par to 1 pm.; National Boat-building, 1 to 1½ pms.; Contractors', 1-16 to 1-8 pm.; Ditto, Deferred, 1-16 to 1-8 pm.; and Crystal Palace, 1 to 1½ pms.

The Home and Colonial Government Securities have been tolerably firmly held:—Canada Six per Cents, 1877-9, have sold at 107½; Ditto, 1889-91, 104½; Ditto Five per Cents, 1860, 101½; Ditto, 1877-9, 101½; Ditto, 1889-91, 99½; Ditto Five per Cents, 1860, 101; Ditto Five per Cents, 1888, and upwards, 97½; and Miscellaneous shares have ruled inactive. Crystal Palace, Preference, have been done at 99½; Australasian Investment, 1½ to 2 pms.; Natal, 1½; Atlantic Telegraph, 3-16 to 5-16 pms.; British and Australian Copper, 3½; Great Shih Sewerage, 1½; Hudson's Bay, 1½; Peninsular and Oriental Steam Navigation, 1½; Electric Telegraph, 48 ex div.; Peninsular and Oriental Steam, 70 ex div.; Ditto, New, 40.

There has been a moderate, but by no means active, demand for railway shares, and generally speaking, prices have been well supported. The following are the week's official closing quotations:—

BIRMINGHAM, Wolverhampton, Stour Valley, and Dudley, 92½; East Anglian, 17½; Great Northern, 103; Great Western, 80; Lancashire and Yorkshire, 111½; London and Blackwall, 39½; London, Brighton, and South Coast, 111½; London and North Western, 94½; Manchester, Sheffield, and Lincolnshire, 47½; Midland, 102½; North British, 72½; North Eastern—Berwick, 91; York, 91½; North Staffordshire, 12½; North and South-Western Junction, 19½; Scottish Central and Caledonian, 97½; South Devon, 8½; Eastern, 8½; Victoria Lambeth and Pimlico, 11½; West Midland—Oxford, 46½.

The Foreign and Colonial Railways have been dealt in to a fair extent.

PREFERENCE SHARES.—Edinburgh, Perth, and Dundee, 74½; London, Chatham, and Dover, 19½; Manchester, Sheffield, and Lincolnshire, 98½.

DEBENTURE DESCRIPTIONS.—Bombay, Baroda, and Central India, 94½; Eastern Bengal, 19½; Great Indian Peninsula, 95½; Madras, 104½; Scinde, 103½; Great Western, 101½; Great Indian Peninsula, 95½; Madras, Five per Cent, 103½; Scinde, 103½.

FOREIGN.—Antwerp and Rotterdam, 11; Namur and Liege, Preference, 19 ex div.; Recife and Sao Francisco, 11½.

The returns of the Bank of England for the week ending July 24 shows the following results, as compared with the previous week:—

Amount of circulation	Increase	£338,900	Amount of other securities	Decrease	£57,567
Amount of deposits	Increase	1,000,000	Amount of gold coin and bullion	Increase	1,281,400
Amount of the Rest	Increase	1,000,000	Amount of notes unemployed	Increase	1,281,400
An increase of Government Securities			An increase of reserve of notes		42,100
Low all		27 ½			27 ½

The total circulation is now £20,769,291; public deposits amount to £4,123,650, and private deposits to £11,984,277. Securities are £18,924,1 and the stock of bullion is £11,720,090.

Friday Afternoon.

There is a decided improvement to notice in the Market for Home Securities to-day, and prices have generally ruled firm. Consols for Money have marked 93¼ to 93; for the Account, 93 to 93¼; the Reduced and the New Threes 92¾ to ¼; and Exchequer Bills 10s. to 8s. dis. To-day's price of the new India Loan is quoted at par to ½ prem. In the Foreign House Turkish stock has improved. The Six per Cent Loan is quoted at 78¾ to ¾; and the new Ditto, 61¾ to ⅝. Railway Shares rule inactive.

THE MARKETS.

CORN EXCHANGE (Friday).—To-day's market was scantily supplied with English wheat, the demand for which ruled firm, and prices were well supported. The show of foreign wheat was tolerably extensive, and the demand for it was steady, but prices were unchanged, at quite previous quotations. Flouring cargoes of grain moved off steadily, at full prices. Barley was in good request, and the quotations were fully 1s. per qr. higher. Malt was steady, at late prices. Beans and peas were firm, at a shade of money. Oats 6d. per quarter. Other kinds were in slow demand, yet prices ruled firm. Linseed cakes were in fair request, at £11 10s. per ton. Rapecake was in fair demand, at £7 5s. per ton. Cotton cake was in fair business was doing, at full quotations.

English.—Wheat, Essex and Kent, red, 36s. to 40s.; ditto, white, 38s. to 42s.; Norfolk and Suffolk, red, 34s. to 38s.; ditto, white, 36s. to 40s.; Yorkshire red, 34s. to 38s.; ditto, white, 36s. to 40s.; Lincoln and Norfolk, 34s. to 38s.; Scotch and Northumberland, 32s. to 37s.; Rye, 24s. to 26s.; Barley, grinding, 22s. to 24s.; ditto, malting, 26s. to 28s.; Malt, pale, 52s. to 56s.; ditto, brown, 48s. to 52s.; Beans, mazagan, 30s. to 32s.; ditto, Tick, 30s. to 32s.; Harrow, 30s. to 32s.; Peas, white, 32s. to 34s.; ditto, grey, 32s. to 34s.; Oats, Yorkshire and Lincoln, 20s. to 22s.; ditto, Scotch, 20s. to 22s.; ditto, Irish, 20s. to 22s.; Flour, per sack, 40s. to 44s.; country marks, 36s. to 38s. per 280lbs. American, 18s. to 20s. per barrel. French, 40s. to 44s.

Seeds.—There was no change to notice in the value of seed, and the demand, generally, is wholly confined to the wants of the trade. Linseed, English, 52s. to 54s. per quarter; Baltic, 50s. to 52s. per qr.; Black, 48s. to 50s. per qr.; Mediterranean, 48s. to 50s. per qr.; Hempseed, 40s. to 42s. per qr.; Canary, 60s. to 64s. per qr.; Coriander, 18s. to 20s. per cwt.; Rapeseed, 42s. to 44s. per last; Carraway, 24s. to 26s. per cwt.; Coarse, 18s. to 20s. per cwt.; Fine, 22s. to 24s. per cwt.; Trefoil, 20s. to 24s. per cwt.; Red Clover, 24s. to 28s. per cwt.; White, 30s. to 36s. per cwt.; Mustard, English, 4s. to 5s. per 8lb.; White, 3s. to 4s. per 8lb.; Brown, 3s. to 4s. per 8lb.; Tares, old, 4s. to 5s. per bushel; new, 3s. to 4s. per bushel.

Potatoes.—Supplies are large, and the demand is heavy, at a decline in the quotations of from 10s. to 20s. per ton. Yorkshire Regents, 80s. to 90s. per ton; Scotch Regents, 80s. to 90s. per ton; Kent and Essex Regents, 70s. to 80s. per ton; Scotch Cups, 60s. to 70s. per ton; Yorkshire Cups, 60s. to 70s. per ton; Jersey Regents, 90s. to 100s. per ton; Jersey Cups, 80s. to 90s. per ton; Guernsey Regents, 90s. to 100s. per ton; Guernsey Cups, 80s. to 90s. per ton; Cork Reds, 60s. to 70s. per ton; Cork Whites, 60s. to 70s. per ton; Belgian Reds, 60s. to 70s. per ton; Belgian Whites, 60s. to 70s. per ton; French Reds, 60s. to 70s. per ton; French Whites, 60s. to 70s. per ton.

Provisions.—The finest bacon moves off steadily, at full quotations; but inferior kinds are dull to-day. Those singed sides, 56s. to 58s. per cwt.; middles, 52s. to 54s.; other provisions move off steadily, at previous rates.

Butter.—Best Friesland, 112s. to 116s. per cwt. on the spot, and 4s. to 4d. for the last three months. Supply of inferiorities, 10s. to 20s. per cwt., with a slow sale.

Cheese.—Best Cheshire, 60s. to 64s. per cwt.; Derby, 56s. to 60s.; and skim-milk more off steadily, at 20s. to 30s. per cwt.

Spirits.—Rum moves off steadily, at 1s. 9d. to 1s. 10d. for proof Leewards, and 1s. 8d. to 1s. 9d. for Jamaica. Brandy, 10s. 6d. to 11s. 6d. per gal. Geneva, 1s. 6d. to 1s. 7d. Proof, 9d. to 1s. 0d. English ditto, 1s. 1½d. to 1s. 4d.; and English gin, for export, 2s. 1½d. to 2s. 3d.

Sugar and Coffee.—Of both articles the demand is steady, at full prices. Sugar is 6d. to 9d. dear, 42s. to 44s., and refined, 47s. 6d. to 48 per cwt.

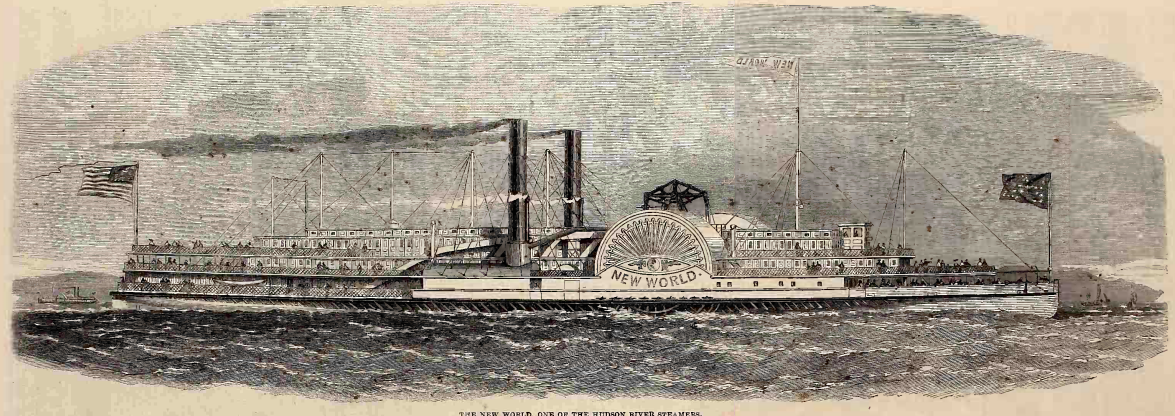
Tea.—Common Congou, 1s. 10d. per lb. Fine ditto, 2s. 2d. per lb. Good Congou, 2s. 3d. per lb. Fine ditto, 2s. 4d. per lb. Strong Congou, 2s. 5d. per lb. Fine ditto, 2s. 6d. per lb. Common Souchong, 2s. 7d. per lb. Fine ditto, 2s. 8d. per lb. Good Souchong, 2s. 9d. per lb. Fine ditto, 2s. 10d. per lb. Common Pekoe, 2s. 11d. per lb. Fine ditto, 3s. 0d. per lb. Good Pekoe, 3s. 1d. per lb. Fine ditto, 3s. 2d. per lb. Finest ditto, 3s. 3d. per lb.

Wool.—Supplies are tolerably large, and the demand is heavy, at a decline in the quotations of from 1d. to 2d. per lb. Privately, the demand is very limited.

Coals.—Tyne, Wear, and Tees, 14s. 6d. to 15s. 6d. per ton. Hetton, 15s. 6d. to 16s. 6d. Lambton, 15s. 6d. to 16s. 6d. Stewart's, 15s. 6d. to 16s. 6d. Hartley, 15s. 6d. to 16s. 6d. Wallsend, 15s. 6d. to 16s. 6d. Other sorts, 13s. 6d. to 14s. 6d.

Coal Freights.—Moderate supplies of coal vessels are on sale. Those engaged for the Thames are in fair request, at 2s. 6d. to 2s. 9d. per ton. Tyne, Wear, and Tees, 2s. 6d. to 2s. 9d. per ton. Hartlepool, 2s. 6d. to 2s. 9d. per ton. Stockton, 2s. 6d. to 2s. 9d. per ton. Sunderland, 2s. 6d. to 2s. 9d. per ton. Hetton, 2s. 6d. to 2s. 9d. per ton. Lambton, 2s. 6d. to 2s. 9d. per ton. Stewart's, 2s. 6d. to 2s. 9d. per ton. Hartley, 2s. 6d. to 2s. 9d. per ton. Wallsend, 2s. 6d. to 2s. 9d. per ton. Other sorts, 2s. 6d. to 2s. 9d. per ton.

Newspaper and Periodical Printing.—Numerous supplies of wood continue on sale. The demand for all kinds of timber is steady, at full prices. Teak, per load, 3l. 10s. to 4l. 10s. Mahogany, Honduras, per foot, 1s. 0d. to 1s. 6d. Ditto, Cuba, 1s. 0d. to 1s. 6d. Ditto, Tobasco, 1s. 0d. to 1s. 6d. Ditto, Mexican, 1s. 0d. to 1s. 6d. Ditto, Bay, 1s. 0d. to 1s. 6d. Pine, Quebec, per load, 3l. 10s. to 4l. 10s. Ditto, Memel, 3l. 10s. to 4l. 10s. Ditto, Riga, 3l. 10s. to 4l. 10s. Ditto, Archangel, 3l. 10s. to 4l. 10s. Ditto, Gothenburg, 3l. 10s. to 4l. 10s. Ditto, Christiania, 3l. 10s. to 4l. 10s. Ditto, Swedish, 3l. 10s. to 4l. 10s. Ditto, Finland, 3l. 10s. to 4l. 10s. Ditto, Dantzic, 3l. 10s. to 4l. 10s. Ditto, Stettin, 3l. 10s. to 4l. 10s. Ditto, Pomeranian, 3l. 10s. to 4l. 10s. Ditto, Prussian, 3l. 10s. to 4l. 10s. Ditto, Petersburg, 3l. 10s. to 4l. 10s. Ditto, Lisbon, 3l. 10s. to 4l. 10s. Ditto, Oporto, 3l. 10s. to 4l. 10s. Ditto, Gibraltar, 3l. 10s. to 4l. 10s. Ditto, Quebec, 3l. 10s. to 4l. 10s. Ditto, New Brunswick, 3l. 10s. to 4l. 10s. Ditto, Nova Scotia, 3l. 10s. to 4l. 10s. Ditto, Canada, 3l. 10s. to 4l. 10s. Ditto, Red Pine, 3l. 10s. to 4l. 10s. Ditto, Yellow, 3l. 10s. to 4l. 10s. Ditto, Spruce, 3l. 10s. to 4l. 10s. Ditto, Deals, per 120, 11l. 10s. to 12l. 10s. Ditto, Battens, 8l. 10s. to 9l. 10s. Ditto, Flooring Boards, 1st, 12l. 10s. to 13l. 10s. Ditto, 2



THE NEW WORLD, ONE OF THE HUDSON RIVER STEAMERS.

AMERICAN STEAMERS.

THE HUDSON RIVER STEAMER THE NEW WORLD.

Before the introduction of railways, facility of communication, upon which the prosperity of America depended, rendered the perfection of lake and river steamers a matter of such vital importance that all the natural mechanical ingenuity peculiar to the Anglo-Saxon race became taxed to the utmost to construct the most perfect class of steam-vessel adapted to the peculiar traffic of the locality they were to be employed in. High speed, sleeping and feeding accommodation for the passengers, and shallow draught of water—qualities common to nearly all American vessels—have given the present form and character to the steamers used throughout the United States and the British provinces.

An examination of the construction of these vessels, and the innumerable details and contrivances necessary in them, give one a very high idea of the mechanical skill and inventive powers of the American people: from the colossal beam-engine, which propels her down to the minutest fittings-up of the hot-cabins, the barber's shop, or the lavatories, everything that ingenuity can devise for making things perfect has been done. We cannot say that we have observed the same attention to those details upon which the comforts of the passengers so much depend on board English ships. It arises from this cause—that in America the building and fitting of the cabins is done by a class of people who devote themselves entirely to such work and study to attain perfection at it. In England the shipbuilder who designs the ship applies his whole ability to perfecting the hull, rigging, and fittings of the deck, and doubtless builds a vessel better adapted to bear the rude handling of stormy, winter seas than is produced in any other part of the world; but cabin comforts he despises, and thinks lubbers only require them, so leaves it pretty much to ship-joiners and inferior people, who do them all after one plan, whether the vessel be intended to navigate the Baltic in winter or the Red Sea and Indian Ocean in summer.

There is also another reason why a difference should exist in the general characteristics of American and English steamers. The latter vessels are nearly always running long passages on an even keel and in comparatively smooth water, their rivers, lakes, and great sounds and estuaries being of that character; while in England we have scarcely any long journeys to make by water unless we cross either of the Channels or the North Sea, in which case the vessel, though she start from London-bridge, must be in every respect such a sufficient sea-boat that she could cross the great Atlantic itself, for none can tell but that, in her little voyage to Boulogne, Calais, Rotterdam, or Hull, she may have to encounter weather as bad as, if not worse than, any she might fall in with in a passage to New York.

Steam navigation in America commenced upon the Hudson. It is about fifty years since that Fulton placed his first steamer, the Clermont, upon that river; and only one little steam-vessel was then running in England—that was the Charlotte Dundas Symington's boat—upon the Forth of Clyde Canal. Now all the seas, rivers, and great lakes in the world are navigated by steamers. In the important point of speed the Hudson River boats have always maintained the lead. The fastest steam-vessel in the world is now running there, the Daniel Drew. This vessel has attained the extraordinary speed of twenty-five miles an hour without assistance from either wind or tide.

Our Illustration of American river-steamers, the New World, is chosen as showing in the fullest manner the peculiarities of this class of craft, the immense stack of sleeping-cabins, the projecting sponsons, or guards, the remarkable manner in which the rigidity of the hull is maintained by trussing with wooden beams, braces, iron tie-rods, &c., without which the vibration of the mass would be terrific, while with it the whole is so steady that a passenger cannot feel in the slightest degree either the beat of the engine or the revolution of the paddles.

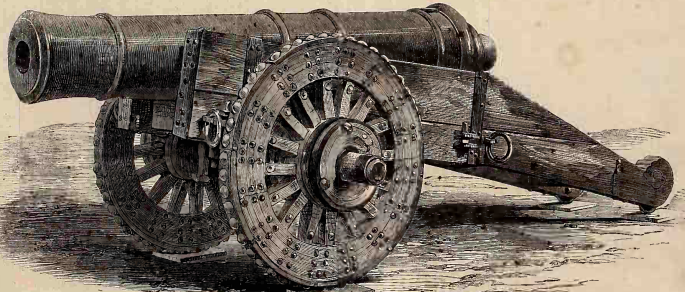
The boilers of this vessel are placed outside on the guards, a singular position for such great weights, but tending much to keep the vessel cool, as well as adding to her safety. This class of vessel, with more or less of top hamper in the way of cabins, is used on all the waters of the northern and eastern States. They navigate, also, Long Island Sound and the Bay of Fundy; but they must not be confounded with the class of high-pressure boats that navigate the rivers of the southern and western States. It is these latter that have earned such notoriety for exploding and getting in collision, although some terrible accidents have happened in the northern States and on the lakes, the most recent on Lake Michigan. The Lady Elgin was a vessel of precisely the class we have been describing.

Between Boston and New York are lines of magnificent steamers. They run in connection with the railway at Allan Point, their course being about 146 miles by the East River and Long Island Sound. This distance they generally accomplish in about seven hours and a half, including the delay in calling at New London to discharge and take in both passengers and cargo. They regularly maintain this high speed; and it is a fine sight to witness the departure of quite a fleet of these vessels every evening from their docks at New York.

The dimensions of the Hudson River steamer the New World are as follow:—

Length over all	..	..	..	..	380 ft.
Breadth over all	..	..	..	..	85 ft.
Breadth of beam	..	..	..	..	50 ft.
Diameter of cylinder	..	..	..	..	76 in.
Length of stroke	..	..	..	..	15 ft.
Diameter of paddle-wheel	..	..	..	..	40 ft.

It has 347 state rooms or cabins, and 600 berths.



BRONZE GUN CAPTURED FROM THE CHINESE DURING THE OPERATIONS IN AUGUST LAST.—SEE PAGE 74.

THE CIVIL WAR IN AMERICA: "CONTRABAND OF WAR."—FROM A SKETCH BY OUR SPECIAL ARTIST.

ILLUSTRATIONS OF THE CIVIL WAR IN AMERICA.

UNDER the head of "Contraband of War" our Special Artist has forwarded to us a characteristic sketch (herewith engraved) of a party of slaves seeking protection in the Federal camp. It appears that the slaves from the different plantations in Virginia are continually going through the pickets of the Federal army, as fugitives from their masters, and when it is proved that their owners are fighting in the Secessionist ranks the slaves are treated as contraband of war.

The incident depicted on the first page—the Capture of a United States' Dragoon while on Picket by Guerrilla Horsemen of Virginia—happened near our Special Artist's camping-ground at Cloud's Mill, in the Federal Camp. The man, while dismounted, was suddenly set upon by seven or eight of the Confederate cavalry; and, though he made a gallant defence, was carried off.

PARIS FASHIONS FOR AUGUST.—SEE SUPPLEMENT, PAGE 93.

*** *The charge for the insertion of Births, Marriages, and Deaths is Five Shillings for each Announcement.*

CRYSTAL PALACE.

THE GRAND FAREWELL FESTIVAL.

The Directors of the Crystal Palace have the pleasure to announce that they have made arrangements to give

A GRAND MUSICAL FESTIVAL,

IN HONOUR OF

THE FAREWELL APPEARANCE OF MADAME GRISI.

This Festival will take place on WEDNESDAY NEXT, July 26.

It has been the endeavour of the Directors to make every selection for the public favour to secure a Performance of the highest character, and certainly the list of Vocalists and Instrumentalists engaged for this day's Festival will be more than usually interesting.

Madame Grisi, who has not only won the highest classic, but who has been the most frequent exhibitor at this Palace, will on this occasion, for the last time, delight the public with her unrivalled powers, and will sing one of her great parts in all the forms of music of this country.

In compliance with this, the Farewell Appearance, arrangements have been made to impart to it the character of a Reception, and to afford the opportunity to the public of testifying the high estimation in which they hold the talents of Madame Grisi, the price of admission to the public in general is placed at such a moderate sum as will, it is hoped, ensure an immense attendance, and thus afford to the great prima donna

The Programme for the occasion will appear on this occasion—

Miss Dolby, Miss Banks, Miss Lascelles, Miss Theodosia Thirlwall, Signor Mario, Signor Giuglini, Signor Gardoni, Signor Santley, Signor Patti, Signor Tamberlik, and Mdme. Grisi,

who will sing some of her most popular music.

Conductor—Mr. Costa.

What is not widely known at present, and on this occasion, The Orchestra will be augmented by the Bands of the Italian Opera and that of the Crystal Palace Company, the chorus of the Royal Italian Opera, the additional chorus specially engaged in Sacred Harmonic Society's Festival selection of Choral Anthems from the Sacred Harmonic Society's Festival selection of Choral Anthems from the Sacred Harmonic Society's Festival selection of Choral Anthems from the

LEONARDS, and EASTBOURNE, for one or more persons, are issued by the SOUTH EASTERN RAILWAY COMPANY, available for periods, from Thursday to Monday, and Saturday to Monday inclusive, at the following reduced fares:—From London-bridge, and Victoria, via the "Tunes" daily.

EDUCATION.—Richmond-hill.—In a French and German Protestant Establishment, permanently engaging its resident professors, pupils receive a thorough education in the French, German, and English languages, literature, history, painting, music, dancing, drawing (without restrictions by a drawing), the DAUGHTERS OF GENTLEMEN only receive instruction from any of the masters, with liberal board, for 40, 45, and 50 guineas per annum, according to the number of masters they may require to attend them. The domestic and religious comforts of a happy home are secured under French and German governesses. The principals, assisted by a sister, devote their undivided attention to the comfort and improvement of the pupils. Parents can best appreciate the domestic arrangements, by visiting the establishment at any time they please. The house is on a healthy and commanding situation on Richmond-hill, near the Park; it is detached, surrounded by five acres of land, of shrubbery and airy enclosures, thoroughly ventilated, and contains large day and play rooms and four bath-rooms.—THETA, Post-office, Richmond Surrey.

BONN, on the RHINE.—Dr. BREUSING prepares a limited number of PUPILS for the Universities, Cheltenham, Sandhurst, Woolwich, and the Civil Service. Terms 100 guineas. Bonn, Germany.—THOMAS, Gippeswyk Boulevard; or Dr. Breusing, 100, Goltz-str. Strand, Bonn, on the Rhine.

A LADY of limited income is desirous of an ENGAGEMENT as READING or CLOSING COMPANION to a Lady, without salary, a comfortable home being the object of the advertiser.—Box 345, Post-office, Ross.

TO PARENTS resident in India or elsewhere who desire to find a Christian Home and Education for their Children.—The Wife of an Engineer, Military officer and recommended, receives a limited number of young Pupils from seven to twelve years of age, to be treated as her own children. Residence a retired and healthy part, close to the British Channel. Unexceptionable references given.—Address, Engineer, 30, Cambridge-square, Hyde-park.

A LADY of limited income is desirous of an ENGAGEMENT as READING or CLOSING COMPANION to a Lady, without salary, a comfortable home being the object of the advertiser.—Box 345, Post-office, Ross.

THE CLOSE OF THE EXHIBITIONS.

TO-DAY the exhibition season closes. The three thousand and odd specimens of the graphic art which during three months and more have decorated the walls of the Royal Academy, the Suffolk-street Gallery, the Portland Gallery, and the two Water-colour Galleries will be dispersed to the four quarters of the compass: some to their fortunate purchasers, some back to the parents' studio; and the great outer world will, with very few exceptions, hear of them no more. Upon the whole, the art-campaign just closed, though by no means a brilliant one in achievement, has, we believe, been successful above the average in point of sales. The public, therefore, are not to be blamed if art does not prosper amongst us. That there is a strong and growing feeling amongst the masses of the middling classes of society for the cultivation of art and an improved taste for it also, both as regards subjects and their mode of treatment, is undeniable. It will be for the artist worthy to meet this increased call upon his labours, and to keep pace with the intelligence which dictates and guides it. If the profession as a body has done little in vindication of the character of the British school during the past season, and if its magnates have done least of all, let us hope that it is only in accordance with the proverb "Rendez pour mieux aimer," and that the year 1862, when the art of Europe will hold its congress within our metropolis, will find them prepared to meet all comers, and to come off with honour in the great competition.

We paid parting visits within the last few days to all the exhibitions, and, besides selecting several subjects for engraving, which enrich our present Supplemental Sheet, found, in the case of the Royal Academy, occasion for one or two general remarks, as well as some special notices of works which had hitherto escaped our observation.

And first let us congratulate the lady artists upon the advance which they are making in the higher branches of art—setting flower and still-life aside—which threatens to make some of the mightiest of their male competitors look to their laurels. Miss E. Osborn's "Escape of Lord Nithsdale" we have already spoken of with honour; it is one of the very best pictures in the exhibition. Miss Solomon's "Arrest of a Deserter" also is a work which mingled itself out as one of no ordinary merit, full of dramatic power, and admirably composed. Another name also should be mentioned, but with feelings of sorrow and regret, for it is that of one who has passed away from life ere the exhibition closes upon her performance. "Peep-bo!" by Mrs. H. T. Wells (whose death is recorded elsewhere), is a work full of nature and feeling, painted in a manner which shows at once a womanly delight in her subject and a strong feeling for art. "The Venetians," by the same hand, being the study of a female head, with the peculiar Venetian golden hair, and treated in the Venetian style of colouring, though rather stern in aspect, displayed considerable cleverness. Miss J. E. H. Hay has treated the subject of "Tobias Restoring the Eyesight of Tobit" in an impressive manner, with great correctness of drawing, an eye to harmonious colouring, and a true feeling for the classic style of art. "The Cloister of the Convent of San Domenico, near Fiesoli," the humble retreat where Fra Angelico lived and worked, is invested with all the poetry which that time-honoured name inspires. In an obscure corner of the north room we discovered and much admired a very pretty domestic subject, entitled "A Breton Interior," by Miss E. Macirone.

"The Last Days of Queen Anne," by J. Z. Bell, showing one of the scenes of dispute between Lords Bolingbroke and Oxford about the Treasurer's sick, which hastened the death of that Sovereign, is better in drawing than colour, and, barring a little hardness, is a meritorious production. J. Archer's "Playing at a Queen with a Painter's Wardrobe" is a pleasant conceit, worked out with considerable humour in a rich tone of colour. J. Waiser's little girl "Resting" is a clever study from life, and a nice bit of colour. H. Le Jeune's "Autumn" exhibits a joyous group of children carrying home firewood, painted in a florid hue, in the French style of treatment. A work which demands a better place than where it is hung, near the middle door in the south room, is W. W. Nicol's "The Harbour Bar is Moaning—Newhaven Fisherman's Cottage." The fisherman's wife, a fine, handsome woman, dressed in a printed calico, the pattern of which is most conscientiously elaborated, is sitting hard at work mending one of her husband's nets, which comes across the face of the little chubby child asleep on her knee. There is evidence of a feeling of apprehension in the half-averted eye and contracted brow, but still she goes on with a will at her work. At the open window, and craning his neck round the corner on the look-out for his father's boat, is a little boy, his face beaming with health and intelligence. The picture in every part is replete with life, and admirably painted.

In landscape-painting let us do timely justice to Callow's "Spring—the Outskirts of Burnham Wood." It is a charming bit of Nature—a tangled covert, with straggling trees, their boughs not yet in leaf, sending long broken shadows on the ground in the early sunlight. Some young lambs gambolling about give life and reality to the situation. Another admirable glimpse of "Burnham Beeches," but under severe aspect, is given by G. Sant, in a carefully studied and most ably painted landscape.

In particulars are one or two which claim commendation for their truth-

"THE PATH TO BLACKOOWN AND THE SURREY HIGHLANDS," BY J. W. WHYMPER, FROM THE EXHIBITION OF THE NEW SOCIETY OF PAINTERS IN WATER COLOURS.—SEE PAGE 98.

"THE WOODLAND GLADE," BY G. CHESTER, FROM THE ROYAL ACADEMY EXHIBITION.—SEE PAGE 98.

fal and genuine character, and the honest work bestowed upon them. That of Louis Huth, Esq., by Roxall, though treated in an unpretending manner, bears the stamp of truth and life. Charles Sturridge, Esq., by Long, is expressed at full length, in dark riding suit, leaning against an oak panel, with a fine dog by his side, vigorously painted, without any air of affectation. Wenzell's portraits of "Lady Morison" and "Thomas Hesketh, Esq., late Mayor of Preston," display judicious treatment and thoroughly masterly work. One of the most careful and successful samples of portrait-painting in the whole exhibition (though very unfavourably hung) is that of "A Volunteer Lass of Corsty," by E. B. Giraffe. It is admirable for the poise of the figure, the rounding of the bust and limbs, the manly expression, and the consummate finish of every detail. Two very pleasing female portraits are those of "Mrs. Joshua Peddle, of Stanfield Hall, Norfolk," by J. Rannie, and that of a young lady in a hat and fair complexion, wearing a drab fur hat, entitled "The Morning's Walk," by C. A. De Val.

We have not noticed the architectural drawings in the Academy Exhibition. They, however, are more than usually limited in number, and present few objects of interest. Mr. H. Barry's Royal Academy, about to be erected at Malta" is a rather heavy building, somewhat after the type of the new Covent-garden Opera House, but more ornamental. Corinthian pillars being placed on all sides of the building. Another difference is that the portico is without a pediment, and is approached by steps on the sides from the entrance. Statues and vases ornament the balustrade of the roof. "The Victoria Military Hospital in Course of Erection on the Banks of the Southampton Water," by F. A. Dovey, appears to possess all the requisites of health and stability, with a proper regard to ventilation. H. S. Legg exhibits another out of numerous plans submitted in competition for covering the area of the Royal Exchange with glass, which he proposes to do at the range of the upper story by the very simple process of throwing curved iron girders across. Gothic triumphs in all its amplitude of wasteful and inappropriate display in the Manchester Assize Courts now in course of erection from designs by Mr. Alfred Waterhouse. Mr. G. G. Scott exhibits four "Views Illustrative of Gothic Designs for the Government Offices," which appear to be for preference we have avowed for the application of classic architecture to such purposes. In truth, however, there is a great deal of pretension necessary, and superficial show resorted to by the votaries of Gothic architecture on all occasions of attempting to apply it to modern purposes. Such pretension is unworthy of high architecture, and renders it a mere theatrical style of ornamental ruins, and, above all, the relations between external and internal lines, extending even to the roof, which should be the continuation of the walls, are almost unheedfully abandoned, and all that appears in their place is such designs as that by Mr. Scott, now before us, which exhibit a row of mined windows, lofty towers having no possible purpose, and a highpeaked roof, pierced with dormer windows and other fringed ornamentings. An interior view of a court shows two projecting towers one on each side, appropriated to staircases, which in their abrupt diagonal lines are suggested by those of the Mediæval towers of Strasburg and open to the air. For effect is anything but pleasing, amongst the designs for metropolitan improvements we find that E. Marshall for a viaduct across the valley between Snowhill and Holborn-hill was described and engraved in our last Number. Mr. R. Kerr exhibits a very comprehensive design of a proposition which he has submitted to Government for widening the line of the Strand. This is by carrying the street stretching through the heart of the metropolis, by building an open viaduct, with or without locks, on both sides of the Thames, and for forming proposed roads to connect with it, exhibits a scheme which will do up to six feet below highwater mark, by means of a low-level sewer running parallel to the course of the river. The principle of this is a scheme for the concentration of various Government offices, including law courts, without requiring the slightest additional expense to Government beyond that already incurred in the matter of the public service. The proposition is one upon which, without further and careful examination, we feel unable to express any decided opinion. We have no doubt, however, that it will receive the full amount of ethical attention usually bestowed upon suggestions for public improvements.

We observe that on a supply night last week the subject of the continued occupancy by the Royal Academy of the national building and the improvements (?) recently made in it was again ventilated in the House of Commons, Lord H. Lennox having questioned Sir Stafford Palmerston, it struck us, spoke rather vaguely as regards the removal of the academy. "No doubt," he said, "*the intention* was that the Royal Academy should be removed elsewhere, but Government reserved itself with a gallery out of its own funds," and that "when that took place a much larger space would be obtained for the National Gallery, but he gave no hint as to "when" that "intention" would be realised. Really this is too bad. We know the dangers of delay, particularly when, as in the present instance, an influential position appears to have it fixedly at heart, *per fas aut nefas*, to defeat the expressed will of Parliament and of the public; there is hope by the same means to be obtained waiting their opportunity to take advantage of any side wind, should the public fancy be for an instant relaxed, to carry out their purpose. And upon what pretence, let us ask, is the Government delay in accomplishing a great public requirement justified or excused? Is it for want of money or want of space? Impossible. The former is easily money is obtained, and how soon all that money can do is done when Government takes the matter up duly in earnest. The Great Exhibition building of 1862, now in progress, is an evidence of what may be achieved where Court influence and Government influence work together. A permanent building, adequate for the requirements of the National Gallery, would not cost a quarter of the sum which will be expended on a building only intended for the use of one year; and yet we have been a dozen years talking about it, and are as a rule as far as practical results are concerned at starting.

With respect to the recent temporary patching of a building in Trafalgar-square, Lord Palmerston thought that "the alterations, on the whole, were improvements." As far as the additional space for the National Gallery is concerned, we are certainly thankful for it, as it affords accommodation for a considerable number of pictures which otherwise it would have been impossible to place before the public. But the new Sculpture Room for the use of the Royal Academy, so far from being necessary, is in fact a building adapted as a means of evasion and applicable towards a necessary end—is, in fact, so slight of any foundation upon "the old public educational establishment" as to skeleton, however mean and trumpery, will do. We bear to differ with Lord Palmerston to the whole course of proceeding, and to the shuffling which has marked the history of this affair we emphatically say—Shall not do. Public opinion will not be trifled with much longer; and we much mistake if, when the representatives of the rest of Europe come next year amongst us, the present anomalous position of our tardiness of our art-requirements does not form the most unfavourable expressions of astonishment and ridicule as will shame our enlightened authorities into some show of action.

The recent Paris Census shows that no fewer than 23,000 persons are employed on photography and photographic processes in that city.

The Duke of Cambridge has presented a fine collection of stuffed animals at Baden-Baden. The Duchess of Hamilton has placed her cabinet at the Duchess of Cambridge's disposal during her Royal Highness's sojourn at that watering-place.

Advices from Turin state that the Hungarians who were in the habit of annually dispersing a fair which takes place at Debreczin, a place of undertaking anything in that quarter this year. Two cars of Kossuth, who are engineers, are said to have been employed in raising the flagstaffs distrito. On the morning of the 7th but the Bishop had risen higher than it may perhaps about 1848—some say about 1851.

The *Levant Herald* says that the Validé Sultana intends to found a school and civil hospital at Scutari. The latter building will contain accommodation for four hundred patients, the half of whom will be females. This feature of the establishment will be a novelty in Turkey, and will be of immense value to the large class of poor in the quarter in which the new building is to be situated.

THE PRIZE ANIMALS AT THE ROYAL AGRICULTURAL SOCIETY'S SHOW.

IT has been said with truth that steam-ploughs, shorthorns, high-bred horses, and Shropshire sheep, were the four specialties of the Lord Show; and, as the old rams were universally acknowledged to have the pull of the shearlings, one (No. 1), to wit, Patentee the Second, may fairly claim to be the first agricultural commander of the Order of the Ram. The splendid sheep, the winner in a field of twenty-three, is the property of Edward Adams, Esq., of Dunsdon Hall, near Cricklade, and was bred by Mr. Byrd, of Cross Leys Farm, Stafford. He is by Patentee, out of the Freeford Flock, also a Royal Society's winner, who has borne no mean part in improving a breed of sheep which bids fair in process of years to challenge the English supremacy of the Leicester. At this show they mustered less than the standard of Leicesters, 44 Southdowns 40 longwools, not qualified as Leicesters, and 75 shortwools (as was quoted), under Mr. Lane's Cotswolds, Lane's Oxfordshire Downs, and Lane's Hampshire Downs, the latter after-fall fashion by Buttered's Nephew and Cowherd-lad, a true Hampshire Down by the sire of Barnby Moor point of the breed is the loin; but Mr. Peel has found that in his efforts to make that a feature he has lost in quarter (a quarter so necessary in a sterling fame in a year, when Gamel, Walker, Handy, Fleetfoot, and King Dan, have put forth all their strength. Mr. Cragg's aged ram (No. 3) well kept up the high Holm Pierrepont standard, albeit his victory was a surprise to his guardian; and Mr. Jonathan Peel's Look Sharp, Cossington, formed a good third. Look Sharp is but two years and three months old, and *Fast*, *ride*, *vici* has been the uniform motto of Mr. Peel's stock. The curved ribs of Mr. Lane's Long Sam has reigned paramount on the Lancashire fells ever since the Preston Show of "Blue" memory, and a rough John Hoole of the district termed it, disappeared, and "his prescriptive title not to be traced back for more than a century, all round the Keighley moors. Fenfield-lad, a true Leicester by descent on the Essex and Suffolk breeders last month was not successful, and the public thought that his Lordship of the owner of Holkham would have had a better chance. Mr. Druce's

LITERATURE.

JAPAN, THE AMOOR, AND THE PACIFIC. By HENRY ARTHUR TILLEY. Smith and Elder.

Although several works have been recently published which embrace descriptions of the regions which are treated of in the present volume, the subject is at once so interesting, and still so comparatively new, that there is every justification for its issue. In August last the author resided for more than three months, every day of which he was moving among the people, and judging from the result of his observations as here recorded, he was in a position to observe unbiased, and consequently he has been enabled to give to the public additional knowledge of that most remarkable country and its inhabitants, which has at the present moment open a new field of special interest to England. As regards the Russian settlements at the mouth of the Amoor, the author was one of the few who have ever landed there. These settlements possess a peculiar interest at the present moment, as they are the first instance for Englishmen an interest of another kind to that which attaches to the Japanese family or country, there has been of late a notion that the colonization of Russia in that direction indicates an aggressive policy towards the far East. Such a policy is directly and immediately contrary to the views of Khinka and Papeete Bay, or Napoleon's Bay about the forty-second parallel of latitude, being the first Russian harbour met with in coasting southward from the mouth of the Amoor, less the Island of Sagalin, the northern part being Russian, the southern Japanese. Between these lies a narrow channel, which, at its deepest, is only about 24 fathoms. The boundary line, about 53 deg. parallel, is not yet fixed, but it is certain, where both Russians and Japanese are found within a short distance of each other. The Russians have another post at Dasui or La Perouse Bay, where is a fort of mud defences, mounting 16 guns, and taken as a little dominion on the shores. The region abounds in magnificent timber—oak, cedar, and pine; the soil is fertile, the climate is not severe in the winter, as at the same time of year in Japan, but the winter is severe near the coast. Corn, hides and tallow, could be produced in any quantity. It seems reasonable to suppose that coal will be found in the mountains of a territory which might be made the safe high road for any further aggression which Russia might contemplate. But what is the present value of such a possession? As the date of its acquisition and development of these advantages the hand of man is scarcely visible, and the country is in a state of nature.

As yet there are no chains of its colonization to say extent. The whole population of Sidemi does not much exceed two millions. That on the river, numbered in the census of a few years ago, at the mouth of the Amoor, much exceed ten thousand, and the residents the military at the different posts. Many convicts have been sent from European Russia to Eastern Siberia, to whom the Government has given land and assistance during the first year or two of their residence. Many of these have settled down in the forest in all that they are able to reclaim. These people are forbidden to leave the country, and under military law, as a matter of course, in case of necessity. Their settlements may be seen from thirty to fifty versts apart, surrounded by cultivated spots of ground, with a few rude cottages, mud-built, or cattle sheds, that pass up and down the river.

A settlement is to be established here for colonists, years and years must elapse before her object can be attained. In Europe her millions are too many for her home resources. Her Government has been forced to look to the northern coast, and Western Siberia and the mines will still receive her criminals. Russia has already condemned by military law to different offences, were distributed not long ago in the various provinces; and that Finland, with its hardy women, fearless of the cold, and strong as a man's hand but lately also been sent. The immigrants of Chinese is naturally opposed to Russia, and the Japanese and other colonizing peoples of the East, much attraction in Australia and in the different provinces of the east. Ames great continent as the territory is, it is not large enough, although they know that the Russian Government would afford them every protection, and would not doubt that they might set up as an empire of subjected to thousands of vexations from subordinate officials in so remote a district.

Nicholaiwsk, under present circumstances, can never be more than it is at present, a fishing

A few years weeks before I had farewell to the Russian settlements of Eastern Siberia. Trying weather had prevented me from visiting the newspaper writers. Special correspondents from St. Petersburg wrote home that railways were in contemplation to Nicholaiwsk, and that public subscriptions were opened in new foot throughout all Russia for that purpose. So much amusement, and this laudable exercise of the public spirit, had been forwarded to St. Petersburg to be laughed at there. The difficulties to be overcome in making a railway over the mountains, forests, bogs, morass, and, moreover, through a country which produces nothing, and where commerce is at present not thought of, are so great that any man could laugh at the attempt as simply one to be seriously contemplated. The great benefit of the Amoor navigation is to open a way into the country. Packs by water, to carry up to 100 poods, leaves by sea, assisted by the present expensive land conveyance, and to such a point as the Russian Government, or, at least, some such, might, with a view to immediate colonization as to keep out other nations, which if they formed settlements, might become dangerous neighbours to their neighbours.

At Aden, I have read reports of thousands of men having been marched through Siberia with much ease as they could be from Petersburg to Moscow. The writer could not, with such a business fervour in her, see how thought a moment how so many men could be supported. At the settlements up Amoorka on the road, and also to provide food for the men, as stated by the traveller by sledge in winter can never be certain if he will find food for himself and his horses at the next station. The march of a small body of men will suffice to show the difficulties to be contended against in the way of the settlers of Amoorka and the country on the banks and the shores of the Pacific. They entered the gloomy forests and mountains of Siberia, and, as they advanced, the cold became more intense. Added to these miseries they lost their way; the path became lost with every step, and they were—some dying on the roads and some dead only by cutting a way through the wood. Retreat soon became absolutely impossible, and those who had refused to march were left dead or dying, and some four or five days' Loss who should die were cast among the living, and some four or five members of the party were left dead or dying. Now that steam-boat communication has been established on the river, small bodies of troops, with their provisions, can pass during four months of the year, during those months when the river is free from ice.

Apple Jack.

The work which the interest of Russia seems to have marked out for her for many years to come lies clearly in the consolidation of her power, the acquisition of new territory, the establishment of colonies, and the work of the controlling of that social revolution out of which will proceed the changes in the condition of the people. Whether these changes when they shall be ripe for the public hand of Time, but by a sudden revolution, are quite sufficient to exert the whole energies of the society of any country for a generation, but when once they are accomplished, and the nation remains consolidated under the influence of the new principles developed among with, then such a power as Russia must greatly be feared, especially on any disturbance of the balance of power in Europe.

We have made these extracts believing them to bear on a question which is often discussed of late. We can only add that the whole remainder of the work, and that part which especially relates to Japan, and the narrative of the author's visit to Yeddo and other places of the Tycoon's court, is written with an absence of pretension and with a simplicity of style which are not only agreeable in themselves but paid very much towards faith in the authenticity and value of what has been set down.

A PLEA FOR THE STUDY OF THE ENGLISH LANGUAGE has just been published by the Rev. Alexander D'Orsey, English Lecturer at Corpus Christi College. It is an enlargement of a discourse read by the author on the 1st of February last at the Royal Institution of Great Britain, and is illustrated with coloured language-maps of the British Isles and America. It contains remarks on the nature of language; the genealogy of languages; the birth, growth, and blended of the English tongue; its dialects, and the proportion of Anglo-Saxon and other languages it contains. Mr. D'Orsey dilates on our present neglect of our mother tongue in our schools and universities, in which we see a perfect contempt to Continental nations. He gives painfully-ludicrous examples of the consequences of this neglect, and supports his proposition by the authority of our most eminent scholars. As remedies he proposes the establishment of normal schools for children's governesses, training colleges for schoolmasters, the endowment of professors of English at all our universities and the establishment of an English department in every public school.

SCIENTIFIC NEWS.

AN APPARATUS FOR LIGHTING GAS BY ELECTRICITY was recently exhibited at a meeting of the Franklin Institute, Philadelphia. The apparatus consists of a small glass tube, receiving between two pole of battery, and giving the generated electricity to points in communication with a brass and above twelve inches long, terminating in a ball. A small platinum wire is attached to the lower part of the instrument. A piece of wire, attached to a stand with a gas-stop and burner, is placed in such a position that when the ball of the gas-lighter passes through the jet of burning gas and instantly ignites it. The apparatus was manufactured by Messrs. Hall, Varen, and Co., of New York.

THE SUNSHINE RECORDER, or Plansiphere, is an apparatus of great simplicity, contrived for presenting a photographic representation of the sun's path and duration of sunshine during any given day without the machine every day, from the earliest hour in the morning to one hour after sunset. A description of this instrument, which has been in use at Kew Observatory, since November, 1858. It consists of a hollow globe of glass, of Whitton, near Hounslow, appears in the last number of the *Journal of the Photographic Society*, and is illustrated by a woodcut. The author considers the specimen register-sheet which he received "very satisfactory" for the purpose intended, and adds that the sheet would give an approximate idea of the duration of sunshine during any day, even if the sun were hidden by clouds, including a tolerably clear sky. In conformity with the law of refraction, when the sun shines on the globe, the rays are brought to a focus at a point on the inner surface of the globe, placed in contact with the lower surface of the disc, and form evaporated or burned into the underlying dark paper to the amount of sunshine, and the slightest shade of the sky produces only a slight discoloration of the paper, very different from the burnt mark caused by the rays of the sun.

NOMENCLATURE OF THE MINOR PLANETS.—A letter on this subject by J. R. Hind appears in the January number of the *Monthly Notices of the Royal Astronomical Society*. He expresses his dissent from the decision of the Paris Academy, that the Director of the Observatory for the time being should have the power of giving the new planets classical names should be discontinued, and that the names should be simply numbers. The names adopted or conferred upon Astræa would be (1) Hencke; Thetis, (17) Luther; and so on. Mr. Hind also would give a name relative to some person as Maximilliana, Angelina, which, he says, ought to be rejected, or, if these be allowed, it should be with the understanding that no future nebulæ are to receive the name. The first sight of the sky produces only a slight discoloration of the paper, very different from the burnt mark caused by the rays of the sun.

The first sight of the sky produces only a slight discoloration of the paper, very different from the burnt mark caused by the rays of the sun.

THE RED RIVER HOC.—*The Canadian Society's Illustrated Newspaper* has the following account of this remarkable picture, by Mr. J. Wolf, of the Red River hog of West Africa and its four young ones. These interesting creatures arrived in 1858. To attempt a description of their habits would be quite unavailing, and they disappeared one by one, having been destroyed by their mother within a few days after their arrival. The Red River Hog inhabits of the limestone animal is found in the young of the wild hog of Europe and of Asia, but not in the American species, and is one of the most characteristic animal in this country, as far as we are aware. The male Red River Hog died in Regent's Park, on the 20th of March, 1859, and Mr. Wolf, in the Illustrated London News, in the same number of these *Proceedings*, some notes on the anatomical structure of the animal, illustrated by woodcuts.

HOT SPRINGS OF LANGARNESS.—In a paper on the Hot Springs of Iceland, by Dr. Louise Lindsay, read before the Royal Geological Society of Ireland, the author gives a graphic account of a delightful journey to the interior of the island. The first locality visited was the Geysir Basin, which is described as consisting of a plain at the foot of the Bjarkalidi district. Dr. Lindsay considers the temperature of the water in the geysers to be about 212 deg. Fahr. The water is used for cooking purposes. Luxuriant vegetation characterized the immediate vicinity of the springs, and moved by the wind, produced a most beautiful effect. Dr. Lindsay also speaks of waves moderate in the air. Although this island is not remarkable for its mineral wealth, it is rich in the beauty of its scenery, and the author states that it contains with the description of the hot springs of Iceland, and the manners and customs of the people, which are interesting in every quarter of the globe. The paper concludes with a revised and corrected list of the species of plants found in Iceland.

ELECTRICITY was applied to the EXPLOSION OF GUNPOWDER by Franklin in 1751, and by Priestley in 1767; but it was not till after the discovery of the galvanic battery that it was employed to any practical extent to mining and military purposes. In 1832 Prence military engineers experimented on the explosive effects of galvanic electricity, and succeeded in the important blasting operations—such as the destruction of Round Down Cliff, near Dover, and the removal of Diamond Rock, near Gibraltar. The valuable discoveries of Faraday in electro-magnetism and magneto-electricity of late years have rendered the use of electricity as a means of the production of electro-magnetic induction apparatus for military purposes. The most recent and important application of electricity to explosive purposes is that of Messrs. Lund and Mr. F. Abel, the director of the chemical department in Woolwich Arsenal. A report of these gentlemen to the Secretary of State for War, published in the Parliamentary Papers, has presented a short time ago. Mr. Abel, however, has published a second in the *Philosophical Transactions*, in which the application of electricity to hydro-electric machine was also fully tried. Mr. Abel considers that it would be an effective agent in submarine explosions, and suggests various practical modifications to adapt it to military purposes, for which preference should be given to Mr. Lund's magneto-electric machine, which is described in this case in magneto-electricity (discovered by Faraday). Among its advantages are its isolated position from the battery, and the consequent safety of the people employed, unlimited number of charges, rapidity of discharge, and susceptibility to mechanical combination.

VARIOUS ORDERS OF MANGANESE have been produced artificially by M. Kuhlmann, by process described by him in a paper recently read before the Academy of Sciences, printed in the *Comptes Rendus*. Among these artificial products is manganese of lime, a rich rose-colour, and the chloride of manganese, which is also a rose-colour, previously prepared in a volatile reagent will be more abundantly present at our disposal.

ELECTRICITY AND MAGNETISM.—The power which soft soft from possess of signalling, under the influence of the electric current, an instantaneous movement of the needle, is well known. In order to apply this to circular, whereby a rotatory motion of immense rapidity is easily produced. Under the influence of the electric current, the needle is attracted by the magnet, and the motion is communicated to the wheel.

To overcome this inconvenience a distinguished engineer, M. Froment, has substituted for the needle and indicator, a bell, which, struck by the resolutes may be made useful. We cannot give details; but we learn that the system of M. Froment is in use on the Paris and Versailles line, and a machine constructed of eighty electro-magnets in six frames and ten minutes' movement of the needle, and the bell rings at the end of the ten minutes per second. M. De la Rive, however, does not think that electricity will ever be employed as a motive power. He gives a preference to steam, but points out their advantage in regard to their avoiding the dangers of fire and explosion, as in the case of steam, and by applying only a moderate force to them in action.

CHANDOS GAS.—On June 19, at a meeting of the Parliamentary Committee, Mr. R. Chandos, of New York, exhibited his gas and lighting apparatus. At the bottom of the grand entrance he placed his apparatus, which consisted of a combination of the vapour of the spirit of naphtha and essence of turpentine, pumped by palpitate and and divided in the middle of the room, and the hydrogen gas. The gas was lighted at the apertures, one for the stimulation of atmospheric air by tubes, the other for the purpose of lighting. Each of the apertures was provided with a small cock at the hydro-carbons. Details of the lowering apparatus will be found in the report of the Select Committee. Mr. Chandos's invention appeared to us a most means of illumination. He says that its employment will require no laying down of pipes, and that it can be used in any dwelling-house. It is also more convenient form for lighting in one moment the largest as well as the smallest apartment, and the original cost is trifling. We have not witnessed all the illustrations, and leave an opinion in the paper through which it is conveyed.

THE ANTHROPOLOGICAL SOCIETY OF LONDON.—A paper was read by Mr. John Marshall, of University College, London, in the *Natural History Review*, on the nature of the nail as a phylogenetic organ. The nail is considered as an animal was little. Sus. ovindopeda: the brain immediately after its removal from the animal, and allowing for the blood, &c., Mr. Marshall gives its absolute weight at 14oz., and that of the human adult at 49oz. Dr. Beddoe read a paper on the skull of the young group described by Dr. Beddoe in June, 1860, and the absolute weights of which gives the following results:—Average weight of male skulls, 50 oz.; average being 46oz. and 42oz. respectively. This brain is, however, light in comparison to the head in the male, which is 1-36th, whereas in the female the proportion would average as 1-40th. Size. After a careful description of the various parts, Dr. Beddoe concludes that the skull of the female is smaller than that of the male. Mr. Marshall states that he found all the parts of the cerebellum the same as in the human brain, and that the cerebellum was placed in the same position as in man. He merely recognized the results of an anatomical investigation, and that he has no theory to offer himself, or any explanation of the developmental hypotheses on the origin of species.

THE PRODUCTION OF MIST is the subject of a note by the veteran Professor Forbes (Principal of Edinburgh) in the *Edinburgh Philosophical Journal*. The cause usually assigned for mist is the access of cold air to the surface of the earth. Professor Forbes has made a number of observations which go to show that resting on the surface of large bodies of water, and that the mist is formed only when the air is cooled by contact with the water, owing to the heat absorbed during summer, it of a higher temperature than the surrounding air. Dr. Dove, however, refers to another cause, not so much noticed—viz., a mist would occur in coming in contact with a colder air, equally humid, rising on cold surfaces, whether of land or water, about the end of winter or beginning of spring. He describes mists which he considers to have been thus formed in the lake district of Cumberland. To a similar cause, also, he refers the phenomenon termed sweating, which is the precipitation of moisture on walls and flagged floors excluded from the influence of fire. He also attributes to a warm south wind succeeding a very cold one, and the deposition of a large quantity of moisture when, at once succeeding a very cold one, and the deposition of a large quantity of moisture when, at once succeeding a very cold one, and the deposition of a large quantity of moisture when, at once

"ROUGE ET NOIR," BY P. LEVIN, FROM THE ROYAL ACADEMY EXHIBITION.

GAMBLING—called by some an amusement, by others the most fascinating and insidious of vices—has from the earliest ages held its malignant influence, to a greater or less extent, in all countries, barbarous as well as civilised. The ancient Germans used to gamble to such an extent that when they had nothing else to stake they staked themselves, and, losing, went without a murmur into slavery; and it is noteworthy that at the present day the most reckless gamblers on the face of the earth are the Germans, and their still more barbarous neighbours the Russians. Until of late years gambling, in one form or another, was not only tolerated, but countenanced, licensed, and supported by the Governments of almost every state in Europe. The lottery in England was abolished only about thirty years ago; and games of hazard, though strictly contrary to the letter of the law, were permitted surreptitiously to hold their court and ensure their beastoon of victims until a stringent Act of Parliament effectually suppressed them within the last fifteen or twenty years. Even in France the gaming-houses—Frascati's and others in the Palais Royal—were regularly licensed to one company until the year 1858, and brought in a considerable revenue to the head of the State as well as to the licensed undertakers. These speculators kept six houses, for which they paid an annual tribute of a quarter of a million sterling; and it appears from the report of a trial in the following year that the profits of the company, after paying this enormous subvention, amounted to £76,000, of which two-thirds went for the benefit of the city of Paris, leaving only £19,000 to the speculators for their own share. All this, however, so far as Paris is concerned, is now matter of history. But in Germany—that is, in the petty German principalities, which, thanks to the Treaty of Vienna, still hold place amongst the sovereign and independent States of Europe—this horrible system of plunder is still carried on with unabated and relentless vigour, and forms one of the most important items in each little Serene Highness's revenues. In Prussia and Austria the system has been suppressed; Aix-la-Chapelle was the last town, under the rule of the former State, where it was tolerated, and there only for the entertainment and advantage of travellers, inhabitants of the town being rigorously excluded from the salons in which it was carried on. Baden-Baden, in the Grand Duchy of Baden; Wiesbaden, Schwalbach, and Schlangenbad, in the Duchy of Nassau; Homburg, in the States of the Princely name of Hesse-Homburg, and other German watering-places, are the acknowledged seats where this entertaining system of plunder is carried on to aid the curative qualities of the water.

The principal games in vogue at these places are Rouge et Noir, played with cards, and Roulette, played with a wheel. The former is the favourite venture with the real thorough-going gambler, being considered more scientific, and involving more complications, and, therefore, more worthy the attention of one who has made such things his study. For the benefit of those who have not seen the game in operation it may be stated that it it played with four packs of cards mixed up together; the cards being dealt out first for the black and afterwards for the red, up to some number over thirty and not exceeding forty, whichever colour at the end of the deal is nearest thirty being the winner. The table has the advantage every time thirty-one is dealt to red and black respectively; in which case they virtually claim half the money staked at the table, inasmuch as upon making the deal over again they take up all the money staked on the losing colour and do not pay the winning. This advantage gives the bank on a run of play a "pull" of 7½ percent against the player; or, in other words, every pound which is staked against the bank, though apparently upon an even chance of winning or losing, is staked at a depreciated value of eighteenpence; or, to make the case plainer still, the bank claims and takes eighteenpence out of every pound which is staked at the table. Of course, the players endeavour to counteract this overwhelming advantage against them by various ingeniously-devised systems of play, the most ordinary being that in which, by means of increasing their stakes, they shall make the one "win" pay the balance of one stake upon sundry successive losses. This would be feasible enough if the player had an unlimited stock of money at his command, and the bank were unlimited in its operations. The Bank of England would not suffice for the former, as we all must know by the calculation of the sum arrived at in the case of the horseshoe, beginning with one farthing and doubling every time. But, even supposing the player's means to be as inexhaustible as those of Midas, his efforts would be defeated through another cause—that the bank at the table limited its risks upon any one coup to a certain sum—generally 12,000 francs, or £500—and any one who will calculate how soon the most skilfully-contrived martingale will go

"DAR-THULA," BY HENRY TIDEY, FROM THE EXHIBITION OF THE NEW SOCIETY OF PAINTERS IN WATER-COLOURS.—SEE NEXT PAGE.

FINE ARTS.

NEGRETTI AND ZAMBRA'S PHOTOGRAPHS OF JAVA.

Java is one of the most interesting islands in the world: its fragrant spiceyes, its rich and glorious vegetation, and the rainbow hues of its flowers, create it at once a paradise on earth.

Like cases in the desert, Java, with its associated isles, rises from the wide-spread waters clothed in a garb of living emerald, and mantled in earth's fairest tints and most delicate hues; while from their fragrant fields blow spicy breezes which waft the mariner across the Indian Archipelago, and, as incense from a temple constructed by the Creator himself, ever proves a sweet portion to the Java shores.

The island of Java, however, surpasses all the adjacents isles in fertility, population, and general improvements. It is fruitful in the staples of rice, coffee, sugar, indigo, spices, and in the most extensive forests of teak. According to Mr. M'Culloch, the island yields 2,000,000 of revenue to the Dutch Government.

But how can we become familiar with the riches of this land, where the feathery palm-trees rise as the great princes of vegetation, and where the most delicate plants in the hothouses of Europe flourish in the atmosphere? We are happy to say that, although we may not be enabled to visit this land, yet that it has been brought to us in a manner in which we can fully appreciate its beauties by Messrs. Negretti and Zambra's photographs, most especially as we have one of the most beautiful stereoscopic photographs impressible on the objects of greatest interest in this lovely island.

These views furnish representations of the general aspect of the country, of the towns, the vegetation, and the people with their habits. The landscapes are entitled "River at Buitenzorg" "Village of Buitenzorg," and "Sunset" (a storm scene), are the most lovely.

The river scene represents the steady flowing waters which are bordered with the richest of tropical vegetation. Here, in the loneliness of the most beautiful English forest we have added the charm of the deer, whose graceful movements and antlers from which are crowned with a tuft of plumose foliage, the energetic shouts of the younger palms, and the downy and colossal heads of the spreading palms, the "Queen of Palms," most regally rise from the ground, till in the far-off distance it is lost on the slopes of a mountain. The distribution of the trees in the whole picture is full of harmony and grace, and would appear to have been intentionally planned, and in the midst of the forest there seems to rise a hills of light as a reflex of the glory of God formed there since its tropical creation.

The village and storm scene are also most striking and beautiful; in the latter the trees are in the grey, gathering gloom of an approaching storm, their branchings, and mantling in gloom both the foreground and distance of the picture, which light serves to relieve in the middle distance. The top of a magnificent palm which rises from the valley is seen over some objects in the foreground, which gives the fullest idea possible of the height of the tree.

The "Rice-fields" is also a subject of deep interest, showing the manner in which the water is husbanded for the use of the plantation.

The "Bath" is a most charming view, and consists in the foreground of a pool of water surrounded by stones, from amidst which trees and shrubs spring, forming a bower of the deepest shade, which is reflected by the glassy surface of the pool as by Nature's own mirror. The water is clear as crystal, and the bottom is seen through it, for the rotten of the pond can be seen with the utmost distinctness, and a case or rope, which is attached to a tree, is held by the bathers as they enter and dip into the water, can be traced throughout the entire width of the pool. Behind the rough moss-grown stones which bound the pond there rises a dense fence, which is formed of the wild cactus of the most simple wickerwork; and interlaced amidst the fence we find little creepers, which add to the beauty of the whole of the plants and hedges. At the back of this fence we have a jungle of young palms, the leaves of which shoot up with marvellous vigour, and are ten or twelve feet in length, while the stems of the trees are studded with it is a feature found only in purely tropical countries.

The "Swing" represents another scene of rude chiket, and gives even finer views than the last of the young palms, for here two of these plants, with their much-divided cornlike leaves, are stretched almost to the foreground.

The "Plantation Grove" portrays a sluggish stream, which is partially overgrown by aquatic plants, and which at the same time is overshadowed by a glorious vegetation. At the right of the stream we have almost exclusively as large objects the banana or plantain, a vegetable for which God has given man all his wealth. The ground wheat in England to feed one man will in the tropics grow enough bananas to feed five hundred men. At the left of the stream we have a few large bananas, contrasting beautifully with the bamboo, which forms a large portion of the boundary background of this picture, owing to the enormous size of their leaves, which are from six to eight feet in length by from two to three feet in breadth, while they are altogether graceful, and are well adapted to bear the force of the wind, which, however, is a thing of frequent occurrence.

The "Native Village" is of a most picturesque, yet the effect is very dissimilar: the stream is not so sluggish, and the "breadth" of the plantain foliage is replaced by the feathery aspect of that of the bamboo. The cornfield represents a field of Indian corn, which is at the height of 50 or 60 feet, is yes only a grass; and this very circumstance that it is a grass, and not a tree, gives a most singular effect to the tropical climate may enable us to form some conception of the extent to which the vegetation generally of the tropics exceeds in magnitude and splendour that of northern climes.

But, of all the following views, perhaps the most curious is the "Crescent Town." Here we have a village in a concave under a barren, sidelike height, and covered by colossal leaves, which are disposed in the form of a crescent, and which run parallel to each other in all directions, as is usually the case, but pass alternately to the right and left, so that a flat, fan-shaped top, about 40 or 50 feet in diameter, formed of these leaves, is presented to the spectator above. This picturesque artist it will be useful to know that the leaves are never shed by the plantain, but are gradually torn away. This condition of things is beautifully seen in the view now before us.

The next is "Tree Worship," and appears to be a concert under a banyan-tree. The tree is a most beautiful object, and the clustered rib-formed roots which spring from the trunk in one or more directly to the earth, and become trunks themselves, and thus form a number of natural cathedrals. In the midst of the clustered columns of this cathedral of nature the concert of rude music is performed. The instruments and the mode of playing are peculiarly native, and the whole scene presents the charm of life, as it is an instantaneous view, and was taken during the performance of the concert.

The "Theatrical Performance" is also very remarkable, and appears to be one highly civilised to have more of the comic than the tragic in its composition.

We trust that the "Emperor" is not to be considered to be flattered in his portrait, as he sits down in one of our odd-fashioned arm-chairs, for he certainly looks nowise too attractive. "The Sultan and his Court" is also a most interesting representation. It is almost necessary to be told which is the Sultan and which are the wives.

Great praise is due to Messrs. Negretti and Zambra for the energy and perseverance which have led them to produce such a series of instant scenes of interest and beauty as these, as they have done before in the case of the Holy Land, and which will be a permanent source of numerous staff of travelling artists for this purpose; and the impediments arising from climate and the incidents of travel present difficulties which it requires both judgment and ample resources to overcome.

On Monday evening a discussion took place in the House of Commons on the subject of the future disposition of the Sloane collection, which was admitted on all hands to present the properties of a monster difficulty, threatening to become a national scandal. Ten courses of action were stated to be open to the Government; the one to extend the dimensions of the Museum by the purchase of adjacent premises; the other, to separate the collections, with the view of relieving the Museum of part of its contents. We hope that the latter course will be adopted, and that the sculptures at least will be removed, and placed in a fitting abode devoted specially to the fine arts, and the rest of the miscellaneous contents in a natural history, ethnology, numerology, antiquities, &c., only be left in the custody of the present trustees. How sculptures came to be included in the Museum's collection was a mere matter of accident, having been at the time of the purchase of the Elgin and Egyptian marbles no other public exhibition-house in which they could be stored; since the establishment of a distinct department for the fine arts in the National Gallery, longer to sever the two sisters of art, sculpture and painting, would amount to a cruel and unjustifiable absurdity. Besides, it has been the Archbishop of Canterbury, and the Lord Chancellor, and the Speaker of the House of Commons—the three trustees by Act of Parliament—to be supposed, in virtue of their office, to know about the fine arts? It is placing them in a ludicrous position to call upon them to appoint the officers, or in any way interfere in the management of an institution devoted to other duties. Another evil resulting from the barum-scarum way in which our fineart collections are regulated consists in the not unimportant item of expense. On the first Monday of each month artists between the British Museum and the National Gallery spring—quite *à l'improvis*—that most ingeniously-devised of all contrivances, an hydraulic lift. South Kensington Museum, the annual charges of which since its establishment have constituted a very formidable item in the miscellaneous estimates. In point of direction, also, the taste of the country has by these means been strangely and wantonly divided. Sir Charles Eastlake is a worthy man, though he undoubtedly knows about ancient art, and adds nothing to the products of modern; and Mr. Cole is a worthy man, though we are free to confess he knows nothing at all about art, except in the merest forms of practical manipulation. But why give £1000 a year to Sir Charles for dispensing the public liberality in the purchase of pictures? And why give £1000 a year to Mr. Cole for superintending a drawing-school? How much better would it be to concentrate all the fine arts under one roof, and to pay for them the £2000, or more if required, to men who really understand and love their subject, and whose thoughts should be undividedly addressed to its pursuit.

Mr. E. W. Wyon has completed his statue, commissioned by the Corporation of London for the entrance hall of the Mansion House. The subject is that of Britannia, from Spenser's "Faërie Queene," and the poetical passage illustrated is that in which Cœur de Lion, when attacked in the middle of the night by certain knights, she stands upon the defensive :—

> the warlike maid,
> All in her snow-white smock, with locks unbound,
> Threatned to wreak her wrath and vengeance dread.

The subject is well selected for exhibiting females of a high order of beauty and a noble and dignified aspect. The figure is of a modest size, the pose spirited and dignified in motive, and the drapery, which is loosely thrown on and finely treated, is sufficiently ample, without concealing the elegant contour of the figure.

The coming Fine-Arts Congress at Antwerp, to take place next month (August), promises to be attended with many circumstances of interest. Amongst other subjects to which the attention of the artists and literati gathered together in congress from all parts of Europe will be directed is that of literary property, in works of art, and the necessity for suppressing the wholesale piracy now going on, which has become a serious evil to the trade of the metropolises, the continental, and its markets. We entirely concur in the importance of this question, the just solution of which is essential to the cultivation and progress of creative art.

We regret to record the death of a very promising female artist and amiable woman, Miss E. Fox, which took place a few days ago after her confinement. Mrs. Wells was in the spring-time of life, being only thirty years of age. Her father, three of whose pictures hung in the Royal Academy this year, evinced the presence of genius and considerable artistic skill. Her studies had been pursued in the best schools of London, Paris, and Florence, in which last-named city she was, some four years since, married to Mr. H. T. Wells, the well-known portrait-painter.

The Rev. George Washington has been appointed Consular Chaplain at Cairo.

Thirty cases of marbles and other antiquities which arrived at Woolwich last week from the site of the ancient city of Cyrene, Africa, on board the steam-vessel Antelope, were forwarded to the British Museum.

A new drinking-fountain, erected in the Black-friars-road, was opened last Saturday, under the auspices of the Rev. Mr. Brown, the Rector of the parish. The fountain has been built partly by funds collected by the working men of the Vulcan Temperance Society, and partly by money given by the drinking-fountain Association.

The collection of native products and the specimens illustrative of the arts and industries possessed by the people of India, now several years past but then on view at the old India House, in Leadenhall-street, have been removed to the Royal Museum, Whitehall, in which institution they are under the direction of Mr. Digby Wyatt, Dr. Forbes, and Mr. Dowsing, will be opened to the public on the 1st proximo.

Acting upon the recommendation of Professor Owen, the trustees of the British Museum have purchased the principal objects in Mr. De Chaillu's collection, amounting to £500. The most valuable specimens include the King of the Gorillas, the large specimen stuffed by Mr. Wilson, which has been exhibited in the Regent's Park, and the Gorilla's mother, the younger specimen, called Joe in Mr. De Chaillu's lecture, and another skin; also the skin of the Chimpanzee, the Ashango, and the African Mandan, with their skeletons, and the skins of some smaller animals.

PRESENTATION TO MR. HENRY GIBSON.—Yesterday week a meeting was held at Fenshi's Hotel, New Palace-yard, Westminster, for the purpose of taking steps to present a testimonial to Mr. Henry Gibson, M.P., with a testimonial in recognition of his "persevering, able, and successful efforts during the last twelve years to promote the Association for the Relief of the Taxes on Knowledge." Mr. W. Ewart, M.P., presided; and amongst those present were Sir J. Duke, Bart., M.P.; Mr. J. Bell, M.P.; Mr. J. Wilde, M.P.; Sir C. E. Douglas, M.P.; Mr. Stansfeld, M.P. The gentlemen present formed themselves into a provisional committee, and agreed to add to their number, and to appoint an executive committee having power to appoint local committees. It was resolved to leave the sum proposed to be able to be present, in order to show his appreciation of the object, and also to allow Mr. Gibson to offer his contribution in some substantial mode with a view of tendering him his need of thanks for his labours. Mr. Gibson, in returning thanks for the honour conferred upon his country that some recognition should be made of Mr. Gibson's services; but he thought it would have a more lasting influence unless a testimonial was applied, and he saw around him gentlemen of just the kind to make it a success if they devoted themselves to it. Subsequently a resolution to the effect that the subscriptions should not exceed £1 was agreed to.

QUEENSLAND.—During last week Mr. Henry Jordan, commissioner from Queensland, delivered at the Society of Arts a most interesting lectures in London on the new Australian colony as a field for emigration and for the manufacture of cotton. He told that Queensland, commenced together more than a million of square miles, being more than three times the size of France, and the whole of it was available for settlement. The country was mountainous, and deep regions of clear, pure water. No adequate conception of the beauty of the scenery without taking into account the transparency of the atmosphere and the glorious beauty of the Australian sky. He then dwelt upon the singularly favourable climate of Queensland, and described the capabilities of the soil as being singularly great. Cotton was, however, stated to be the great staple of Queensland. Experiments that had been regularly grown and sent home to England, and the highest authorities had pronounced it to be of the finest quality. Upon this subject, Mr. Jordan quoted from letters received from Messrs. Hollingsworth, Tetley, and Co., and from Messrs. Todd, Bowman, and Co., in proof of the statement; also from the authorised Government pamphlet. Cotton was indigenous in Queensland; it was found in a wild state, and had been so used by man in America. The yield was large, averaging at the least 400lb. to the acre. The cultivation was simple, and the yield of interior districts would be considerably more. As much as equal to 600lb. had been grown to the acre. The cost of labour was very low. Mr. Jordan stated to cultivate ten acres. The picking was done during the months of May, June, and July, and the cotton was then ready for shipment. By the rules of the Government pamphlet, "the weather was eminently serene and salubrious." Ten acres of land, he continued, might be rented by one man at a low. Supposing the land to be their own, there would in this case be no expense for labour, and there would be no rent to pay, because the Colonial Government would give the land away to any one who would go out and settle upon it. Among the special advantages offered as inducements to emigrate was this:—Persons taking their own free passages of their own families, and not less than 14 years of age, for every 100 tons they thus introduced into the country. Persons of a certain class, unable to pay their own passage, can obtain free passage by the Black Ball line of packets, owned by Messrs. J. Baines and Co., with whom Mr. Jordan has made arrangements.

NAVAL AND MILITARY INTELLIGENCE.

Colour-Sergeant Lucas, 40th Regiment, is to be promoted to Quartermaster, yesterday week, in his seventy-fourth year.

His Royal Highness the Duke of Cambridge, as General Commanding-in-Chief, held a review on Monday afternoon at the Horse Guards. There was a numerous attendance of officers.

A tablet has been erected in the parish church of Stoke Damerell to the memory of the late Lieutenant Robert Hall Sprent, 46th Regiment, by his brother officers, as a token of their esteem and affection.

There are seventeen departments, or divisions, of the War Office, consisting of 69 persons, of which 18 are military, or belonging to Army offices, and 51 are civilians.

The 8th Hussars Regiment, under the command of Colonel Frederick Paul Haines, C.B., has been officially inspected by Major-General Lord W. Paulet, C.B., and pronounced highly well on parade, and has won through a variety of manœuvres in a very smart and creditable manner.

The next competitive examinations of candidates for direct commissions before the Council of Military Education will take place on Monday, August 5, at the Royal Hospital, Chelsea. The examination will occupy four days.

The examination of officers, candidates for admission to the Staff College, before General Knollys, the Viscount Combermere, and members of the Council of Military Education, commenced on Monday at the Royal Hospital, Chelsea. About thirty candidates were present. The examination will terminate on the 31st inst.

By order of the War Department the Rotunda at the Royal Military Repository, Woolwich Common, is to be considerably enlarged and improved, for the purpose of receiving war trophies and other objects of interest. Another addition is also to be made to the Royal Military Academy, at an estimated cost of £50,000.

Some interesting experiments were again made at Portsmouth yesterday in the presence of her Majesty's ship Britannia, off the harbour's mouth, to test the efficiency of the new Portsmouth Breakwater Fort. Some months ago the Britannia was fired at by her Majesty's ship Pembroke, for forming a counteraction between a stranded ship and a breakwater. The experiments were fortnightly continued.

A proposition is under the consideration of the War Office to do away with the individual regimental staff-sergeants, and that they should be placed under the general staff-sergeants, and will be, in every respect, treated as staff-sergeants from the regiment to which they may be appointed. The up-staff-sergeants from one post, or from one regiment, to another is the system at present being put in force, and by wearing the clothing as the sergeants of the corps away with, seeing they belong—*United Service Gazette.*

The PRINCE OF WALES.—Last Saturday morning, at six o'clock, his Royal Highness mounted his horse with his colonel from the Curragh to Gorey, where his Royal Highness breakfasted with the officers of the 60th Rifles, at Marybrough.——The third grand review took place on the Curragh, on Thursday, the 18th inst., in honour of his Royal Highness. The troops on the ground were the same as those on the previous occasion. After a review of artillery had been gone through, a sham fight was then enacted, the execution of which lasted three hours.

In accordance with the intention made a short time ago by the Commander-in-Chief, on a public occasion, a body of volunteers will, during the ensuing month, have the advantage of joining with the regular troops in the ensuing month, have the advantage of joining with the regular troops in the annual practice of military life in connection with their practice in rifle shooting. Arrangements are now in progress for the reception of our brethren in arms. Accommodation will be provided for the volunteers in the regular barracks, and it is likely the distinction of the regular troops—the Scots Fusilier Brigade—will be extended to them.

A fleet of 250 twenty of the 100-pounder Armstrong guns were being tested with proof-shot at the butt at Shoeburyness. The firing of the first seven produced no effect. The shots from the fifth gun disturbed the slippery slab of No. 8 gun, increasing the recoil of the butt, and, notwithstanding the most vigorous efforts to prevent the accident, it went a distance of standing the force of the missile was thus decreased, it went a distance of nearly four miles, being laid to a field near Rochford.

Under the new regulations adopted since the amalgamation of the corps of Royal and Indian Engineers, Engineer officers and others not of the corps of Royal and Indian Engineers, who may be appointed to the Royal Engineer establishment, will be required to undergo a course of instruction at the Royal Engineer Establishment, Chatham, previously to their proceeding to Royal Engineer establishment, Chatham, previously to their proceeding to India, instead of being transferred from Chatham and enrolled at Greenwich for the voyage, as has been customary previously to the depôt at Worley. The exceeding to present orders, contrary to Greenwich the new arrangement will, on the 1st of the ship-sailing month, be carried into effect for Bombay in the Windsor Castle, one of the ship-chartered troop-ships for the Indian Service, on the 20th instant.

The Duke of Cambridge having decided that the whole of the troops shall be regularly instructed in gymnastic exercises as a part of their military education, the following order has been issued from the office of the military secretary-general, Horse Guards:—"The introduction of gymnastic military exercises into the Army, on a properly-organised system, having been determined upon, and a general order having been published on the subject in view at sanctioning the establishment of a Gymnasium at Aldershott, his Royal Highness the Commanding will mention whether there are certain buildings at important stations, the alteration of which, with little expense, would render them available for gymnasia, without incurring any such exercises. RICHARD AIREY, Quartermaster-General."

The following arrangements are in force at present at Chatham, Sheerness, Portsmouth, Woolwich, Shorncliffe, and one or two other important stations, at which ships are lying, in which cases every encouragement is given to the men to take exercise themselves in athletic sports.

The national military rifle match at Wimbledon was concluded on Tuesday week, when the Volley Stakes, the Non-commissioned Officers' Prize, and the Rifle Derby were contested. The Queen's Prize, the Ladies' Prize, and the Rifle Derby were decided on the Volley Stakes, and the two prizes were added to the first battalion of the Royal Rifle Corps. The Ladies' Prize of £10, presented by Mrs. Hall, was awarded to Private Hall, 1st Middlesex Corps, second to Colour-Sergeant Truscott, for all non-commissioned officers, at 200 and 600 yards, five rounds at each, and the contested. The distance was also 200 and 600 yards, five rounds at each, and the stakes consisted of two prizes. Mr. Hall, as other stationers in London, Chatham, of the regiment at Aldershott, and Mr. Hall, of Dublin, and Messrs. Hall, of Dublin and Shorncliffe, being represented. The result was that Private Hall, 1st Middlesex, was first, and Colour-Sergeant Wagstaff, of the 46th Regiment, second. The Rifle Derby was decided on Thursday, and, as the Queen's Prize went, were the successful competitors in the afternoon the Rifle Derby, open to all winning the Ist. At the close of the competition for the Queen's Prize,

"A SURREY CORNFIELD." BY V. COLE. FROM THE EXHIBITION OF THE SOCIETY OF BRITISH ARTISTS.—SEE PAGE 95.

"THE FRANCISCAN SCULPTOR," BY H. S. MARKS, FROM THE EXHIBITION OF THE ROYAL ACADEMY.—SEE PAGE 92.

PRESIDENT LINCOLN'S MESSAGE.

The extra Session of Congress was opened at Washington on the 4th inst. Thirty-nine senators were present in the Senate, including Messrs. Johnson, of Tennessee; and Breckinridge, of Kentucky.

The House of Representatives was organised immediately on assembling by the election of the Hon. G. A. Grow, of Pennsylvania, for Speaker. Mr. Grow, on taking the chair, made a strong Union address to the Congress.

The following is the President's Message:—

Fellow-citizens of the Senate and of the House of Representatives.

Having been convened on an extraordinary occasion, as authorised by the Con stitution, your attention is not called to any ordinary subject of legislation. At the beginning of the present regular session, the functions of the Federal Government were found to be suspended within the several States of South Carolina, Georgia, Alabama, Mississippi, Louisiana, and Florida, excepting only those of the Post Office Department. Within these States all the forts, arsenals, dockyards, custom-houses, and the like, including the movable property pertaining to and about them, had been seized, and were still retaining possession of the Federal mails. The forts in Charleston harbour, South Carolina. The forts, also, and armed forces had been organised, and were organising, all avowedly with the same hostile purpose. The forts remaining in the possession of the Federal Government in and near these States were either besieged or menaced by warlike preparations, and especially Fort Sumter, which was invested by surface batteries, and fortified with a large military force, with guns equal in calibre to the best of its own, and outnumbering the latter, perhaps, ten to one. A depredatory share of the Federal mails and mail-rides had been taken, and the mails themselves, and the robbed mail-riders, were passed against the Government. Congressional districts and revenue districts had been broken up, and their officers and agents were driven away. Judicial officers had been seized for the same object; the navy was lying idle in part of the same region; and officers and seamen were the scattered in distant seas, leaving but a very small part of the Federal navy immediately at the Government's control. Officers of the Federal army had resigned in great numbers, and of those resigning a large number had taken up arms against the Government. The Government had been resisted with all ease, the purpose to serve the Federal Union was openly avowed. In accordance with this purpose an ordinance had been adopted in each of these States declaring that States respectively to be separated from the National Union. A formula for instituting a combined government of these States had been promulgated; and this illegal organisation, in the character of the "Confederate States," was already invoking recognition, aid, and intervention from foreign Powers.

THE FORBEARANCE OF THE GOVERNMENT.

Finding this condition of things, and believing it to be an imperative duty upon the incoming Executive to prevent if possible the consummation of such an attempt to destroy the Federal Union, a choice of means to that end became indispensable. This choice was made, and was made to that end become indispensable. This choice was made, and was made to that end become indispensable. This choice was made, and was made to that end become

struction of corn they show that, to be consistent, they must secede from one another whenever they shall find it the easiest way of settling their debts or effecting any selfish or unjust object. The principle itself is one of disintegration, and upon which no Government can possibly endure. If all States are one should assert the power to drive that one out of the Union, it is presumed the whole class of sounded politicians would at once deny the power and denounce the act as the greatest outrage upon State rights. But, suppose that precisely the same act, instead of being called driving the one out, should be called the reclaiming of the others from that one, it would be exactly what the seceders claim to do, unless, indeed, they make the point that the one, because it is a minority, may rightfully do what the others, because they are a majority, may not rightfully do.

THE REBEL POLITICIANS IGNORE THE PEOPLE.

These politicians are subtle and profound in the rights of minorities. They are not specific but protest which masks the Government and speaks from the preamble calling itself "We, the people." It may well be questioned whether it have to-day in a single State a majority qualified voters of any State, except, perhaps, South Carolina, in favour of disunion. There is much reason to believe that the Union men are the majority in many, if not in each, in every one, of the so-called Seceded States. The country has not been demonstrated in any one of them. It is reserved to affirm this even of Virginia and Tennessee for the result of an election had in military camps, where their bayonets are all one side of the question voted upon, can scarcely be considered as a fair or reasonable test of opinion. At all events we insist all that large class who are at once for the Union, and against secession, would be entitled to the benefit of the doubt, had they not almost without extravagance that the free institutions we enjoy have developed the powers and improved the condition of our whole people beyond any modern parallel. Of this we now have a striking and impressive illustration. So large an army as the Government has now on foot was never before assembled on a single call. All who has taken his place there of his own free choice. But, more than this, there are many men in the volunteer service members, and some possess full practical knowledge of all the arts, sciences, professions, and whatever else, whether useful or elegant, is known in the whole world. This is scarcely one from which there could not be selected a President, a Cabinet, a Congress, and perhaps a Court, abundantly competent to conduct the Government itself. Not to say this is not true also in the army of our late friends, now adversaries, in this contest. But it is so much more the reason why the Government which the people have chosen should be taken out of and not broken up. Whoever, in any section, proposes to abandon such a Government would do well to consider soberly the rights of man at it is that he does it—whether he is likely to get in its stead—whether the substitute will give, or be intended to give, as much good to the people? There are some foundations for us this subject. Our adversaries have adopted some declarations of independence in which, unlike that of peerless leaf Jefferson, they omit the words "all men are created equal." Why? They have adopted a temporary Government, framed upon the principle explicitly avowed by that good old sire, signed by Washington, they omit "We, the people," and substitute "We, the deputies of the sovereign and independent States." Why? Why exclude the people? Is not man the source of all power and the authority of the people. This is essentially a people's contest.

THE LASTING OBJECT OF THE UNION.

On the side of the Union it is conceded by maintaining in the world that form and substance of government whose leading object is to elevate the condition of men, to lift artificial weights from all shoulders, to clear the path for all, and to afford all an unfettered race and a fair chance in the race of life, yielding to partial and temporary inconveniences necessity. This is the leading object of the Government for whose existence we contend.

FIDELITY OF THE ARMY AND NAVY.

I am most happy to believe that the plain people understand and appreciate this. It is worthy of note that while in the Army and Navy—the latter of small dimensions compared with the former—the officers who have been favoured with high commands, and have treated with contempt those who have conferred upon them, not one common soldier or common sailor is known to have deserted his flag. Great honour is due to those officers who remain true, despite the example of their treacherous associates; but the greatest honour, and the most important fact of all, is the unanimity and firmness of the common soldiery and common sailors. To the last man, so far as known, they have successfully resisted the traitorous efforts of their superior commands but no leader has been obeyed as absolute law. This is the patriotic instinct of plain people. They understand without an argument that the destroying the Government which was made by Washington means no good to them. Our popular Government has often been called an experiment. Two points in it our people have settled—the successful establishing and the successful administering of it. One still remains—its successful maintenance against a formidable internal attempt to overthrow it.

It is now for the common people of the world that their cause can fairly carry an election can also suppress a rebellion; that ballots are the rightful successors to bullets, and that when in any country which have fairly and constitutionally decided there can be no successful appeal back to ballots; that there can be no successful appeal except to ballots themselves, at succeeding elections such will be a great lesson of peace, teaching men that what they cannot take by an election neither will they take by war—teaching all the folly of being the beginners of a war.

THE GOVERNMENT AND THE SOLDIER.

Let there be given to the unselfish in the minds of mankind men as to what is to be the course of the Government towards the Southern States after the rebellion shall have been suppressed, the Executive deems it proper to say it will be his purpose so far as may be guided by the Constitution and the laws, and that he probably will have no different wishes or purposes in regard to the rights of the people, whether in the Seceded States or the people under the Constitution, than that expressed in the Inaugural Address.

He desires to preserve the Government, that it may be established for all as it was administered by the men who made it. Loyal citizens everywhere have the right to claim this of their Government, and the Government has no right to withhold or neglect it. It is not perceived that in giving it there is any coercion, any conquest, or any subjugation, in any just sense of those terms.

The Constitution provided, and all the States have accepted the provision, "That it shall be the duty of the United States to guarantee to each Union a republican form of government." But if a State may lawfully go out of the Union, having done so, it may also discard the republican form of government; so that to prevent its going out is an indispensable means to the end of maintaining the guarantee mentioned, and, when any State attempts this obligatory, the indispensable means to it are also lawful and obligatory.

THE DUTY OF THE PRESIDENT.

It was with the deepest regret that the Executive found the duty of employing the war power in defence of the Government. Forced upon him, he could but perform this duty or surrender the existence of the Government. No compromise by public servants could, in this case, be a cure; not that compromises are not often proper, but that no popular Government has long survived a practice by executive that those who carry an election can only save the Government from immediate destruction by giving up the main point upon which the people gave the election. The people themselves, and not their servants, can safely reverse their own deliberate decisions.

As a private citizen, the Executive could not have consented that these institutions shall perish, much less could he in betrayal of so vast and so sacred a trust as have free people had confided to him. He felt that he had no moral right to shrink, nor even to count the chances of his own life in what might follow.

In full view of the great responsibility, he has so far done what he has deemed his duty. You will now, according to your own judgment, perform yours. He sincerely hopes that your views and your action may so accord with his as to assure all faithful citizens who have been disturbed in their rights of a certain and speedy restoration to them under the Constitution and the laws, and having thus chosen our course, without guile and with pure purpose, let us renew our trust in God, and go forward without fear and with manly hearts.

July 4, 1861. ABRAHAM LINCOLN.

LORD JOHN RUSSELL'S FAREWELL TO HIS CONSTITUENTS.

The electors of the city of London assembled on Tuesday in the Guildhall, at the invitation of Lord John Russell, who wished to bid them a public farewell on his retirement from the position of one of their representatives, which he had held during the long period of twenty-five years. He was received by the vast assemblage composed of citizens of all classes. On entering the hall the noble Lord was received with loud and general cheering, which was renewed again and again on his appearance upon the platform. He was supported by the Lord Mayor, Sir Francis Graham Moon, Bart., Mr. Alderman (Mr. T. Henley, M.P.) briefly explained the object for which they were assembled, and passed a high eulogium upon the political character of the noble Lord.

Lord John Russell, on presenting himself to the assemblage, was received with enthusiastic and prolonged cheering, accompanied by the waving of hats and handkerchiefs. Silence having been restored, he said—My lord and Gentlemen,—I come to this place, where I have so long and so often been entertained by the citizens of London, in a different capacity, or to return thanks for a right elective. I now come to return thanks to you for events which have passed during the long period of twenty years. I have had the honour to represent the great city. Believe me, gentlemen, I would gladly have continued to enjoy that honour and that confidence with which I have been honoured. But, after twenty years of representing the city, and forty-seven years passed in the House of Commons, I felt to me and my constituents it appeared to me that I could not conscientiously remain to perform those labours any longer—exceedingly, I mean, with such care and with such zeal as I consider that he should not break down in a hopeless attempt. Her Majesty has been pleased to offer me a retirement of my will be the means of enabling me to signify her intention to elevate me to the peerage. Gentlemen, I feel that this is a political moment when I cannot be known; but I must also feel that it is a painful moment when I come to bid adieu to those friends with whom I have agreed so long and so often. I have had a good report and through evil report, for as long a time. And I should ill deserve the confidence which you have myself if I did not look upon events of the period that has gone by, and consider whether it has been entirely or uniformly evil. I think, gentlemen, I may say that the first event of which I was to the beginning of its great struggle between Free Trade and Protection, and how great was the struggle, how violent the feelings of the day, I do not, we were then defeated as a party, but in principle we were triumphant. (Cheers.) In which we have since, in a long succession of years, by the triumph which was carried as a dangerous and almost destructive innovation—(cheers)—a measure which, in the first instance, gave a considerable shock to agriculture, but which, in the end, has been productive of the greatest benefit to the country. (Cheers.) I have not to mention the Corn Law Repeal, larger and better proportions than the compromise which we commanded over the Irish Church, and the abolition of the Church rate. (Cheers.) I have not to mention the abolition of the Test Act, which was a measure which, I believe, will prove the greatest blessing to the Church itself, and to the country. (Cheers.) I have not to mention the Reform Act, which, I believe, will prove the greatest blessing to the Church itself, and to the country. (Cheers.) I have not to mention the abolition of the Test Act, which was a measure

"WANT OF CONFIDENCE," BY G. H. THOMAS, FROM THE EXHIBITION OF THE ROYAL ACADEMY.

"WANT OF CONFIDENCE," BY G. H. THOMAS.

MR. THOMAS idealises a very pretty notion of the mixed curiosity and bashfulness of child life in this little picture. A little boy has been induced by his elder sister to gather some wild flowers and choice herbs to feed the old horse in the neighbouring field, but when he comes to the act of presenting them his courage almost fails him—he wants confidence to place them in the gaping mouth of the harmless animal who stretches forward to receive them. The sister, by placing her hand on the faithful creature's head, would indicate that there is no ground for alarm, but the little urchin is still deterred by a "want of confidence." The grouping and execution of this little affair are very pleasing. Exhibited at the Royal Academy.

"THE PATH TO BLACK DOWN, AND THE SURREY HIGHLANDS." BY J. W. WHYMPER.

We are obliged to Mr. Whymper, as we are obliged to Mr. Vicat Cole, in our present sheet, for introducing us to some of the beautiful scenery in which the neighbouring county of Surrey abounds, and which, as it were, is close to our door. The pointe of vantage which gild the eye and reward the toil of the tourist at every turn in this favoured territory would almost exhaust the power of enumeration and defy any attempt at elaborate description.

"Surrey comprises," says Dr. Mantell, "an area of about 750 square miles. A chain of chalk hills, called the North Downs, extends through the country from east to west, and presents an elevated plateau of variable breadth, intersected by numerous valleys, and divided transversely by deep ravines, through which the Rivers Wey and the Mole pass, from the south of the Downs towards the north, and discharge their waters into the Thames—in like manner as the rivers of Sussex traverse the South Downs in their passage to the British Channel. To the south of the Downs a valley of clay (the Vale of Holmesdale) occurs, which is succeeded by a range of sand hills, running parallel with the chalk, and gradually increasing in altitude as they proceed towards the west, attaining at Leith Hill an elevation of nearly 1000 feet. To the west of the chalk hills the country gradually descends to the level of the alluvial valley of the Thames, its surface being diversified by mounds or hillocks of clay, loam, and gravel of inconsiderable elevation. The Surrey Downs, as we have stated, are noteworthy for their agreeable scenery. From Leith Hill there is a prospect of unexampled beauty; Box Hill has long been the admiration of poet and artist; Cooper's Hill is immortal in Denham's vigorous verse; and Richmond Hill has excited the muse of Thomson, and of a greater than he—William Wordsworth. Other eminences, scarcely less deserving of praise, are Sanderstead Hill, near Croydon, the Banstead Downs, St. Anne's Hill, associated with the memory of Fox; St. George's Hill, near Esher, with its Roman camp; Tilburstow Hill, near Godstone; and the heights of Hindhead, Hambledon and Hascombe. The hilly road from Albury to Ewhurst continually unfolds to the tourist fresh gleams of beauty; and a noble panoramic view may be enjoyed from the summit of Anstie-bury."

Of the particular region to which Mr. Whymper resorts for the landscape before us some more detailed account may be acceptable. Black Down is a mild, barren, sandstone hill, about three miles from Haslemere, in Surrey, which is now easily reached by the Direct Portsmouth Railway, though formerly but little known or frequented. It is seen rising to the left of the railway when proceeding towards Portsmouth, about three miles and a half off, and has generally a sombre appearance, from which, probably, it derives its name. It is nearly as high as Leith Hill, and commands a yet more glorious panoramic view. From its highest point, where a kind of summer-house has been erected for the accommodation of visitors, the eye travels on one side as far as the sea, thirty miles off, and on the other through a noble vale thirty miles in breadth and sixty miles in length. Probably there is not a more delicious rural prospect in the world of hill and dale, rich woods of finest timber, interspersed with fields of corn and pasture, and when, as just at present, the atmosphere heightens and diversifies its charms, the long cloud-shadows increasing its space, the scene is one of unrivalled magnificence and interest.

The individual nook which Mr. Whymper has chosen for the ex ercise of his pencil is of that peculiar beauty and wild suggestive richness which almost creates a new sensation as you gaze upon it. The rugged hill, covered at the top with a light mist; the calmness of the wooded retreat beneath, peopled by just sufficient of life to show that the spot is one within reach of the abodes of civilisation; and the air which encircles the trees and pervades the whole scene, all combine to make this little bit a gem of landscape, both in conception and execution. Too much cannot be said of the sympathetic feeling with which Mr. Whymper has taken up his subject, and the delicate and appreciative finish with which he has invested every detail. This little work was one of the most attractive of his numerous exhibits at the gallery of the New Water-colour Society.

"THE WOODLAND GLADE." BY G. CHESTER.

In this broiling hot weather it is delicious to fall upon such a cool, calm retreat as that represented in Mr. Chester's clever landscape, "The Woodland Glade," exhibited at the Royal Academy, consisting of water, rock, and wild scattered trees, in admirable disorder. It has obviously been taken from nature, and selected with a fine eye for the picturesque.

"CRAB-CATCHERS," BY E. DUNCAN, FROM THE EXHIBITION OF THE WATER-COLOUR SOCIETY.

"THE VALLEY OF THE LLEDR." BY J. C. REED.

THE application of water-colour painting to the realisation of the grandest features in nature is successfully exhibited in this landscape, which was exhibited on the walls of the New Water-colour Society. The huge broken mountain range, whose granite surface is partially covered with thin herbage, is depicted with admirable truth, both as regards texture and colour. In the valley below, winding like a silver thread, is a small streamlet. In the foreground, on a broken road, are some cattle going out to pasture. A few stunted trees diversify the view, which is picturesque in the highest degree.

"THE CRAB-CATCHERS." BY E. DUNCAN.

MR. DUNCAN'S scenes of rural life and sea life are as endless in variety as inimitable in performance. Now we have him in the happy rural homestead, with sheep and heavily-laden wains; now in the raging tempest on the inhospitable shore; now, as in the case before us, illustrating a peculiar branch of industry on the seacoast at low water. This little production is remarkable for its truth and keeping. We almost smell the seaweed in those rocks and in those little pools where industrious explorers are seeking their prey. In the distance is a bold expanse of sea, slightly agitated by a breeze. This fine little picture was exhibited in the gallery of the Water-colour Society.

"THE VALLEY OF THE LLEDR," BY J. C. REED, FROM THE EXHIBITION OF THE NEW WATER-COLOUR SOCIETY.

Relics of the Past.

OLD ENGLISH DRINKING-VESSELS.

We glanced some weeks ago, in presenting an Engraving of a certain curious carving-knife, at the customs of the English dinner-table in former times. The engravings in question led us to treat more particularly of the manners and usages of our forefathers in the unpromising matter of eating, but as man lives by edibles alone, we propose to take of eating, but as man lives by edibles alone, we propose to take of cating, but as man lives by cutables alone, we propose to take of the present page of some-thing concerning the customs of our ancestors in the operation of drinking; premising that their superiority in this faculty was long maintained by their descendants, who, indeed, in the early part of the present century enjoyed the reputation of being, to use a mild phrase, the most convivial people in Europe.

The Anglo-Saxons were unquestionably huge drinkers as well as feeders; and as they esteemed the ingluvies highly, so they laboured to ornament their drinking-vessels with all the skill in working the precious metals for which they were so famous. But the Anglo-Saxon drinking-cup was the simple horn of the beast, which, when it had supplied the rude warriors of the North with the wherewithal to satisfy their hunger, furnished them with a convenient utensil for the gratification of their thirst. And as it had served these human savages, as fiction of their thirst. And as it had served these human savages, as well as the Homeric heroes before them, in the same estimation, so an appendage of the Anglo-Saxon dinner-table until after the Conquest. It is true that other drinking-vessels had been creeping into use, as suggested, no doubt, by that communication with the Continent which the Saxon antiquary has enriched the simple cup of the Danes, as well as by their mastery in working the precious metals before alluded to.

Drinking-horns are frequently seen on the Bayeux tapestry, and in the magnificent collection of antiquities in the Brush Museum there is a magnificent collection of antiquities in the Brush Museum there is a capacious specimen of the kind belonging to no more a date as the sixteenth century. Many of our readers have seen an old-fashioned Scotch mull they will form a perfect idea of this vessel from which our forefathers quaffed their "good old wine."

The horn in the British Museum is formed of the small tusk of an elephant, carved with figures of that animal, unicorns, lions, and crocodiles. It is mounted with silver; a small tube, ending in a silver crocodiles. It is mounted with silver; a small tube, ending in a silver cup, issues from the jaws of a lion whose head and shoulders incline cup, issues from the jaws of a lion whose head and shoulders incline the mouth of the vessel, on which the following legend is engraved :—

Drink you this and thank no scorne
All though the cup be much like horne.

As there is progress in all things, and men are rarely satisfied to let well alone, the horn was not long before it had rivals. The commonest well alone. The horn was not long before it had rivals. The commonest of these was the Mazer-bowl, a turned vessel, with a tophook on the upper two sunken raised hoops for its rim, with a tophook on the upper two sunken raised hoops for its rim, with a tophook on the upper two sunken raised hoops for its rim

THE WATTS MEMORIAL STATUE AT SOUTHAMPTON.

A HANDSOME work of art has been erected in the public park at Southampton to the memory of Dr. Isaac Watts, who was a native of that town, and Wednesday week, being an anniversary (the 187th) of the poet's birth, was appropriately chosen for its inauguration. The weather was fine, and the ceremony most interesting. A vast procession, consisting of the Mayor, Recorder, magistrates, and Corporation of the borough, and other public bodies, accompanied the Earl of Shaftesbury—who had accepted the invitation to inaugurate the statue—from the Audit House to the park in which it was erected. The procession was headed by the band of the 2nd Hants Volunteer Rifles and the Royal Engineers and gentlemen engaged in the civil department at the Ordnance Map Office, followed by the bodies named in official costume, the clergy and ministers of all denominations, the Sunday-school teachers, and sundry others, the whole numbering several hundreds of persons. Large galleries had been erected for the accommodation of numerous ladies and gentlemen who accompanied them, and the park was filled with thousands of people, while the streets through which the procession passed were crowded, and the windows and housetops were all occupied. Flags floated everywhere, and the town has seldom put on a more thoroughly gay and holiday appearance.

On arrival at the ground Dr. Watt's hymn, "From all that dwell below the skies," was sung by a full orchestra, numbering some 200 or 300, composed of the united church and chapel choirs of the town. The Mayor (Mr. Alderman Coles) then advanced to the front of the dais and asked the Earl of Shaftesbury to inaugurate the statue. His Lordship ordered the statue to be uncovered, and when it stood unveiled several rounds of hearty cheering were given.

The Earl then made a speech, in which he said that no oration, however studied or laboured, could do honour to the memory of such a man as Dr. Watts; but, if he wished to offer a panegyric of him, he (Lord Shaftesbury) would go into all the cottages of the town, into the ragged-schools, and to the death-beds of expiring saints, and there catch the last faint whispers of dying Christians, and those should be his tributes. It was said of many men that their good die with them and their evil deeds remain. But, he thanked God for it, this was reversed in the case of Dr. Watts. His wrongdoings—and who is there that sinneth not?—have all passed away and become forgotten! But his good deeds survive, and will do so to the end of time.

Another hymn was then sung, and the Rev. Mark Guyer, M.A., Rector of St. Mary's, offered the dedicatory prayer. The statue was then handed over to the Mayor, on behalf of the Corporation and the town, in an appropriate address by the Rev. T. Adkins, pastor of the above-Bar Independent Chapel, as Vice-President of the Committee, in the absence of the President, the Bishop of Rochester. The magnificent "Hallelujah Chorus" was sung by the choir, accompanied by the band; the Rev. Thomas Adkins pronounced the benediction, and the interesting ceremonial concluded by the band playing the National Anthem.

The whole monument is rather over 19 feet high, having a base of 6 feet 6 inches square, placed on a slightly-elevated mound. The statue itself, which is about 6 feet high, faces the south, looking towards the town, and is of the finest white Sicilian marble. There are three bas-reliefs, also in Sicilian marble, on three sides of the shaft of the pedestal (on the fourth side is the inscription). One of them, in the front, represents Dr. Watts as a teacher of the young, surrounded by a group of children, who are looking to him for their lessons, and under which is inscribed the following words:—"He gave to lisping infancy its earliest and purest songs;" another, on one side, represents him as a philosopher, with the following quotation from Dr. Johnson, in his life of Dr. Watts, inscribed beneath:—"He taught the art of reasoning and the science of the stars;" while, on the other side, represents him as a youthful poet with upturned look, under which is placed the following appropriate lines from one of his own hymns:

To heaven I lift my waiting eyes,
There all my hopes are laid.

The pedestal is of the finest polished grey granite, and has been executed by Macdonald and Co., of Aberdeen. The statue itself conveys an expressive likeness of Dr. Watts obtained from the most authentic sources, and represents him in the attitude of a preacher of the gospel "proclaiming glad tidings," while an archaic honeysuckle, wreaked round the upper part of the pedestal in white marble, is emblematic of the simplicity and purity of his character. The whole design has been carefully studied, and the details have been worked out with scrupulous care. The site selected is a happy and commanding one; and the portion of the park in which it is intended to be placed will hereafter be designated the "Watts Park."

A brief notice of Dr. Watts may not be out of place here.

He was born July 17, 1674, in a house still standing, three doors below the market in French-street, Southampton, which used to bear the name of Little St. Dunnis, probably from its having been in the middle ages a chapel connected with the monastery of that name, founded by Henry I., at Portswood. He loved learning from his earliest years and began to cultivate it successfully in that valuable institution, the ancient Southampton Free Grammar-school. Having passed his youth in assiduous study he spent some years as domestic tutor to the son of a Baronet. He then took the charge of an Independent congregation in London. But before he had reached his thirty-eighth year ill-health broke down, and though he continued to the end of his life to serve his congregation as far as he could, his literary labours were transferred continued in a retreat at Stoke Newington. This was supplied to him by the generous friendship of Sir Thomas and Lady Abney, who received him into their pleasant mansion, where for six and thirty years he was treated "with all the kindness their friendship could prompt, and all the attention that respect could detain." This providentially favoured, solitary case of situation nor oppressive bodily infirmity could ever seduce him into indolence. His pen was active as long as he could hold it; and whether his subjects were literary, philosophical, or theological, all were imbued with the influence of the vital piety of his heart. His book on logic was long a text-book in our Universities; his "Improvement on the Mind" has been pronounced by Dr. Johnson to be "a work in the highest degree useful and pleasing; so that whoever has the care of instructing others may be charged with deficiency in his duty if this book is not recommended." His "Hymns and Psalms," and his "Divine and Moral Songs for Children," have never ceased, since their first publication, to issue from the press in countless thousands; and few indeed are the collections of devotional poetry compiled for social worship in which some of his best hymns are not to be found. He died at Stoke Newington, on the 25th of November, 1748, in his seventy-fifth year, and was buried in Bunhill-fields. A bust in Westminster Abbey commemorates his name. It is a very pleasant circumstance that, in the present effort to do honour to the excellence of Dr. Watts in his native town, there is a cordial concurrence of members of several different communions on behalf of a man who himself cherished the spirit of Christian unity. Yet, happily, this is not a new thing. Dr. Watts was in his lifetime in free correspondence with the Archbishops of Canterbury and York and the Bishop of London. Some of his publications were early placed in the Book List of the Church of England Christian Knowledge Society; and when the quarto edition of his works was published, in 1810, George III. and Queen Charlotte, with several members of the Royal family, headed a subscription-list which contained the names of many eminent persons, who never asked what were the modes of worship of men who, like Baxter, Doddridge, and Watts, lived and wrote for the Holy Catholic Church in all times and places. "Such Watts was," said Dr. Johnson, "as a pious Christian Church would rejoice to have adopted; eminent for literature and venerable for piety; gentle, modest, unaffected; his estimable was united with charity; tender to the poor, and attentive to children. To the poor, while he lived in the family of his friend, he allowed the third part of his annual revenue, though the whole was not a hundred a year. For children he condescended to lay aside the scholar, the philosopher, and the wit, to write little pieces of devotion and systems of instruction adapted to their capacities, from the dawn of reason through its gradations of advance in the morning of life. Every man acquainted with the consonancy principles of human action will feel with veneration on the writer who is at one time combating Locke, and at another making a catechism for children in their fourth year. A voluntary descent from the dignity of science is perhaps the hardest lesson that humility can teach. Few men have left behind such purity of character or such monuments of learning. He has left neither enemy nor memorial of spiritual nature unexamined; he has taught the art of reasoning and the science of the stars. There is, perhaps, nothing in which he would not have excelled, if he had not divided his powers to different pursuits."

ALDERSHOTT CAMP RACES.

THIS pleasant affair came off on Monday, on a course which was laid out at the North Camp, and over which, though rather rough, the going was very good. Nearly 20,000 spectators—some of whom were

THE FARNBOROUGH CUP, RUN FOR AT THE ALDERSHOTT CAMP RACES ON MONDAY.

conveyed by excursion-trains from London—were present. Of course the military element predominated. Military bands were in attendance, and played, at intervals, in the neighbourhood of the grand stand. The races were exceedingly well contested, especially the steeplechases, in which The Don and Neasttead ran a dead heat, each horse being nicely handled. The stewards were Major Slade (5th Lancers), Captain Peel (A.D.M.), and Captain Coote (29th Regiment); Mr. M'George officiated as starter, Mr. Goddard as judge, and Mr. Hesketh (18th Hussars) as clerk of the course. The races were under the patronage of Lieutenant-General Pennefather, who was on the course.

The Farnborough Cup, one of the prizes—of which we give an Engraving—is of a tazza form, chased in relief. The cover, which removes to form a centre for flowers or fruit, is surmounted by a finely-modelled figure of a racehorse. This elegant piece of plate was manufactured by Mr. Hancock, of Bruton-street.

The following races were run—

THE CHANGER RACE, a sweepstakes of 2 sovs each, with £40 added, for horses bona fide the property of officers quartered at Aldershott that have been rides as chargers for the last six months. Ten entered and eight ran.

Captain Wilmot (Military Train) Mon Etoile	(Mr. Rolfe) 1
Mr. George Pain's (53rd Regiment) Colleen Bawn	.. 2

THE ALDERSHOTT CUP, a sweepstakes of 5 sovs. each, h. ft., with a cup valued at £63, and a purse of 30 sovs. presented by the Inhabitants of Aldershott, for horses bona fide the property of officers quartered at Aldershott that have been in their possession since March 1, 1861, that have never won a public race, and that have not even been in a racing-stable for the last twelve months. Eight entered and all ran.

Mr. Graham's (18th Hussars) The Early Bird	..(Mr. O'Shea) 1
Mr. Starkey's (9th Lancers) The Baby	(Owner) 2

THE SOUTH-WESTERN RAILWAY PLATE, value £25, presented by the South-Western Railway Company for horses the property of officers quartered at Aldershott, and which have been in their possession since January 1, 1861. Nine entered and seven ran.

Dr. Habb's (5th Lancers) Charles XII., 5 yrs.	(Mr. Fursden) 1
Mr. Starkey's (9th Lancers) The Baby, aged	.. 2

A HURDLE RACE of 3 sovs. each, h. ft., with £10 added, for horses bona fide the property of officers quartered at Aldershott that have been regularly trained during the past season. Over six flights of hurdles four feet high. Eight entered and seven ran.

Mr. Tinsley's (Army) Rhonah	.. 1
Mr. Hesketh's (18th Hussars) Bourgeois	(Owner) 2

THE FARNBOROUGH CUP, a sweepstakes of 5 sovs. each, h. ft., with a cup value £10, presented by the inhabitants of Farnborough, for horses to be ridden by officers quartered at Aldershott. Eighteen entered and five ran.

Major Johnson's (6th Inniskilling Dragoons) Lyre	(Mr. Lawrence) 1
Mr. Starkey's (9th Lancers) Vesper, 4 yrs	(Mr. Pemberton) 2

A WEIGHT HURDLE RACE, 5 sovs. each, 3 ft., with £20 added, for horses belonging to officers that have been in their possession since May 1, 1861. Over six flights of hurdles. Thirteen entered and twelve ran.

Captain Reiber's (M.S.) Schindurhanne	(Captain Peel) 1
Mr. Hesketh's (18th Hussars) Bourgeois	.. 2

THE JESSOP MONUMENT, CODNOR PARK, DERBYSHIRE.

A FEARFUL storm of thunder and lightning visited the locality of Codnor, Derbyshire, on Monday, the 8th instant, injuring the Jessop Monument in an extraordinary manner. The monument was struck near the top by the electric fluid, which took the zigzag course shown in the Engraving, shattering many of the steps and dashing them, along with the pondorous stones forming the building, a considerable distance, till it came to the base of the building, where it forced the substratum-plate from its place, and displaced the massive block of stone beneath it, buried itself in the earth.

The Jessop Monument is nearly 60 feet high, and, being built upon a lofty eminence, commands a beautiful and extensive view of the Erewash Valley. It is situated nearly in the centre of the Butterley Company's large ironworks and coal-fields, of which the late William Jessop, Esq. (to whose memory it was erected), was many years the active managing partner. It was built by public subscription amongst his friends and admirers and the workmen of the Butterley Company, at a cost of about £700. The first stone was laid by Mr. Francis Wright, of Ormesett-house, on Oct. 9, 1834. It was built of gritstone, with a ponderous rustic base, surmounted by a circular column, 40 feet high, ornamented by handsomely-chased mouldings and dowels, and a winding staircase worked into the solid stone, thus forming, as it were, the vertebræ of the building.

Our Engraving is from a photograph taken by Mr. J. A. Warwick of Derby.

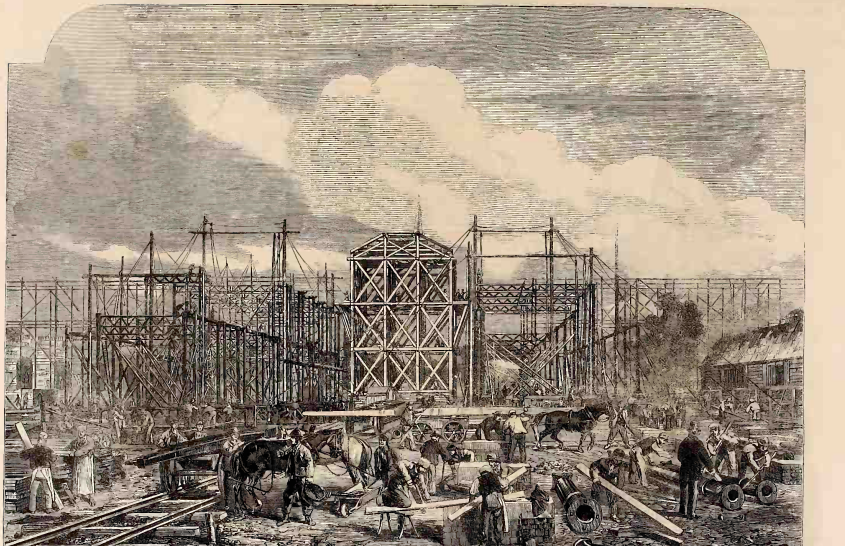
THE PIMLICO LITERARY INSTITUTION.

THIS institution has been founded for the purpose of supplying the inhabitants of Pimlico with a library and a convenient reading-room, furnishing means for rational amusement and improvement to the mind. The building is composed of yellow brick, with red and dark brown bands, the intermixture producing a good effect. The frontage, which is towards Winchester-street, is 103 ft. long; the depth, in Warwick-street, is 45 ft. The large hall is 80 ft. long by 40 ft. wide, and its height is 35 ft.; it is approached by stone steps. The second hall is 40 ft. by 28 ft. There are also a library, and class and chess rooms, rendering it a building of great utility and importance to the large locality of Pimlico. The whole has been constructed under the immediate direction of Mr. Winder, of Fenchurch-street.



PROGRESS OF THE BUILDING FOR THE INTERNATIONAL EXHIBITION OF 1862.

THE GREAT INTERNATIONAL EXHIBITION OF 1862.

THE building for the Great International Exhibition of 1862 is proceeding under Messrs. Kelk and Lucas in real earnest, and with marvellous rapidity. But a few weeks ago the first indications of an intended building were shown by the erection of scaffolding-poles for marking out the ground; now the form of the building appears mapped out in its real proportions, the brick walls, when our artist visited the spot, having risen to some 30 ft. from the ground, whilst the iron portions were proceeding with even greater expedition, having attained in parts the height of 50 ft. The rows of iron pillars which strew the ground are being rapidly absorbed into the structure, and so admirable are the contrivances brought into use on the occasion that almost as by magic they are seized, elevated to the places they are to occupy, and secured in almost less time than it would take to describe the operation.

Some idea of the massive character of the brickwork of the Picture Gallery may be formed from the fact that nearly twenty millions of bricks will be used in constructing them. The flooring has been laid, and was tested, first, by being weighted with bricks laid equally over it in all parts five deep—equal to 140 lb. on the square foot—and, subsequently, with a weight increased to 200 lb. on the square foot, a weight greater than under any circumstances it can be supposed to be required to bear. This gallery, as at present arranged, will not be the unbroken line of flat-wall surface from end to end which it was anticipated to be; there will be two compartments of 325 ft. long each—one of 150 ft., two of 75 ft., and four of 50 ft. The subdivisions, however, will be but slight, being made only by lofty brick arches, similar to the slight framings of the same description which were used at the Manchester Art-Treasures Exhibition with such good effect. Beneath the middle of the picture gallery will be one of the main entrances to the basement of the building; and such is the solidity of the structure that at this part there are four piers in the walls which are no less than 17 ft. wide by 10 ft. deep, and 60 ft. high, all of solid brickwork.

In the nave and transepts the columns on both sides are double, one square and one round, each being 12in. in diameter. The other columns for the side courts for exhibitors are 8in. in diameter. These columns are calculated to be able to bear a weight ten times as great as can ever possibly come upon them. The trellis-girders, which support the floor of the galleries, it is estimated might possibly under extraordinary circumstances be called upon to bear a weight of from 28 to 30 tons. A number of them were tested, and shown to bear a weight of from 72 to 76 tons; but, even this not being deemed satisfactory by the conscientious and wisely-cautious contractors, it has been resolved by them to increase their thickness so as to make 80 tons their minimum breaking strain.

In no work of the kind which has ever before been undertaken has the same amount of skill and ingenuity in the laying out of the work, and for facilitating the rapid operation and precision of labour been employed, as in the present stupendous building. The picture presented is that of a building being put together by rapid but imperceptible movements, almost without the appearance of manual exertion.

Upwards of two miles of little tramways intersect the ground in all directions, and along these a couple of men can move a truck with four or five tons of girders at a far greater speed than six or eight horses could move them in a wagon. With the same view a small powerful steam-engine is placed in the centre of the works, and connected by a network of ropes passing through pulleys over all parts of the ground. By means of these loads are drawn about the tramways, or columns and girders hoisted and lodged in their places, with amazing rapidity and ease. But the most astonishing and the most extensive of these labour-saving contrivances is a gigantic travelling scaffold, which has been built on twelve wheels, to run on rails up and down the whole length of the centre nave. This huge structure is 60 ft. square and 100 ft. high, and weighs nearly 300 tons. Yet so equally is it balanced, and so smoothly do the wheels work, that four men with levers can move it with a certain amount of rapidity to any part of the works. It will be used in hoisting the upper columns, the huge circular wooden ribs of the roof, for painting, or, indeed, for any purpose connected with the building where many men have to be employed at a great height. For the end transepts, as being much lower, this contrivance will not be necessary.

The annex or shed for the exhibition of machinery in motion is progressing with astonishing rapidity, and in a few weeks it is expected to be ready for roofing in. The framework of this shed is much and deservedly admired for its lightness, simplicity, and solidity. At the north end of this annex, farthest away from the main building, some fine trees are growing, which will be suffered to remain, and a garden for refreshment will be formed under their shade where those disposed to smoke may enjoy the weed without let or hindrance.

Altogether the progress of the building has been such up to this point that Messrs. Kelk and Lucas are confident that they will be able to hand it over to the commissioners completely finished before the stipulated time—perhaps as early as March next.

With respect to the probable number of exhibitors—in 1851 there were at the opening of the building 8000 exhibitors—for 1862 the commissioners have already received applications from upwards of 6000. Some of the demands for space are to the extent of fourfold what can probably be conceded.

On the Continent the intended exhibition is received with the utmost fervour. France, Prussia, Russia, Sweden, Norway, Italy, Spain, Portugal, and Belgium are especially active in the cause. In Russia the Emperor has appointed two commissioners, one for the north and one for the south of his gigantic empire. Only three countries or Governments decline to have anything to do with it. These are Turkey, Rome, and Morocco. Strange conformity of States allied to the claims of civilisation and the advanced intelligence of the age! Nothing is expected from America. The commissioners communicated with the Federal Government some time since, but the usual notice has not, we believe, been sent round to the Governors of each State, as it was not thought wise to do so in the present unhappy state of affairs. France's demand for space has not come in, and is not likely to come in much before November. As a set-off to the secession of Turkey, the Government of Egypt is exerting itself warmly, so that, on the whole, all is going well and with good promise.

THE PIMLICO LITERARY INSTITUTION.—SEE PRECEDING PAGE.

THE BUTCHERS' MARKET, HAARLEM.

THOUGH Haarlem is not equal to Leyden and some other towns in Holland, its streets are remarkably clean, planted with trees, and traversed by numerous canals. Among its public buildings the most remarkable are the townhall, a handsome structure; the palace, or Prinzenhof; and some of the churches, especially the cathedral, the largest church in Holland, in which is the celebrated Haarlem organ. Another of its noteworthy edifices is the meat market, situated in the great market-place. It was erected in 1600. The façade is ornamented with sculptures representing heads of bulls, sheep, &c., the roof and gables being enriched with designs in leadwork. The basement is used as a military magazine. Our architects, who have lately considered the roof an important feature in their designs, may gather valuable hints from this edifice and from many others in Holland.

THE ILLUSTRATED LONDON NEWS

No. 1101.—VOL. XXXIX.] SATURDAY, AUGUST 3, 1861. [WITH A SUPPLEMENT, FIVEPENCE

THE HAPSBURG RESCRIPT TO THE HUNGARIAN DIET.

We are about to lay before our readers a specimen of the raw material out of which revolutions are made—an illustration of dynastic pride, obstinacy, and infatuation such as drive nations mad—a sample of the kind of policy, if policy it deserves to be called, which has latterly kept Europe in a ferment utterly incompatible with the natural progress and expansion of the arts and enterprises of peace.

There is strange excitement in the city of Pesth. It is not noisy, but it is intense. It does not gesticulate, but it is painfully visible. It may be seen everywhere, anxiously as the outward signs of it are suppressed. The representative city of the kingdom of Hungary awaits the answer of the Emperor of Austria to the Address of the Diet. That Address set forth in unflinching but respectful language the historical and constitutional rights of the kingdom, the manner and extent to which they had been arbitrarily violated by the autocratic Imperial policy of the last twelve years, and the demands founded upon them. It had been modified in form from that originally passed by the Diet, and transmitted to Vienna, which had been returned as offensive to the Emperor's dignity as a *de facto* Sovereign, the Diet, on second thoughts, wisely resolving to deprive Francis Joseph of every merely personal ground of quarrel. The substance of the amended Address had been left untouched. The document had been carried up to the Emperor by the Presidents of the two Houses, had been presented, had been graciously received, and an answer to it promised in the shape of a Rescript. There is delay. It is known at Pesth that warm debates have been going on in the Imperial Cabinet; it is not yet known with what result. The city, unanimous and resolute as it is, waits with nervous anxiety the Emperor's reply, for on the tenor of it the future of the ancient kingdom of Hungary depends. Who can wonder at the visible signs of profound agitation during the awful suspense?—signs answering to the quivering muscles, the restless eyes, and the blanched but firmly-compressed lips, of individual patriotism as the moment approaches for deciding the alternative whether it is to do or die.

Francis Joseph, probably, has not formed a very accurate estimate of the people who now await his Imperial Rescript; albeit his armies, not many years since, were driven by them clean out of Hungary, and could only return in the wake of Russian battalions. It is clear that he has never yet sounded the depths of the national spirit, nor computed the enduring resistance of their love of freedom, nor measured the force of their patriotism. They have historical recollections much older than any which belong to his Imperial ancestry. They have habits which are the deposit of several centuries of the action of cherished institutions upon national character. They have a courage which would be strengthened, even if it were not inspired, by a long succession of glorious annals. They inhabit a country of far greater breadth, and of far ampler and more varied resources, than any of the provinces of the Austrian empire, and they outnumber several times over the German population now striving to dominate over them. They constitute, if one may so say, the body of Austria, while other peoples associated with the empire are but limbs. In devotion to freedom, and in fitness to use and enjoy they it, they resemble Anglo-Saxons. In military vigour may claim equality with their Polish neighbours. There are in Hungary, as elsewhere, differences of religious faith, and varying shades of political sentiment; there are there, as elsewhere, strongly-marked social grades and conditions, the interests of which, although really identical, are often seemingly conflicting; but, strictly speaking, there is but one party—namely, the party of Hungary. This is the people with whom Francis Joseph essays to deal, in order that he may break them into submission to his will; and the question between them, summed up in few words, is this—whether these nine millions of people shall preserve distinct and entire their ancient nationality, with all the proud memories, the political guarantees, the institutions and privileges, which are

THE ARCHÆOLOGICAL INSTITUTE OF GREAT BRITAIN AT PETERBOROUGH: ENTRANCE TO THE NAVE OF THE CATHEDRAL, BY S. READ.—SEE SUPPLEMENT, PAGE 120

theirs by inheritance, or whether they are to lose their identity and become absorbed into an empire fashioned by German minds in a German mould. The Hungarian Diet have unanimously told the Emperor that they will continue to be what the treaties, laws, and institutions handed down to them in their forefather have made them; that they will recognise him as their King, and reside him that fealty which all their Kings have received; but that they will not surrender the individuality of a great and renowned historic nation like Hungary in order to be fused into that centralised system which, under the designation of the Austrian empire, ministers to the dynastic ambition of the Hapsburg family.

The course pursued by the Emperor Francis Joseph since the Battle of Solferino and the Treaty of Zurich indicated that his mind had been chastened by adversity, and led to the expectation that if he did not, as it was thought probable he would not, accept the programme laid down for him by the Hungarian Diet, he would, at any rate, urge his own with some show of conciliation. The empire is not precisely what it was when he first grasped the sceptre which the hand of his uncle was too feeble to wield with effect. He has ceded some provinces to a trustful provinces besides Hungary. His financial position is but a step or two from bankruptcy. He has lost Lombardy; he has seen his hold upon the Papal dominions and the Two Sicilies wrested from him by Piedmont; he retains Venetia only by an overwhelming, and, to himself, an exhausting, military force; and he can no longer count upon the assistance of Russia, whom the perfidy of Austria in 1854 has alienated, and whom the Crimean War, and the internal troubles consequent upon the emancipation of the serfs, have disabled for many years to come. For the present, it is true the Emperor may dismiss all apprehensions of attack from the side of Italy, for no power in Europe will resent all the energy of which he is master to hold his own. But, if Italy is somewhat embarrassed, Austria is not less so, and no one can assure her that, should she get inextricably involved in civil dissensions, France will leave her entirely unmolested. One might have expected, under all the circumstances which surround and menace the Imperial throne, that Francis Joseph would have feigned, even if he did not feel, moderation and caution in his manner of treating the Hungarian people; and it is certain that the party at Pesth who hoped that his Rescript might be found to contain the basis of a satisfactory settlement could give a reason for the hope they entertained.

The document has now seen the light. It has been read to both Houses of the Hungarian Diet. Its sole merit is that it is unmistakable, and puts an end to intolerable suspense. It is, as we have said, the new manifesto of war which revolution is made. It is a bill of declaration of war to the knife. It is more—it is an irritant, every word of which seems to have been chosen and inserted with the express purpose of instilling venom into open wounds. Its air is haughty, authoritative, threatening. It does not argue—it commands. It is blunt, rude, and even insulting. It bears on its instrument with a jagged edge. But this is not the worst. Ridiculously sows division between the Magyar and non-Magyar populations of Hungary, and makes demands on behalf of Transylvania and Croatia which are but too well calculated to lure them—as they were lured in 1848—into a conspiracy designed to crush the very nationality of feeling which it craftily invokes. Hence it is that the Rescript cannot be treated with the contempt it would otherwise have elicited. It is a dangerous explosive, and the fear is lest in its explosion it should separate as it was intended to do, associate races.

It would be superfluous here to describe a document which most of our readers will have perused with deep attention. They will have seen that, following upon a brief exordium which seems to have exhausted the Emperor's stock of civility, there is a succession of paragraphs rising in insolence of tone one above another, until the whole series is capped by the most galling demand to which the temper of Hungary could be exposed. The Constitution of 1848 is to be recognised so far as it suits the Emperor's convenience, or, in other words, so far as it coincides with "our diploma of the 20th of October, 1860." As to the demand of the Hungarians that their union with the Austrian empire should be merely a personal one, through the Crown, and that their ancient nationality should not be merged, contrary to laws and treaties, in the Austrian empire, the pith of the answer is, "We, therefore, most graciously make it known to the Diet of the assembled States and Representatives that we cannot those articles of the 1848 which are in contradiction with the requisite security of the indivisible interests of our collective State, but especially with our decisions of the 20th of October, 1860, and the 26th of February, 1861, we, even as we hitherto have never recognised them, so also in the future we will not recognise them, nor consider ourselves personally bound to do so." This is pretty well; but then follows a passage which far transcends even this in arrogance:—"As we propose to make further communication of our overtures in the form of Royal propositions, we command the States and Representatives assembled in Diet that they shall submit it for their duty to prepare projects of law for effecting changes in the statutes of 1848, for the purpose of annulling certain articles of these statutes in the sense of our declared intentions." The summons to the Diet to send deputies to the Austrian Reichsrath is in similar vein; but the sting of the Rescript will be found in the passage which commands the Diet to take the initiative of a law guaranteeing the rights of the non-Magyar inhabitants of Hungary.

And now, how will this rescript be treated? There cannot be the least doubt that its commands will be disregarded; but what next? Nothing has yet been determined. The nation is unarmed, and therefore cannot fight. Its common belief, too, is that this Rescript was penned with the intention of goading the people into insurrection, and so finding a pretext for resorting to martial law; and therefore it is unwilling to fight just now. It will probably fall back upon passive resistance, a defence which, where the people are unanimous, is sure to be successful. The Hungarians, cruelly as they may suffer meanwhile, can wait—Austrian cannot wait. She must have taxes or die of inanition, and taxes in kind seized from a whole nation will go but a small way to replenish her Exchequer. Perhaps Hungary is more certain of the issue than she would have a right to be if she could meet Austria in battle array, for, after all, there is nothing so certain of baffling the designs of tyranny as a unanimous and persistent determination on the part of the people "not to do." No resistance is so hard to overcome as passive resistance.

FOREIGN AND COLONIAL NEWS.

FRANCE.

The Emperor returned to Fontainebleau on Wednesday evening. His Majesty will open the branch railway between Vichy and Nonjaniers. A fête will be given at Vichy, and at which the Emperor was present for a few minutes, produced 4000*l*., and his Majesty has, in addition, given a sum of 10,000*l*. for the poor. His Majesty has himself drawn up a plan for embellishing Vichy with a new boulevard, a park, and public gardens.

The Emperor has sent General Decaen to Santander to compliment the Queen of Spain.

General Montauban, who had command of the French troops in China, has arrived in Paris.

It continues to be confidently asserted in Paris that the King of Prussia will pay a visit to the Emperor Napoleon, at the camp of Chalons, and that some of the minor German Princes will accompany him.

The Gloire iron-cased frigate has arrived at Algiers from Toulon, after a run of 341 hours.

SWITZERLAND.

The National Council has agreed to the resolution of the Council of the States to raise the contingent to the number of 100,000 men.

The Federal Assembly has elected M. Dubs member of the Federal Council by 80 against 34 votes. M. Dubs declared that his policy with respect to Italy would be that of conciliation and independence. Switzerland, he added, is a Federal estate and in regard to foreign questions, neutrality. M. Fornerod has been elected Vice-President of the Confederation.

PORTUGAL.

Some serious disturbances have broken out in the province of Algarve respecting a new law of taxation. The insurgents have been in collision with the troops, who have been victorious. On Monday evening the disturbances continuing, the corvette Estephania sailed for Tavira with troops. It is said that Vienna is also disturbed.

The Hereditary Prince of Hohenzollern, who is to marry the Infanta Maria, daughter of the late King Don Miguel, and sister of the present King of Portugal, is to leave Prussia for Lisbon about the 15th of September, which date is to be celebrated there on the 7th of September, the fiftieth anniversary of the birth of the Prince's father. After the wedding the newly married couple are to visit the Courts of London and Brussels, and will then reside for some time on the estates of the Hohenzollern family in Switzerland.

AUSTRIA.

The Lower House of the Vienna Reichsrath was yesterday week the scene of a stormy discussion on the question of the nationalities. Prince Auersperg, the President, was obliged to call Herr Giskra to order with the exception of three, took umbrage, and left the House, reserving to themselves the right of withdrawing from the Reichsrath altogether. At a meeting on Saturday the President declared that the retirement of the members of the Right arose from a misapprehension of his words, and that they had peremptorily required their seats.

Such accounts as have as yet reached us from Pesth agree in asserting that the Emperor's rescript was received with the greatest joy and enthusiasm by the Magyars. Their leaders have not yet determined the precise steps which are to be taken; but it seems to be thought that they will endeavour to restrain the Hungarian Government from attempting to offer armed resistance to the Austrian Government, and that it will be content with a protest which, if it does not go the length of barricading the Vienna Cabinet until a more favourable opportunity for insurrection shall occur.

PRUSSIA.

Preparations have been commenced at Berlin for the fête of the coronation, which, it is said, is to be celebrated with extraordinary pomp. The Berlin correspondence, according to report, on Oct. 15, the anniversary of the birth of the late King Frederick William IV., and the entry into Berlin of the three Sovereigns, the Sovereigns of Prussia, Russia, and Austria, will dine together in the Palace of the Hohenzollern family in Switzerland.

DENMARK.

Late on Saturday evening 400 inhabitants of Schleswig, chiefly from the German portion of the duchy, arrived at Copenhagen, and met with an enthusiastic reception, in which the choral societies took part. The Mayor of Copenhagen, accordingly, in a speech expressing the inhabitants of Copenhagen gave a grand banquet in the neighbouring palace to the guests; 2000 persons assisted. The King of Denmark placed his hunting castle at their disposal. Several Schleswigers made speeches in favour of the rights of Denmark over Schleswig, which were received with great cheering.

News from Constantinople contains more detailed accounts of the recent disastrous financial crisis which has shook that capital.

The Beam, which has just arrived at Bordeaux from Senegal, has brought more than 10,000 parrots and parroquets.

The New York Post says that 20 sail-street bankers on the 9th inst. effected the full cessation of a five-million loan in forty minutes.

The *Free Press* of Singapore states that a "seamauke" has passed over Singapore, and that 178 persons perished.

According to advices from Corfu, the health of the Empress of Austria has so far improved that her Majesty has been able to get out in a boat on the harbour of Corfu.

The Havre Journals state that the harvest has commenced in that neighbourhood with favourable weather. The wheat crops are a good quality.

The *Levant Herald* says that the Valide Sultana intends to found a school and civil hospital at Scutari. The latter building will contain accommodation for four hundred patients, the total cost of which will be 6000*l*. The former, we are happy to say, will be built by Turks.

The German journals announce the death of the Duke of Cop-Rousseau, the last of the princely house of Cop, and who was the head of nobles in Prussia, aged seventy-three. He was married to a daughter of Baron Constantine de Stein, and left issue eight children. The estates, bequeathed by his son, Prince Rodolphe, married to a daughter of the Prince de Ligne, Prussian Minister at Brussels.

THE CAPE OF GOOD HOPE.—The Union Company's steamer Norman, with the Cape mail, arrived at Plymouth on Tuesday evening. She left Table Bay on the 21st ult., Madeira on the 31st ult., and Lisbon on the 1st inst. the remainder of the passage. Sir George Grey has not left for New Zealand. A bill has been introduced for the establishment of the voluntary principle in regard to church rates, and for the withdrawal of the State grants for religious purposes. The Legislature has prorogued itself to the 29th inst. Through this bill, and as in with great severity. There was a frequency of stormy weather. Nothing further has been heard from Bishop Mackenzie.

INDIA AND CHINA.—The overland mail has put us in possession of papers from Calcutta to June 27, and from Hong-Kong to June 11. Everything was very quiet at Calcutta. The various changes in the native army were being actively carried out; and all reports about the famine were decidedly favourable. In China political matters were on a satisfactory footing, though the conciliatory attitude of the Emperor from Pekin prevented that full confidence so essential in international relations; Prince Kung, however, continued on the most friendly footing with the English and French Ambassadors. The movements of the rebels were still enveloped in mystery. It was stated they had not left Nankin, and that trade had, in consequence, much improved at Tien-Tsin. A pause is reported in the opium markets.

LATEST NEWS FROM ABROAD.

The following telegrams were received through Mr. Reuter's office yesterday (Friday):—

ITALY.—The following despatch has been received by the Federal Council of Switzerland from the Swiss Consul at Turin, dated July 19:—"Monsieur le President,—I regret to have to inform you that Baron Ricasoli, the Minister for Foreign Affairs, has announced to me the determination of the Italian Government to withdraw the permission accorded to the Swiss lately in the service of Francis II. to remain at Naples, notwithstanding that it was one of the conditions of the capitulation of Gaeta. Consequently, I shall ask M. Pesch di San Marino had demanded the withdrawal of this permission because they felt assured that it would bring a programme into trouble, the unanimity of the people designating them as the former and, probably, future agents of Francis II. I have energetically protested against this resolution, and have written a letter to that effect to the Minister, a copy of which I inclose. Unhappily, I fear that our countrymen sometimes manifest their sympathies in a very unseemly manner. For instance, my Consul who is universally known as a Reactionist gave a grand dinner on the day on which the head of the Italian Government was present, to which were invited—with the exception of seven or eight Swiss—were who enough to stay away. Those who accepted the invitation had evidently a right to do so, but it was not prudent, considering that at the time Chiavone and his men had taken to the field, and the reaction at the moment was in the ascendant. The Ambassador of the State for which this Consul acts has addressed a despatch to his Government on the subject in which he severely censures the conduct of the Consul. His despatch was given me to read. Receive, &c., A. TOURTE."—A passage in the letter from the Swiss Minister to Baron Ricasoli referred to in the above runs thus:—"M. le President,—Allow me to say that without the two reactionists of the Federal Assembly which cancelled the capitulation and its military service of the Swiss above it, it may be doubted whether the revolution which has united the Two Sicilies to Italy would have been such an easy matter as it has been, therefore, but to think Switzerland, which did not hesitate to sacrifice the interests of 15,000 of her countrymen to the liberal cause."

SPAIN.—Madrid, Aug. 1.—The Madrid papers of to-day assert that anarchy and disorder reign in Morocco. They mention the assassination of six rich Moorish travellers by the Kabyles of Vadras, and state that the crime remains unpunished.

POLAND.—Cracow, August 1.—The *Gaz* of to-day publishes news from Warsaw, according to which the office of Administrator of Poland will be abolished, and General Lambert, the Military Governor, will be intrusted with the portfolio of the Interior. The exhibition of any more Polish costumes in honour of the late Prince Adam Czartoryski has been prohibited at Warsaw.

THE CIVIL WAR IN AMERICA.

By the arrival of the North Britain at Londonderry we have telegrams to the 20th ult.

BELLIGERENT OPERATIONS ON SEA AND LAND.

Major-General M'Clellan has won a successful series of battles over the Confederate in Western Virginia, which enables him to report that he firmly believes Secession is killed in that section of the country. On the 12th a division of the Federals, led by General Rosecrantz, drove the enemy from an intrenched camp at Rich Mountain, near Beverley, and on the 13th General M'Clellan marched on to Beverley, and captured six brass cannon, of which one was rifled, and all the camp equipage and transportation waggons. The enemy lost in the two battles 150 men, and at least, 300 wounded. The Federals lost in this second engagement 11 killed and 53 wounded. On the same day General M'Clellan received the submission of Col. Pegram, who asked for the surrender of his whole command, numbering 600 men.

On the next day, the 14th, General Garnett and his forces were routed at Carrackford, near St. George, and his baggage and one gun retaken. General Garnett was killed in the engagement. The Confederate force was said to be 5000 strong, and the Federals 3000. The dead on both sides were counted and a correct list obtained. The Federals report a loss of 19 killed and 40 wounded. The troops engaged in these two battles were chiefly from Ohio.

The main body of the Federal Army of the centre, numbering 55,000 men, and commanded by General M'Dowell, began its march towards Richmond on the 16th inst. They were met with no serious resistance until they reached Dalbiron, a fortified position, three miles from Manassas Junction, on the 18th inst. In front of the Federals was attacked this position and was repulsed. Afterwards, however, the position was carried. At the last accounts the two armies were only 25 miles from each other near Manassas Junction, a battle seemed inevitable on the next day (Sunday) or Monday, the 22nd ult.

General Patterson's division, which lay at Martinsburg, has been superseded by Major-General Banks. General Dix succeeds General Banks in command at Baltimore.

The Federal Government has decided that no more fugitive slaves shall be allowed in camp.

In Missouri Colonel Siegel has gained another advantage over the State troops.

The Confederate privateer Sumpter, which escaped from New Orleans, made for Cuba, where she seized eight Northern vessels, six of which were run into Cienfuegos and one was burned. The Governor-General of Cuba sent a gunboat to the coast and warned her, but refused the prizes. One of them which had been sent home under a prize crew was taken into Key West, the crew revolting and being unwilling to return to the Sumpter. Two of this crew were Englishmen.

Galveston, Texas, was blockaded on the 2nd ult.

WASHINGTON.

The opposition to the war party in Congress never divides more than ten in the House of Representatives, and on above half that number in the Senate. Four Northern Democrats only adhere to the cause of peaceable separation. The other members of the party are Senator Breckenridge, of Kentucky, and in the House Messrs. Burnett, of the same State, and Vallandingham, of Ohio.

Messrs. Carlile and Wing, of Western Virginia, have been admitted to seats in the Senate, as lawfully representing Virginia, in fact of the Union. Hitherto they have been in Confederate circles.

The military authorities exercise a censorship over the telegrams sent by correspondents at Washington to the Northern papers. The object is to prevent the knowledge of which may be of service to the enemy.

The Secretary of the Treasury raised 5,000,000 dols. in Treasury notes, at par, in the New York money market in forty minutes; the energetic course of the Government impressing the revolution having infused new confidence into the capitalists.

THE CONFEDERATE STATES.

The eighty-fifth anniversary of American Independence was observed with the usual éclat throughout the South.

Vice-President Stephens is delivering public harangues in the Gulf States, with the object of rallying the people to the Southern Government.

The usual mail facilities are still extended to the people of East Tennessee by the Federal Government in consideration of their loyalty.

THE SOUTHERN STATES.

There is much suffering among the working classes and the families of the volunteers in New York, Philadelphia, and St. Louis. In New York the Common Council appropriated 500,000 dols. towards the relief of the needy.

The particulars of the accident which proved fatal to Mrs. Longfellow are as follow:—She was engaged in making wax seals in the library for the assessment of her two youngest children, when a piece of light fire from a match which she was melting the wax. She had on a light summer dress, which was all in flames in a moment. Mr. Longfellow, who was in his study near by, ran to her assistance, and succeeded in extinguishing the flames, with considerable injury to himself, but too late to save the life of his wife. She was the daughter of the Hon. Nathan Appleton, of Boston, and leaves a family of five children—three of them daughters and two sons.

The trade returns of the port of New York show to what an extent the import trade of that port has suffered in consequence of the war. For the week ending July 13 there were imported of dry goods only 2,258,236 dols. worth, against 1,776,456 dols. for the corresponding week of last year, and 2,620,240 dols. in 1859.

COUNTRY NEWS.

Sir Charles Slingsby, Bart., has given a site for the new Town-hall at Knaresborough, and £500 towards the building fund.

A duplicate of Mr. Baily's bust of Admiral Blake has been placed in the library and museum of Liverpool.

The Royal Botanic Society of Dublin has resolved, by a large majority, that the Glasnevin Gardens shall be open to the public on Sundays.

The British Medical Association held its twenty-ninth annual meeting at Canterbury on Tuesday, Wednesday, and Thursday last week.

Wrexhall Abbey estate, with the old abbey mansion and nearly 2000 acres of land, has been bought for £93,000 by Mr. James Duplake, of Hurt-hall, Manchester.

A grand fête was held at Brandlands on Wednesday, by the kind permission of Lord Palmerston, on behalf of the Southampton Fellenbach Institute.

The Palm Cotton Mill at Robertstown, near Dewsbury, was on Saturday last burned to the ground, with the exception of the part containing the engine. The damage is £2000, of which about half is by insurance.

Porthlick Castle, near Glasson, the residence of Captain Smyth, has been, with its enclosure, completely occupied by a land, caused by the caustic breathe of the ocean.

On Sunday evening the extensive barn and wire rope manufactory of Messrs. Clarke, Chapman, Bibby, and Co., Wreper-road, Liverpool, was destroyed by fire. The loss is estimated at about £20,000, which, it is understood, will be covered by insurance.

Martha Spencer Weaver, the woman convicted of the murder of a child belonging to whose parents, at Dudley, near Chesterfield, under the influence of opium, has been respited; and the sentence of death will be commuted on penal servitude for life.

A young woman, the wife of a collier named Whittingham, taking her husband's supper to the Prestield Colliery a few days ago, carelessly leaned against the shaft of the pit, and was precipitated to the bottom, and her death. A bystander caught her child out of her arms as she was falling, and so saved its life.

Two gentlemen were crossing Scawfell a few days ago, where they found Mr. Cornelius Nixon, of Liverpool, a gentleman about seventy years of age, in a state of prostration. Mr. Nixon stated that he was on an excursion, and that he was very anxious to avoid Scawfell. He had, however, been taken ill, and he requested that they would not leave him on the heart. He died soon after being discovered, from an affection of the heart, induced, he thought, by over-exertion.

The first annual meeting of the Royal Irish Grand National Archery Club was held in the Belvedere Gardens, Dublin, on Wednesday, Thursday, and Friday last week. His Excellency the Lord Lieutenant, Lord Gough, and the Viscount Castle, were present on each occasion. The attendance of visitors, particularly on the last day, was very numerous; and the shooting during the week was remarkably fine. A ball on a large scale was held in the Rotunda on the evening of the 24th ult.

Three colliers were on Sunday se'nnight rescued from Kilvenside Pit, near Bradford, after having been imprisoned for a day in a quagmire of water, by which several were drowned. One of the party had three sisters drowned, and a fourth divided with his companions; and, after a struggle, the water was at hand. On being rescued they were found asleep, tired out with watching and labour. They had been under water that their deliverance was probably at hand. All three are doing well.

The annual fête in aid of the deserving Poor known as the Great Western Railway Widows and Orphans took place on Saturday last on the seat of Viscount Barrington, Beckett Park, Shrivenham, Berks, and was attended by a large company. The former was the 17th occasion which has granted the use of special trains, which conveyed thousands of visitors from Paddington, Reading, Reading, and other stations on the line. The Directors of the Paddington Rifles and the 5th Berks Volunteers were also present. Previous intimation for refreshments received on the 24th ult. Most of the arrangements were well carried out by Mr. Baley, of Paddington, and the committee of management.

Two heavy thunderstorms on Saturday did severe damage in different part of the country. At Warrington several places were struck by lightning, and the telegraphic communication with Manchester was for a time stopped. The bench at which he had been watching a minute previous was shattered to splinters. The storm was a very heavy one, and the streets of Warrington sustained considerable injury. At Doncaster the storm was not so severe, but the damage was done in a short time. Several houses in the Low-house, was killed. At the village of Hook, near Beverley, it was very severe, and attended with much mischief. Ashberry, named Mary Ann Hall, and three of his children, were engaged working in a turnip-field. When the heavy rain came on one o'clock. Failing to find shelter with his children, sought shelter, first under a hedge and then under a wide-spreading tree. The lightning struck the tree, killing the man and his father and two of the children. The surviving child was severely stunned.

THE "TYRANT."—Several of the shepherds and keepers on the Orbits state that they have not often seen the sheep so well and fat as they are this year. The young lamb look so strong and healthy and wild on the wing, three weeks before the "Twelfth," as Mr. Edmund Kimberley's young ones did on the same spot. The best in Perthshire, we are informed that 120 brace could be shot daily, followed by three guns, on the moors of Tay, on the neighbouring Rannoch Moor, belonging to Mr. G. Kellie M'Callum, and Cromlix, belonging to Mr. Dundas Devenport, a near neighbour of his, and has not been so for many years. In Glenogles, the shooting quarters of the Earl of Camperdown, very good sport is expected. Capercailzie have increased here also, and fifteen and eighteen young birds in a covey are not rare. The capercailzie has also increased to some extent in Glenfalloch, the seat of Mr. M'Laurin, Arrochar, Dunbartonshire, Cushnilli, Rossie, and Dunrobin castle, all kinds of game are very plentiful. Grouse are seen in great numbers on the Ben Buchullish, Invermay, and Condie runs, and there is every prospect of excellent sport at these places. In the interior and Highland districts generally, partridges and pheasants are more numerous than for several years, though the partridges were much thinned last year, and late rains destroyed many broods in the open districts. Hares and rodents are very plentiful, and all game appear in excellent condition.—Scotsman.

LAW INTELLIGENCE.—At the Derby Assizes on Monday a young man, named George Smith, was sentenced to death for the murder of his father, at Ilkestone, in May last.—And Saturday, Mr. William Hall, a farmer, of Ashley-Lee, between Hull and Beverley, aged 74, was declared in an action for breach of promise of marriage. The defendant, Mr. Thomas Rainford, a farmer, about half the age of the promise-breaker, and she estimated that her feelings had sustained £2500 worth of damage, and £1500 was awarded her.—At the Maidstone Assizes yesterday week a young man named Henry Sherry was charged with the murder of a woman. The facts proved in evidence showed that the prisoner's father and sister lived in a small thatched house on the premises near Cranbrook, and that while they were out the deceased and the prisoner had entered to the ground. On the previous day the prisoner had been refused money to do this, and the deceased had reproached him for spending so much time in the public-house. He was found guilty, but recommended to mercy on account of his youth.—On the same day, Samuel Lacy, a man of very respectable looking boy, apparently about twelve years old, whom he took to Shoreham, before to it, with a view to drown him. Mr. Justice Crowder remarked that he would, on account of his youth, commute the sentence of death to one of penal servitude for life.—At the Maidstone Assizes yesterday week a young man named Henry Sherry was charged with the murder of a woman. The facts proved in evidence showed that the prisoner's father and sister lived in a small thatched house on the premises near Cranbrook, and that while they were out the deceased and the prisoner had entered to the ground. On the previous day the prisoner had been refused money to do this, and the deceased had reproached him for spending so much time in the public-house. He was found guilty, but recommended to mercy on account of his youth.—On the same day, Samuel Lacy, a man of very respectable looking boy, apparently about twelve years old, whom he took to Shoreham, before to it, with a view to drown him. Mr. Justice Crowder remarked that he would, on account of his youth, commute the sentence of death to one of penal servitude for life.

NAVAL AND MILITARY INTELLIGENCE.

By orders from the Admiralty, a commission has been formed to inquire into and report upon the best mode of ventilating ships of war.

General John Swinburne died on the 27th inst. in his seventy-third year.

A monument to the memory of the late Sir Harry Smith was erected last week over the grave in the churchyard at Whitton.

The death of Admiral the Hon. Sir F. B. B. Pellew took place at Marseilles on Monday last, in his seventieth year.

The annual review of the Aldershot encampment was made on Tuesday, at Chatham, of the Achilles, 59, iron steam-steamer, which is to be built at that yards. This is to be the most splendid of our mail-clad steamers.

A large party of troops belonging to the various regiments in India arrived at Chatham on Monday night, having disembarked from the chartered transport Royal Ann, 700 tons, belonging to James Dunbar, London. The troops left Calcutta on the 25th of March last. Three deaths occurred on board during the voyage.

A large quantity of engineering tools have been forwarded to the 1st Royal Surrey Militia from the Inspector of Military Correspondence on the establishment of the Secretary of State for India, in the room of Colonel W. Bailey, who has been appointed to the Indian Staff. Drawers have been entered upon the duties of his office.

There was a review at Chatham last Saturday, in which nearly the whole of the garrison took part. On Tuesday morning some sham operations were carried out on Gillingham Common by the troops of the Royal Indian Engineers, in the presence of the Duke of Cambridge, Lieutenant-General Sir J. Fox Burgoyne, K.C.B., Inspector-General of Fortifications, and a number of other officers, on the field works of the Royal Engineers at Brompton Barracks.

MILITIA VOLUNTEERS.—According to a return just issued from the Horse Guards, dated July 31, the total force of the Militia and Volunteers of the United Kingdom has furnished 97,715 volunteers to the regular army, and 14,000 to the Militia reserve. Of these, 83,000 were furnished by England and Wales was 80,000, from Scotland 10,000, and from Ireland 20,000 (including 7000 yeomanry).

Sir William Armstrong, in his inaugural address as President of the Institution of Mechanical Engineers, delivered at Sheffield on Wednesday, remarked that the art of gunnery had undergone a change. The introduction of ordnance will always keep pace with the improvements in naval architecture. A new era in naval warfare has undoubtedly begun, and iron plates one or no ships at all—at least, so far as regards forts.

His Royal Highness Prince Albert, as Field Marshal, as General Commanding-in-Chief, inspected the 1st Life Guards and the Royal Horse Guards (Blue) on Wednesday morning, and the 1st Royal Dragoons and 2nd Dragoons on Thursday morning. Colonel Dudley De Bos commanded the 1st Life Guards, and Colonel Bathurst the Royal Horse Guards (Blue). At the termination of the inspection the Duke of Cambridge expressed his satisfaction with the appearance and general bearing of the troops.

On Tuesday morning, at half-past eleven o'clock, a full Board of Admiralty, consisting of the Duke of Somerset (First Lord), Admiral Sir F. Grey, Admiral Sir Maurice Berkeley, Admiral Sir Thomas Pasley, Admiral Sir Robt. Mc. Whitehead, M.P., Lord Clarence Paget (Secretary), Colonel Grosse (Secretary), and Mr. Corry (Parliamentary Secretary), assembled. The Board arrived at Woolwich, for the purpose of conducting the annual inspection of the Royal Artillery, and of the Royal Marine Light Infantry.

Instructions have been issued to the Inspectors-General of Fortifications (says the *Army and Navy Gazette*) to appoint as an explorer officer to inspect, examine, and report upon the defensive condition of each and then to proceed to the Curragh for the like purpose. After this duty is accomplished, the officer is to proceed to Canada, and make a complete tour of camp at Chobam, and probably the research may extend to Germany as well. Captain Alexander, Royal Engineers, has been appointed to the Curragh duty, and has already commenced his labours at Aldershot; and we understand that the advantages of the system of keeping the troops trained during the winter in camp will form part of his inquiry.

Some important experiments were made at Shoeburyness on Tuesday before the Duke of Cambridge, with the view to the removal of more of two new targets, formed so as to represent a portion of an armour-clad vessel's broadside. The first of these targets was constructed by Mr. Hall, and has intended to show how destroyed ships might with advantage be built of iron only; the other was the invention of Mr. Rendel, and was intended to prove that wooden vessels may be plated over, and at one fifth the cost required for the erection of iron ships. In the latter case the plates are so fixed between the iron that total destruction of the timber, but the resistance offered to the shot is not much decreased, upon the whole, satisfactory.

THE VOLUNTEER MOVEMENT.

The Supplemental Estimate for charges on account of volunteer corps amounts to £30,000.

The War Office having refused to furnish the London Rifle Brigade with camps and equipments for their proposed fourteen days' encampment under canvas at Aldershot, the Duke of Cambridge has given orders that the whole of its orders relating thereto are cancelled.

The rifle corps of the Inns of Court volunteers at Warnwood Scrubs, which commenced on Thursday week, was brought to a close on Saturday last. The strength for the week was 1000 men, and the number of volunteers who left the camp at a fair average quality. Captain Fenton, distributed the prizes.

The Sutton Coldfield Rifle Corps, which was formed in the town of North-west Middlesex Rifle Volunteers were inspected in Regent's Park by Colonel Hughes, Assistant-Quartermaster-General, on the 27th ult., under the command of Lieutenant-Colonel Hogg, F.G.S. After the inspection Colonel Hughes complimented the corps on its appearance, and intimated Colonel Hogg on the excellent regiment he had under his command.

The 2nd Middlesex (Victoria Park) Rifle Volunteer Volunteers was held on Monday at Wilth's Room—Lord Elcho, Commandant, presiding.

The 7th Surrey Rifle Volunteers (Bermondsey, Rotherhithe, Kennington, Lane, and town through battalion and shrinking drill, twenty rounds of ball cartridge firing, and marching to each man.

Mrs. Somerset, wife of the Colonel, presented colours to the 60th Middlesex Rifle Volunteers, at the Drill-hall, Hackney, on Saturday last, the weekly men living in the district.

The Royal Horse Artillery was inspected last Saturday by Colonel Morris, the Government Inspector of the Artillery Volunteers, in their paradeground, Hewitt's Nursery, Finsbury. The corps, which is under the command of Captain Graham, is a very small one, but it is very efficient, as well as nearly all the artillery movements, which were performed in a manner that elicited the commendation of Colonel Morris. The Government Inspector, who at the conclusion of the exercises addressed them, said that he was very much pleased with the appearance of the regiment on the present occasion, and that he should have great pleasure in reporting favourably of it to the Secretary of State for War.

The Bermondsey Volunteer Artillery was inspected last Saturday by Colonel Morris, the Government Inspector of the Artillery Volunteers, in their parade-ground, Hewitt's Nursery, Finsbury. The corps, which is under the command of Captain Graham, is a very small one, but it is very efficient, as well as nearly all the artillery movements, which were performed in a manner that elicited the commendation of Colonel Morris, the

FIGURE OF A NYMPH IN THE ROYAL DAIRY, WINDSOR, BY J. THOMAS.

WE have great pleasure, by the gracious permission of her Majesty, in giving an Engraving of the figure of a Nymph, in marble, by J. Thomas, which serves as a fountain in the Royal dairy, just completed at Frogmore, a view of the interior of which we published in our last Number. The figure is light and symmetrical in form, the attitude being eminently graceful. The nymph stands on a lotus plant, and has aquatic leaves bound round her head; in her hands she carries a vase, from which flows a stream of sparkling water. The workmanship is of the highest and most careful finish. Placed in a little niche, composed of majolica, the general effect of this little figure is extremely beautiful.

NEW CONGREGATIONAL CHURCH, LEWISHAM.

THIS church, the foundation-stone of which was laid by the late Mr. Alderman Wire, is situated on the high road at the corner of Brookeyham. It is built in the Gothic style. The plan consists of an entrance-tower, with approaches to gallery, nave, north and south aisles with transepts on each side, and chancel. At the end of the chancel is placed the schoolroom, with commodious vestries attached.

Internally, the building is of considerable importance, the nave being divided into five bays, by arches springing from carved capitals, supported by light and elegant piers; over each arch is a traceried window, at the side of which the roof-timbers spring to a lofty pitch, the whole being exposed to view, and stained in imitation of oak. The transepts open into the nave by bold arches, and, together with the chancel-arch, screens, and other fittings, present a pleasing combination. The sittings throughout the ground floor and gallery are in the form of open benches, and are of comfortable elevation and description. The tower opens into the church by an archway, and in this space the organ is placed. The remaining fittings are suitable with the general style of the building, and present altogether a satisfactory combination.

Externally, the church is built with Kentish ragstone, with Bath stone dressings to the windows, doors, buttresses, copings, and other ornamental work; the whole forming an imposing structure. The architect was Mr. Henry E. Coe, and the builders were Messrs. Dove Brothers, Islington. The entire works are carried out in a sound and substantial manner.

NEW DRINKING-FOUNTAIN IN THE CITY.

YESTERDAY week a "drinking-fountain, which for some months has been in course of erection in front of the Royal Exchange, was dedicated to public use by Mr. Samuel Gurney, M.P., whose gift it is. It consists of a pedestal and a circular basin 5 ft. in diameter, composed of polished granite, supported by three dolphins in bronze. Upon the basin is a circular plinth of white marble, forming a base for a half-draped female figure in bronze, representing Temperance, in the act of pouring water from a vase. There are four streams of water—one from the base of the figure and three from the plinth upon which it stands, with so many elegantly-shaped drinking-cups of white metal and gilt inside, chained to the masonry. The fountain, erected at a cost of about £300, is placed in the centre of the area in front of the Exchange, between it and the Duke's statue. Care has been taken in constructing the drainage to prevent the splashing of the water upon the pavement, and the foundation is surrounded by a rim of perforated ironwork, inserted in the pavement, for carrying off the spilled water. The work has been done with the permission of the Court of Sewers, who engage to supply it with water; but the property in the fountain itself remains with Mr. Gurney, or the Metropolitan Free Drinking Association, of which he is the chairman. The design is by E. F. Wakefield, honorary secretary to the association, and the modelling by Messrs. Wills Brothers.

PENINSULAR AND ORIENTAL COMPANY'S STEAM-SHIP MOOLTAN.

THIS last addition to the noble fleet of this celebrated company has lately left our shores on her first voyage. The Mooltan has been built to run between Southampton and Alexandria. She was designed by Mr. James Ash, and built by the Thames Iron Company. Her size, length, and tonnage (2600) are for the present day of almost an ordinary standard, for the strides by which companies and shipbuilders are advancing to vessels of almost Great Eastern proportions are great and rapid. The Peninsular Company are building ships of upwards of 4000 tons; and even the Warrior, of nearly 7000 tons, though large certainly, is thought by no means out of the way for ordinary sea-going merchantmen, as is evidenced by the Government having now under consideration a scheme for a line of 6000-ton steamers as troop-transports and mail-steamers between this country and India via the Cape. The Mooltan is 370 feet long (only five feet shorter than the Himalaya), 41 feet deep, and 39 feet wide. Such a width for such an immense length may at first appear disproportionate and too little; but in this ship, built to accomplish a high rate of speed with a small consumption of fuel, these dimensions were almost unavoidable. She is ship-rigged, and her appearance in the water gives one more the idea of a costly yacht of immense size, so exquisite are her fine lines and her graceful buoyancy. Light, however, as she looks, the hull is of enormous strength, and broad diagonal stringers of iron so cross the ship in both sides and deck in all directions that she may be considered, of her size, as strong as the Great Eastern herself. Inside she is fitted up with a solidity and splendour which have not been seen in the finest vessels of this company. Everything even on the upper-deck which is not of polished mahogany is of polished teak, and the expenditure in ornamental fittings would appear to be carried to an extreme, if they were not also all solid and serviceable. The decorations of the state saloon might be pointed to as a model for good taste and elegance of what a ship's fittings would be in this respect.

All connected with the machinery and hull are novelties, though not innovations. The Peninsular and Oriental Company pay annually nearly a million sterling for coals, and their efforts, therefore, have been constantly directed to the encouragement and development of machines that will do the most work with the least consumption of fuel. Speed in ships with great power is always attainable; but the cost of an extra knot on a seagoing steamer is something enormous, and companies have found that, like other things, speed may therefore be bought too dear. By the application of the superheating apparatus to their vessels, the Peninsular and Oriental Company have already effected a considerable saving of fuel. With one applied by Mr. Penn to the Valetta the consumption of that ship has been reduced, we believe, from sixty to forty tons a day. With the Mooltan, however, the company are trying to achieve still greater results, and, by certain modifications in the plan of the machinery, hope, with only four small boilers, engines of 400-horse power, and a consumption of one ton of coals per hour, to make this vessel average a speed of 10½ knots an hour. To average this on all her runs the Mooltan must be able to do 12½ or 13 knots in anything like fair weather. The engines have been fitted by Messrs. Humphreys and Tennant, and are, for their power, unusually compact, not occupying a greater width in the ship than the diameter of the large cylinders. The cylinders are "jacketed," as it is termed—that is, there is an upper pair of 43 in. diameter, in which the dry steam is first used, at a pressure of 20 lb., and an outer cylinder of 96 in. diameter, when it is worked expansively and afterwards condensed and returned to the boilers. The boilers contain only 1800 ft. of surface, and 160 ft. of fire-bar. For a seagoing steamer of 400-horse power the Admiralty require boilers containing 7000 ft. of surface and 280 ft. of fire-bar. The stroke is only 3 ft., the diameter of the screw 17 ft., and the pitch 22 ft. The whole weight of the engines, with water in the boilers, is 350 tons. Mr. Humphreys guarantees with these engines, up to four times the nominal horse-power, to do 12 knots at the measured mile, and to average at sea 10 knots. In her passage from the Thames to Southampton, in spite of a strong head wind to Dover and a strong tide against her all the way, except during three hours, the Mooltan averaged over nine knots, and in a run of twenty-four hours only consumed 70 tons 19 cwt. of coals. The fuel used was patent, so that a count tally of every block put on could be kept. For nearly seven hours only 4½ tons were used, and while the screw was going at 58 revolutions, and the engines indicating between 1100 and 1200 horse power, the vessel was going through the water at nearly 10 knots, not a complete ton, it is stated, was used in any single hour. Of course, the engines are superheating, being fitted with Lamb's apparatus in the bottom of the funnel, and from this the steam passed at from 400 degrees to 320 into the cylinders—the pressure in the boilers being 20 lb., in the engines from 17½ lb. to 18½. Her official trial-trip at Stokes Bay averaged 12·4 knots at the measured mile.

NEW DRINKING-FOUNTAIN IN FRONT OF THE ROYAL EXCHANGE.

NEW CONGREGATIONAL CHURCH AT LEWISHAM, SURREY.

"COMING HOME BY THE SHORTEST WAY."—DRAWN BY J. GODWIN.

"COMING HOME BY THE SHORTEST WAY."

BY J. GODWIN.

Mr. Godwin has here produced a joyous little picture which it gladdens eyes to look at. A party of village children have been out gathering wood and wild flowers, and, shouting with glee, are making their way home by a short cut through a close-tangled copse. The eldest of the party carries master baby on his shoulders, whose head is smothered in flowers. On before struts the penultimate of the family, with a basket of flowers slung round his neck, and carrying a small bough as a parasol. Three others are playing a sort of game of hide and seek behind. Simple as this little production is, how true is it in feeling! How suggestive of Nature in the heyday of life, teeming with gladness in happy *innocence*! We fancy we hear the hilarious voices echoing through the almost pathless wood, and sniff the fragrant air which hangs about the cool and shady recesses, defiant of the broiling mid-summer's sun, and feel the crisp herbage crunch and spring beneath our feet as we accompany the little rollicking party in their homeward ramble. The artist has realised this pleasant little episode with a free hand, and in a thoroughly congenial spirit.

GODSHILL CHURCH, ISLE OF WIGHT.

Nearly midway between Newport and Blackgang, in the centre of a champaign country of great luxuriance, suddenly rises a picturesque and somewhat precipitous hill amid a wealth of foliage—a quaint and prosperous village clustering round its base. On the summit of this hill rises a grey and ancient church, of considerable architectural beauty, and its sides are dotted with green graves and time-soiled tombs, wherein "the forefathers of the hamlet sleep." The village derives its name, Godshill, evidently enough, from the singular position of its admirable church on this lone, abrupt hill. We give from Venables' "Guide to the Isle of Wight" some particulars of the village and church:—"There are few prettier villages than Godshill to be seen anywhere in England, and the neighbourhood is rich in lovely country walks. The church (of which the old tradition is told, so common elsewhere to explain the position of sacred edifices on elevated or otherwise inconvenient sites, of spirits, either good or evil, transporting the materials from the valley below during the night, until the builders were constrained to acquiesce in the change of situation) stands on an isolated knoll, whose broken sides, rich in colouring and profuse vegetation, offer many tempting studies to an artist. Hollow lanes burrowing in the red soil wind up its flanks, on which the pretty grey-stone thatched cottages are scrambling in picturesque defiance of order. In the spring the abundance of wild flowers adds materially to the charm of the place. The view from the churchyard is one of the loveliest in the island; though not so extended as those from the higher elevations, the isolation of the knoll affords unbroken prospects on all sides. The Church of All Saints, like many of the island churches, of which it is one of the largest and best, consists of two equal-gabled aisles, with no constructional distinction between the nave and chancel. The east end, with its double gable and decorated window half overgrown with ivy, is a picturesque object, as the west end of the north aisle stands the pinnacled tower, of Perpendicular date, probably the work of the same artist as the neighbouring towers at Chale, Gatcombe, and Carisbrook. A small transeptal chapel projects on either side and breaks the length. On the gable of that to the south is a *Sanctus Bell Cot*. The walls of the church are incrusted with many-coloured lichens—red, orange, black, white, and grey, which afford a real treat to the student of this humble but most interesting form of vegetable life. The interior is spacious, the aisles divided by six well-proportioned arches rising from octagonal piers. The monuments are more interesting than usual, and deserve examination. Tradition assigns the foundation of the church to the time of Edward the Confessor: certain it is, that it was in existence immediately after the conquest, when it was one of those bestowed by Fitz-Osborn on the Abbey of Lire. On the dissolution of the alien priories it was given to Sheen, and, reverting to the Crown, was presented by Charles I. to Queen's College, Oxford. The church was struck by lightning in January, 1778, and considerably damaged. The lightning descended the tower, loosening the masonry, and, entering the church, proceeded along the whole length of the wall above the arcade to Sir John Leigh's monument, where it dislodged a portion of the mouldings, and made its way into the ground below the east window."

GODSHILL CHURCH, ISLE OF WIGHT.

CALENDAR FOR THE WEEK.

SUNDAY, August 4.—Tenth Sunday after Trinity.
MONDAY, 5.—Quarter Sessions commences.
TUESDAY, 6.—Conference at Zurich, 1859. New Moon, 9h. 54m. p.m.
WEDNESDAY, 7.—Name of Jesus.
THURSDAY, 8.—Canning died, 1827.
FRIDAY, 9.—London Building Fund closed, 1859.
SATURDAY, 10.—St. Lawrence.

TIMES OF HIGH WATER AT LONDON-BRIDGE,
FOR THE WEEK ENDING AUGUST 10, 1861.

OUR CONTINENTAL SUBSCRIBERS.—To suit the convenience of residents in Germany, Russia, and the eastern portion of Europe, we have appointed Mr. Ludwig Denicke, of Leipsic, Special Agent for this Journal.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, AUGUST 3, 1861.

SAD news is, in all probability, crossing the Atlantic. The last mails have spoken of the advance of the Federal army upon the Confederates, and we hear of a repulse of the former, and then of its success in carrying a disputed position. This information, of course, cannot though Northern channels, and we have not yet learned to accept, unhesitatingly, every statement so transmitted. But there seems no reason to doubt that the armies were drawing very close, and if the journals that "expect" a battle "to-day or to-morrow" are to be relied upon it could hardly be many days before thousands of men, speaking the same language, and but the other day proud of being governed by the same rulers, would be hurled upon one another in fierce conflict. A spot called Manassas Junction was indicated as the probable scene of the expected engagement. Some superseding of Federal Generals on the eve of fighting might not seem a good augury for the North; but, if the accounts as to the numbers of the forces be trustworthy, it is difficult to understand how an experienced soldier like General Scott can fail to be victorious. Private letters say that the authorities at Washington have no such ideas as are promulgated by journalists about bringing the war to a rapid termination, and that they do not contemplate the final subjugation of the South in less than two campaigns. In far less time than such protracted operations will require the pacification of the States will, we hope, be effected by other agency. Meantime, we await the arrival of the first engagement that has been dispatched since the declaration—we do not to say of war—but of "action" by the belligerents.

Ministers have performed the pleasing sacrifice with which it is the custom to solemnise the termination of the Session, and a few days will see the New Palace of Westminster given up to the artists. Government have accepted Lord Lovaine's amendment to the Bankruptcy Bill, which will therefore become law, a Chief Judge being omitted from the programme, and due precautions being enacted to prevent any sudden and unjust dealing with an absentee debtor. Mr. Cowper has made an announcement of very considerable interest. Government approve of the report of the commission on the embankment question; will next Session introduce a bill for carrying it out; and propose to intrust the works to the Metropolitan Board. By that time, possibly, the gigantic drainage works now in the hands of the Board will have so far advanced as to impress the public with a larger idea of the sanitary capabilities of the board than seems at present to pervade London. It is satisfactory that the embankment is at last to be really undertaken. West of the Temple Gardens there is to be a fine roadway, one hundred feet wide, to Westminster-bridge. East of the gardens there is to be a viaduct, seventy feet wide, to Blackfriars Bridge. Thence is to be cut a new street to the Mansion House. The plan is neither glorious, nor imposing, nor Roman, nor Napoleonic, but perhaps it is the best we can get, and certainly it is better than nothing, and we have the money to pay for the works. It probably should some at our little-mindedness and sweep away our small doings to make room for a line of water palaces, we shall be out of the way of humiliation, and posterity may please itself. The other noticeable matters connected with the legislation of the past week are the passing the bill for making University extension to be given in writing, and the bill appropriating the St. Albans and Sudbury seats. There have been Ministerial re-elections (Mr. Layard does not need re-election), and Lord Henry Scott, a Conservative, has defeated the Liberal candidate for Selkirkshire

In the City, as in the world know, the struggle for the seat vacated by Earl Russell has resulted in the election of Mr. Western Wood, brother of the Vice-Chancellor. A brother of Sir Page Wood has solid claims upon the Liberals of the City, for the battle which seated Baron Rothschild was chiefly fought in the House of Commons by the former, whose acuteness, eloquence, and genuinely hearing rendered him an invaluable champion. The Lord Mayor's friends attribute their defeat to "apathy," and also to the absence from London of great numbers of voters who would otherwise have supported Mr. Cubitt. There must be apathy on both sides, for the last return gives 19,026 voters for Cubitt, and only 19,338 polled. The majority for Mr. Wood was 566.

There seems to be little in foreign affairs requiring mention, except that the new Sultan is vigorously prosecuting his economical reforms, and has given a signal proof of his own intention to practise what he preaches by declining the Dowager Sultana's present of a beautiful new wife, remarking that he had already one wife, whom he loved, and that he wanted no additions to his household. A monogamic Sultan arises in an age of Mormonite Christianity!

THE COURT.

The Court remains in the Isle of Wight, where her Majesty is enjoying the quiet retirement of her beautiful marine residence.

On Saturday last the Crown Prince and Princess of Prussia and Princess Alice crossed over to Southampton in the Royal yacht Fairy, and went by special train to Winchester to see the cathedral. The Royal party arrived back to Osborne at half-past seven.

On Sunday the Queen and the Prince Consort, the Crown Prince and Princess of Prussia, Princesses Alice, Helena, and Louise, Prince Arthur and Prince Leopold, attended Divine service, which was performed by the Rev. G. Prothero.

On Monday the Queen and the Prince Consort, and Princess Louise, took a carriage airing. The Crown Prince and Princess of Prussia and Princess Helena crossed over to Southampton in the Royal yacht Fairy, and went in a carriage to visit the cathedral of that city. In the evening Vice-Admiral Sir H. W. Bruce, Commander-in-Chief at Portsmouth, and Admiral Sir George William Rose, Commander of the South-Western District, arrived at Osborne, and had the honour of dining with the Queen.

On Tuesday the Queen, with the Crown Prince and Princess of Prussia, and Princess Helena, drove out in a carriage and four. Colonel Grant, Groom of the Queen's Household, attended a meeting of the Royal Agricultural Society, and returned to Osborne about half-past four o'clock. The Queen and Princesses Helena and Louise took an open carriage and four. The Crown Prince and Princess of Prussia and Princess Alice rode on horseback.

Lieutenant-Colonel the Hon. C. Grey and Major Du Plat have succeeded Lord Alfred Paget and Colonel the Hon. A. Hardinge as Equerries in Waiting to her Majesty the Queen.

Their Imperial Highnesses the Archduke and Archduchess Maximilian of Austria, travelling under the title of Count and Countess of Lachroum, were graciously received at Osborne yesterday (Wednesday) by her Majesty.

It is understood that, according to present arrangements, the Queen and the Prince Consort, accompanied by Princess Alice, will leave Osborne on the 20th inst. for a tour in Ireland.

THE PRINCE OF WALES.

On Saturday the Prince of Wales paid the Duke of Leinster a visit at Carton, and remained there until Monday. On Sunday his Royal Highness attended Divine service at the parish church of Maynooth, when the Rev. Mr. Blacker, the Rector, officiated; and subsequently inspected the Roman Catholic College, where he was received by Archbishop Cullen. The little town of Maynooth was well illuminated by the inhabitants in honour of the Prince's arrival.

His Excellency the Turkish Ambassador will leave the Turkish Embassy early this month for Belgium and Holland. His Excellency is expected to be absent about three weeks. The Ambassadress and family will sojourn at St. Leonard's-on-Sea.

The Duke and Duchess of Northumberland have left Northumberland House for Foxton Hall, their marine residence on the coast, near Alnwick.

The marriage of the Marquis of Bath and the Hon. Miss Vesey, daughter of Viscount and Viscountess de Vesci, is appointed to take place on Thursday next.

The Earl and Countess of Derby have left St. James's-square for Knowsley Park for the autumn.

The Earl and Countess of Jersey have left Carlton House-terrace for Sutterton. It is the intention of the noble Earl and Countess to pass the autumn in Ireland.

Viscountess Palmerston will have an assembly this evening (Saturday) at Cambridge House.

A marriage is arranged to take place between Lady Julia Villiers, daughter of the Countess of Jersey, and Sir George Wombwell.

The benefit Lord Herbert was expected to receive from a session at Spalato, Belgium, has not, it is said, been realised. In consequence of increasing feebleness Lord Herbert has returned to England. His Lordship was obliged to be carried on board the steamer in which day he left town for this seat near Salisbury.

Sir Richard Mayne has gone down on Monday next for Dublin. Lady Emily Peel goes to Geneva to pass a fortnight or three weeks.

The Right Hon. Benjamin Disraeli, M.P., and Mrs. Disraeli have left London for Hatfield House on a visit to the Marquis and Marchioness of Salisbury.

THE MINISTERIAL ARRANGEMENTS are now complete. Lord Wodehouse has retired from the Foreign Office, and Mr. Layard assumes that post. It is understood that Sir Roundell Palmer, M.P. for Plymouth, will succeed Lord Westbury, and Lord Cranworth, who has long been displaced, and is therefore entitled to a retiring pension. The only remark at the time, that Lord Elgin obtained no office during the late changes in the Ministry.

THE MINISTERIAL WHITEBAIT DINNER.—The customary Ministerial whitebait dinner which precedes the adjournment of Parliament took place on Thursday last at the Trafalgar, Greenwich. The party proceeded to Greenwich "in a steamer from Hungerford-bridge engaged expressly for the occasion," and it is given by a correspondent of the *Daily News* of the circumstance which gave rise to the annual whitebait dinner. "Some years ago," he says, "Sir Robert Peel, Mr. Sidney Herbert, was in the habit of escaping occasionally to his fishing cottage from his Parliamentary duties, and he invited a party of friends to dine with him, as he was familiarly styled, 'Old George Rose,' Secretary of the Treasury, and an old friend of Sir Robert's, to Greenwich. Mr. Gladstone, who was then President of the Board of Trade, was also invited, but could not attend on account of a previous engagement. As the party dined at Greenwich on the 1st of May, and received with great cordiality at the 'Fishing Cottage,' He was in well pleased with his visit and the hospitality of the party—they generally considered two, if not three, bottle men—that on taking leave, Mr. Pitt hoped they would make it an annual affair. Sir Robert was pleased to remind him at the proper time! For a few years Mr. Pitt was an annual guest, and Addington's visit and the hospitality he was always treated to by George Rose." But the dinner was great, railways had not yet started from the river-side, and the Ministerial party had to cross over in boats to the Fleet Minister of the Crown. Sir Robert, however, had his remedy, as he then all sorts of conveyances, and the party dined at the Ship Tavern, Lower London. Greenwich was suggested as a convenient half-way house for the next year's dinner, and it has been the place of meeting for a large number of that august fraternity. The party was now changed from a trio to a score, Sir Robert's invitations being confined to the Cabinet Ministers. It subsequently extended its dimensions, and at last Lord Camden exclusively connected with the Treasury, and sitting at the table, was only fair that Sir Robert Peelian should be released from the expense. It was then arranged that the dinner should be given to some by Sir Robert Peelian—that is to say, at his invitation, and he insisted on still contributing a buck and champagne. At the time of Sir Robert's death Mr. Disraeli took the chair, that became a custom, which has never since been forgotten.

LORD JOHN RUSSELL'S ADDRESS.—The following notice appeared in Tuesday's *Gazette*:—"The Queen has been pleased to direct letters patent to be passed under the Great Seal granting the dignities of Viscount and Earl of the United Kingdom of Great Britain and Ireland unto the Right Hon. John Russell (commonly called Lord John Russell), and to his lawful heirs by the names, styles, and titles of Viscount Amberley, of Amberley, in the county of Gloucester, and of Ardsalla, in the county of Meath, and Earl Russell, of Kingston-Russell, in the county of Dorset.

Last Saturday the president of the Manchester and Salford Equitable Co-operative Society laid the foundation-stone of a weaving shed at Cadee, to hold 500 looms, which will be worked on the co-operative principle, that is, what a loom-is labour. A ten party was afterwards held in the Cloth Hall. Lord has been sought for a spinning mill.

Henry Irving Fellow Crosse, Esq., barrister, of the Middle Temple, has been appointed Attorney-General of British Columbia.

CHURCH AND UNIVERSITIES.

A memorial clock has been placed in New Brighton Church tower by two ladies to commemorate the death of a sister.

The inhabitants of Chelsea have presented the Rev. R. Burgess, Vicar of Upper Chelsea, with a free-will offering of £1200.

A new church is about to be erected in the district of Christ Church Macclesfield, which contains 20,000 persons and but one church.

The parish church (lately rebuilt) of St. Mawgan, Cornwall, was consecrated on Thursday week by Bishop Trower, on behalf of the Bishop of Exeter.

The foundation-stone of the new church of St. Paul's, Hadlands, Over Darwen, was laid last Saturday by the Bishop of Manchester in the presence of a large number of spectators.

The Bishop of Durham is progressing favourably, and it is anticipated that his health will be restored in a few weeks. His Lordship's Primary Visitation has been postponed.

Her Majesty has confirmed the decision of the Judicial Committee of the Privy Council, depriving the Rev. James Bennett of his benefice; and has restored the St. Pinnock, Sussex, has been declared vacant.

On Monday the mausoleum which has been built in the grounds of Frogmore House, and which is to receive the remains of the Duchess of Kent, was consecrated by the Bishop of Oxford. An Incumbent of the Mausoleum was given in the Number of the Journal for the 20th of March last.

The Dean and Chapter of Durham have made an additional donation of £1000 towards the building of St. Catherine's Church, in the parish of St. Margaret, in the city of Durham, now building a new church at Spittal, in Northumberland; and £50 towards the endowment of the same, to the patron of Incumbent.

The first stone has been laid of a new church at Port Adelaide South Australia, and the church at Glenelg is also about to be enlarged. A very fine church for the colony is being built at Gawler, twenty-six miles north of Adelaide, and an impressive ceremony was held there on last Whit Monday, on the occasion of laying the corner stone of the chancel.

The Bishop of London on Monday morning consecrated the beautiful new church of St. Anne, Haggerston, Stamford Hill, Middlesex, built by the munificence of S. Newton, Esq., at a cost of £8000, with schools and schools adjoin. The whole comprise one of the handsomest piles of building in the diocese of London. The site was given, and £4000 is said to have been added to the parish of Lewisham.

The first stone has been laid of a new church at Port Adelaide South Australia, and the church at Glenelg is also about to be enlarged. A very fine church for the colony is being built at Gawler, twenty-six miles north of Adelaide, and an impressive ceremony was held there on last Whit Monday, on the occasion of laying the corner stone of the chancel.

The Bishop of London on Monday morning consecrated the beautiful new church of St. Anne, Haggerston, Stamford Hill, Middlesex, built by the munificence of S. Newton, Esq., at a cost of £8000, with schools and schools adjoin. The whole comprise one of the handsomest piles of building in the diocese of London. The site was given, and £4000 is said to have been added to the parish of Lewisham.

St. Luke's Church, Burwood (about seven miles from Sydney), New South Wales, was consecrated by the Bishop of Sydney on the 1st of May. The church is a substantial building of stone, and though not large presents a purely ecclesiastical appearance. The pews, reading-desk, and fittings, are of deal, stained. On the following day the Bishop consecrated a small church at Castle Hill, about seven miles from Parramatta.

A new church in Upper Garden-street, Westminster, founded by the daughter of Dr. Norris, late Bishop of Ossory and Lismore, was consecrated on Wednesday by the Bishop of London, assisted by the Bishop of Oxford. The church is to be called the Good Shepherd, and the materials used are mainly red brick, stone, and marble. The interior decorations are very rich.

PREFERMENTS AND APPOINTMENTS.—The Rev. J. Mee, M.A., of the British and Foreign Bible Society, has been appointed to the deanery of Graham's Town, South Africa, and not to the deanery of Grahamstown, as stated in the last Ecclesiastical Gazette. The Rev. H. Burse has been collated to the archdeaconry of Essex, he having been collated to the prebend of Chiswick, in the diocese of London, on the 25th ult. The Rev. C. A. St. John Mildmay, Hursley, Hants, to Jointneston, St. Helens; Rev. J. Burrow to Warehorne, Kent; Rev. T. Wilson to Sargent Bodmin, Cornwall; Rev. Canon Jones to Llanvair Talhaiarn, St. Asaph; Rev. W. Shedden, St. Helens, *Chaplaincies*; The Rev. J. Alston to Mr. Tweedmouth, Northumberland; Rev. J. Pilkington to the Bishop's Industrial Schools, Durham. *Incumbencies*. The Rev. N. G. Grey to St. Mary's, Dover; Rev. B. Bennett to Ashton-under-Lyne; Rev. Roscoe Church, Kilmarnock, Ayr. *Curacies*: The Rev. H. J. Bailly to Longworth, Berks; Rev. H. Helsen, Rev. A. Jones to Llanfair Talhaiarn, *Guardian*.

PROPOSED PROTESTANT CHURCH IN VORARLBERG, AUSTRIA. The new law for the Protestants in Austria has given spirits and hopes to the professors of that religion. Intelligence about the progress, from the capital of Vorarlberg, an Austrian circle at the western extremity of the Tyrol, is said to be to the effect that a meeting of Presbyterians recently have held for the purpose of saying what can be done in the way of building a Presbyterian church. The meeting was numerously held, for the province. Baron Poenitz, who is married to a Scottish lady, gave the use of his house for the first general meeting. The Baron is a Roman Catholic, but his family are staunch Protestants, and he is taking the lead in this important movement. He is supported by Count Thurn, Governor-General of Bregenz, who have formed themselves into a committee of management. The Austrian government requires a sum of £2000 to be raised before the congregation can be formed, or an annual income of 1000 florins (£150); and the meeting at Baron Poenitz's was to try how much towards that sum could be obtained, and what further steps should be taken in furtherance of the object. The sum of £1000 was already signed for in the room, and about 12,000 florins more in the shape of yearly subscriptions. In addition to the money collected, the Baron has given a commodious site, which must be used for the church and school to the value of 3000 florins. The committee are of that the efficiency of the Bible Society and Friendly Protestant Society and many surely will be found willing and able to add a little to the fund for raising the first Presbyterian church and the first school for the children of Protestants, in Vorarlberg.

UNIVERSITIES AND PUBLIC SCHOOLS.—Oxford: The Rev. R. Hansell, M.A., has been elected to the Principalship of the Hall under the diocese of Norwich, and Mr. C. W. Clarke, B.A., of Balliol, to the open fellowship of Mr. Hutson has been elected to the Fellowship.

There was a strong muster at Eton College Election on Saturday, to participate in the festivities. The proceedings commenced, as was given in the quadrangle by Austen-Leigh, K.S., "captain" of the collegers for the ensuing year. At the termination of the examination, all of which proceeded with considerable animation and spirit, most of the visitors adjourned to the college chapel, to inspect the recent improvements in that sacred edifice during the last few years. Among the principal of these are the marvellously stained-glass windows, by Wailes, of Newcastle. Within one of the aisles of the college. The usual election dinner took place in the college hall, at three o'clock, where covers for about 200 persons were laid, the collegers being also among the number. The principal event of Election Saturday is the annual procession of boat from the college-head to Surly Hall and back, and accordingly some thousands of spectators assembled in the Brocas to witness the start, and the event was one of unusual interest, as it took place upon the Thames. The vacation commenced yesterday, at the close of the examinations. The boys of the college will return to Eton on Sept. 19; those on Sept. 20th, Sept. 19; and the remainder on Sept. 20. There are now considerably more than 800 boys in the college, and the number is rapidly in progress to become nearer the increasing numbers.

On Tuesday afternoon the distribution of prizes to the pupils of King's College School took place in the large hall of the college, before a large and fashionable assembly. The prizes were given to the scholars by the Rev. Dr. Wordsworth, first-class classical; W. T. T. Dyer, first-class mathematical; R. Henry Hall, R. Bentley Cox, and Alexander Grant, 1st division; J. P. Bourchier, 2nd division; A. L. Whatcroft, second division mathematical; W. J. Brooks, third-class, division A; W. Lee, third-class, division B; E. C. Hall, fifth-class, division A; and S. Hall, sixth-class, division A. The prizes were then distributed as follows:—Prize for Latin Hexameters, R. Bentley Cox; Latin Prose, J. C. Wallcutch; prize for Greek Iambics, given by the Council, R. Pryce Owen; prize for Latin Verse, given by the Council, R. Pryce Owen; prize for English Verse, given by the Head Master, J. H. M. Wetherell; prize for an English Essay, given by the Head Master, J. R. Bourchier; Alderson Prize, Rice Price, J. J. C. Wylie.

The distribution of prizes at the City of London School took place the same day, when, after the declamations in honour of the founder, the Lord Mayor, on the report of the Examiners, presented the following principal prizes:—Bentley Scholarship, G. S. Brown; Solomons Scholarships, E. Powell; Peterson Scholarship, W. Lee; Mercers' Exhibitions, Classical, W. J. Brown; Mathematical, St. Thomas's Medical Scholarship, A. C. Mayberry; Carpenters' Exhibitions, Classical, W. Lee; Mathematical, W. J. Brooks; Rev. Dr. Conquest's gold medal, T. S. Alder; Sir James Shaw's classical medal, G. S. Brown; Alderman Wilson's prize, W. Lee; Mr. Sheriff Rose's prize, Alexander Reid; R. Hale; Sir G. Carroll's medal for French, C. H. Nelson; Sir G. Carroll's medal for Mathematics, W. Lee; Alderman Hale's medal for arithmetic, J. R. Syme; Bently Lott's medal for writing, R. Ashton; Bentley Virtue's prize, J. E. Symes.

On Thursday, St. James's Day, the prizes were distributed at Forest School, near Walthamstow. The Bishop of London, the Bishop of Lincoln, Rev. Dr. Gilkestie, Principal and sole trustee, and most of the neighbouring clergy and gentry were present.

The annual distribution of prizes at the Islington Proprietary School took place on Tuesday, when Mr. Vicar Gibbs presided, and Revs. Dr. Cumming filled the chair. The Head Master, the Rev. R. W. Bush, M.A., read a long list of the honours gained during the year by pupils of the school at Oxford, Cambridge, King's College, and in the Government Competitive Examinations. Mr. T. Bennett has been elected Head Master of Penzance Grammar School.

The Telford medals of the Institution of Civil Engineers have been awarded to W. H. Preece, G. P. Bidder, jun., and F. Fox; and premiums of books to F. Braithwaite, G. Hurwood, and W. Hull.

Her Majesty's Commissioners for the International Exhibition of 1862 have received a communication from the Italian Government intimating that commissioners have been appointed to represent Italy in the coming exhibition.

LITERATURE AND ART.

"Now we're off!" Such is the never-failing exclamation that issues from the lips of the traveller, the most averse even from stereotyped conventionalities, when the screech of the railway whistle, the casting off of the steam-boat moorings, the "give them their heads" of the stage-coachman to the ostler—yes, there are still some stage-coachmen and still some ostlers left—proclaims immobility to be at an end, and locomotion to have begun. "Now we're off!" The delightful words are just now finding upon many tongues. "Now we're off!" elucidates the member of the Alpine Club, as knapsack on back and *Alpenstock* in hand, he starts for his beloved "peaks, passes, and glaciers." "Now we're off!" the jaded journalist, the faggod-out man of letters murmur, as they bid adieu for a season to scissors and paste, to printers' imps and proofsheets. "Now we're off!" cries, in jubilant tones, the artist as he makes a preliminary call at sketching-shops for a fresh supply of moist colours, camp-stools, and sun-defying umbrellas, and hies him gaily to Devonshire or South Wales, to the Highlands or the Lakes, to the Pyrenees or the Picrees, to the Maritime or the Cottian Obcrland. And "Now we're off" must the Minister of State exclaim, exhibited his hands, and chuckling gaily, as a spruce, decorated Citizen steam-boat bears him and his colleagues to Greenwich, there to dine in the dulcet regions of the Ship, kept by Mr. Hurt, of the Trafalgar. For is not the Ministerial whitebait dinner the event pre-eminent in the whole overture, to the commencement of the Ministerial holidays—holidays during which the "Imperials" of inquisitive Opposition Members of the Opposition trouble not, and the voice of the contankerous is hushed?

A Government dinner of long-remembered fame recently volunteered some amusing "folk lore" relative to the origin and derivation of the white bait dinner. One Sir Robert Preston, it appears, a last century Baronet and member of Parliament, made himself so free with the fish that grew out of an annual whitebait treat which Sir Robert used to give in a more convivial manner than the present Right Honourable George Rose. He was, besides, a tremendous diner-out at Club, and at George Rose, was the constant butt for the satire and invective of William Gilbert, "the Rose" was also addicted, by the testimony of his once, since you "served out dogs in the Navy." Old George had been in early life a Purser in the Navy, and Gilbert's epithet applied to Mr. Rose ending with "yours with the feelings that suit him as a man" to

REVIEW OF FEDERAL TROOPS BY PRESIDENT LINCOLN AND GENERAL SCOTT.

On July 4, the anniversary of American Independence, 20,000 troops belonging to the State of New York alone were passed in review before the President and General Scott. Many of the Secretaries of the different departments were present, among whom Mr. Seward occupied a prominent position on the right of the Commander-in-Chief. The moment taken by our Special Artist for his sketch of this imposing ceremony, engraved on page 111, was when the Garibaldi Guard was marching past. As each company came in front of General Scott the men took the green sprigs they had fastened amid their cock feathers and threw them towards the old chieftain. The Garibaldi Guard is composed of Hungarians, Germans, Swiss, Italians, and French, and they are uniformed after the fashion of the Sardinian Bersaglieri.

REVIEW OF FEDERAL TROOPS ON THE 4TH OF JULY BY PRESIDENT LINCOLN AND GENERAL SCOTT: THE GARIBALDI STAND TAKEN PART—FROM A SKETCH BY OUR SPECIAL ARTIST.—SEE PRECEDING PAGE.

SKETCHES IN PARLIAMENT.

WHEN the "dog star rages" the House of Peers asserts itself as part of the constitution of the country by driving through a number of stages a number of bills by a series of rapacious jerks. No doubt Lord Derby and Lord Redesdale persist and vow that they will not permit the Lordships' House to be a mere registry of the doings of the Commons; but, somehow, mankind out of doors incline to the notion of the mere recording powers of the Peers, and dare rather to this one or twice in a Session they find a fish debate to bolster up a speech, the positive and active existence of the second estate of the realm. The old storyteller who prays for rain, perhaps has his eye elevated, now and then, but few days or so these have been two features in the House of Lords which are noticeable. In the first place, the transmigration of Lord John Russell into Earl Russell has been made complete by the ceremonial of the admission among his peers. For a week the Lordship remained in a state of chronic and half-disappointed expectation. Everybody, more or less, purposes to market, while, and gold, did not appear in the locks until the 1st of July. It is a pity that the old-fashioned full-bottomed which deputed Earl Russell in a coronet and robes far too large for him, for when his Lordship appeared in the House in the latter garb the recollection suggested was back to the good old days, when Reynolds drew the indefatigable secretaries between a caricature and its subject, and how the caricature gained a place in the minds eye from a likeness. Well, just this occurred to the spectator when the new Peer, in his robes, formed part of a procession in which, exhausted enough, it was all men, except Earl Russell and Earl Granville, who, walking last, did not break the physical contract which was presented. The procession was from the Chancellor's throne (occupied with his back sideways), is anything but imposing. It does not take long, but seems and seems to be very much like a bore. It is the only time we ever scened more relieved than Earl Russell himself when he took his seat in his usual accustomed corner on the Opposition cross-benches, and with only a gangway between him and the Bishops. Curiously enough, on that evening there was a division against the Government, which was carried in favour by a majority of only one, which was the new Earl's vote.

On another evening the Peers returned to their country seats. The occasion was the discussion of the disagreement of the Commons with the Lords' amendments on the subject of the proposed Chief Judge in bankruptcy. The object of the noble the new Lord Chancellor, a measure which it is probably be found not to be too easy. That noble and learned Lord opened the debate in a speech of immense power, and conscious that a majority was against him, he did not hesitate to make that a restrain any of his knowledge that the movement was, like that against Lord Eldon in the Commons, a party one. The opposition, if it was led by an ex-Chancellor, who, remembering how often his weakness was thrown in his teeth by Lord Chancellor when he was at the Bar, availed himself of the first opportunity when they met in a common arena to endeavour to pay off old scores. Indeed, it is probable that all the other old lawyers present had been more or less severely handled taken by Lord Westbury who Attorney-General were influenced by a similar feeling, for the last time and of course the new and learned leader of the Conservatives no doubt determined the opposition which was organised. Accordingly these sages, sage being here more than usually applicable with any degree of truth, to the Chancellorship of the appointment of a Chief Judge in Bankruptcy, which was to get rid of the Commissioners altogether, and to give the tribunal requisite to the Divorce Court, where an able single Judge has given out a most satisfactory, if not a very great success; and actually persisted in committing the radical changes in the administration of bankruptcy to a set of functionaries whose disagreeable qualities Agnes have been proved to be, not only intolerable, of the alternation which has taken place, and who would have been swept away by the Government of the legal and commercial worlds, if the Government had ventured to ask the House of Commons for retiring pensions for them. The law Lords—those weird brethren of the law in the House, and who have been, like Hyder Ali, known in a legal Chelsea or Greenwich Hospital in default of any other asylum for the old Commanders—found their position a very hard one indeed, and hardly expect that they will succeed in stopping to any extent the career of a great costly judge and legal reformer.

The House of Commons is now reduced in point of numbers to something just over the chartered forty which constitutes a House. It need not be said that this number is made up mostly of a class of members who are five so much in the House that there is constant speculation as to the nature of their habitations when Parliament is not sitting. They are always there, and always; and although when Sir Gilbert Heathcote or some such unprecedly skipped in his Indian Budget there were not twenty hearers present, and when I have no-confidence motions (the last referred to the idea of the lockers-on) were all close at hand, although even their powers of sufferance did not enable them to hear the Minister for the Home Department. It has become a matter of fact that certain members who have been comedy but adequately described as the temple of the Chief to amuse themselves by saying before Mr. William Cowper, the Chief Commissioner of Works, who, being a well-to-do country gentleman, has taken the ministers of forge to please everybody, with the usual result. There was one of these demonstrations on the part of Mr. Bernal Osborne and Mr. Gregory one night, in which the King the Fine Arts Committee was one of the most patriotic and most obtrusive gentlemen contrived to use language which drew down a reply for an hour of the days when the member who was prepared to vindicate himself and his opinions by his personal prowess, and this even in the English Parliament. In that of Ireland, of course, all believe that a supply of claret was kept up so regularly in the lobby as a supply of refreshments. It did chance of to some of the unpunctual of the members that both gentlemen in question have been named as candidates for the Secretary-ship for Ireland, which happened to have been given away the very day before. It is not surprising, therefore, that one of them, with the mind full of the subject, was weak enough to take an illustration in the course of his speech from a description which Cicero gives of the mode in which young politicians were trained for the Irish Secretary-ship, but which was probably meant to apply, not quite unfitly, to the appointment which had just been made. The manner which thus peeped out was gratifying to some listeners, as it accounted for the fervour of the attack on a gentleman who is connected by family ties with Lord Palmerston, and who is understood to be specially esteemed by the Premier. For some time past Mr. Gregory has been silent and moody. One night, when the subject was the relative increase of the French and English navies, he suddenly roused himself from his torpor and launched into a violent attack on the unpopularity which was thought that he was about to pronounce one of those summaries of the Session which Lord Lyndhurst, Lord Brougham, Lord Derby, and Lord Lyttelton descendant of late. When the effect of his outburst was may be judged from the fact that Mr. White, in his illustrating, good-natured way, absolutely answered him in the strict sense of that term; and Sir John Pakington and Mr. Henley, his own colleagues, thought it necessary to get up and declare their adhesion to the course taken by the Government, and so gave him the mash direct. He has not appeared in the House since, so this probably accounts for the fact that he has not again this year his exit as well on the whole he rather ignominious, and he is falling sequal to a series of unadvantageous and inhumanagement which have characterised his proceedings during the Session. The last debate there was exhibited as complete a specimen of that which is metaphorically called "eating his leek" as the part of the great naval reformer, and, so to speak, growler, Mr. Lindsay, as could well be witnessed.

The wonderful persistence of our legislators in the carrying out of their own crotchets has been as much displayed as ever. It is not patriotism, it is hardly vanity, which can induce gentlemen to make long speeches, which are never reported, to empty houses; it can only be a mania which is caught from the atmosphere of the place, and which is too powerful to be shaken off. Every one knows that the bringing in of the Appropriation Bill means that the remainder of the business of the Session is purely formal and technical, and that even the time which that measure takes in passing through its stages is grudged as an impediment to the prorogation. Yet Lord Robert Montagu chose the second reading of even such a bill to propose that its progress should be delayed for a week at least, and endeavoured to prove his case by a mild attempt at a summary of the Session. Again, on an evening when all the business might have been well got through in two hours, and nobody have been lost in the way of result, the lawyers, finding a clear stage, eagerly crowded on it, and from half-past five to ten hours intervened through the House the inspiriting accents of the Attorney-General, Sir Fitzroy Kelly, Mr. Malins, &c.—scarcely if at all relieved by the more argumentative tones of the Solicitor-General, the neatness, ingenuity, and gentlemanly fluency of Mr. Bovill. Then, on a question of the Paper Duties, some of the two members for Truro—both of whom are sound Protectionists—were heard, and the Cornish men distinguished from his colleague, and because he is lord of the manor of the Duchy, which lie of the coast of Cornwall, or for any other reason why, is called "Selby Selby," and not Selby Selby, as an ordinary mortal of exactly thirteen members. It is probable that there never has been a Session in which there has been so much talk as distinguished from speech-making proper. There has been a mighty splutter over the Estimates, but there has not been a reduction made in a single vote; indeed, the only saving that is apparent is the item of the Exhibition been £200 a year, which was taken away from a miserable German travelling showman to give to the Royal Academy. Of course, in the last words we should indicate on the subject of our legislature, we would not state any favourable opinion that the present is the worst Parliament that has sat since that which was presided over by "Prince Goa Barbecues."

IMPERIAL PARLIAMENT.

[The following abstract of the proceedings in both Houses of Parliament on Friday, July 26, appeared in our Town Edition last week.]

HOUSE OF LORDS.—FRIDAY, JULY 26.

DEATHS OF THE HOUSE.—The EARL OF DERBY drew the attention of the House to the deaths which had occurred in the House since it last met, and with the issue of business before Parliament. Before Wednesday 58 bills were introduced into the House of Commons, and 30 had been read a second time. Of these bills 78 had been passed, 5 had been rejected by the Commons, 25 withdrawn, and upwards of 30 had been postponed in consideration of the Lower House. In their Lordship's House there were 45 bills awaiting the royal assent, 16 of which are the result of the session a very important class of bills before their Lordships which there seemed no likelihood of getting through. He alluded to the Bankruptcy and the criminal law, which were on their Lordships' paper, but for the consideration of which they had been unable to find time. Many public business suffered very seriously from the haste with which it was commenced, and the Bankruptcy Bill, which, in its present form, had been hurriedly disposed of the other day in the House of Commons after a few o'clock, was a striking illustration of the evil consequences of inspection measures. There had yesterday been 26 bills on their Lordships' table, but they had been disposed of in a manner which he (Lord Derby) wished to ask was whether the noble Earl opposite (Earl Granville) was prepared to say that the Government would not press the Bankruptcy Bill and not press forward bills when it was impossible that they could receive the attention which they required? He (Lord Derby) could not but view with the view of preventing injurious haste in the House of Commons—Lord LANSDOWNE thought it desirable to enter into explanation with regard to the subject at the Bankruptcy Peer Bill. He really did not think that the Government were to be blamed for the course which they had taken with regard to the Bankruptcy Bill. Five minutes before the House went into Committee on this bill their Lordships sent down a message to the House of Commons to ask to other questions raised by the Earl of Derby. After some further conversation the subject dropped.

DISABILITY AND INSOLVENT BILL.—The reasons of the House of Commons for disagreeing to their Lordships' amendments in the bill in the above bill were considered, and a lengthened discussion took place on the motion of the Lord Chancellor that the House do not insist on its disagreement to the amendments. The Lord Chancellor said that the House of Commons had to the office, power, and duties of the Chief Judge." The House having divided, there appeared—Contents, 39; Non-contents, 17; majority against the Government, 34.

The other bills and Lords' amendments were then disposed of.

HOUSE OF COMMONS.—FRIDAY, JULY 26.

NEW WRIT.—At the morning sitting a new writ was ordered to be issued for the borough of Cambridge, in the room of Mr. Hugh Fortescue, who accepted the office of Chief Secretary for Ireland, in the room of Mr. Cardwell, who accepted the office of Chancellor of the Duchy.

The House then went into Committee of Supply, and was occupied until the evening sitting in passing votes for civil services in Class 1.

THE MAGISTRATES AT RYDE.—Mr. H. LEWIS asked the Secretary for the Home Department whether the Government intended to take any steps with Thomas Carter for three weeks to prison and hard labour for stealing in the parish of Ryde? Mr. SOTHERON ESTCOURT replied that the conviction of Mr. Thomas Thorpe Fowle and Mr. Le Marchant Thomas at the Ryde Petty Sessions, that the Government had been unable to take any steps with regard to those magistrates on the subject, but he had not received any writ.

THE CIVIL SERVICE ESTIMATES.—Mr. GLADSTONE, in reply to a question of the Government to the increase of the Civil Service, and the importance of supplementary estimates, said that he could not at present make any other measures, especially by the reappointment of a Committee of the House, to consider the whole question of the Civil Service Estimates. He thought that the adoption of the new trade conditions would check the growth of that noble service, and he was glad to say that the Government had succeeded in obtaining a treaty, the obtaining the position of a Protectorate along the territories from Cape Coast Castle to Lagos, and the establishment of the Consulate should be, and were about to be, established at Lagos. It was their duty to put down with this country, and the slave trade would gradually die out.—Lord PALMERSTON said that the Government were not in a position to say that the most anxious attention of the Government was given to it. The noble Lord concluded by saying that the Government had no intention which were going on cross this subject with other Powers, particularly France, with regard to the Suez Canal, and that they were not at present engaged in making a satisfactory arrangement. When at length it was decided that an act were passed, he should consent to introduce it. It was found that the latter vessel were commanded by a captain from the Southern States the Government of the United States had requested that the vessel had for its captain a man from the Northern States the case was very different. The Government had no intention of interfering in the matter was under the consideration of the noble Lord the Secretary for Foreign Affairs. He did not see how they could interfere in the matter.—Mr. BRIGHT asked the reminder of the night was occupied with the consideration of the remaining Estimates.

HOUSE OF COMMONS.—SATURDAY, JULY 27.

The House met on Saturday morning, and completed the important work of the Estimates, by agreeing to the report of the Committee of Supply.

THE CHURCH RATES AMENDMENT BILL.—The Lords' amendments of the EXCHEQUER stated that the supplementary votes had cut down his Budget surplus from £1,200,000 to only £1,000,000, and that it was from all the preconclusive of the previous, which had already in some departments surpassed the expenditure.

Several bills were advanced a stage.

The Appropriation Bill was then terminated by Mr. B. OSBORNE calling attention to the injury which some of the freezers in the Houses of Parliament had sustained.

HOUSE OF LORDS.—MONDAY.

The Appropriation of Seats Bill passed through Committee.

THE MUNICIPAL CORPORATIONS AMENDMENT BILL, opposed by several Conservative Peers, but, on a division, the second reading was carried by a majority of 17.

A large number of bills were advanced a stage, including the Irrotwoods Fair Bill, which was read a third time and passed.

HOUSE OF COMMONS.—MONDAY.

THE GALWAY CONTRACT.—The House was elicited to in the House of Commons. LORD PALMERSTON stated, in reply to Mr. Gregory, that the Government had not received any information from the Galway Company of their intention in regard to the recommendations of the Select Committee, but that they were aware that several gentlemen connected with the Galway had left and America; and he thought, moreover, that Galway was the most central point on the Irish coast.

THE CONSOLIDATED FUND APPROPRIATION BILL.—Upon the motion for the second reading of this bill considerable discussion was occasioned by an amendment of Lord R. MONTAGU, to the effect that before the second reading for the bill should be printed and placed in the hands of members.—This amendment was negatived, and the bill was read a second time.

WILLS AND DOMICILES OF BRITISH SUBJECTS BILL.—On the order for going into Committee on this bill the ATTORNEY-GENERAL explained the nature of the measure. It provides that no British subject shall acquire a domicile in a foreign country unless he has resided there for twelve months after he has made a declaration that he must of a declaration of acquiring the intention to become domiciled. Foreign conventions would be necessary to give effect to the provisions of this measure.—A legal discussion ensued, in which Sir F. Kelly, Sir G. Bowyer, the Solicitor-General, Mr. Malins, and Lord Dunkellin took part. The House went into Committee, and the various clauses of the bill were agreed to.

MISCELLANEOUS.—The Land Tax Redition Loan Bill was read a second time, as were the Militia Pay Bill and the Militia Ballots Suspension Bill. The Lords amendments on the Bail Court Chancery Bill were agreed to. The Drainage of Land Bill, the Public Offices Site Bill, and the Petitions British Forces India bill were read a third time and passed. Some other bills were advanced a stage.

HOUSE OF LORDS.—TUESDAY.

Lord J. Russell took the oaths and his seat on being created Earl Russell.

The Accessories and Abettors, the Criminal Statutes, the Larceny Act, the Malicious Injuries to Property, the Coinage Offences, the Forgery, and the Offences Bills were severally read a second time, as were the Durham University Bill and several others of minor importance.

The report of amendments of the Appropriation of Seats (Sanitary and St. James) Bill was received.

The Enlistment in India Bill and the Municipal Corporations Act Amendment Bill passed through Committee.

Several bills were read a third time and passed, and others advanced a stage.

HOUSE OF COMMONS.—TUESDAY.

The Consolidated Fund (Appropriation) Bill passed through Committee, as did the East India Loan (No 2) Bill, the Militia Pay Bill, and the Militia Ballot Suspension Bill.

The Treasury Chest Fund Bill was read a third time and passed.

The Lunatics (Ireland) Bill went into Committee.

The Parochial Offices Bill passed through Committee, as did the Copyright (Musical Compositions) Act (No. 2) Bill, and the Offices of Rosters, Royal Navy, Bill.

The Government of the Navy Bill, as amended, was considered, and ordered to be read a third time the next day.

BANKRUPTCY BILL.—Mr. SPEAKER stated that the Lords had insisted on their amendments in the Bankruptcy Bill relating to the Chief Judge, with which the Commons had disagreed, and had not insisted on the amendments with which the Commons disagreed, and gave their reasons, which were ordered to be printed, and considered the next day.

BIL. DUNLOP'S DESPATCHES.—AUSTRIA AND HUNGARY.—Mr. GRIFFITH moved for copies of Mr. Dunlop's despatches from Vienna, when acting lately as diplomatic agent of the Government in that locality and asked what part her Majesty's Government had taken in the differences between Austria and Hungary.—Lord PALMERSTON, in declining to produce the papers, which could not be given without injury to the public service, said that he was of opinion that Austria should be presented as a great empire in the centre of Europe, and that it was the interest of that empire and of Europe, they left them to be settled by the parties themselves, whatever might be their opinion as to the rights of the case.—The motion was withdrawn.

HOUSE OF COMMONS.—WEDNESDAY.

The Indictable Offences (Metropolitan District) Bill was withdrawn.

The Lunacy Regulation Bill was read.

The Grand Juries (Ireland) Bill was passed through Committee.

The Consolidated Fund (Appropriation) Bill was, after some debate, read a third time and passed.

The Volunteers' Tolls Exemptions Bill passed through Committee, and by leave was read a third time and passed.

The East India Loan Bill, the Militia Pay Bill, the Militia Ballots Suspension Bill, the Wills and Domiciles of British Subjects Bill, the Bankruptcy of Personality of British Subjects Bill, the Statute Law Revision Bill, the Copyright (Musical Compositions) Act Amendment Bill, the Lunatics (Ireland) Act Amendment Bill, the Metropolitan Police District Receiver Bill, the Parochial Offices Bill, the Government of Dependencies Bill, and the Government of the Navy Bill, were severally read a third time and passed.

The Grand Juries (Ireland) Bill, on the motion of the Lord Advocate for disagreeing with the Commons on the subject of the Chief Judge in Bankruptcy, under the Bankruptcy Bill, was read a second time.—Mr. CHICHESTER FORTESCUE moved that the House do not insist on its disagreement to the Lords' amendments in the Bill. After a long discussion the motion was preferable to the loss of the bill, which must otherwise cease. The motion was agreed to.

ENFRANCHISEMENT OF THE THAMES.—In answer to Sir J. Shelley, Mr. CHICHESTER FORTESCUE said that it was the plan of the Thames Improvement Commissioners, that plan was found to be the most consistent with private interests and public convenience, and he believed that the Government and the Government was prepared to adopt their recommendation. It was not intended that the Commissioners should be to carry out the work, but it would be intrusted to the Metropolitan Board of Works.

HOUSE OF LORDS.—THURSDAY.

ROYAL CONVEYANCE.—Her Majesty has given her commission to the following bills:—Tay, Piers and Harbours, Turnpike Trusts Arrangements, Harbours, Passengers' Small Vessels (Ireland), Harbours, Docks, and Piers, Pensions, Railway Companies Mortgage Transfer (Scotland), Drumkeeping (Ireland), Lunatics (Ireland), Parochial Offices (Ireland), Copyright (Musical Compositions), Vaccination, Voters (Ireland), University Elections, Dublin Revising Barristers, Lincoln Jurors (Ireland), Lunacy Regulation, Bankruptcy Law (Ireland) Act Continuance, Local Government Act Amendment, Locomotive Trams (Scotland), Bankruptcy (Ireland) Act Continuance, Irrotwoods Fairs, Drainage Limitation, East India Consols, &c., County Surveyors, &c. (Ireland) Public Works (Ireland), Bankruptcy (Ireland) Act Amendment, Writers and Solicitors (Ireland), White Herring Fishery (Scotland), Turnpike Acts Continuance, Public Works Loan Advances, Consolidated Fund, Oath Relief, and thirty-two private bills.

The Lords Commissioners were the Lord Chancellor, the Duke of Argyll, and the Earl St. Germans.

THE PUBLIC BILLS were read a third time and passed—viz., the Industrial Schools (Scotland), Industrial Schools, Enlistment in India, and Indemnity Bills.

HOUSE OF COMMONS.—THURSDAY.

NEW MEMBERS.—Sir G. Grey took the oaths and his seat for Morpeth on being appointed Secretary for the Home Department, in the room of Sir G. C. Lewis, now Secretary for War; Sir R. Peel, for Tamworth, on being appointed Chief Secretary for Ireland, in the room of Mr. Cardwell, now Chancellor of the Duchy of Lancaster; Mr. W. Wood, for the City of London, in the room of Lord R. Russell, now appointed one of the Vice Presidents of the Committee of Council; Mr. Coles, for Andover, in the room of Mr. Cabell, who has accepted office.

THE GALWAY CONTRACT.—Lord PALMERSTON, in reply to Colonel French, said he had not yet received any information from the new given from the Cunard Steamship Company. The Government, however, would make a statement on the subject from the peerage.—The several bills upon the paper were advanced a stage.

THE WEATHER.

ELECTION INTELLIGENCE.—At Andover on Monday Mr. Henry Beaumont Coles, of Middleton-House, Longparish, who represented the borough from 1847 to 1857, was returned in place of Lord Mayor Cabell without opposition. He said he was a Liberal Conservative, and that he should not entertained and unaffected in their integrity the settled institutions of the country.—At Ryde, on Tuesday, Mr. Cardwell, who has accepted the office of Chancellor of the Duchy of Lancaster, was on Tuesday re-elected member for the city of Oxford, without opposition. Mr. Cardwell addressed the electors at considerable length, tendering them his sincere thanks for returning him for the third time within a period of little more than two years. He had favourably received the recent changes in the Ministry, and considered the principle and domestic policy of the Palmerston Administration. The right gentleman was enthusiastically received.—The election for Morpeth, occasioned by the acceptance by Sir George Grey of the office of Home Secretary, passed by the acceptance by Sir George Grey of the office of Home Secretary, passed by the acceptance by Sir George Grey of the office of Home Secretary, passed

NATIONAL SPORTS.

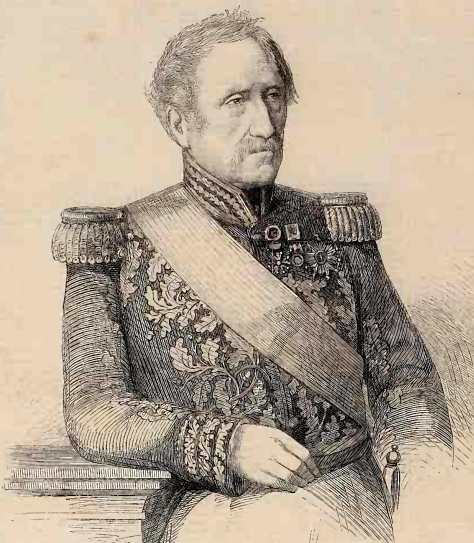
Goodwood, which, in spite of the enormous profit made annually out of its Grand Stand, prize-sheet £700 less in added money for four days than Brighton does for three, opened well this year. For the Craven Stakes, Racecourse, as usual, took his canter in his muzzle, and then, with 7lb. extra, led from end to end, and won by a length. Lord Portsmouth was loudly cheered as he led him back to scale; and well he deserved it. Coaster, the jockey, seemed to have quite recovered the effects of his Ascot shake off the Nan Darrel filly, and his friends say that in his first moment of returning consciousness he was heard to murmur, with true professional fervour, "Who rode the mare?" Gratwicke Stakes brought on a much weaker lot than we were wont to see in "the brave days of old," and the grey Dr. Leger colt blundered sentenced Knight of St. Patrick and three others in a canter. The Knight made the running in some portion of the race, and his earing almost "strangled" him when he was pulled up. The Lavant Stakes produced a tremendous race between Repose and Pelignor by Rataplan, the latter, with just 6lb. the worst of the weight, being beaten by a short head. No less than seventy animals were "coloured," and forty-five "stripped" for the Sussex Stakes Cup; and thus the Joe Miller Chester Cup start, which has long been a regular feature in point of numbers since racing was a sport, had to yield by two. After ten and thirty minutes' delay, Gaper, who had the second favourite, got well off, and at the stand it was a match between Lady Emma and Knight of St. Patrick, the latter in front and in that order they finished. The Knight gave the winner, a three-year-old filly by Stockwell—Ayesha, and only beaten by a head. It is said that Lord Exeter is very anxious to buy this mare for his son Lord Amcotts Lewis, who carried 10lb. more than the winner, was fourth; and the Unclassic Mr. Horne Thimbleby, Mr. Wallis, broke down badly. Mr. Alexander had, however, a good slice of comfort in the Hon. Stakes with his gelding; and Elderton showed a sad lack of pace in a half-mile sweepstakes, which Scotston showed a sad lack of pace in a half-mile sweepstakes, which Scotston showed a sad lack of pace in a half-mile sweepstakes, which Scotston

COUNT ORNANO, THE NEWLY-CREATED MARSHAL OF FRANCE.

THE suddenness with which the important ceremony of the final interment of the remains of Napoleon I. in their magnificent resting-place under the dome of the Invalides was decided upon deprived this great historical event and "closing scene" of much of the éclat that would otherwise have attended it. The proceedings may be said almost to have passed simply *en famille*; the Emperor, the Empress, the Prince Imperial, three Princes of the Bonaparte family, and the great State functionaries alone assisting at the solemnity of transporting the coffin of the First Napoleon from the chapel wherein it had hitherto lain to the porphyrean sarcophagus so long in preparation for its reception, and about which for a time, while it was a question of burying the Emperor at St. Denis, some uncertainty existed as to its future occupant. The four or five hundred veterans drawn up in four lines in the Cour Vauban to await the arrival of the nephew of their first Emperor served, as it were, as the link between the two, and their cry of "Vive l'Empereur," although as sincere as ever while, was but as the feeble echo of the exclamations of their younger days, pronounced enthusiastically by the conquerors of Marengo and Austerlitz on the fields of their grand victories.

However quietly the last honours may have been paid to the greatest chief of modern times, the founder moreover of an Imperial dynasty, we are convinced that all those who were present were fully imbued with the solemnity of the occasion. Around that tomb and about its precincts the living debris of the companions of the illustrious Corsican were gathered to witness the final entombment of his remains. To mark the occasion in the annals of the Invalides the Emperor distributed a number of crosses of the Legion of Honour to some of the oldest of the pensioners, and promoted General Count Ornano, Governor of the Hôtel des Invalides, to the rank of Marshal of France, conferring upon him the bâton recently placed at his Majesty's disposal by the death of Marshal Bosquet.

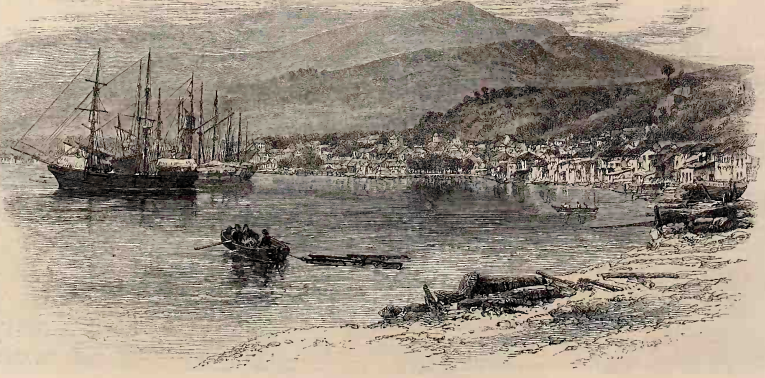
Count Ornano, thus raised to the highest military dignity of France, is not only one of the oldest soldiers of the first Empire, but, perhaps, the only officer in Europe who can boast of having served during nearly half a century in the capacity of General of Division. Philippe Antoine Ornano was born at Ajaccio on the 17th of January, 1784, and entered the army as an officer of dragoons at the early age of sixteen. After the Marengo campaign, during which he was attached to Desaix' division, he was appointed Aide-de-Camp to General Leclerc, whom he accompanied on the expedition to San Domingo. He was soon afterwards placed in command of a battalion of Corsican chasseurs, at the head of whom he had the good fortune to capture several pieces of cannon at the glorious battle of Austerlitz. The intrepidity of the young officer obtained for him the approbation of the Emperor, from whose hands he received the Cross of Honour on the field of battle. It is not our intention to recapitulate the different campaigns in which Count Ornano took part: we should have to cite almost all the military events of the First Empire. Suffice it to say that he fought with equal distinction in Portugal (1809), in Russia (1812), in Germany (1813), and in Paris (1814), where, as a youthful General, being then only in his thirtieth year, he was charged with the command of the army of reserve, amounting to 40,000 men, and intended for the protection of the French capital. But the reinforcements constantly required to be sent off to the Grande Armée reduced this reserve to a mere fraction; so that on the morning of the battle of Paris General Ornano had but 6000 soldiers, with which small force he contributed to the brilliant defence of the capital. He afterwards rejoined Napoleon at Fontainebleau; and when the Emperor, seeing that his conditional abdication in favour of his son was not accepted by the Sovereigns, thought of falling behind the Loire and continuing the war, Ornano received the command of the cavalry of the Imperial Guard. He was at Fontainebleau at the moment of Napoleon's farewell; and, if he did not figure at his master's final struggle for power on the plains of Waterloo, it was because a severe wound prevented him from being present on the last battle-field of the Grande Armée. In his seventy-eighth year Count Ornano not only enjoys the advantage of good health and a high military reputation, but also the most envied distinction to which a French soldier can aspire, the bâton of Marshal, appropriately conferred upon him on the 2nd of April, 1861, by the Emperor Napoleon III., in the presence of the remains of the founder of the Bonaparte dynasty. The Count is, moreover, a senator, Governor of the Invalides, member of the Council of the Imperial Family, and Grand Cross of the Legion of Honour, of which he was also at one time the Chancellor.



COUNT ORNANO, MARSHAL OF FRANCE, FROM A PAINTING BY HEUSS, AT THE HOTEL DES INVALIDES.

ST. PIERRE, MARTINIQUE.

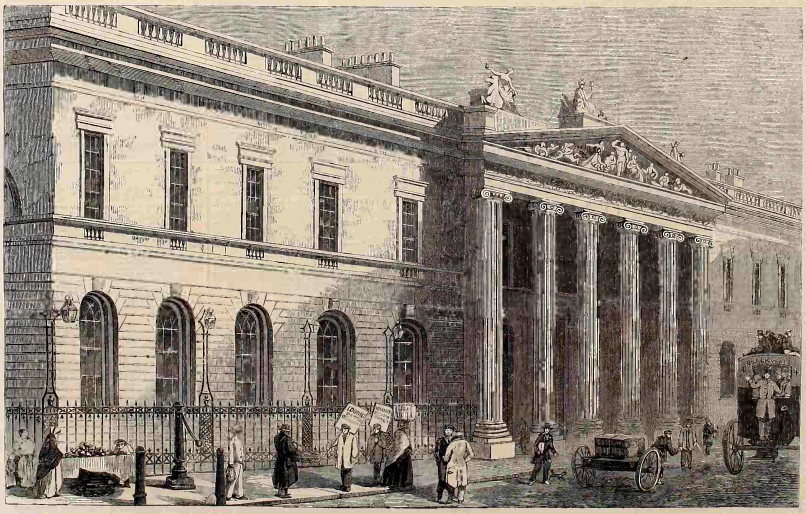
MARTINIQUE, or Martinico, is one of the French West India Islands in the windward group. It is mountainous, and contains several extinct volcanoes. The numerous small rivers are used to turn sugar-mills. About a fourth of the surface is covered with dense forests. The soil is fertile, the chief products being sugar, coffee, and cocoa. This island, called by the natives Madiana, was discovered by the Spaniards in 1493. The French founded a colony on it in 1635. It was taken by the English in 1762, but resigned in 1763; they again occupied it from 1794 to 1809, and it was finally given up to France in 1814. The capital of the colony is Fort Royal, but St. Pierre is the most populous town, and the centre of commerce. Prince Alfred was magnificently entertained in this city on the occasion of his Royal Highness's visit to Martinique in March last. St. Pierre is said to be the handsomest town in the West



TOWN AND HARBOUR OF ST. PIERRE, MARTINIQUE.

THE NEW INDIA MUSEUM, WHITEHALL-YARD.—SEE SUPPLEMENT, PAGE 123.

Indies. Besides three spacious streets parallel to the beach it has several transverse streets. Streams of water are conveyed through the principal streets, imparting a degree of freshness to the air most desirable in so warm a climate. St. Pierre has numerous public buildings and schools, a theatre, and a botanic garden. Its population is over 30,000. The Empress Josephine, first Queen of Napoleon I., was born here in 1763. Although St. Pierre is the principal place of trade in the island, its roadstead is open, affording very indifferent shelter to shipping, but it is defended by several forts.



EAST INDIA HOUSE, LEADENHALL-STREET.—SEE SUPPLEMENT, PAGE 123.

*** The charge for the insertion of Births, Marriages, and Deaths, is Five Shillings for each Announcement.*

BIRTHS.

On the 22nd of April, at Belfast, Cape of Good Hope, the wife of Percy Nightingale, Esq., Colonial Civil Service, of a daughter.

On the 15th ult., at Baldwyn House, Dundee, the Lady Jane Ogilvy.

On the 12th of June, during the passage from Calcutta to England, Sir Albert John de Hochepied Larpent, Bart., aged 46.

On the 22th ult., at Kensington, London, William Henry, eldest son of William Bowen, Esq., Birkenhead, Cheshire, aged 20 years.

THE MARKETS.

Corn Exchange, July 29.—An increased supply of English wheat was on offer on to-day's market, and the demand for fresh red and white qualities was limited. Fine parcels, however, of the latter were in request, and quite as dear as last week. Low qualities, however, were 1s. per qr. cheaper. Foreign wheat moved off slowly at previous rates. Barley and flour were dull, and prices had a downward tendency. The demand was somewhat restricted. Fine malt was firm in price; otherwise, the trade for it was quiet. Beans were in fair request, at extreme prices. Peas were in limited request, and 1s. per qr. cheaper. Oats were in moderate request, at 1s. per qr. lower.

July 31.—Fine wheat, barley, oats, and flour, were in steady, but by no means active, demand, at full prices. Otherwise, the trade was in a languid state, at Monday's currency.

Arrivals this week:—Wheat, English, 2m. qrs.; do., Irish, 6m. qrs.; do., foreign, 1m. qrs.; flour, British and Irish, 6m. sks.; do., foreign, 1m. sks.; barley, 3m. qrs.; malting, 2m. qrs.; oats, 1m. qrs.; beans, 1m. qrs.; peas, 1m. qrs.; linseed, 1m. qrs.; rapeseed, 1m. qrs.; linseed cake, 1m. qrs.; rapeseed cake, 1m. qrs.; rape cake, 1m. qrs.; Canadian, 2m. qrs.; Indian, 1m. qrs.; cotton cake, 1m. qrs.; Indian corn, 1m. qrs.; Indian meal, 1m. qrs.; oatmeal, 1m. qrs.; barley meal, 1m. qrs.; pease meal, 1m. qrs.; beans meal, 1m. qrs.; wheat meal, 1m. qrs.; rye, 1m. qrs.; buckwheat, 1m. qrs.; tares, 1m. qrs.; hay, 1m. tns.; straw, 1m. tns.; hops, 1m. pkts.; potatoes, 1m. tns.; wool, 1m. bls.; wool, 1m. pkts.; wool, 1m. bls.; wool, 1m. pkts.; wool, 1m. bls.; wool, 1m. pkts

AUGUST 3, 1861.

BROLIO, THE ANCESTRAL SEAT OF THE RICASOLI FAMILY.—SEE NEXT PAGE.

LONDON-BRIDGE RAILWAY TERMINUS HOTEL.—SEE NEXT PAGE.

A VISIT TO BROLIO, THE ANCESTRAL SEAT OF THE RICASOLI FAMILY.

EVERY without the special interest attaching to the residence of the statesman to whom the destinies of Italy have been confided, a visit to Brolio would well repay any traveller for the trouble of making it. But the Baron Bettino Ricasoli*, now that the peaceably-inclined Cavour is no more, unquestionably the foremost man in Italy—the man on whom all eyes in Italy are turned with hope and daily increasing confidence, and in whom Europe is beginning to recognise a Hercules worthy of sustaining that world which has been deprived of the mighty Atlas who hitherto supported it. The Tuscans, and those well acquainted with the history of Tuscany for the last two years, had reason to know something of Bettino Ricasoli, and the universal grief occasioned by Cavour's untimely death, were able to draw no small measure of consolation from the knowledge that they knew that if an ardent and enthusiastic patriotism, a love for Italy, and a confidence in her approaching regeneration, could have been the passion and the conviction of a man, one was still left undisputable moral courage, joined to a rare purity of uprightness, and a still rarer faith in the efficacy and triumph of intelligent and upright political conduct; if the combination of these characteristics with truly large and statesmanlike views of the position of the country, of the causes which have contributed to its decline, and the means needed for its recovery, they knew that if these qualities could be found in a Minister capable of carrying out the great work which had been left unfinished, they could put the hand on the man that Italy needed. Fortunately, Victor Emmanuel had seen enough of the late Governor of Tuscany to be of the same opinion. And since his recent speech in the Turin Chamber, in the course of the debate on the loan, they will be found to have any doubt on the correctness of his judgment.

Baron Bettino Ricasoli is the head of one of the most ancient noble families in Tuscany. The old Florentine patricians, so is well known, may be divided, as regards their origin, into two classes—the more ancient feudal and territorial nobility, and the city or commercial nobles, who rose into distinction within the walls of the city and during the period of the greatness of the Florentine Republic, and who had all the characteristics which in every part of Europe marked the mediæval feudal aristocracy, and they were more than this, as incompatible with the royally-rising power and civilisation of the young communal community rising into greatness on the banks of the Arno, as was the more intellectually-developed, more extra-polated and became extinct; while a portion of them became civilised citizens, assumed city pursuits, and took part in city government. The Ricasoli were among these, and there are few pages of the history of Florence which do not testify to the high position they occupied in the city government, and in the opinion of their fellow-citizens. In the palmy days of the Republic they were the equals, the compeers, and rivals of the Bardi, Pazzi, Albizzi, Strozzi, &c., of those times because, while they fell with the rest to the subjects of the upstart Medici, left to the broad acres, the ancient possessions of the family, when long before the time came for collecting taxes, rents, and nobility over a banker's counter, remained.

The Baron has a fine and vast possession in various parts of Tuscany, but the chief seat and largest property of the family was, and is, situated in the beautiful hilly country between Siena and the upper valley of the Arno. And there, about twelve miles from Siena and some fifteen from Montevarchi, the nearest town in the Valdarno, is the ancient feudal castle of Brolio, in one of the most picturesque positions which it is possible to conceive. On leaving Siena, with his face turned eastward, the traveller plunges at once into the most picturesque country, of which every knoll and upland is covered with corn lands, vineyards, and olive groves, sometimes separated from each other, but more frequently in the richest confusion the same piece with the corn and wine, and oil, with here and there a fig-tree into the bargain, while the narrow valleys and streamlets course on, are green and fresh with a growth of small and stunted oaks. Journeying through this pleasant land, the wayfarer come to the large, well-marked valley of the storied Arbia, the classical stream which, as the poet of the Divine Will well remember, was dyed red on the memorable day of the fight between the Republics of Florence and Siena.

After crossing this stream all fertility of country becomes less thickly inhabited, the trees become fewer and less extensive, and the oak woods occupy a much larger share of the scenery of the hills. The growth of stunt oak is less stunted, and some fine trees begin to be noticeable, among them. Very pretty as is and always has been the scene to be the charitable point of all the hill region, the large mass and the grey towers of Brolio are the first objects which attract one's notice, and tell him that fortress-looking building on the edge of the far horizon is the object of his pilgrimage, and the ambitious goal of all these subjacent hills. Then the castle more precisely and evidently dominant is the position and appearance of the castle.

Conspicuous, however, as it is on its lofty hill, some 1750 feet or thereabouts by the level of the sea, the traveller loses sight of Brolio oftentimes as he threads his way among the wooded hills, before he climbs the last ascent on which the castle stands. When at last he has crossed the hill on the side of which the castle stands, and higher ground in the immediate vicinity. A lofty wood-covered peak rises inland, forming the junction of the modern residence; and the stranger is told that "Old Brolio" once stood. But in a ruin still may be seen, on the topmost rock of the hilltop peak. The present castle does not date from the twelfth century—the building of which the old territorial Barons become lay-abiding citizens of Florence. The main body and tenor of which is that of their friend was square, and every man's hand against them, and the present building on the high ground in front of the old castle, and which, as the stranger is told that "Old Brolio" once stood, but in ruins only we

The Italian greyhounds made up a small but select class of six, and the honours fell on Clara, aged seventeen months, the property of Mr. Langley, of Gadesmere near Derby's pet (which weighed 5lb., at two months, but of its own companion Topsy. Our artist has however, with his sketches of Lilley, the property of Mr. Hinchliffe, of Foster-lane, Cheapside, which, although not among the first five of the day, had an extra prize of a Cup or medal awarded to her by the committee. Her owner states that her weight is only 3lb., and that on one occasion she killed twenty full-grown rats in 3 min. 40 sec. On another occasion she killed twenty full-grown rats in 3 min. 40 sec. On another, they killed twenty-six, avoiding the assistance of a third terrier, as at the time of the tournament there were only 2lb. 5oz. of her.

Mr. Wilkinson's Dandy won in the next class among the medley, which was not a remarkable one, we have selected Mr. H. P. Welch of Sunderland's Bobby, a dog that has been hanging and brought off no fewer than seven prizes at Birmingham. The specimens in this class were twenty-eight in all; and, to judge of the latitude which is given to the judges' fancy, we might refer to the fact that Mr. Mattess, two St. Bernards (one of them descended from the monks' *Fidus Achates* Barry), a cross between a St. Bernard and Scotch foundland, and a mastiff, a Russian mastiff, an Iceland dog, a Spanish bullfighter, and a celebrated performing dog. Besides these we divers exquisite beauties there were two French poodles, each of them an especial beauty, and with such delicately-shaven pink toes that one thought with a relish of the Plantagenet race ogresses whose delightful article had so achieved so brilliant.

The setters come up forty-seven strong in the first class alone: but many of them, in consequence of the heavy rain of the year, were greatly out of condition in their coats. We do not remember seeing any whole black and fine-coloured dogs among them, as judges very properly dislike them, owing to the difficulty of seeing them among heather. This also told rather against the winners Ned (engraved) and Jess, both the property of Mr. J. Meades, whose performances have brought the Birmingham Show to such a high state of efficiency. Ned shows a great deal of quality, but is a little wanting in size, and Jess hardly so good as he might be in his tail, while a furious controversy has arisen about Rock, who, instead of his fine horizontal ring which is such a characteristic in dogs of this character, has the tip curled up quite colley fashion.

SCIENTIFIC NEWS.

ELECTRICITY.—In a memoir translated in the *Bibliothèque de Genève* M. Ruhl considers the analogy of the sources of the electricity of tension and that of the voltaic pile to be incontestable, and gives his opinion that the contact of heterogeneous substances is the cause of the former. This opinion is combated by the author, M. A. de la Rive, who does not consider it to be fairly derived from the facts related. He considers that the explanation of the generation of electricity by friction, from which he first derives one of his principal arguments in favour of the contact theory seems rather to be that the origin of the electricity is to be attributed to the molecular movements, which arise as much from pressure as from rubbing; that, moreover, the nature of these heterogeneous bodies is sometimes the same, sometimes the negative, fluid with which the two rubbed or pressed substances are charged.

THE MOVEMENTS OF SIRIUS (the Dog Star) have been investigated by M. Calandrelli, director of the Pontifical Observatory at Rome, formed and illustrated by Mr. Dawes, who has brought to bear his powerful and expensive apparatus. M. Calandrelli thinks the anomalies of Sirius are explained by the theory in the communication of Professor Bessel to the hypothesis of a large satellite. M. Liverrier, after reading the above communication, drew from the circumstance of Prof. Bessel's idea having been unanimously supported the study of astronomy, and added satirically, "This is the way in which the Providence of God makes use of men even in the natural sciences!"

PURE WOOL.—Near Breslau, in Silesia, are two establishments erected by M. Pannewitz—one a factory where pine leaves are converted into a kind of wool, and the other a factory for knitting stockings. The pine leaves used in the manufacture last mentioned are employed entirely. The material used for the former is the cones, which are collected in May. As we know M. Pannewitz's method, but it is stated that a fibrous material can be obtained from the pine leaves by boiling them with soda, and treating them in a solution of chlorinated lime. Blankets made of pine wool have been extensively used in Russia, and knitting stockings, and also carpets, are now the new made of this material. In the preparation of the wool an ethereal oil is produced, which is said to be a valuable addition to the materia medica. Further particulars will be found in the *Technologist*.

A LORGNETTE for subaqueous exploration has been prepared by G. G. Cressia, of Philadelphia. It practically consists of a copy of Nessi's prism of Iceland spar between the object-glass and the eyepiece, which removes the apparent dip of the bright red refracted from the submerged object, and thus renders objects beneath water more distinctly visible.

CHEMISTRY OF BLOOD.—M. Denis has communicated to the French Academy of Science a continuation of his researches. About three years ago he extracted from blood a substance which he has named "plasmine," because it is the basis or property of which the blood is composed, and by appreciable cause, and probably plays an important part in the economy of the living animal. He has detected this remarkable substance in the blood of men, calves, and oxen. Its solubility in water is probably due to its existing in a fibrinous state. When coagulated by heat or by the action of acids it becomes an albuminoid. The last figure, which constitutes the albuminous part of the plasmine, is insoluble in water, alcohol, and ether.—*Comptes Rendus*.

THE CIVIL WAR AS SEEN AT ROME is described by Father Secchi in a communication to the French Academy. The most interesting fact which he relates is that on the 9th of August, the anniversary of the battle of Aix, and of the day near the nucleus was very strong, and could be distinguished by the projection of the light, while the filament had disappeared. There was a polarisation, even with Arago's polariscope with a double coloured image, but, however, it was not the case, and the filament stays, and the nucleus, in spite of its extreme denudation, exhibited sensible indications of polarisation. Father Secchi considers this fact of great importance, and is disposed to think that the nucleus is the first sign translated to its own light, perhaps on account of the immediate action of which it was formed by the sensible heat of the sun. M. Perry, the meteorological observer at the Havannah, Cuba, states that he has recorded at the same time observed by himself and that by several other observers bodies in the celestial space more or less continued with atmospheric polarisation, originated by the polarisation of the electric currents, and not by black or stormy. This may combine with the light of a comet by reflection, but it is easy to distinguish it by means of the usual means of observation.

THE RING OF SATURN.—With reference to the observation of Mr. Warren De la Rue of parallaxion in the shadow of the ring of Saturn passing the ball, M. Bessel, the famous astronomer, in the *Astronomical Society's Monthly Notices* the following note of the interesting phenomena which has been made by himself when he observed the ring in the same position on August 3, 1849. The peculiar feature of the magnified view was that the ball was distinctly rounded, but the ring was flat, and that the ball was evidently rounded or notched, covering the line of mountains upon the planet at the corresponding position of the ball. He also states that the ring almost breaking it up into a ring of dots."—Captain W. S. Jacob, of Hartwell, who observed the phenomenon on May 1, 1848, is inclined to attribute the dark variation in the chalk or tone of the shadow, by which the darker portions appeared to be more distinctly seen.

GROUND-ICE is the ice found under the surface of the water in rivers. Mr. Stannard has called the attention of the meteorological society to apparently unnatural position; and also the attention of practical men because of the mischief it may occasion by accumulating at obstructions, as a branch of a tree in a millstream, when the water is charged with ice particles. Richard Kirwan published a paper in the *Transactions of the Royal Society* on this subject. He believes that he was the first to state that granular ice is formed in the bottom of the streams, and that the particles of which it consists, as formed, are carried along by the current, and submerged and entangled by plants, &c. Mr. Stannard, in 1850-1, he writes, "had the opportunity of observing previously found it; but, although the frost was severer than it had been for many years past, he found it only in one locality—viz., on a stone covered over by the water of a rivulet at Duddington, near Edinburgh. Other observations have led him to the opinion that the position of ground-ice is one of lodgment merely, in opposition to the notion that the water has risen in the bed of the river, the current presenting no resistance in its natural place—the surface. In a note to Mr. Adie's paper, the scientific member Dr. E. Prout finds no objection, that the formation of ground-ice, which takes place only in rapidly-flowing streams, depends upon the fact that ice, like other crystalline bodies, deposits itself more readily on rough surfaces (process, in fact, at a higher temperature) when in contact with such surfaces, than within the mass of the liquid itself. Hence, when a rippling stream is cooled to 32 deg., ice crystals attach themselves to the pebbles at the bed of the river and form nuclei for further deposition.

THE CIVIL WAR IN AMERICA

(From our Special Artist and Correspondent.)

Federal Camp, Virginia, July 7.

THERE are many, no doubt, who on reading a correspondent's letter envy him the life of excitement he is supposed to lead with an army in the field. They would gladly forego their home comforts for the assumed pleasures of a military existence, and think that a tight berth, regulation blankets, on a straw mattress, with rank grass for a bedstead, is as comfortable as the peaceful slumber they enjoy between their own white sheetings. Breakfast at nine, luncheon at two, and dinner at six are conventionalities they are prepared to repudiate, preferring infinitely the chance of a hasty meal when the military exigence casts in a simple fashion—that is, with the fingers. They picture to themselves the air filled with musical smells, the ground strewn already forests in the "old dominion" of Virginia, the occasional hiss amidst romantic scenery, the halt at some crystal spring, with a silvery cascade leaping over moss-covered rocks, the bivouac, and luxurious repose of the campaigner with its refreshing temperance. In the cool of the evening, as they imagine, the light, floats before them a succession of visions. "Our Special's letter, they hope to have in the second plains. As they part the blue cloud from the turgescent British, he remark a mirage of a cave city, transparent with light, floats before them a succession of visions. Passing the threshold of a tent in their dreamy excursion to the realms of fancy, they behold a merry group of newspaper scribes jovially engaged in killing time instead of the enemy, some lounging in rocking-chairs, some reclining at length on the velvet couches, others lolling about easily in the shape of mint julops, brandy smashes, gin cocktails, port wine sangarees, and whisky punches. Such, my friends, is the romance of campaigning read on, and you will see the reality.

My location at present is near a place called "Bull's Cross Roads," on the Virginia side of the Potomac. In the early part of the morning and in the evening moving about the neighbourhood is like wending through a morass, so heavy falls the dew, while during the day particles of dust are to be found in the air. Anyone who has ever camp that one scarcely dares quit shelter for fear of coup de soleil, and to breathe in such an atmosphere is to run the risk of a headache. At four am, the drum beats the réveille close to your head just as you have done battling with myriads of bloodthirsty mosquitos and other nameless pests, and you are getting into your first sleep. Then there is another roll for company drill; and, unless you want to go without your breakfast, you must turn out. Breakfast at the officers' mess supplies but a short time, there being very little to take off on going to bed, and, consequently, very little to put on on rising. Supper is the only one not liable to a headache. It is the time. Anyone who assists in tents, I had a curious incident related to me the other day. An officer who had been engaged over night by some of his comrades against such intrusions, and being advised to shake his feathers well before donning them, treated the matter with contempt. He thought it a useless precaution to take, as in the first place, he did not believe a snake would seek lodgings in his wardrobe, and, in the next place, no snake could get in. However, the foreign substance would settle the affair satisfactorily. The next morning, therefore, he was not surprised to see the subject of a tent; there were shrieks of "Murder!" coupled with imploring for the doctor; and, on his neighbours rushing to his assistance, they found him writhing in agony with one hand to his throat. Before an agonising expression they would immediately cut off. He screamed to them not to touch him, but to fetch the doctor. The doctor was not more he crushed it the deeper it inserted its fangs, and he was sure he had but a few moments to live. The doctor soon made his appearance, and commenced examining the boot from the top, when, to the surprise of every one, out dropped a spur covered with blood. The patient's nigger had accidentally caught the spur of his boot in the bedclothes, and unthoughtedly inserted one in each boot for safety.

The crystal spring alluded to is a beautiful sketch of campaigning in, in the early morning, sluggish stream, flowing lazily through a deep, wooded dell (all the water in Virginia appears to me to be of the same sluggish character), and the bivouac. A couple of days' marching, and in this I take my bath, feeling infinitely more dirty afterwards than before. The men are in their shirt sleeves and undress costume, leaving are, terrified, mid-stream. Jumpy anxiety to escape I dragged myself out, and, with a sigh of relief, found myself safe on the bank amidst as I write this. Custom, however, hardens one to anything; and I had the snakes now disport ourselves with mutual confidence in the water. A log of wood is a sight I dearly love to contemplate, and claims one's attention, and the seventy smells from Charley's kitchen lead you by the nose to the cooking-stove. Here the most ambitious of boiled has improvised us some prime rump-steak. Crunch! how tough it is! Why, where on earth did you get this, Charley? "Oh, sir," says he, "why, I've heard as a soldier is a-soonin' a-kosha, after tattoo?" Gracious goodness! surely the Ethiopian don't intend to insinuate that I am a dog! Such, however, is the case, and I am in the Scotch farmer's ox cow; and, as this nigger disclaimed her fust, welcoming in her guess. I thought while the gentlemen ad lice for the Cheese! "Right! right! Berry excellent meat, sir. Shades of the Old Cheshire Cheese! how I pine after my accustomed "steak and oyster" and pint of stout! Breakfast at 9 a.m. Tea, coffee, Wine-coffee-cour in place of the wretched Moor that eaters for me now. Eggs, fresh, and satisfactory meat complete the list, which, throughout which you are wretchedly uncomfortable. Flies and mosquitos fight their battles on each unmoved portion of your skin; the thermometer ranges from 90 deg. to 100 deg. in the shade. Of course work, and immediately you have a dozen visitors from neighbouring camps to see you, and to discuss all topics of the day, interesting and distracting you. An inoffensive dinner at last causes as a kind of break to your misery, and the whole closes with infinite pipe-making, and the consumption of the weed. Then you may be found in your tent, rifle, rooted to the same spot, with no change of scene, the only incidents of which are the occasional passing of a mule with a couple of pickets, all of which I have sent you sketches of. As yet I have failed to get a shot at the foe, but for a day, as in front of this position the great battle will be fought.

What cannot fail to interest your readers greatly will be an effort on my part to give an impression of the "lie of the land" in Virginia, so far as they are now relatively placed. The extreme right of the Secessionist army is at Manassas Junction, the line of which runs from that point to extend from Richmond to Manassas Gap, running north-west, and their left rests on Winchester, in the western part of the State, about 150 miles from the Potomac. The forces of the Confederates have their left, in the neighbourhood of Carthage, and their right in the neighbourhood of Alexandria, on the coast of Illinois. Opposed to their left is General Lyons, who menaces them in that quarter, while the centre is held by General Patterson, who guards the front to their right attack. But the greatest interest unquestionably lies in Virginia, where the most considerable force on both sides is brought into the field. The Federal troops, under the direction of some successful movements on the Upper Potomac, are about to form a position in Harper's Ferry, and, should the enemy not retire sufficiently to hear of them giving the Disunionists battle. General M'Dowell, in command at Alexandria, on the right centre of the Potomac, is now at Washington, threatens the Secessionist positions at Fairfax and Manassas Gap; while General Butler, at Fortress Monroe, in the Chesapeake Bay, is in command of the extreme left of the Federal line, (notwithstanding his reverse at Big Bethel) with a flanking movement on Richmond. Should the forces under the command of the United States they will be able readily to follow out my description. General Scott, the veteran of the Mexican war, commands in chief, and though his head is blanched with the snows of seventy-five winters, and his frame enfeebled by the hardships of more than half a century of service, yet his energy and intellect are as unimpaired as when he gained his old victories. General Mansfield acts as his Lieutenant.

A few remarks in reference to the organisation of the Union Army will not be thrown away here. For a country like the United States—recollect I am speaking of only the northern division—to place 100,000 men in the field armed and equipped in the short space of little better than two months is indeed surprising. When I say 100,000 I mean those actually in line of battle; not including the untold legion on their way to the seat of war and others drilling in the various States to which they belong. Your readers, to realise the energy that has been displayed, must take into consideration the fact that the standing army has scarcely ever exceeded 15,000; and that almost every man now called upon to serve has been enrolled, clothed, armed, and drilled in the period above mentioned. I do not mean to assert that in that army goes to the field in as serviceable a condition as a European one of similar proportions; for in the essential of cavalry there are lamentably deficient. But perfection is not to be expected from a country that has never had claim to be considered a military Power, though I must say that I have very much proudly assert her right to such distinction before the close of the lamentable strife that is now engaged in. I have had a two years' positive testimony, which is, that no other nation could bring into array a more goodly show of stout and manly men. These are remarks taken from among the hardy sons of Maine, Michigan, Vermont, Wisconsin, New Hampshire, and Iowa, men who can bear hard by the hardest privations, and who have the physical strength of a bear for more than mental capacity. It is not by any means uncommon to see in the main huge, herculean fellows, who are the first in the fight, "boys" who can hand a tree or start a raft over a fall, throttle a bear, or pole a barge down the rapids, and in whose hands a musket and bayonet is no more than a walking-stick. In this last instance, the State gives its quota to the national forces, and I have simply pardoned the humour for the sake of introducing some of the features about to enter the arena. The greatest failing probably is this army is the want of competent officers. The men themselves begin to feel this, and are murmuring at the inefficiency of many who have take wealthy tradesmen from behind their counters and dub them Colonels and Majors. Had a system been for the entire system of political interestedness the mishaps at Big Bethel and Vienna would never have occurred, and the term in reference to the conduct of a commander-in-chief, "one of those occasions, as of losing his presence of mind," would probably have been omitted in the history of the campaign. Speaking of engagements, I would here like to put myself right with you and your readers. If you do not receive from me a description of every action fought, the reason is that there is no single chronicler; and it must also be considered that this is a "big country," and that the distances between the different columns are great, and the communications bad. I shall, however, to pay a flying visit to Patterson's division at Martinsburg, and to Harper's Ferry, as this position is distant and somewhat off the Confederate troops on the Upper Potomac, which occurred on the 2nd ult. I send you a Sketch of the advance of the Wisconsin men through the woods on the opposite side of the river, to illustrate Patterson's position.

We are now daily waiting orders to advance, and when they come some 75,000 troops will be put in motion, advancing on the centre of the Confederate position. It is possible the first engagement will take place at Fairfax, from which we are now distant about fifteen miles. Should the Secessionist force, however, retire from that neighborhood the main army will be on the road to Gen. Beauregard's camp, or even further on, where their largest body of troops is assembled. When we move there will be a fight, and a sharp one, too, as I shall be able to keep you better supplied than I have hitherto done. F. V.

Some Illustrations sent by our Special Artist with this letter are in hand, and will probably appear in our next Number.

EMBANKMENT OF THE THAMES.

THE committee appointed to examine into plans for embanking the River Thames within the metropolis have issued their report. After briefly describing the main features of the various plans which were sent in, the Commissioners say:—

We are of opinion that no short length of land will prove sufficient for the purpose, but that it will be necessary to establish a complete thoroughfare between Westminster-bridge and Blackfriars-bridge, by means of an embankment and roadway, and that the river frontage should be continued on eastward from Blackfriars-bridge to a new street, about to be formed from Blackfriars-bridge, the City, and Fleet-street, from the west end of Earl-street, across Queen-street, to the Mansion House. Without such a street no relief would be given to the traffic of the neighbourhood of Ludgate-hill, St. Paul's churchyard, and Cheapside.

We are of opinion that the embankment should be carried on from the terrace of the Houses of Parliament, and thence to Blackfriars-bridge upon nearly the line adopted by the Act of Parliament of the 4th of August in 1841 by Mr. Walker, Captain Bullock, Mr. Saunders, and Mr. Leach. The original width of the roadway should be 100 ft., and that of the terrace 50 ft. high water. The road would commence at Westminster by nearly direct approach to the clock tower, and would pass in front of the Houses of Parliament to the boundary of the Temple Gardens; from this point the road would be carried on in front of the Temple Gardens, and supported by a wall of masonry rising to the level of Blackfriars-bridge, so constructed as to leave a sheet of water for the convenience of the Temple boat-houses, of a breadth of about 70 or 80 feet. The space between the place under the ascending road would be left to be filled up as the public interest may require, or as a basin between the structure and the wharves.

The new street from the north-eastern boundary of the Temple Gardens by which the embankment—sustained by a river wall—would be carried, would be 200 feet from the existing river wall. At Hungerford it would be 150 feet from the existing wharf; in Somerset House it would be 100 feet, and at the Temple Bar the plan accompanying the report sets forth the entire scheme.

The new street to the north of the Temple Gardens, which would receive the embankment, would be 80 feet in width, and would be continued from Whitehall, opposite the Horse Guards and also from some of the streets of the Strand; and it would be carried on in a direct line through the Inner Temple to Fleet-street. The frontages on these streets would be regulated by the Metropolitan Buildings Act, and the carriage-way would, it should be borne in mind, be 60 feet wide, with a footway at the side of 20 feet. The line adopted at the deposit of the society, to be dealt with in a similar manner. The other portions of the embankment would be left open for the health recreation of the public or be applied to building purposes.

We propose that Whitehall-gardens should be made with the same intended roadway

FLYING FOXES RECENTLY ADDED TO THE ZOOLOGICAL SOCIETY'S GARDENS, REGENT'S PARK.

THE INDIAN PTEROPUS, OR FLYING FOX.

THE large frugivorous bat of India (*Pteropus Edwardsii*), or "flying fox"—as it is somewhat incorrectly called, since it has nothing to do with the carnivorous group of animals to which foxes belong—has been but seldom brought alive to this country. At the present time, however, the collection of the Zoological Society of London in Regent's Park contains three fine living examples of this animal, the survivors of a considerable number of individuals which were brought from Calcutta last autumn, and exhibited for some time in a room in Piccadilly. Upon one previous occasion only, we believe, have the society possessed the pteropus alive, and then only for a short period. In its native country—the peninsula of India—this large bat is very abundant, and uniformly lives in society. Numerous individuals select a large tree for their resort, and, suspending themselves with the claws of their posterior extremities to the naked branches, often in companies of several hundreds, afford to the stranger a very singular spectacle. They pass the greater portion of the day in sleep, hanging motionless. Ranged in succession with the head downwards, the membrane contracted about the body, and often in close contact, they have little resemblance to living beings, and by a person not accustomed to their economy are readily mistaken for a part of the tree, or for a fruit of uncommon size suspended from its branches. Soon after sunset they gradually quit their hold and pursue their nocturnal flights in quest of food. They direct their course, by an unerring instinct, to the forests, villages, and plantations, occasioning incalculable mischief, attacking and devouring indiscriminately every kind of fruit. The only persons who habitually use this bat as an article of food are said to be the Portuguese in Western India; but Colonel Sykes has testified, from personal experience, that its flesh is delicate and without disagreeable flavour.

NEW ANTELOPE HOUSE IN THE ZOOLOGICAL SOCIETY'S GARDENS, REGENT'S PARK.

THE antelope-house lately erected in the Gardens of the Zoological Society of London in Regent's Park was built for the society by Messrs Lucas, the well-known contractors, from the designs of Anthony Salvin, Esq., jun., at a cost of about £2500. The building, of which we give herewith a View from the south side, is placed in the southern part of the gardens, and stands at a right angle to the house containing the zebras, which was finished and opened to the public about two years ago. It measures 175 ft. in length, by 22 ft. in width, and is divided into fifteen commodious stalls, each of them communicating by sliding doors with those adjoining and with an open court in front. The fittings are substantially constructed of oak and wrought-iron bars. The whole of the open timber-work of the roof inside is stained and varnished, which adds greatly to the general effect of the interior. Ample means of ventilation have been secured by the dormer windows placed over each stall, and by ventilators fixed in the roof; and the whole edifice may be fairly said to be not only the most commodious and valuable building for animals as yet erected in the society's gardens, but also by no means deficient in architectural merits.

A collection of animals received a short time ago from the Cape of Good Hope, presented to the society by his Excellency Sir George Grey, the Governor of the colony, and brought safely home under the care of Mr. James Benstead, the society's agent and collector, contains several remarkable additions to the beautiful family of antelopes, for the accommodation of which the building is proposed to be exclusively devoted. The series of these animals now living in the society's gardens embraces no less than fifteen species, which, we understand, will shortly be rearranged side by side in the new building, as nearly as possible according to their natural affinities. The following is a list of them:—

1. The Dorcas Gazelle (Gazella dorcas), from Egypt and Northern Africa generally. Several fine examples of this beautiful species have been lately received by the society from his Excellency Sir Gaspard Le Marchant, the Governor of Malta.

2. The Spring-bok (Gazella euchore) of Southern Africa.

3. The Stein-bok (Calotragus tragulus) lately received, for the first time alive in Europe, from Sir George Grey, Southern Africa.

4. The Grys-bok (Calotragus melanotis), also just received from Sir George Grey from Southern Africa, but previously in the late Earl of Derby's collection at Knowsley.

5. The Grimm's Duyker-bok (Cephalophus Grimmi), from South Africa.

6. The Maxwell's Duyker-bok (C. Maxwelli), from Western Africa.

7. The Reh-bok (Helotragus capreolus). Several females of this elegant antelope have been received at different times from Sir George Grey, but the society have not as yet obtained a male of this species.

8. The Leche Antelope (Admotragus lechi). Of this beautiful species of antelope, which was first discovered by Captain Frank Vardon in one of the earlier expeditions to Lake Ngami, the collection contains a single female, received from Sir George Grey. It is remarkable for its tame and quiet disposition.

9. The Leucoryx (Oryx leucoryx). The Leucoryx, which was first introduced into England by the late Earl of Derby, breeds freely in confinement. The pair in possession of the society have now a young one with them which has nearly attained its parental stature.

10. The Addax (Addax nasomaculatus). A male of this antelope has been lately presented to the society by his Excellency Sir Gaspard Le Marchant, the Governor of Malta.

11. The Common Gnu (Catoblepas gnu).

12. The Brindled Gnu (C. gorgon). A pair of Gnus, composed of one of each of the two only known species of this curious form of antelope may be seen daily enjoying themselves in the grassy paddock near the new building.

13. The Blesse-bok (Damalis albifrons). Sir George Grey's recent donation embraced a single example of this brightly-marked antelope, believed to be the first ever brought alive to this country.

14. The Eland (Oreas canna). The herd of elands, originating from those bequeathed to the society by the late Lord Derby, at present consist of a male and four females. A steady increase takes place every year in their numbers, the spare animals being draughted off to supply the wants of sister societies and such noblemen and gentlemen as are desirous of assisting in the attempt to introduce this valuable animal into our parks and forests.

15. The Nylghau (Portax picta). This fine Indian antelope breeds readily in this country. The pair in the society's possession are now accompanied by twin fawns, born a few weeks ago.

A group which included some of the most interesting of these animals was given in the Number of this Journal for the 6th of July last.

WESLEYAN CHAPEL, SOUTHPORT.

A NEW Wesleyan Chapel has just been opened for Divine service at Southport, Lancashire. The style of architecture in which the building is designed is the Early Decorated Gothic. Externally, the chief feature that meets the eye is the spire, 130 feet in height to the top of the pinated and gilt finial by which it is surmounted. About twenty feet below this finial there is a circlet of gabletted storm lights, and there are, besides, at intervals, bands of a blue tinted stone, which is also used in the relieving arches of the windows and doors. The main front road in the relieving arches of the windows and doors. The main front road in the relieving arches of the windows and doors. The main front road

DISPATCHING THE MAHMAL, OR HOLY CARPET, FROM CAIRO TO MECCA.

has energetically followed out and improved upon the blueprint in force or projected by his father, the regenerator of Egypt. The present Viceroy has done much to improve the position of the country—witness the extensive public works, well organised and lucrative railways, steamer service in the Red Sea and Mediterranean, upwards of 1000 miles of telegraph communicating with nearly all the principal towns in Egypt—canals, which, perhaps, is the most important, for with them much land has been redeemed, and is now valuable; innovation and improvement are observable at every step. Few, however, of the most sanguine ever anticipated that civilisation would intrude itself into matters of religion; and yet this is the case in Egypt.

The Viceroy, seeing the difficulties and dangers of the desert route, and the annual loss of human life, not only from the latter, famine and privation, but from the swords and bullets of the many hordes of Bedouins who infest the Arabian peninsula, has decided on a railway shorld, for its greater security, in future proceed by steamer to Jeddah, and on the morning of the 22nd of June, as before mentioned, his Highness in person, with a large staff, and many of the suite, left for that destination.

Our View is taken from the roof of the eastern side of the railway station. A space of ground of convenient size was held by troops composed of a battalion of chasseurs à pied of the Guards, one battalion of grenadiers (black), some regiments of cavalry in front of the latter, composed of carabineers and cuirassiers in chain-mail, and in rear of the chasseurs a battery of six field-pieces. The uniform of the soldiers we have not given time. The crowd bearing the "mahmal" is entering; a species of small boat glittering in elaborate gold embroidery secures the sacred relic from the vulgar gaze. The camel, which is beautifully white, is also covered with gold trappings. On the second camel is an agent sent by the chief of the Prophet, and on the third is seated a half-witted man, with a profusion of hair upon his head and face. On account of his insanity he is considered as a saint, and is known by the name of the Sheik-el-Gamel. He always accompanies the carpet to Mecca, as his father did before him. The remainder of the procession (which may be estimated at upwards of 500 persons, independent of the mob) is not shown; they were excluded for want of space in the immediate vicinity of the station.

The camel, after perambulating in front of the Viceroy's block for some time, was led to a splendidly-decorated railway-car (made for the particular purpose) at the side of the locomotive-engine, and, relieved of its burden. The "mahmal" was then placed in the open space reserved for it in the centre of the car, and the camel (which is also thought something of from his connection with the holy carpet) was accommodated with a truck.

Days of misery were then emptied from his Highness's black amongst the crowd of celebrities and mob in close attendance. A desperate scramble, humiliating, and indescribable, ensued, which we leave to the immediate consequences. The hands played with energy; the guns fired; the cry was rushed; and the Viceroy, with a gracious air, slowly moved off the platform. His Highness, seemingly highly gratified with the successful manner in which the whole affair passed off, smiled; the consuls, as they bowed, smiled; and his Highness then stepped into his own train and was away to Alexandria before one could turn his hand. Crowders of Europeans crammed the roof and windows of the station. Nothing could be more effective, as far as variety of colour is concerned, than this view. The splendid uniforms of his Highness, his officers, and guards; the scarlet and gold livery, the dense masses of many coloured and costumed people, and all this under a bright blue sky and clear atmosphere, combined to give effect to a scene which can only be met with in the East.

WILLS AND BEQUESTS.

The will of the Right Hon. Henry Singleton, Lord High Chancellor of Great Britain, of St. Andrews, Fitzalan; Hartrigge House, near Jedburgh; and of Strathclyde House, Dumbarton, and Duke Street, Grosvenor Square, who died on the 4th of June last, aged seventy-nine, was proved in her Majesty's Court of Probate on the 26th ult. by the oaths of Lady Singleton, the relict, and the Right Hon. William Frederick, Baron Strathclyde and Campbell; the Hon. Hallyburton Campbell, and the Hon. Dudley Campbell, the sons, the executors. The Right Hon. Baronet Campbell. The personalty was sworn under £120,000. Lord Campbell, as the source of all his property, bequeaths his estates, made by his will, bearing date the 29th of March, 1860; but in 1858 he made a codicil, having reference solely to the disposition of his Irish estates, which he left entirely to his wife, and of the two domains being taken conjointly by the Court as Lord Campbell's last will. All the estates, real and personal, should be considered as appointed in England, Scotland, and Ireland, which he has left entirely amongst his large family of three sons and daughters. To his eldest son, Baron Strathclyde, he devises his Irish estates, with the exception of a farm, which he bestows on his second son for life, with the fee to his heir-at-law, and the residue of his estates, to his eldest son, whom he has also appointed testamentary legatee. To his two sons, Hallyburton Campbell and Dudley Campbell, and to his son-in-law, the Hon. Mary Scarlett and Cecilia Campbell, he leaves legacies of £10,000 each; and to his married daughters, the Hon. Mary Scarlett and the Hon. Rose Elliot Duckworth, legacies of £5000 each, beyond what his Lordship had previously bestowed upon them two late father, also to his son-in-law, his daughter, the Hon. Mary Scarlett Campbell, who, he observes, was his faithful and valuable amanuensis for thirty-three years, all the manuscripts and other papers, which she is at liberty to publish for her sole benefit. Lord Campbell bestows on his eldest son the official robes which his Lordship wore as Chancellor, the offices of Chief Justice and Lord High Chancellor, with the insignia of nobility and collars of the Order of the Bath, official distinctions. All the sons whom Lord Campbell directs to be retained as herlooms. The will, which is very brief, is in the form of a handwriting; but the codicil is more elaborately drawn, and has been written by some other person. The will is attested by he Lord-ship's father and by Mr. Archibald Campbell, by Mr. Lordship's clerk, and by Mr. Hooker Cooper, and the Lordship's butler.

The will of the Right Rev. Thomas Dealtry, D.D., Lord Bishop of Madras, in which Presidency he died in March last, aged sixty-five, was proved in London in the Prerogative Court of Canterbury, on the 24th of July, by the oath of sworn under £4000. The executors appointed are his relict, W. H. Browne, Esq., Madras Civil Service, Alexander Grant, Esq., Madras Civil Service, and Richard, of the firm of Messrs. Shand and Mason, fire-engine pump-manufacturers. Lord Bishop died at Bath, and his own handwriting testifies to the whole of his property to his widow. He died April 8, 1862; and the testators witnesses are Charles Horton and Henry C. Rous, 8th Fire Office, Threadneedle street.

A terrible explosion of gunpowder-mills has just taken place in Aragon. One hundred mills were burnt down, and twenty workmen were killed or injured.

The Poles of Posen are wearing mourning rings of silver, enamelled black, and bearing a white letter on a black ground the date of Feb. 27, 1861, also numerous crosses of the Latin form.

CRIME IN THE THREE KINGDOMS.—The number of persons committed for trial in 1860 on charges too serious to be disposed of summarily was—in England, 17 per cent less than it had been five years previously, and 1 per cent less than it had been in the preceding year. The year's list of committals for murder and attempts to murder or to maim was one more than in Ireland (in a population of three millions greater than England, being 166 against 281); but the convictions were far more numerous in England than in Ireland. For all offences together, the committals in England and Scotland were about 75 per cent of the committals; in Ireland, only 65. The total number of persons committed for trial in England, Scotland, and Ireland (about 7500 persons were committed for riot or breach of the peace in 1860, that is, before the reform bill and peace act), was 24,000. Taken together forming 57 per cent of the whole number of the committals; in England, 13,000, or three-fifths of offences, the convictions were 75 per cent. The more comprehensive returns of the numbers who were in prison during the year give the number as the average per annum; and in England and Wales the magistrates as well as those committed for trial by the courts—it appears that the criminal class in England exhibited some subjection to control. In every 197 of the population, and in Ireland 1 to every 195. But, as the same person when committed within the year was counted again, the number 39 in every 100 criminals, in Ireland no less than 47. Female prisoners in Ireland are not declining in the same ratio as male, and last year's returns show by a most striking manner the irreclaimable character of many female prisoners: 166 of the male prisoners in Ireland had been in gaol above eleven times, but 688 of the females; 47 of the male prisoners had been there above twenty times, but 1 hundred and 5 females. Curious that the Irish female should be less easily reformed than the male.

CHESS.

TO CORRESPONDENTS.

R. B.—So far the most exhaustive and able analysis of the King's Bishop's Gambit is that of Staunton, the well-known Shakspearian player and author.

A. Z.—Your problem is ingenious, but not quite correct, because, but you are wrongly informed that it was taken from the Sporting and Dramatic News. Your solution, however, is correct.

ANXIOUS and SOLUS.—Your proper course is to advertise that any person playing games of correspondence in a game by correspondence may meet with an opponent by applying to the Secretary of the Chess Club.

SOLUTION OF PROBLEM No. 298.—By Mr. Bolton, Mr. Nicholson, Mr. Sharpe, Pip, I. P. D., C. M. B. Quidnunc, T. V., Timothy, F. F. G., Lubrity, Query, Arnold, Cant, D. D., Pilot-Chess, R. Relics of the Past.

OLD ENGLISH DRINKING-VESSELS.

(Concluded from page 109.)

MANY specimens of early drinking-cups survive to this day. In the eleventh volume of "Archæologia" Dr. Milner has exhibited and described an ancient oaken cup, formerly belonging to Glastonbury Abbey, which he supposes to be of Saxon times, and to have been a wassail-cup.*

In "The Antiquarian Repertory," vol. i., p. 217, there is a paper, with an engraving, descriptive of an oaken chimney-piece, in a room called the Armoury, near Smallland, in Kent, on which is a carving of old house at Berlin, near Smallland, in Kent, on which is a carving of a wassail-bowl resting on the branches of an apple-tree. On one side of this curious chimney-piece, which is as old at least as the fourteenth century, is the word *svanehil*, and on the other *drinckehille*.

Some of the early drinking-vessels in which time had masses inscribed upon them, and were bequeathed as tokens of affection to relatives and friends. Edmund Earl of March, in April, left to his son a Hanap of gold, with cover, called "Benecorne"—that is, bene-cup, or perhaps a cup bequeathed with the testator's blessing.

In 1392, Richard, Earl of Arundel and Surrey, devised to his wife her own goblet, named "Bealchier," and in 1449 we find Sir John Neville leaves to the Abbey of Hawt Bergrire a cup called "ye Katarye." Besides the drinking vessels already mentioned there were large standing-cups, as they were called, named "galoniers" and "drani-galoniers," which were placed on the table or dresseir, for ornament partly, but also for use, and with them "dragon's" or "dragonells," for spices, made in divers quaint and pleasing forms.

Such were the chief vessels in use among the higher classes of society. Those adopted by the lower were even more diversified in form and more varied in appellation. Heywood, in his "Philochronista" (London, 1635) says:—"Of drinking-cups divers and sundry sorts we have many, some of box, some of maple, some of holly, &c. Mazers, broad-mouth dishes, noggins, whiskins, piggins, crinces, ale-bowls, wassel-bowls, sauce-dishes, tankards, runers, from a pottle to a pint, from a pint to a gill. Other bottles we have of leather, and with them 'dragon's' or 'dragonells,' for spices, made in divers quaint and pleasing forms.

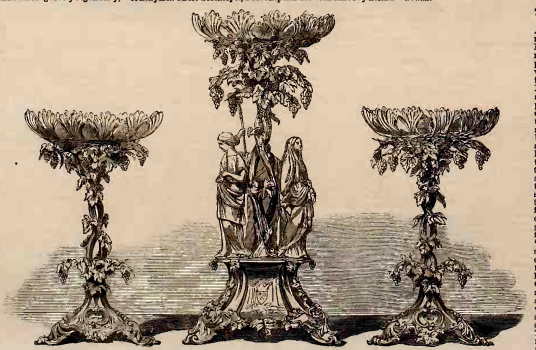
TESTIMONIAL TO COLONEL JOHN GOWAN, OF THE UNITED STATES' SERVICE, FOR THE CARE BESTOWED BY HIM ON THE GRAVES BEFORE SEBASTOPOL.

council of India.—On the staircase are hung the valuable pictures which were formerly in the possession of the East India Company. The library formerly occupied by Lord Liverpool is now filled with the mineral products of India; the dining-room is stored with raw products and manufactures in jewellery and Japan wares; the drawing-room has been fitted up with much care, and in it are displayed the silk and jewelled dresses of the East, which present a most gorgeous appearance. A small room adjoining is filled with models of agricultural implements and of the various craft for navigating the seas and rivers of India. The large collection of models illustrating the manners and customs of the people will be shown in a corridor adjoining. The six bedrooms on the upper floor are stored with birds, which have been most carefully classified by Mr. Moore, and are arranged very ingeniously, so as to take advantage, in the best manner, of the unfavourable light which the small and inconvenient rooms afford. The kitchen of the establishment is filled with antelopes, stags, leopards, and other large stuffed animals. A fine collection of the Elliot marbles, consisting of slabs, cornices, panels, and other portions of the sculptures from the ruins of Amrawuth, are arranged in the grounds of Fife House. These marbles have not yet been exhibited in this country, and they are remarkable for the extreme delicacy and minuteness of their finish. The subjects represented are connected with the worship of Buddha; and the marbles formed at one time portions of a magnificent temple, of which the ruins now alone remain to tell of the patient skill of its founders. A more interesting collection of sculpture does not exist, and many of them will bear favourable comparison with the Elgin marbles in beauty of design, while they greatly exceed them in point of finish and careful execution. The large collection of ethnological specimens, containing electrotype casts of the faces, feet, and hands of every tribe of Northern India, Cabul, and Thibet, in the completion of which the accomplished M. Schlagentweit lost his life, are arranged in the entrance-hall, together with many of those remarkable specimens of Indian sculpture which were formerly shown in the sculpture gallery of the India House. There is no branch of industry or of manufactures, and scarcely any description of raw produce, which is not illustrated in this most interesting museum. Some very considerable inroads were made into the collection by the trustees of the British Museum, who were authorised to take any specimens they thought proper, and they availed themselves of the liberal offer to the extent of clearing off nearly all the specimens of natural history. The India Museum is open to the public on Mondays, Wednesdays, and Fridays.

TESTIMONIAL TO COLONEL GOWAN.

COLONEL JOHN GOWAN, of the United States' service, having bestowed great care in preserving and restoring the graves of our deceased countrymen before Sebastopol, a subscription has been raised by British officers and relatives of those who fell during the Crimean War in order that a testimonial might be presented to that gentleman to mark their grateful sense of his generous care. Lord Frederick Paulet and Colonel Hudson were the chief movers in the matter. The result of their exertions has been a silver-gilt shield, of which we give an Engraving. This fine work of art, the production of Mr. Hancock, of Bruton-street, is 27 inches in diameter, and weighs 350 ounces. The border is richly chased with equestrian and other figures, subjects taken from the Elgin marbles, the whole having been executed from models by Flaxman; and the centre bears an appropriate inscription. The plate has been forwarded by her Majesty's Government to Captain Culpertson, English Consul at Theodosia, for presentation to Colonel Gowan.



TESTIMONIAL TO MR. WEST, HON. SEC. TO THE STATIONERS AND PAPERMAKERS' PROVIDENT SOCIETY.

TESTIMONIAL TO MR. F. WEST.

At the twenty-first anniversary meeting of the Stationers and Papermakers' Provident Society, recently held, a testimonial was presented to Mr. Frederick West, who has been the hon. secretary of this society for more than ten years. Mr. George Chater, the treasurer, addressing Mr. West, said he felt a pleasure in presenting, in the name of their friends, a small token of their esteem of his private worth and valuable aid during the period he had fulfilled the duties of hon. secretary. He could bear witness to his kindness of manners and untiring zeal in the cause. He trusted the present would be accepted as a sincere token of their esteem. The testimonial consists of a handsome silver centrepiece and two epergnes, the design of the former being as follows:—A tripod supported vase, enriched with vine leaves and grapes, supporting three frosted figures, representing "Wisdom," "Liberality," and "Religion." The stem of twisted vine, with canopy of vine and grapes overhanging the figures, surmounted by a trellis-basket holding a cut-glass bowl. One side of the vase contains the arms of Mr. West, another side the arms of the Stationers' Company, while a third bears a suitable inscription. The two silver epergnes correspond with the centrepiece. This handsome testimonial was manufactured by Messrs. Barnard and Sons, of Angel-street, St. Martin's-le-Grand.

THE ILLUSTRATED LONDON NEWS.

No. 1102.—VOL. XXXIX.] SATURDAY, AUGUST 10, 1861. [WITH A SUPPLEMENT, FIVEPENCE

THE SESSION.

THE Session of 1861 was brought to a close on Tuesday by the delivery of the following Speech from her Majesty by Commission:—

THE QUEEN'S SPEECH.

MY LORDS AND GENTLEMEN,

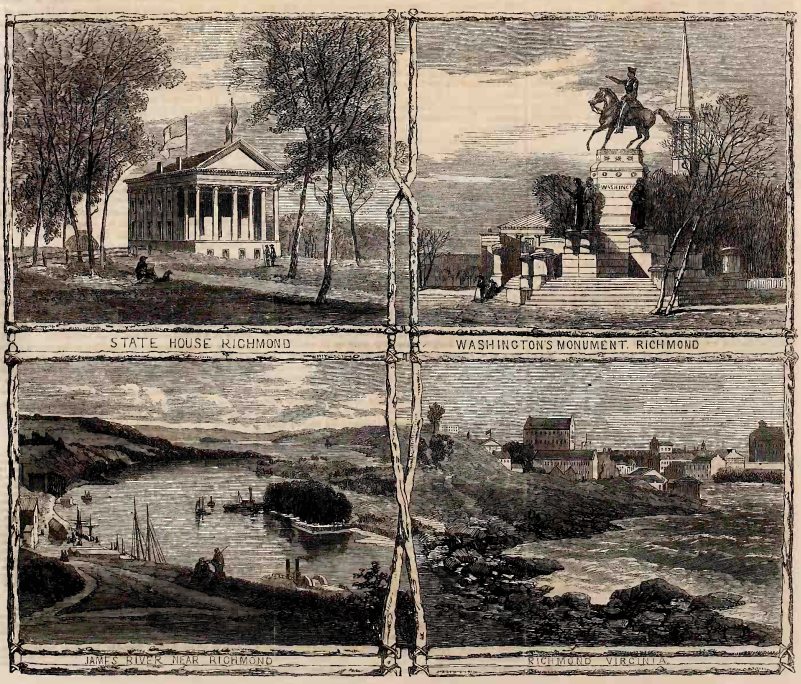
We are commanded by her Majesty to release you from further attendance in Parliament, and at the same time to convey to you her Majesty's acknowledgments for the zeal and assiduity with which you have applied yourselves to the performance of your duties during the Session of Parliament now brought to a close.

Her Majesty commands us to inform you that her relations with Foreign Powers are friendly and satisfactory, and her Majesty trusts that there is no danger of any disturbance of the peace of Europe.

The progress of events in Italy has led to the union of the greater part of that peninsula in one monarchy under King Victor Emmanuel. Her Majesty has throughout abstained from any active interference in the transactions which have led to this result, and her earnest wish as to these affairs is, that they may be settled in a manner best suited to the welfare and happiness of the Italian people.

The dissensions which arose some months ago in the United States of North America have, unfortunately, assumed the character of open war. Her Majesty, deeply lamenting this calamitous result, has determined, in common with the other Powers of Europe, to preserve a strict neutrality between the contending parties.

Her Majesty commands us to inform you that the measures adopted for the restoration of order and tranquillity in Syria, in virtue of Conventions between her Majesty, the Emperor of Austria, the Emperor of the French, the King of Prussia, the Emperor of Russia, and the Sultan, having accomplished their purpose, the European troops which, in pursuance of those Conventions, were for a time stationed in Syria to co-operate with the troops and authorities of the Sultan, have been withdrawn; and her Majesty trusts that the arrangements which



THE CIVIL WAR IN AMERICA: SKETCHES FROM RICHMOND, VIRGINIA, THE CAPITAL OF THE CONFEDERATE STATES OF AMERICA.

have been made for the administration of the districts which had been disturbed will henceforward secure their internal tranquillity.

Her Majesty has seen with satisfaction the rapid improvement in the internal condition of her East Indian territories, and the progress which has been made towards equalising the revenue and expenditure of that part of her empire.

GENTLEMEN OF THE HOUSE OF COMMONS,

Her Majesty commands us to convey to you her warm acknowledgments for the liberal supplies which you have granted for the service of the present year; and her Majesty has seen with satisfaction that, after amply providing for the wants of the public service, you have been able to make a sensible diminution in the taxes levied upon her people.

MY LORDS AND GENTLEMEN,

Her Majesty commands us to express to you the deep gratification with which she has witnessed the spirit of devoted patriotism which continues to animate her volunteer forces, and the admiration with which she has observed their rapid progress in discipline and military efficiency.

Her Majesty has given her cordial assent to the Act for completing the number of the members of the House of Commons by allotting the forfeited seats of Sudbury and St. Albans.

Her Majesty trusts that the Act for Improving the Laws relating to Bankruptcy and Insolvency will be productive of important advantage to the trade and commerce of her subjects.

Her Majesty has given her ready assent to Acts for consolidating and assimilating the Criminal Law of England and Ireland, and for promoting the revision of the Statute Law.

Her Majesty has given her assent to important Acts which she trusts will have the effect of opening more lucrative employment in the Public Service to the European and Native Inhabitants of India; of improving the means of legislation; of furthering the ends of justice: and of promoting the contentment and well-being of all classes of her Majesty's Indian subjects.

Her Majesty has assented with pleasure to the Act for the Improvement of Harbours on the Coast of the United Kingdom, and for relieving Merchant Shipping from Passing Tolls, and also to the Act for improving the Administration of the law relating to the Relief and the Removal of the Poor.

Her Majesty trusts that the Act for rendering more easy arrangements connected with the drainage of land will assist agricultural improvements in many parts of the United Kingdom.

Her Majesty has gladly given her assent to many other measures of public usefulness, the results of your labours during the Session now brought to a close.

Her Majesty has observed with heartfelt satisfaction the spirit of loyalty, of order, and of obedience to the law which prevails throughout all her dominions, and she trusts that by wise legislation and a just administration of the law the continuance of this happy state of things will be secured.

On returning to your respective counties you will still have important public duties to perform; and her Majesty fervently prays that the blessing of Almighty God may attend your exertions, and may guide them to the attainment of the objects of her Majesty's constant solicitude—the welfare and happiness of her people.

This Royal summing up of the events of the Session is, perhaps, an adequate statement of the work done, although it conveys but a small idea of the labour which has been gone through by the Legislature. The simple fact that 303 public and private bills have been passed, and are now Acts of Parliament, in some degree affords a representation of the action of the Session; but even the pages of "Hansard" will fail to exhibit any true standard of the immeasurable quantity of talk as distinguished from speechmaking which has endured through the long hours of almost unprecedented lengthy sittings in the Lower House. It is this mania for bald, disjointed chattering, which, as it is unchronicled and entirely unheeded out of the walls of Parliament, while its effect within is simply nothing, that has caused the Session of 1861 to appear unusually tame. Great debates, in the strict sense of the term, there have been none; great speeches hardly any, if any at all; the nicely-balanced condition of parties rendering it unnecessary for the leaders on either side to make any striking efforts to stir up the energies of their followers. With an Opposition just strong enough to thwart the Government in smaller matters, and to run them very close on all important matters, and themselves neither sufficiently organised or conscious of the requisite strength to take office, measures have been made the subject more of nice calculations of numbers on divisions than of spirit-stirring orations or great party triumphs. The Speech from the Throne at the opening of the Session was modest and unassuming even to meagreness; and, having smoothed the way by a disclaimer of any intention to touch the question of the amendment of the representation of the people—an abandonment made complete by the declaration of Lord John Russell against any further attempts at Reform—the Government settled down quietly to the consideration of the Bankruptcy and Insolvency Bill. This measure, shortened and modified, met with a favourable reception in the Commons, although it was debated with great minuteness and subjected to very keen criticism. In the Lords it was more roughly handled, and not the less on its last appearance there, when the presence of its actual framer, the new Lord Chancellor, more clearly developed the personal nature of the opposition which it received, and in the end caused it to undergo the Procrustean process of a compromise.

Probably for the last time for many a year a comprehensive and tentative Budget was brought under the consideration of Parliament. With much skill Mr. Gladstone contrived so to interweave the principles on which remission and imposition of taxation were founded that he contrived at once to outwit the Lords and reassert the privileges of the Commons in the matter of the paper duty. This result was not obtained without long and dreary contests, suggested and led by Mr. Disraeli with much craft and astuteness. His last *coup*, when he endeavoured to take advantage of the dissatisfaction of the Irish members in reference to the Galway contract, and by their aid, or by their neutrality in the division, to throw out the portion of the Budget which involved the repeal of the paper duty, was as signal a failure as in the present state of parties in the House of Commons could possibly have occurred. That he himself was conscious of this has been shown by his comparative silence and his total party inaction from that time to the close of the Session. It was on the Wednesdays, and principally on matters connected, directly or indirectly, with religious feelings and ordinances, that the strength of the Opposition was put forth. They succeeded in throwing out a bill for legalising marriages with a deceased wife's sister, and several minor measures which involved the principle of religious toleration; and they fought the question of the abolition of church rates with all the heat and concentration of party, but with little power either of argument or of eloquence. Nevertheless, the bill of Sir John Trelawny was stopped by the casting vote of the Speaker from going to the Upper House, where the Lords would have, perhaps, been more justified in its rejection than they have yet been if it had gone up to them carried on its third reading by the Commons by a majority of one, if the Speaker had thought fit to give his decision in its favour.

The measures of the Government have been unusually departmental. Sir Charles Wood, as the chief of the Board of Control, has been enabled to pass an Act of great utility, which, under the title of the Harbours Act, affords facilities for the enlargement and improvement of harbours, and has materially lightened the burdens on shipping by the abolition or diminution of tonnage dues. Mr. Cardwell, as President of the Board of Trade, succeeded with his Irremovable Poor Bill, which settles many of the vexed questions respecting the removal of paupers, always a fruitful source of litigation and consequent expense. Sir Charles Wood has literally carried the House, or at least that section of the House which attends to Indian affairs to a full tide of Indian measures. These Acts respectively making alterations, and, it is believed, great improvements, in the Legislative Council; the judicial system, and in the organisation of the Civil Service; the obtaining of powers for raising two loans on the credit of the Indian revenues; and a financial statement shewing the near approach of the balance of income and expenditure, may well be considered Parliamentary successes on the part of a Secretary of State for our great Eastern dependency. The Home Department started with a fair display of good intentions; but time and talk prevented the accomplishment of Mr. Hayes's Bill, and of an attempt to amend the Law of Elections. After some difficulties and one or two defeats, the Home Secretary was enabled to allot to new constituencies the seats long vacant by the disfranchisement of Sudbury and St. Albans; and although, owing to the tactics of the Opposition, led on by their regular commander, but by an unprovised guerrilla chief, the distribution is apparently not in favour of the Liberal party, yet it is undoubted that large contstituencies have received that franchise to which they were entitled. The Drainage of Land Bill belonging to this depart ment must also not be left unnoticed, inasmuch as no allusion mention in the Speech from the Throne on Tuesday last. In reference to Ireland there is little or nothing to record. Some few measures were passed, and several others were thrown over; the fact being, that owing to the absence of either the Chief Secretary to the House, the secretary to the Irish Board of the Treasury, whose place it was found impossible to fill up, and the general dissatisfaction and unmanageability of the Irish members, even Mr. Cardwell's powers of work and endurance were unequal to the task of effectually dealing with legislation for the Irish portion of the Parliament, among all other things, the worst thing by means of an Act for Assimilating the System of Voting at Elections in Counties to that which has worked well in Boroughs, a measure which was brought in and carried by a private member; and an Act for Improving the Condition of Irish Constabulary Officers, a bill which, however, is not by any means to be estimated by the simplicity of their designation.

A characteristic of the Session has been the elaborate dissection of the Estimates. Long delayed by the puny and profitless discussions on the Budget, when they came on for consideration they were subjected to the most minute examination. The result has not been immediate, for no single item was brought into process of reduction, but the study of their structure and the principles of their extraordinary vitality and tendency to growth, even from an abstract and scientific point of view, cannot be without benefit. At any rate, in this matter we will venture to say that the House of Commons did its duty so far as stringent and searching inquiry is concerned.

The debates on foreign affairs have been neither numerous nor remarkable. There has been an unhappy sameness in them, both as regards subject and treatment, which has tended to their exhaustation, and these, so far as we recollect, not a single instance of a foreign debate occupying a whole evening. Of course, Italy and the objects and designs of France have been the main topics, the affairs of Syria having also obtained their due share of observation and comment. Although the Marquis of Normanby in the Lords and Mr. Kinglake in the Commons, have endeavoured to excite attention and to elicit opinion, yet there has been such a pervading impression that the conduct of foreign affairs on the part of the Government is satisfactory, and calculated to keep England in her true and rightful position among the nations of the world, as to neutralise that antagonism which is necessary to the interest and the quality of debate. Whenever the state of things in the United States of America has been touched on, it has been with a praiseworthy reticence; and in this, as in all the rest of our foreign policy, the great principle of a powerful and watchful neutrality has been maintained.

The Session has been unusually abundant in Select Committees of Inquiry. There have been Committees on the Administration of the Admiralty, on Colonial Military Expenditure, on the Incidents of the Income Tax, on the subject of Duty on Foreign Rags in reference to the manufacture of Paper, on the Local Taxation of the Metropolis, on the Relief of the Poor, both in England and Ireland, and other matters of less importance, and most of these Committees have brought their labours to a close, and presented their reports. The result of a Commission to inquire into the best mode of Embanking the Thames has been made known to Parliament, and the Government is prepared to take action in the matter. The vexed question of style for the new Public Offices, including the Foreign Office and India Office, has at length been settled by the adoption of Palladian instead of Gothic architecture. Space fails us to indicate the number of smaller matters, the glennings and sweepings of legislation, which, in common with the larger measures above indicated, have been nanguinated in the elephantine grasp of Parliament.

In that which may be designated as "personnel," some very material changes have taken place in the Legislature and the Government. Lord Campbell and Lord Herbert have passed away, and left the Chancellorship to Sir R. Bethell and the War Office to Sir George Lewis. Sir W. Atherton has been removed from the Solicitor-Generality to the Attorney-Generality, the former office falling into the hands of Mr. Rounddell Palmer. Lord John Russell has disappeared from the House of Commons, and has sought the comparative repose of an earldom and the House of Peers. Sir George Grey has succeeded to the Home Office, Mr. Cardwell taking the place of Chancellor of the Duchy of Lancaster. Earl De Grey and Ripon and Mr. T. G. Baring again change places, the former returning to the under-secretaryship for war, and the latter to that for India; while Sir Robert Peel has become Secretary for Ireland, and Mr. Layard succeeds Lord Wodehouse as Under-Secretary for Foreign Affairs. Only two new Peers have been created this year—Sir Bethell taking the title of Baron Westbury on his accepting the Great Seal, while Sir Maurice Berkeley has been elevated to the dignity of Baron Fitzhardinge. In the Commons there have been many changes, Colonel Bathurst has succeeded Lord Herbert as member for South Wilts; Mr. Barnes has replaced Mr. Crook for Bolton; Mr. W. E. Forster, Mr. Salt at Bradford; and Mr. Leslie, Lord Haddo (now Earl of Aberdeen) for Aberdeenshire. West Sussex is now represented by Major Bartelot in the place of the Earl of March (now Duke of Richmond); Mr. Lori Phillips sits for Pembrokeshire, vice Lord Emlyn (now Earl of Cawdor); Mr. Heygate has succeeded Dr. Noble, deceased, at Leicester; Sir Hugh Owen represents Pembrokeshire in the place of Sir John Owen, deceased; Sir David Dundas has been elected for Sutherlandshire, in the room of the Marquis of Stafford, now Duke of Sutherland; Mr. Harvey Lewis occupies Mr. Edwin James's seat for Marylebone; and Captain Willes Johnson that of Mr. David Pugh for Carmarthenshire. Mr. Hodgson Hinde Wilkinson sits in the room of Hugh Pigot; and Mr. Duff Abercromby, Banffshire, instead of Major Gordon Duff. Lord Richard Grosvenor is member for Flintshire, in place of the Hon. T. E. Lloyd Mostyn; and Mr. Wegselin stepped into the vacuum created at Wolverhampton by the promotion of Sir R. Bethell. The retirement of Mr. Hill made way for the appearance in Parliament of Mr. Rounddell Palmer, the new Solicitor-General; and Colonel Luke White resigned his seat for the county of Longford, and was succeeded by his son, bearing the same name and rank. Finally, Mr. Allan Lockhart, having vacated his seat for Lanarkshire, it has been filled by Lord Henry Scott; and the vacancy in the representation of the city of London caused by the accession to the peerage of Lord John Russell has been filled by Mr. Western Wood, who triumphed over the Lord Mayor (Mr., Alderman Cubitt), and, that gentleman having previously given up his seat for Andover, the representation of that borough has fallen into the hands of Mr. H. B. Coles.

On a review of the Session and its operations, taken as a whole, the decision of those who feel called upon to give one will perhaps be that the results have been nearly equal to the promises made at the opening, which were judiciously kept within the narrowest bounds. This finding, however, is in the nature of a special verdict, and by no means admits either the premises or the consequences. Looking to the powers of work which have been displayed by this Parliament, and which have been reckoned by the hundred, it is not too much to say that the country expects better things of it for the future. For the Session of 1861, with its performances, such as they are, and its shortcomings and deficiencies, many as they are, perhaps the public will be inclined to pass an act of indemnity.

SKETCHES FROM RICHMOND, VIRGINIA.

On the proceeding page we give four Engravings (from drawings made by Mr. Lefevre James Cranstone) in connection with Richmond, the chief city of the State of Virginia, where the Southern Congress is holding its sittings, and which for the time being takes rank as the capital of the Confederate States of America. Richmond is situated on the north bank of the James River, about 150 miles from its mouth. Its chief public building is the State House, or Capitol, which is finely situated in the middle of a lawn, on the brow of a hill which overlooks the city. It is a copy of the Maison Carrée at Nimes, the plan of which was sent over by Mr. Jefferson, when he was Ambassador in France. The Capitol is a principal feature in the scenery of the city from many points of view. Virginia is justly proud of having given birth to Washington, and statues of him are found in the State. Besides the Washington Statue in the Capitol at Richmond there is, in the beautiful grounds of which the city boasts, an equestrian one of him (given on the preceding page), in company with statues of Thomas Jefferson and Patrick Henry—all of which were chiselled in Europe at no inconsiderable cost.

In a copyright case which occurred at the Secondaries' Court, yesterday week, it was stated that Rosa Bonheur's celebrated picture of "The Horse Fair" would soon become the property of the nation, and be lodged in the National Gallery.

A bust of Sir Joshua Reynolds has been presented by a number of subscribers to the Cottonian Library, Plymouth. A movement is also being organised to raise funds at the forthcoming Great Exhibition to erect a full-length statue of the artist at Plympton, his birthplace.

LATEST NEWS FROM ABROAD.

The following telegrams were received at Mr. Reuter's office yesterday (Friday):—

FRANCE.—Paris, August 8.—To-day at 11.30 a.m., the Emperor officially received the Minister of the kingdom of Italy. M. Daley was condemned in a fine of 3000 francs for having participated in the distribution of a false dividend.

TURKEY.—Ragusa, August 3.—The European Commission for the settlement of the affairs of the Herzegovina has been dissolved. Omer Pacha has addressed an ultimatum to the Montenegrin chiefs. The army of Omer Pacha now numbers 20,000 men, and is being concentrated with the intention of vigorously carrying on operations.

HUNGARY.—Pesth, Aug. 8.—In to-day's sittings of the Lower House the Address of the Upper House in reply to the Speech was proposed by M. Deak. The demands made in this address do not differ from those contained in the first address. It refuses the Imperial rescript, and declares, in conclusion, that further negotiations are hroken off. This address was unanimously and enthusiastically adopted, and it was resolved to send it to the Upper House.

FOREIGN AND COLONIAL NEWS.

FRANCE.

The Emperor and Empress arrived at the Tuileries from Fontainebleau last Saturday afternoon, and in the evening left for St. Cloud.

The King of Sweden, Charles XV., accompanied by his brother, Prince Oscar, arrived in Paris on Tuesday. The Emperor, surrounded by the generals and officers of the Court, and of the military household, received his visitors at St. Cloud, and embraced cordially the King of Sweden and Prince Oscar. A review of the Imperial Guard and of the garrison of Paris was to be held on Friday (yesterday) in the Champs de Mars in honour of the visit.

The Empress has left Paris for Biarritz.

Sunday's *Moniteur* publishes a circular addressed by M. Rouland, Minister of Public Worship, to the Bishops of France relative to the celebration of the Emperor's fête. M. Rouland reminds the Bishops that his Majesty has maintained the glorious traditions of his race, which opened a gospel civilisation at the extremity of the East, and effectively protects the Christians in Syria. The Pope, he says, in a solemn act, has given his name for the repose and the security which it gives him. "Undoubtedly there still remain grave difficulties to overcome; but the Christian must be full of hope in a patient, loyal, and circumspect policy. This solution belongs principally to Providence." The circular concludes thus:—"Let us kindly pray that the Divine aid may be manifested in their Majesties the Emperor and Empress, in their thoughts for the peace of nations and the happiness and dignity of France."

It appears from the returns made by the officers appointed to take the list of electors in the population of Paris amounts to 1,700,000 souls. According to the census just completed, the population of Lyons, including a floating population of 60,000, is 378,000.

ITALY.

The amount to which the subscription to the National Loan has been made by the public now reaches 900 millions.

The Court of Rome has deprived Father Giacomo, Count Cavour's confessor, of his functions.

The news from Naples is more satisfactory. The Archbishop of Naples, discovered plotting, has been sent off to Civita Vecchia to join the others in remonjure, Mgr. Merode.

AUSTRIA.

The Croatian and Slavonian Diet was presided by a formal vote not to send any representatives to the Council of the Empire.

The official *Wiener Zeitung* of Wednesday publishes an autograph letter addressed by the Emperor to the Aulic Chancellery for Transylvania ordering the necessary preparations in reference to the convocation of the Transylvanian Diet to be made before August 10.

The Austrian States Bank and the Austrian Government have received to withdraw the Italian troops from the garrison of Rastadt, and to replace them by Germans, a detachment of Austrian infantry has just passed through Munich on their way from Innspruck to Rastadt.

RUSSIA.

A correspondent of *Caligmani*, writing from St. Petersburg, says:—"The departure of the Empress for the Crimea is fixed for the 15th inst., and that of the Empress for the 18th. The Emperor will take with her only the Grand Duke Sergius and the Grand Duchess Mary, her two youngest children."

Accounts have been received of the defeat of three Russian columns by the Circassians on the 11th, 15th, and 20th of June. The former, who in two of the fights were assisted by artillery, were obliged to retire heavy loss, while the latter were almost annihilated.

It is asserted that General Lanskoi's appointment as Governor of the kingdom of Poland has arrived at Warsaw, and that M. Wielopolski has in consequence determined to resign. It is reported that the peasants in the Province of Minsk are to avenge a pretended insult of the church, have entered their town armed with scythes and axes, and have driven away the garrison.

TURKEY.

The new Sultan granted an audience to Sir Henry Bulwer on the 31st ult., and, in replying to the congratulations of the latter, expressed his deep sense of the friendship of England, and his determination to place large reforms in the government of Turkey. Aali Pacha has been appointed Minister for Foreign Affairs, and Fuad Pacha, Minister of War. The latter is to return immediately from Syria. Congratulations from the Sovereigns of Europe are pouring in upon the new Sultan; a treaty of commerce has been signed between Turkey and Italy, and it is generally some that the new course of administrative reform is to be persevered in, as offices are not to go into the provinces on a long term of years.

It is stated that in consequence of the rupture of negotiations between Omer Pacha and the Prince of Montenegro, the former has received orders from his Government to resume the offensive against the insurgents.

M. Calamatta, an Italian artist, has refused an order from Lamartine, because the poet entertains the opinion that the unity of Italy is things not to be desired.

The Industrial Society of Mulhausen has just received from the Tsar of Russia a gold medal of value, accompanied by a number of small gold which were thrown up from an Artesian well to the depth of 1800 feet, a depth of 1650 feet. The water at the bottom of the bore-hole was of a temperature of 27·5 degrees Centigrade (74·22 Fahrenheit), and was found to be subterranean and not to have a current. These coins had been kept alive for a week in water, and were not found, as is generally supposed, to lose the coining from the process.

THE FRENCH TIE NATIONAL.—A great number of foreigners are present every day at the Tir National at Vincennes. The Belgians have already established themselves splendidly. A good many Swiss marksmen are also expected from Switzerland, Germany, and England, and some have already arrived. The success of the shooting stakes will be the greater the more keen each new fire of the best men to Vincennes. The regiments in garrison at Paris have received a hundred each.

OVERLAND EXPEDITION FROM CALCUTTA TO INDIA.—Intelligence has just been received from Bhamo and another gentleman who left China about three months since with a view of opening a commercial intercourse with the whole of Thibet, and carrying India by one of the passes of the Himalayas. Mr. Whiteley, of Woodhouse, near Leeds, a brother of Captain Baldwin, Royal Artillery, one of the officers engaging the expedition, and which gives the following interesting details:—"The shooting party left Bhamo and proceeded 700 miles up the Yang-Tse River in the south of the province of Animal Hope, and beyond this point one gun-boat only, a small iron steamer accustomed to Tse-Chow (140 miles above Hankow), where the vessels will remain until the return of the party. Captain Baldwin considers that the overland journey as far as the base of the Himalayas will terminate when the winter has set in, and it is impossible to cross the mountains before. Therefore, he considers that the object of the expedition will not be accomplished until the summer of 1862. At present the party has penetrated farther than any European had before been. The country is described as exceedingly fine in many parts; the district around Mankin is wasted by the civil war now raging, which has stopped all trade; but higher up the Yang-Tse River there were indications of great contentment and prosperity, the stream being crowded with junks, and the adjacent country being thickly populated.

THE AMERICAN CIVIL WAR.

By the arrival of the City of Washington at Queenstown we have telegrams to the 27th ult.

DELIBERATE OPERATIONS ON LAND AND SEA.

THE BATTLE OF BULL'S RUN.

After the check which the Federalists received on the 18th ult. in the first assault on the Confederates' position to the south of Bull's Run, a stream which in England would be called a respectable stream M'Dowell contented himself for the two following days with reconnoitring the position of the enemy. Finding the position, which was very similar to that occupied by the Russians at Alma, too strong for an attack in front, the Federal General resolved to turn the Confederate flank. The obstacles to the passage of artillery presented by the narrow and stony roads rendered this plan impracticable. It was therefore arranged that an attack should be made on the flank of the enemy, accompanied by a feint in front. The day fixed for the general engagement was Sunday, the 21st ult. The Federal forces began their march on this memorable day at half-past two a.m. The first batteries opened at five a.m., but it was not until noon that the infantry engagement commenced. The fight then began. The battle extended over about five miles. In the hand-to-hand conflicts the Federalists had the advantage, and at length had gained all the works on the crest of the hill but two or three. Reinforcements were then brought forward by the Confederate from Manassa. Suddenly, about four o'clock p.m., an order was given to retreat, and this retreat soon became a more than disorderly flight. It appears that an attack of the Confederate cavalry was made on the baggage and ammunition stores of the Federalists, which were unprotected by cavalry pickets, for they should have had. The baggage led to the greatest confusion. The ambulance and artillery waggons cut the horses loose and galloped towards Washington. The reserves, attacked in front, flanked, and overwhelmed by the rear, were completely routed, either dazed not or could not retire. Colonel Blenker's regiment, the 8th New York, was the last to come, almost at the moment command ing. When General M'Dowell found his reserves had fled he gave that order to retreat which is much surprised some of the Northern regiments. The retreat in the face of the advancing enemy at once became a flight. Nevertheless, the Federals did not suffer much, as they replaced their guns on the hill, and thus kept the Confederates in check and protected the rear from Centreville. The Southern account, by way of the Ohio, is more favourable to the Federals than the Northern. One report of whose death is one of the many *canards* to which the affair has given rise) commanded the Confederate left. "where the enemy was in full force." They kept stoutly on the Federals, after a run of twenty four miles. Here a regiment on guard at the Long Bridge and the discontinuance of the pursuit enabled the remnant of the Federal army. The army would have dissipated in as many hours as it took months to form. Here it was nobody in pursuit. It was only at eleven p.m. that a small force of cavalry under Colonel Blenker's regiment were easily repulsed. This regiment retired from Centreville at about one a.m. on Monday morning. The Federal army is now under the full encampment opposite Washington, being the only one which retired in a dignified manner.

THE LOSS.

The loss that the Federalists sustained is said to be "continually increasing." The Southern account of the battle of Bull's Run says "300 to 500" "is killed and wounded. Many regiments were said to be "cut to pieces" whose members had merely taken to the woods, and who did not rejoin their colours for days. Among the killed were Major Hapland Regiment, and brother of the Secretary of War. The Southern loss is officially published as 387 killed, 1582 killed and wounded. On Monday the Federal cavalry revisited the field of battle, and brought off some of the enemy's artillery.

[We give in the accompanying Supplement a more detail'ed account of the battle and of the Federal army's flight.]

RECEPTION OF THE NEWS.

Congress, on the 22nd, assembled. It has no disasters, however overwhelming, would deter them from maintaining the Union. In the country and in Congress, in Maryland and in Kentucky, the number of persons who had taken up arms against the Union was passed by 52 years to 6 years, is a spirited debate.

General M'Clellan has been appointed by the Government, and General M'Clellan appointed in his stead to the command of the Army of the Potomac. The latter officer has unanimously received the thanks that have been offered, and shows every disposition to continue the contest with greater vigour than ever.

The news of the defeat of the Federalists was received by the Baltimoreans with joy. Pictures of General Beauregard were sold in great number on the day following the battle.

New York passed through several alternations of feeling. On Sunday it was reported that a great battle had been won, and there was exuberant public joy, and some talk of commencing a war with England. On Monday, when very exaggerated reports of the Federal defeat arrived, there was intense public excitement, with cries for vengeance. On Tuesday, when the small aggregate of the loss of life became known, equanimity was restored.

FEDERAL SUCCESSES.

General M'Clellan, in an address to his "army of the West," boasts that they have annihilated two armies, taken five guns, twelve colours, and destroyed the Confederate communications. Governor Jackson's officers. One of the second commanders of the enemy is a prisoner, there were 2000 men, more than 1000 horses, and a large waggon train, together with all the baggage and camp equipage. All this had been accomplished with the loss of twenty killed and sixty wounded on the part of the Union army in Western Virginia.

Two of the prizes captured by the Southern privateers have been recaptured by the Federalists, and carried into port in the case of the schooner Waring a free colored man effected the recapture by killing with his axe the man in the cabin who was about to set fire to the vessel, and by cutting away the cables. The prize crew, who were on deck, and had no arms, fled overboard, and became quite a hero in New York.

THE BLOCKADE.

It is said there are but three United States' vessels blockading the entire coast of North Carolina, and that the port of Beaufort in that State is open to the commerce of the world. Provisions, &c.

The *New York Times'* correspondent at Fort Pickens states that Admiral Mervine has informed the British Government that the blockade is totally ineffective. This report evidently refers to information from another reporter, for the *Tribune*, writes that the Admiral was satisfied that the blockade of the Mississippi East was sufficiently effective.

FINANCE.

Stocks fell after the disaster at Bull's Run, but exchange on England fell from 109 to 107. The Secretary of the Treasury, Senator Chase, made application for a 5,000,000-dollar loan in Treasury notes, but only half the amount required was offered.

The Queen has appointed John David Hay Hill, Esq., now her Majesty's Consul at Mazatlan, to be her Majesty's Consul in the Island of Réunion. Her Majesty has approved of Don José Antonio de Lavalle as Vice-Consul at Cardiff for the Queen of Spain; of Mr. James Logan Donnelly as Consul at Kurrachee for the King of Hanover; and of Mr. Alexander Bennett as Consul at Kurrachee for the Free Hanseatic City of Hamburg.

A pamphlet has just appeared at Leipsic, entitled "The Duke of Saxe-Coburg and his People." The *Berlin National Zeitung* states that the production has excited the liveliest interest, inasmuch as the author is Duke Ernest Himself, and that he therein treats in the plainest and most open manner of his relations towards his people, and of the national questions in connection therewith. The *Zeitung* adds that this is the first time such a German Prince has so frankly criticised himself.

METROPOLITAN NEWS.

The first annual examination of science classes in connection with the South Kensington Museum took place on Thursday. The meeting has been very successful, and this is in a great measure due to the zeal and ability of Mr. Buchanan.

The great annual gathering of the children of the Metropolitan Charity Schools took place at the Crystal Palace on Thursday. Seventy-six schools, of boys and girls, numbering about 5000 children, took part in the day's gathering.

Tuesday was a grand day at the Crystal Palace, the Odd Fellows of the metropolitan districts having secured the palace and grounds for a demonstration in aid of the widows and orphan fund and the district fund. Not fewer than 35,000 members of the body and their friends were present on the occasion.

The New Police Act (24 and 25 Vict. c. 51) was printed last Saturday. The principal object is to grant pensions to officers and men in the metropolitan police force who would have been entitled to pensions had they retired before Sir Richard Mayne's death. The Act gives further power to the metropolitan police force disposed in the hands of civil and military stations when in the occasion of their duty.

The births of 1861 registered in London were boys and 779 girls—were registered in London last week. In the ten corresponding weeks of the years 1851-60 the average number was 1296——and the deaths in those 10 weeks were 1225. The average number of deaths derived from the returns of corresponding weeks in the ten preceding years, 1851-60, was increased by increase of population, is 1230.

An influential deputation waited upon Mr. Milner Gibson yesterday week to present him with an address thanking him for the exertions he had made to obtain the repeal of the paper duty. Mr. R. Chambers and Mr. Francis Graham Moon paid a high tribute to the eminent services rendered by Mr. Gibson in this now successful cause, the right hon. gentleman made an appropriate reply. The address was subsequently given to the residence of Mr. Ewart, and presented an address to that gentleman.

Yesterday week a German named Cogran was barbarously murdered by her husband in the neighbourhood of St. Giles's, the assault following up his crime of cruelty to his child on the day before. The wretched man was found in the street at an early hour with a gash in his throat, and communicated by signs what had occurred. On going into his house, to search once, the police found the unfortunate wife lying on the floor with her throat cut, having apparently been dead for some time. She was taken to the King's College Hospital, where it is believed he may recover. Drink seems to have been also cause of the murder.

EXTRAORDINARY OUTRAGE.—On the 31st ult., a gentleman named M'Kenzie, resident at Pimlico, received a letter requesting an interview at the writer. "Arrived at the house," says the letter-writer, "I was shown into a drawing a knowledge of the person from a previous introduction at Madrid. Mr. M'Kenzie duly entered the drawing-room, and found a stranger alone. While conversing with her, two men, named Emil Schalk and Carl Heelmed, came to the door, one of whom (Schalk) entered the apartment, and, without uttering a word seized him by the throat and wrists, forcing them downwards. "I have you now, villain," he said, "and I will take care you murdering you." After a great deal of ill-treatment Mr. M'Kenzie was forced, in order to save his life, to sign the documents which he was required to do. This outrage was stated to have lasted from shortly after one o'clock, when Schalk entered the house, until half-past two, when he and his friend then entered the room. Mr. M'Kenzie was enabled to escape. The police are in search of the two prisoners.

NEW BRIDGE AT BLACKFRIARS.—The Bridge Commissioners have decided to erect a new bridge over the Thames at Blackfriars, to replace the present Blackfriars-bridge, and to remove the plan of Mr. Page. The bridge will consist of only three arches, the centre one being of the gigantic span of 200 feet, or 46 feet wider than the centre arch of the structure at Southwark. The two side arches are to be each 100 feet span. The engineering of the arch to the crown will only be a rise of 20 feet, which is a curve of only 1 in 20, almost amounting to a level. The piers are also to stand beneath the parapet to sit an exceedingly bold and handsome design, with a parapet above of only 4 feet 6 inches. The piers are to be of granite, and noble-looking features of the whole. These will be four in number, all of granite. Each of its extremities will be surmounted by a Doric column of polished red granite, 49 feet in height, 21 feet in diameter at base and capital, and 15 feet less than 21 feet in diameter in the centre. The piers will have a bulk hollow, will weigh upwards of 500 tons. Their capitals will rush to the summit of the bridge, which will be 80 feet broader in appearance, with colossal groups of statuary. The whole structure will only be a few feet longer than the present Blackfriars-bridge. The cost of the new bridge is estimated at £250,000 to £260,000.

LAW AND POLICE.—In the Court of Chancery, on Tuesday, the Lords Justices gave judgment in the appeal of Mr. Lovegrove against the firm of Streatfield and Co., against Mr. Commissioner Holroyd's refusal to grant him a certificate. Mr. Lovegrove carried on extensive business. The Middlesex Sessions were commenced on Monday, the calendar containing the names of eighty-six cases awaiting trial. Among them were several gaol delivery. William Wood was sentenced to four years' penal servitude for forgery and uttering. A. Jail named Wilkinson, a clerk in the bankruptcy office to Messrs. Margetson and Heywood, Islington, pleaded guilty to a charge of embezzlement. He was employed to receive fees and remittances, and on his undertaking to send him to Australia. Denis Dempsey was charged with obtaining Mr. James Hamilton, Brompton, through false representations of having served in India and won several medals for distinguished achievements. He was convicted and sent to prison for six months. George Howes, a butcher, of Holloway, and George Tanner, a drover, were indicted for stealing a heifer, the property of Mr. Cox, of the Cattle Market. Tanner was acquitted, and Howes found guilty of feloniously receiving, and ordered to be kept in penal servitude for seven years. Howes and Henry Tranyer was charged with stealing some articles of silver plate and other things, the property of Mr. Hamilton. The prisoners had effected the stealing about with a basket till an opportunity occurred for creeping in at an open window. A jury found Tranyer guilty of the felony, but, in the belief although the prisoner's father swore that he was in his company for more than a quarter of the time he was out of his sight, he was acquitted. The prisoner was convicted to be imprisoned for three months. Louis Genese, indicted for fraudulently obtaining £5 from Mr. Hamilton by means of a watchless cheque, was acquitted. Thomas Wallis was charged with attempting to commit suicide by throwing himself over the London and Birmingham Railway bridge, at Camden-road, on a charge of stealing a number of articles belonging to a regiment of militia, and claiming a sum of money due as bounty. He was convicted and sent to prison for six months. Yesterday, in the Central Court, Robert Lomax was tried for a very impudent robbery. At seven o'clock in the morning he was seen by a female in the house of Mr. Smith, and deliberately smashing the window, carried off a brooch worth £100. The jury returning a verdict of guilty, the prisoner was sentenced to penal servitude. While standing in the dock this ruffian pulled from his pocket a large piece of tin and tried to cut his throat with a penknife, which he had secreted. He missed the mark. On Wednesday T. Richardson, described as a clerk, was charged with stealing a cash-box containing £1 10s. 6d., the property of Messrs. Hardy, easily raising various sums of money by depositing of them. The prisoner pleaded guilty, and was sentenced to eighteen months' hard labour. Thomas Thompson was indicted for stealing some property from a house in Highbury-vale. This was a very daring robbery, for while the family of the residence taking open, the prisoner climbed up a tree in front of the house, and, entering a window, passed over the roof, descended a ladder in the back entrance. He was convicted, and sentenced to three years' penal servitude. A pair of axe-cases, named Henry Jukes and Frederick Jukes, were charged with committing violence as their age in years, were found guilty of following their profession, and, each, ordered to be kept in penal servitude for seven years.

At the Guildhall, yesterday week, Dr. Griffith Jones was committed for trial. On Monday Mary Ann Jukes of Gresham House, Old Broad-street, and elsewhere, was again brought up charged with obtaining about £12,000 worth of property from various persons by means of fraud under a false pretence. A great amount of evidence was taken regarding the transactions in which the prisoner referred to were entered and disposed of, and the case was again remanded till Tuesday next.

STARKE, WINNER OF THE GODWOOD CUP.

To win this cup implies the possession of the best sort of Transatlantic turfite ambition, since Jim Robinson first kindled it one and twenty years ago with the late Duke of Richmond's brave Bergamras. La Société Versvitoise sent over a candidate in Alice Hawthorn's year, the Monarch (Arab), aged, 5st. 4lb., got tailed off for his pains in 1847; Voltaire got within a head of Van Tromp's in 1848, a week year with her Arnine, and fourth with her Fitzemilius, and then dropped into the way lost places next year with Lord Exeter's mare, Mencia—Moscow and War Horse were equally inefficient representatives in Nadcy's year; Hervine was an 1852 incapable, but, receiving a year and 3st. 2lb. from Kingston, beat him and twelve others, when, after a lapse of thirteen year, Jouvence once more brought vote y to Gault. The spell was broken a third time by Baronello in 1865, and in 1856 Mesanpre's third to Rogerthorpe slightly foreshadowed the victory which he was fated to achieve the next year.

It was in the field which Monarque beat on that occasion that the American champions Prior and Prioress made their English debut with singularly luckless success. No better luck attended Obsidian in 1858; and Prioress, who had in the interim both won the Cesarewitch after a dead heat, and run a dead heat for second, could only manage a Goodwood Cup third in the great year when Starke sent the American turf-writers stark mad by winning the Goodwood Stakes,

THE GOODWOOD RACES.

and Umpire's victory in the Nursery elicited "tall talking" about the Derby, which might well make Mr. Ten Broeck blush and disavow such sangars. It was all England could do to hold its own last year, as Gustave, Zonave, and Starke were in the next three places to Sweetmanoe, but America triumphed at the fifth time of asking; and, although Starke received a year and 4lb. as well from The Wizard, the latter came to the post a fresh horse, and not with a severe stakes race in him from the day before.

The following is the result of the race:—

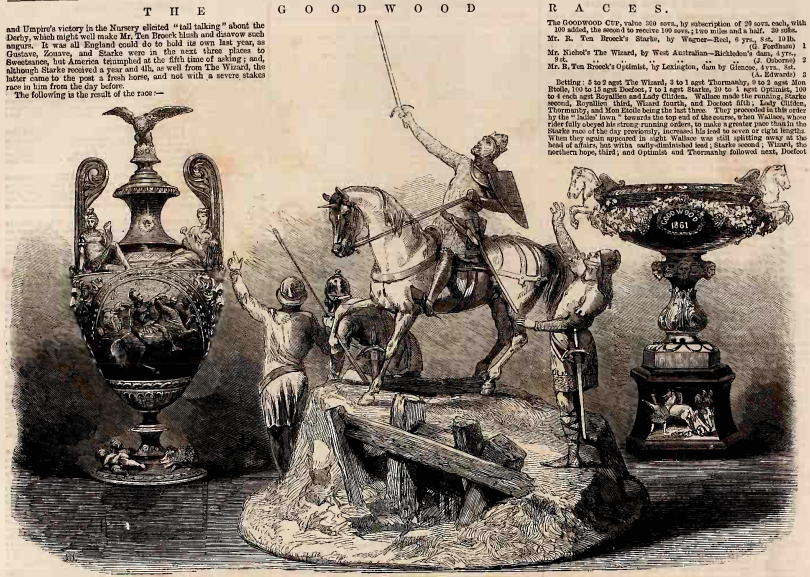
The GOODWOOD CUP, value 300 sovs., by subscription of 20 sovs. each, with 100 added, the second to receive 100 sovs.; two miles and a half. 20 subs.

Mr. R. Ten Broeck's Starke, by Wagner—Reel, 6 yrs., 8st. 10lb. (G. Fordham) 1

Mr. Nichol's The Wizard, by West Australian—Rickleden's dam, 4 yrs., 9st. (J. Osborne) 2

Mr. R. Ten Broeck's Optimist, by Lexington, dam by Glencoe, 4 yrs., 8st. (A. Edwards) 3

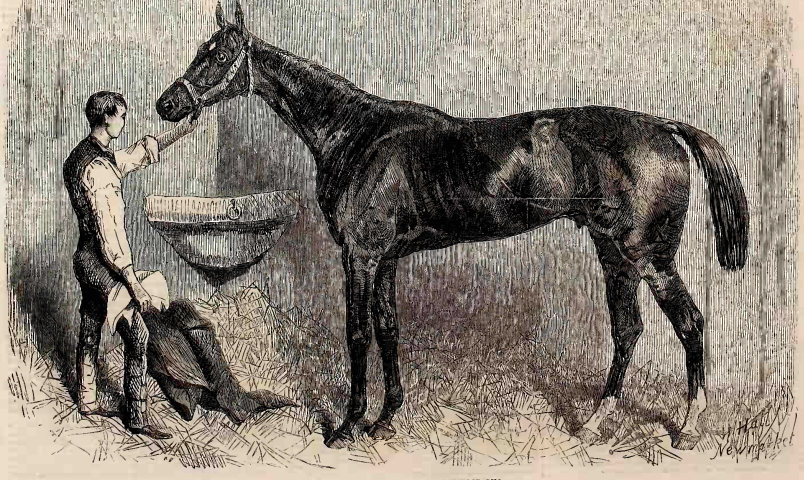
Betting: 5 to 2 agst The Wizard, 3 to 1 agst Thormanby, 9 to 2 agst Mon Etoile, 10 to 1 agst Dorfoot, 7 to 1 agst Starke, 20 to 1 agst Optimist, 100 to 6 each agst Royallieu and Lady Clitden. Wallace made the running, Starke second, Royallieu third, Wizard fourth, and Dorfoot fifth; Lady Clitden, Thormanby, and Mon Etoile being the last three. They proceeded in this order by the "Jockey lawn" towards the top end of the course, when Wallace, whose rider fully obeyed his strong running orders, to make a greater pace than in the Starke race of the day previously, increased his lead to seven or eight lengths. When they again appeared in sight Wallace was still spinning away at the head of affairs, but with sadly-diminished lead; Starke second; Wizard, the northern hope, third; and Optimist and Thormanby followed next, Dorfoot



THE STEWARDS' CUP. THE CHESTERFIELD CUP. THE GOODWOOD CUP.

being close on their flanks. Wallace, having fulfilled his required duty, shot up before the distance was reached. Wizard then took the lead. Starke jolted him at the half-distance, and a splendid race ensued home between them. At the stand the couple were neck and neck, but the Wizard, at the last moment, was "baited" by Starke, who won a terrific and quickly-run race by a head only. Optimist (who had been so judiciously steered by Edwards as to be ready for any possible emergency) was close in the wake of the two first named, and finished third, but two lengths from the quarters of the Melton crack. Thormanby, evidently over-powered with the weight, was declining every stride he took towards the close, but finished a moderate fourth. Mon Etoile, who was beaten thoroughly a mile away from home, pulled up next, and then came Dorfoot.

The victory was not a little owing to the clipping pace at which the race was run, and proved the judgment of William Day (the trainer of



STARKE, THE WINNER OF THE GOODWOOD CUP.

Elcho) when he assured Mr. Ten Broeck that he had thrown away an excellent chance of beating him the day before from lack of it, and advised him now to make such arrangements as would secure Wallace for a pioneer. It seems pretty certain that in future French horses will receive no allowance, and Americans only 7lb.; and seeing that some of our mares are sent over expressly to foal in France, and that American has our choicest blood, the change ought to have been made far sooner.

Starke is a meaty chestnut horse, of about fifteen three, by Wanzer, from a Glencoe dam, and has followed in the winning Goodwood footsteps of his hollow-backed, wall-eyed sire, who won this cup as a three-year-old, seven and twenty years ago. In his general appearance he is not unlike The Baron. He is rather short-bodied, but has plenty of depth of girth, and capital arched loins; a little coarseness about the head and neck, and stands well on his fore legs. His appearance did no small credit to his trainer (Tyron), who has Mr. Ten Broeck's string at Compton, near Derby, and, although even in their old rough-dried condition they showed themselves capable of doing a good thing, they have certainly not suffered by a more rapid conformity to the English training code.

THE GOODWOOD CUPS.

Goodwood has always prided itself upon the recherché taste of its cups, and this year they show no falling off in design or workmanship. The one chosen for the Goodwood Cup—and which, thanks to Starke, is destined to adorn Mr. Ten Broeck's sideboard — was manufactured by Messrs. Emanuel, of Portsmouth, who have recently executed several of the west country prizes, and is designed and modelled by Mr. Henry Morrell. It is a silver vase in the Grecian style, the bowl enriched with festoons of vine leaves and grapes in nitio relievo, with handles formed of winged horses. Homer has been laid under contribution for equestrian scenes for the allo relievo; and the capture of Æneas's celebrated horses by Diomede, and the horses unloosed from Juno's car by the abundant Hours, fitly represent the noble animal in its moments of War and Peace.

The Stewards' Cup will always be memorable as having produced the largest field of horses (45) that ever faced a starter's flag, and the honour of beating them fell on Mr. Murphy's Croagh Patrick, who was foaled in Ireland, and belongs to an Irish owner. In deference, we conclude, to the Premier's avowed preference for it, this vase is also in the Grecian style, and of oxydised silver, elaborately ornamented in high and low relief. Rome's Imperial eagle surmounts it; at the neck of the cup are two spirited reclining figures of a Roman virgin and youth; and the medallions on the sides illustrate the sacrifice of Cæsius, as related by Livy, and an augur praying to the aprenced deities when the golden bowl has closed over the hero. The handles are ornamented with figures of military fame and virtue, and on the base are the twin founders of Rome—Romulus and Remus—guarded by the wolf. The cup was executed by Messrs. Hunt and Roskell, and designed and modelled by Mr. N. R. Rochell.

The Chesterfield Cup, which has been designed and modelled by Mr. Spencer and executed by Messrs. Garrard, is more in the old group character, of which so many have been displayed from the Goodwood balcony. It represents Richard Cœur de Lion wounded before the Castle of Chalus, and was won, after another fierce struggle in a field of twenty-six, by Croagh Patrick, who had the good luck not to be among the unlucky squadron which were left fully twelve lengths at the post.

THE FIRST DAY OF OYSTERS.

Our Engraving represents a scene in a locality which still preserves the aspect of old London on a day which is still a small festival in its way. On the 5th of August oysters can be lawfully sold and eaten; and on the morning of that day these delicate testacea appear all over the town with a suddenness and abundance which prove an admirable organisation in the transmission from their beds on the coast, and their dissemination for retail sale. Old St. James's Day (July 25) was at one time the first day on which oysters were brought into the London market, and there was a notion that whoever ate oysters on that day would not want money throughout the year. At any rate, the custom of indulging in this luxury is largely observed on the occasion of their first coming to market, inclination and taste taking the place of superstition. It is said that £120,000 are yearly spent in London in the purchase of oysters. The number sold by the costermongers in the streets is no less than 124,000,000 annually.

THE FIRST DAY OF OYSTERS: A LONDON STREET SCENE.

On Monday morning the legal opening of trade traffic in oysters took place at Billingsgate. Mr. Deering, the clerk of the market, and his son, were on duty; but their business, in respect of the circumstance, was very slight, as but seven vessels in all formed the oyster fleet, which in years past amounted at times to thirty-eight. The prices ruled very high, and natives were very scarce. The following was the ordinary run of prices: Best natives (supply very short), 42s. to 44s.; old coral and pearl callies, 16s. to 18s.; Scotch callies, 16s. to 18s.; Cheyne rock and large callies, 14s. to 16s.; commons, 10s. to 12s. per bushel. The short supply is to be attributed to the fact that the day of Billingsgate as a "premier" oyster mart is past, the railways having obtained most part of the oyster conveyance, both for the street and trade supply, by a much more ready mode of conveyance and delivery than that of water transit, subject to the delivery dues of the Corporation of London.

THE COMMISSIONERS OF THE ITALIAN GOVERNMENT MAKING OVER TO MESSRS. W. C. STANFORD AND A. SCOTT, CHURCHWARDENS, THE GROUND DECREED BY GARIBALDI AS A GIFT OF THE NATION FOR THE ERECTION OF AN ENGLISH CHURCH AT NAPLES.

GIFT OF LAND FOR A PROTESTANT CHURCH AT NAPLES.

We are enabled to present our readers with a Pictorial Remembrance of one of the most events which mark, we trust, the beginning of a new era—an era of regeneration and of civil and religious liberty in the south of Italy. Till Garibaldi came to free them, imprisonment and exile were the fate of all Neapolitans who would not worship the Virgin and the Images of the Church of Rome; and at Naples not merely were the Jews denied their synagogues, but the religion of even the most favoured Christian nations was so proscribed that neither Russians, nor Germans, nor Swiss, nor English were allowed to have churches or schools of their own. For upwards of thirty-three years every effort was made by the English residents to obtain permission to build a place of worship for themselves; but though in 1834 that permission was granted by the King and his Ministers, and though the fundamentations for their church was laid by the British Minister, the late Sir W. Temple, yet, in consequence of the bad faith of the Neapolitan Government and its intolerant laws of the country, the works were on the following morning unceremoniously stopped by the police, and the British residents compelled to content their worship and the services of their Church within the precincts of the British Consulate, in a large room hired for the purpose. So determined, however, was the Bourbon Government that no Protestant service should be recognised as existing amongst them that no sooner was this room fitted up for a temporary chapel of the same to it from the street was might enter it except through the apartment of the British Consul.

After the arrival of Garibaldi, and the establishment of a liberal Government, the churchwardens sent in a petition praying the Dictator to grant the British residents permission to build a English Protestant church, offering to purchase for its site a piece of ground belonging to the military department of the Strada San Pasquale; and on the 23rd of October, 1860, the Dictator Garibaldi made the following decree:—"Grateful for the powerful and generous sympathy of the English towards the Italian nation, it but a slight return for so many benefits received from them in favour of the noble cause of Italy to decree—Not only is permission granted to build a church on the territory of this capital to men who worship the same God as the Italians, but they are requested to accept, as a national gift, the small space required for the pious object to which they intend to dedicate it." The present Government has confirmed the decree, and our Engraving shows the Royal commission, consisting of Commissary-General Colonel the Cavaliere Ottavio de Filippis, with his secretary; Captain the Cavaliere Leonardo Mastrolmone, R.N.; and the Town Major, D. Antonio Gamble, signing the temporary deeds upon the ground itself, and making it over to the British residents, represented on this occasion by their churchwardens, Messrs. Stanford and Scott, accompanied by their legal adviser, Don Luigi Spasiano, and by Dr. Strange, Mr. Graham, and Mr. Causeen. We learn that the residents have already subscribed £1000 and appointed a committee to collect funds until take all other necessary steps for the immediate erection of a church capable of accommodating not only the residents themselves, but also the many travellers and invalids who flock to Naples, and the sailors who frequent its harbour. We trust that the funds they collect may be such as to enable them to erect a building worthy of Garibaldi's decree, and of the gift they have received from the Italian nation.

CALENDAR FOR THE WEEK.

SUNDAY, August 11.—Eleventh Sunday after Trinity.
MONDAY, 12.—Grouse-shooting begins.
TUESDAY, 13.—Sun rises, 5h. 43m.; sets, 7h. 26m. Moon's first quarter.
WEDNESDAY, 14.—Saturn sets, 8h. 36m., p.m.
THURSDAY, 15.—Assumption.
FRIDAY, 16.—Peterloo Riots, 1819.
SATURDAY, 17.—Duchess of Kent born, 1786.

TIMES OF HIGH WATER AT LONDON-BRIDGE.

FOR THE WEEK ENDING AUGUST 17, 1861.

The Rose Garden of Persia. A Poem. By O. B. Frothingham. Trübner and Co.
The Wedding Guests; or, the Happiness of Life. A Story. By Mary C. Hume. Partridge.
Wild Flowers Worth Notice. By Mrs Lankester. Hatchards.

OUR CONTINENTAL SUBSCRIBERS.—To suit the convenience of residents in Germany, Russia, and the eastern portion of Europe, we have appointed Mr. Ludwig Indefeld, 16, Spezial Agent for this Journal. Terms of subscription:—One Year, 10 thalers; Half-year, 5 thalers.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, AUGUST 10, 1861.

"THE news, long looked for, came at last." On Sunday London heard that on the preceding Sunday fortnight the soldiers of the South and North had met in decisive battle; and we learned that Secessionists had inflicted a disastrous defeat upon the Federalists. The details have since arrived; every one has mastered them; and it is not needful to recapitulate the story of the ill-advised attack, of scientific defence, of retaliatory onslaught, and of disgraceful flight. The day was not done when within ten miles of the field both Bull Run and Fairfax were covered with fugitives from the apprehended vengeance of the South. The flight did not end with the end of possible danger. The terrified soldiers of the Union continued to hurry onwards, and their rush was only checked at Washington. Of the amount of slaughter we know nothing with certainty, but an army might have better afforded to lose half its members than to endure the moral blow which has fallen. The Palmetto flag is for the time triumphant. Fierce is the exultation of the South; deep the humiliation of the North. Yet the matter is perfectly explicable; and it is much to know the causes of things. The Southern force was well disciplined, and was led by men who have studied the art of war. It was, in great measure, acting on the defensive, in a district admirably suited for the purpose, and those natural advantages had been largely improved. The Northern force rushed upon battle without due preparation, and it is to the blatant folly of the newspapers setting upon the weakness of statesmen who fear the mob that this great disaster is due. Scott would not have fought unwisely, but unwillingly; but he was driven to "Go ahead!" drove him upon the guns of the South, and the Union flag has gone down. On the more disgraceful part of the story it is painful to dwell. A battle may be lost: every battle must be lost as well as won; but panic and cowardly flight, accompanied by acts of more cowardly ferocity, are too serious in few of the battles of civilised war. It is clear that such volunteers as have yet been raised are not to be depended on for the steadiness which is the greatest virtue of a soldier, one for which no courage, no enthusiasm, is an equivalent. Scott has, perhaps, over-estimated his army and to make it fit for the field; and when we read of new thousands being poured down as reinforcements, we cannot but ask in what respect do these promise better than their predecessors? What, too, shall be said of the "soldiers" who, because the last day of their term was up, quitted their fellow-countrymen under the thunder of the guns of Beauregard? The whole narrative is too full of unpleasant features to induce an English writer to dwell upon it. Nor will we do more than advert to the savage braggadocio which, at the moment of a defeat, was the only answer, menaced England with the seizure of Canada in return for her resolve of neutrality. Had the Union been less miserably beaten at Bull's Run we might have resented such wanton and unjust insult; as it is, we are silent. Let it be understood, however, wherever English journals are read, that the victory of the South places its cause in no better position in English eyes, and that if we see any favourable sign in this opening misfortune, it is that the South has given such evidence of its strength that an American statesman who shall, when the Northern laurels have been somewhat retrieved, suggest a compromise and peace, will be able to advance the strongest of all arguments—the impossibility of crushing the enemy. There was a rumour that, the Confederates were advancing, and that Harper's Ferry was to be the scene of strife. Probably, in abandoning a defensive position, they may forfeit the results of their victory, and yet General Beauregard does not appear to be a rash and headstrong leader. Washington has been secured, and the energies of the aged Generals of the North, nearly all of whom are very old men, are devoted to the reconstruction of the army.

Such is the news that comes to supply the place of political events at home. Of the end of the Session we have elsewhere spoken, and we for some time shall have little to register that connects itself with Parliamentary affairs. Ireland is not encouraged to make demonstrations in honour of her Princely visitor, but the arrival of the Queen will stir society to an enthusiasm which will not be repressed by regulations. In the meantime the crumbs of hope which Lord Palmerston let fall in relation to the Galway contract have caused much excitement in a country where words have very considerable power. Sir Robert Peel is welcomed as the precursor of the coveted boon, and if Galway he not made a port it will not be for want of determined agitation by all classes. It may be uncharitable to suggest that Government have just now peculiar reasons for desiring to be popular in Ireland, but the fact that Lord Palmerston is not the man to grudge a few encouraging words when they may prove seed sown in good electioneering ground.

Among minor incidents just worth noting may be classed the facts that the Crown has pitied the unsuccessful efforts of Sir Maurice Berkeley to revive a peerage which has given the name of Lord Fitzhardinge. The new Solicitor-General has been knighted, and will do better as Sir Roundell Palmer; and, if the President of the Union persist in his view of ocean custom-houses, the special learning of Sir Roundell will shortly be required in Ireland to revise republican ideas of the idea that the State which does not protect a foreigner's goods is to tax them. Death, coming even more rapidly than could have been expected, has taken Lord Herbert of Lea from the business of life—business which he loved well and performed admirably; and a noble career has been prematurely cut short. It is to be hoped that while the Episcopal Bench is about to lose one of its most earnest and pious members, one whom even those who do not share his sectarian views will promptly recognise as a valuable servant of the Church.

And thus we enter upon the "recess." We are at peace with all the world, and we have order and content at home. In this we must be thankful; but he is a bold prophet who will declare that foreign prospects are cheering. The decided rejection of the claims of Hungary by the Court of Vienna has to produce its natural consequences. The formality of a response from the Hungarian body is about to be gone through, and the Emperor Francis Joseph will find that he has to do with a people who will not be trifled with. It is possible that the Emperor may deem himself driven to use the strong arm, and that the meetings of Hungarian statesmen will be prohibited. With this precipitate the conflict which so many thousands are expecting? And, that conflict once commenced, will it be confined to the limits of Austria's difficulty by Italy's opportunity, and will the signal that sends the Imperial troops against the Hungarians beckon the Italians to Venice? And of the grave complications that may follow we need not speak. It is sufficient to say that the crisis demands all, not for itself, but for the sake of what is to follow

COUNTRY NEWS.

Next year's meeting of the Yorkshire Agricultural Society will be held at York.

Colonel Peard, "Garibaldi's Englishman," was entertained at a banquet at Tywardreath, by his brother Combiners, on Monday evening.

The short line connecting Tenbury with the Shrewsbury and Hereford Railway, at Woofferton, near Ludlow, was opened for public traffic on Thursday week.

The proclamation against the county of Armagh, in consequence of the Derrynaseir affair, has been removed; but some of the district will still be kept under the Peace Preservation Act.

A large cross is about to be erected on the Esplanade of Edinburgh Castle in memory of the 78th Highlanders who fell in India during the mutiny.

The Corporation of Lyme Regis have resolved to borrow a considerable sum of money of the Government for the improvement of their harbour.

On Tuesday the freedom of Montrose was presented by the magistrates and council to Lord de Tabley, Lord Lieutenant of the county, a public meeting of Kincardine, in the presence of a large assemblage of nobility and gentry.

Lord Palmerston has recently purchased two large estates adjoining Broadlands, one of them being Grove-place, Nursling, the house of which was, at the beginning of the century, the residence of Jane Austen, extends to within four miles of Southampton.

The property of the Bishop of Durham workhouse have received from Bull ten Eilies, neatly bound and with gilt edges, with a scrap of paper on which was written, "For the use of the workhouse." The donor is supposed to be a former inmate of the house.

A fire entailing an estimated loss of between £12,000 and £14,000 occurred on Saturday night in a stack of warehouses situated in Upper William-street, Liverpool. The warehouses in which the fire broke out were stored with goods, chiefly the property of persons, upon which alone was the only article which suffered to a great extent. The property was insured.

From a Parliamentary return just issued it appears that the number of persons who died in the Metropolis in the week ended the last quarter of 1860, and whose religious denominations had been ascertained, was 1,316, of whom 1,008 belonged to the Established Church, 1,008 to Roman Catholics, 49,66 Presbyterians (nearly 200 others. The total number on the return is thirty-one short of the number given.

Robert Pattison, an assistant inspector of poor at Glasgow, has been suspended for the sale of a pauper's child for a shilling, a gill nineteen months old. Pattison's wife died a few weeks ago, and from that time he began to neglect his duties. His wife had a child which appeared to be not his child's breast, and then went to the police office, but without stating what he had done. The child was put to needlework nothing about the bloody shed, but believes he is the perpetrator.

The preparations for the Queen's visit which are in progress at Kilmarny House, Ayrshire, are of a most extensive kind. A new, handsome wagger, of a costly nature, is to be erected at Derrycumby by Lord Cathcrston, and the Earl of the Royal family will dine on the second day of their visit. The place has been selected by his Lordship as the most beautiful spot in the West of Scotland, and is situated between the mansion-house of Upper Lake, Marleton House and demesne, the grounds, and the pass of the chain of mountains from Ardrossan to Dunlop and Irish Alps. The scenery and Mackross are similar.—*Cork Examiner.*

The Corporation of Leeds, with the bleaching, dyeing, and fulshier works of the Bolton district have presented a testimonial to Mr. Crook, extensive dyer and manufacturer of that town, in connection with the bill popularly known as the "Bleachers' Short-time Act." The presentation took place at the Bleachers' Association Rooms, Bolton, on Tuesday afternoon and costly flagstones. Mr. Crook, who was received with great enthusiasm, returned his cordial thanks in the name of his colleagues, contending that it would prove beneficial alike to employers and employed.

CONWAY EISTEDDFOD.—This great national festival for the encouragement of Welsh music and poetry is to be held in the Castle at Conway, under the presidency of Mr. George Osborne Morgan, of London, on the 14th, 15th, and 16th of August, and is expected to last for three days by a large number of performers, including the most eminent Welsh artistes. Prizes have been offered to the amount of £200, and £100 more in literature and art, and who have excelled in articles of Welsh manufacture; and colonnades of the Castle are expected to attract 10,000 visitors.

During the thunderstorm which raged on Thursday week an accident of rather a singular nature occurred at the Newry Telegraph-office. It consisted in the electric fluid entering the office by one of the wires, and, current at the time was conveyed into the office. The clerk in charge, who at the time was engaged in writing, received a shock of the most violent description, which a severe shock that he was instantly prostrated to the ground, and remained in a state of insensibility for a minute. He was, however, speedily restored than hurt, as he only experienced a severe electric shock, as if from an extraordinary battery. The steel portion of the telegraph instrument were battered up, as if in a furnace.—*Belfast Protestant's Journal.*

The Rev. Thomas Jones, Baptist minister, of Ebbw Vale, was baptising 40 kingsters, they determined to scale the cliff, some 50 feet in height. They had nearly reached the top when a heavy mass of stones placed there as a protection, which rolled down and struck a boy named Goodchild on the neck. The poor little fellow lost his hold and was precipitated down a distance of 30 feet. A shepherd was below and watched his descent, rolling down slopes, and falling over projections, and when he came to the bottom he was found dead at the bottom. The man, Henry Stickland, carried him to his own house, about three-quarters of a mile distant, and on examining the body found that the boy had not got out of danger, hopes are entertained of his ultimate recovery. He appears to have received a few bruises, and has since been quite well. This circumstance explained by the fact that the ground on which he fell is deeply covered with the fine dust produced by a process of soft clay. The three remaining boys reached the top of the cliff in safety.

A terrific hailstorm occurred on Saturday week at Dunbar, the storm commencing at about half-past two o'clock, and continued for nearly an hour. Vivid flashes of lightning. Previous to the fall of the hailstones a dense black cloud was seen hanging over the village of Belhaven and Hill-town, and from the cloud seemed to break up, and the hailstones, each fully a quarter of an inch in diameter, fell with great violence. The hail fell continuously for about half an hour, and the hailstones by in many places from six inches to a foot in depth. The hail made terrible work in the crops which have been partially destroyed. The range of the storm seems to have been very limited, not greater than a mile and a half in breadth. The damage has been done in the neighbourhood of Westbarns, where it swept everything before it with all the violence of a tornado. Persons in the open fields felt the violence of the hail, and after it the cold was intense. On Sunday the fields were still covered with hailstones, which lay to the depth of half a foot.

LAW INTELLIGENCE.—The remainder of the term of imprisonment to which Mr. Joel Fernandez was sentenced for refusing to give evidence before the Select Committee appointed to inquire into the conduct of the late election of Wakefield, has been remitted—an order for his release having been received at Wakefield Gaol on Saturday morning. It will be remembered that Mr. Fernandez was called as a witness against Mr. J. O. D. Charlesworth, and refused to be sworn on the Jewish form. The Queen's Bench, having made a stern lesson of his connection with the Conservative of Wakefield should be made to give in the recent prosecution, and Mr. Justice Martin intimated that he should willingly support any application which might be made for his immediate release from prison. This last was acted upon, and Mr. Fernandez is once more at liberty.

At the Hadleigh Petty Sessions last week, a trial of a most painful nature took place. An old woman, named Rickwell, was charged with the wilful murder of her husband. The aged couple had become reduced to destitute circumstances, and one morning in May last Mrs. Edwards cut her husband's throat, and then cut her own throat. Immediately after the deed was committed the poor feeble fellow, with a recommendation to mercy. Sentence of death, however, was recorded, and the prisoner was removed to Bury gaol, to await the execution of the sentence in the proper quarter.

At the Lancaster Assizes, Martha Braddish was tried for the murder of her stepfather at Kinsetter, under circumstances which the public will remember. Evidence was adduced on the ground of insanity, and she was ordered to be confined during the Royal pleasure.—The trial of Peace, who was charged with the manslaughter of Mr. Joseph Hargreaves, at Burnley, was brought on on the following Wednesday. After a long examination the jury returned a verdict of "Not guilty," the prisoner having been acquitted on the ground of insanity. The Post Office before Mr. Justice Williams and a special jury, on account of Special Jurymen on the London and Middlesex Lists, the case of Mr. Charles Edwards had been examined the company consented to a verdict with £150 damages. Mr. Edwards is a gentleman of property residing at Bromley, and formerly held an office in the service of the Post Office as letter-carrier. The jury rewarded him accordingly with £175.

CORONER.—There was sentenced on Monday week at Derby for the murder of his father, at Ilkeston, a man in full possession of his faculties.

It is calculated that there are from 1000 to 1500 acres within the middle of London under the crow-berry crop.

Dr. B. Thompson and H. Goodall have addressed letters to the Secretary of State for War claiming respectively £1000 and £1000 from the Government for breach of contract, they having on both fortunes, we are informed, come from India and qualified themselves for medical appointments in the hope of an influx of inducements held out, but at a when sent proved shadowy rejected.

THE WESLEYAN-METHODIST CONFERENCE.

The cases of supernumerary ministers have been settled. The following have received permission to retire from the active duties of the pastorate:—Messrs. J. Turberfield, W. F. Burgess, W. Lord, W. Colcrow, J. F. Chapman, J. F. Jones, T. S. Silliter, J. Mowatt, S. Bowden, R. Frankland, T. Webb, and G. Smith. The report of the committee appointed to recommend us to the most suitable mode of distributing the 10s young men received this Conference, was read by the Rev. Dr. Hannah, in the Chair, and the following stations for Welsh Methodism, forty-seven for missions, thirty-five for the two Conferences, and one for the President his expenses to meet the requirements of the Centenary during the coming year, and twenty for immediate service. The Conference has, accordingly, appointed the following ministers and home missionaries. These are chiefly in number, many of which are connected with the British Missionary Society. The Rev. Dr. Hannah preached a sermon on Thursday week—Spitalfields Chapel, London, to be made a home mission station, with an assistant minister. Public meetings will be held at the Mile End London Circuit; Bayswater to be made a circuit with Kensington; a home missionary to be employed in the Bethnal Green Circuit; Hoxton at the station Vauxhall; a home mission established at Oxbridge to be "formed;" Richmond to be formed into a circuit; Hounslow to be united with Isleworth; Kingston to be worked as a home mission station, and a minister to devote his labours to the Hindoo population; Wandsworth to be formed into a circuit; and Deptford Circuit. An application for a Chaplain to the troops at Chatham has been received, and the Conference has appointed a suitable minister to it. This will make the third minister appointed by the Conference specially to the British Army.

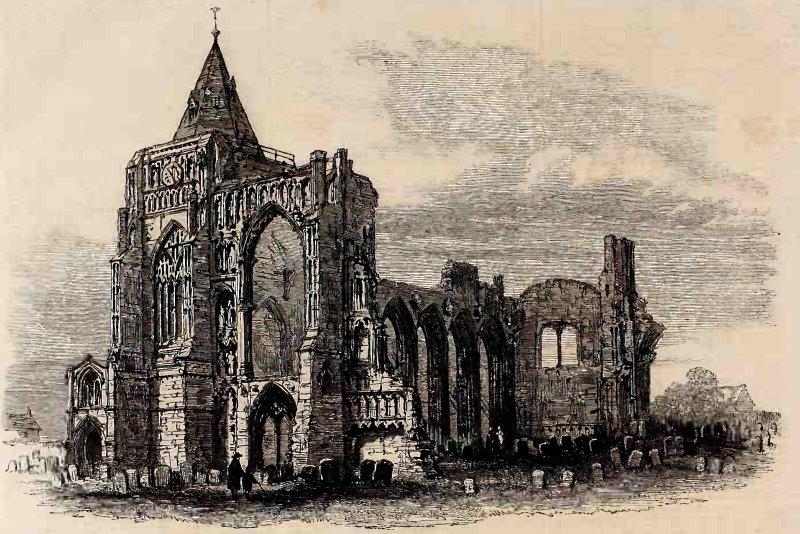
The Rev. W. L. Thornton, M.A., was on Friday reappointed to the editorship of the Wesleyan-Methodist Magazine for another year. The case of the theological tutor had become vacant by the resignation of the Rev. T. Jackson, who has been appointed to the post of Theological Tutor. Immediately after the Conference, the first time during the centenary year, and for several years past, the Rev. Dr. Hannah, the President of the Conference, preached a sermon at the Richmond College he has filled for nineteen years, and in a feeling address presented to the Rev. Dr. Rigg a testimonial of the esteem of the ministers expressed a high admiration of the venerable tutor; and the Rev. J. Kirkland, on behalf of the parents and friends of the pupils, presented his successor.

The question of great moment to the connection has arisen on the presentation of the report of committee, consisting of the two theological professors, Dr. Hannah, Dr. Rigg, Mr. Jackson, and Mr. Thornton, on the proposed interview contained in a book, written by one of the Conference of 1270, together with the Rev. Dr. Hannah's letter to the Rev. Dr. Rigg, on the subject. The doctrine involved is that of the "natural transmission of original guilt," and is the doctrine of the Westminster Confession of Faith and Methodism. The committee stated that after a long and anxious interview with the author of the book, and a careful study of the question involved, they refrain from advocating his peculiar views, and to take a year to seriously reconsider the whole question. The publication of the book was objected to, embodying the Conference views of the book so far as that doctrine is concerned.

The Conference next received the report of the committee appointed to extend the system of education in Wesleyan schools, and to render them more reliable in the connection. These memorials related, in many cases, to subjects of local importance. The Rev. Dr. Hannah presented a memorial from Inverness, praying for a Scotch affiliated conference; from an extension of the Irish Conference; and from Australia, that a general missionary be regarded as church members without any other test of membership. The Rev. Dr. Hannah said that the Conference had received a memorial from Australia that various difficulties stood in the way of the second request; and a memorial from Ireland, that the Rev. Dr. Hannah should visit Ireland, and preside over the Irish Conference. The Rev. John Eloy, a watering-place on the coast of Yorkshire, praying that Eloy be made a circuit, and that a minister be established there. Memorials were also presented from Taunton, and Harrogate. This introduced the whole subject of Methodism in watering-places, and the Conference decided that a committee be appointed to report on the whole question, and that it was deemed desirable that in every such place a chapel should be erected sufficient for the accommodation of the visitors and residents.

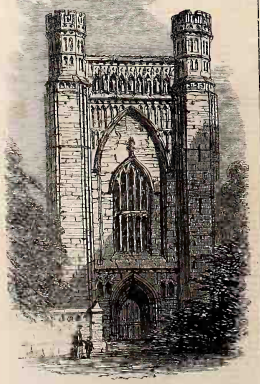
The answers to the address of the French Conference having been read by Dr. Rigg, the Rev. Dr. Hannah presented the address to which the reply was received. These are the schools for the education of ministers' sons, and are supported partly by the Missionary Society, and partly by the Centenary Fund. The financial statement is as follows:—Collections and subscriptions by the Wesleyan-Methodist Missionary Society, £1,000; Centenary Fund, £2,750 0s. 4d.; the children subscribed £100 19s. 6d. The ordinary expenditure is £3,000, and

THE ARCHÆOLOGICAL INSTITUTE OF GREAT BRITAIN AND IRELAND.



CROWLAND ABBEY, LINCOLNSHIRE.

ANNEXED are details supplementing the particulars already given of the agreeable meeting which the Archæological Institute of Great Britain and Ireland has just concluded at Peterborough. After the return of the excursion to Oakham and Stamford on Thursday week a meeting was held in the Corn Exchange, Peterborough—Mr. O. Morgan, M.P., presiding; and a paper was read by Mr. M. H. Bloxam "On the Monumental Remains in Peterborough Cathedral," and another, by Alwyne Compton occupied the chair, and Sir C. H. J. Anderson read a paper on the scraping of the west front of Peterborough Cathedral, which was followed by a lecture by Professor Willis "On the History of the Abbey Church of Peterborough, and the Conventual Remains on its South Side." After an excursion to Thorney, Peakirk, Crowland Abbey, Northborough House (once the residence of Mrs. Clayrole, one of the daughters of the great Protector), Glinton, and Woodcroft House, a soiree took place in the deanery and vineyard at Peterborough, by invitation of the principal inhabitants. Papers were also read by Mr. L. Lambert, of Peterborough, "On the Sarum Hymnal," with vocal illustrations; and other essays were delivered by Mr. Riley and Mr. Stubbs "On the Chronicles of Ingulphus," tending to show that they were forgeries by the Crowland monks, by which they obtained property. After an excursion to Fotheringhay, Elton Church and Hall, Gundle



THORNEY ABBEY, CAMBRIDGESHIRE.

the Rev. J. Lee Warner, "On the MS. Chronicle and Chartulary of Robert Swapham." On the following day meetings of the sections were held in the morning and afternoon. At the morning gathering the Very Rev. the Dean of Ely presided, and papers were read by Professor Babington "On the History of the Fens," and by the Rev. E. Trollope "On the Cardykes." At the afternoon meeting the Rev. Lord

CROWLAND BRIDGE, LINCOLNSHIRE.

THE ARCHÆOLOGICAL INSTITUTE OF GREAT BRITAIN AND IRELAND AT PETERBOROUGH.—WEST FRONT OF PETERBOROUGH CATHEDRAL, DRAWN BY W. L. WILD.

&c., a general meeting was held—Lord Talbot de Malahide presiding—at which the report of the council was read for the past year, and a considerable accession of new members was announced. Some discussion took place with regard to the locality in which next year's meeting should be held, and Worcester was named. Finally, a paper having been read on a remarkable discovery made by Mr. Farran of a sepulchral mound in the Orkneys, the congress broke up.

OUR ILLUSTRATIONS.

We give in the accompanying pages some engravings of noteworthy objects in connection with the Archæological Institute's sojourn at Peterborough.

The West Front of Peterborough Cathedral.—Having in our last Number briefly described this cathedral, we confine ourselves now to give a view of the west front, which is said to be unsurpassed for simple and majestic beauty. The west fronts equalled for single grandeur by few examples in all Europe, of Wells, York, and Lichfield Cathedrals surpass it in some respects, or in richness of detail, but they lack the charm of age which is in richness of detail, but they lack the charm of age which is
so conspicuous in that of their general effect. "The Peterborough fronts," says Walcott, "consist of the three west front of the cathedral (says Walcott) consists of the three arcades, the lower with three doors, the upper having three-light arcades, the lower with three doors, the upper having three-light
windows, recessed behind three lofty pointed arches, encumbered in the
world for simple grandeur and unity, by the gable and flanking turrets, each pierced with the lowest arcade architecture. Behind these are two
each pierced with the lowest arcade architecture. Behind these are two
octagonal, scaled, and pinnacled towers of the nave." The Archæological Institute towards
Thursday last visited by the Archæological Institute towards
the close of last week. Swaithin, Abbot of Peterborough, founded a monastery at this place in the reign of William of Rufus. Ethelwold, Bishop of Winchester, in 972, and dedicated to St. Botolph and St. Mary. Monastery speedily rose to importance, and endowed with many privileges. No women were allowed to live within nine yards of the abbey, which took its name from the neighbouring river Nene, which encircled it. Under the tutor of Bede, and the accomplished Abbot of Wearmouth, who introduced glazing into England, was founded by Saxon and Bishop Peccol, of Leicester, who was a prisoner here on a charge of heresy. The only Abbots of note was a prisoner here on a charge of heresy. The only Abbots of note
were the learned Father Blythe, Robert of Deen and Cranne, who were the learned Father Blythe, Robert of Deen and Cranne, who
Gunter, visit Mary Queen of Scots, 1568, 1169). Five bays of the nave Gunter, visit Mary Queen of Scots, 1568, 1169). Five bays of the nave
only remain, and its aisles were destroyed in 1630. The fine original Norman west front was received additions in the Perpendicular period, including the window and octagonal panelled termination to the side turrets, and a crocketed arcade with statues, which surmounts the gable. In the latter several gravestones record the deaths of noble. In the north porch several gravestones record the deaths of French and Walloon labourers, employed by the Abbot Ernulf to execute the drainage of the fen of that name, it may be expected, will be still further developed in a wider range of characters.

Crowland Abbey.—Part of Crowland Abbey, Crowland or Croyland, Lincolnshire, is a highly interesting ruin. Mr. Mackenzie Croyland, Lincolnshire, is a highly interesting ruin. Mr. Mackenzie
Walcott in his excellent work, "The Minsters and Abbey Churches of the Walcott in his excellent work, "The Minsters and Abbey Churches of the
United Kingdom," tells us that following particulars respecting this celebrated abbey:—Croyland was in ancient times an island in the heart of the fen country, and was the scene of many a legend. Guthlac, a noble saint whose history is enshrined in Shakspeare's "Macbeth." Walthoof was otherwise a liberal benefactor to Croyland, and his sons bequeathed three hides to found a cruel murder in the palace at Winchester. Ulfagyrd was succeeded by Egelsige, Prior of Fontenelle, the famous, but not over-scrupulous Ingulphus, Prior of Fontenelle, the famous, but not over-scrupulous
historian, who built the nave church as we now see it. In 1117 an earth-
quake injured the new building, which was commenced by Abbot quake injured the new building, which was commenced by Abbot
Geoffrey in 1124. Of the church there remain the west front, the nave, and all of the great central tower, forming the east end of the nave: the masonry is admirable. The two western bays are Perpendicular work. Originally the nave had a Decorated Geometrical window remaining in the west wall of the south aisle. The north aisle, also a Transitional Norman doorway, he west the main or lower church, and was built, after a fire, in 1171-91. Abbots Edward, Redingus, and Longchamp made extensive works which are partly visible in the present day, and of the arch of the west window. The elegant pointed and delicate stonework was inserted about 1220 in the north aisle, and mainly about 1300; and part which is Decorated Geometrical was added in 1370, by Abbot Ralph Maske. In 1390 the west window was enlarged, all the wall above the first string-course removed, the western bay was rebuilt, a violent storm having blown down the ancient wall. There are seventeen bays of the nave, with Early English arches, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42,

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—MONDAY.

The House gave the finishing touch to a considerable number of measures, including the Lace Factories Bill, the Appropriation Bill, the East India Loan Bill, the Corrupt Practices Prevention Act Continuance Bill, and the Victoria and Metropolitan Loans Bill, all of which were read a third time and passed.

On the motion of the Earl of SHAFTESBURY, an Address to the Crown was agreed to praying for an inquiry into "the employment of children and young persons in trades and manufactures not already regulated by law."

HOUSE OF COMMONS.—MONDAY.

The only orders on the paper was the consideration of the Lords' amendments to the Industrial Schools (Scotland) Bill, which were all soon agreed to.

In reply to Mr. Colebrt, Sir GEORGE GREY stated that it would be unadvisable to appoint a public inspector of Industrial Schools, as Mr. Horner, for four additional inspectors had recently been appointed.

HOUSE OF LORDS.—TUESDAY.

The Royal assent was given by commission to a large number of public and private bills.

Parliament was afterwards prorogued with the usual ceremonies, the Royal Speech (given at our first page) being read by the Lord Chancellor.

HOUSE OF COMMONS.—TUESDAY.

The House met at noon for formal business.

In answer to Mr. Ready, Lord PALMERSTON said the Government would be prepared at no late date for further consideration in connection with the Committee on the Galway contract, and would, if the Atlantic Company could show that they were in a position to carry out their contract, would submit to Parliament next Session any application for a renewal of the contract.

Mr. WELD inquired whether her Majesty's Government had received any communications from the President of the United States, or from the British Ambassador at Washington, that it was the intention of the Government of the United States to exclude vessels of the ports of the Southern States of America to collect and levy duties upon foreign merchandise?—Lord PALMERSTON said that no American Congress had any right to interfere with the President, if he thought fit to do what his honourable friend specified. The Government had not been informed of the intention of the American President on the subject.

Mr. COMPTON inquired whether application had been made by master manufacturers or the northern and midland districts to tenants of London to send part of their workmen as apprentices to such districts?—Lord PALMERSTON said that communications had been made. They were in print, and would be laid before the House.

Mr. D. GRIFFITH asked the First Lord of the Treasury whether the Government had received any communication from the Government of the Emperor of the French authorities free Napoleon troops crossing into the Roman territory from ports other than those on the slope of that place, but from ports in the French to be made use of in sending the bands of brigands and Zouaves to which have been assembled within the Papal territory for the invasion of the southern provinces of Italy?—Lord PALMERSTON said that the arms were given over to the Papal Government, that being the constituted power in the country. Any distribution of arms since that time could not be by the Government authorised by the Papal Government, and he was sure that what they had been distributed for the purpose of making disturbances on Neapolitan territory.

Mr. SCULLY was calling the attention of the House to the omission of the Government in relation to Irish affairs when the debate was interrupted by the bar of the House of Peers, to hear the Royal Prorogation Speech read by commission.

On returning, the Speech was again read by the Speaker at the table, and the House forthwith separated for the recess.

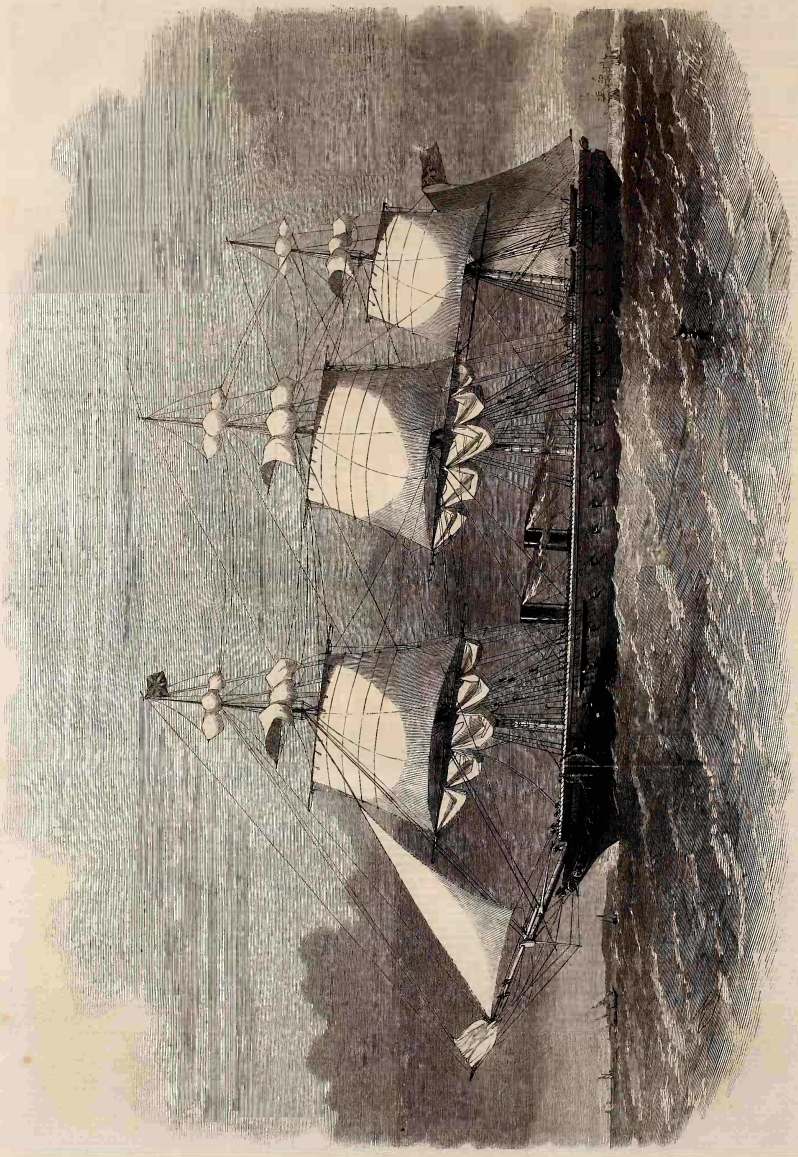
The Queen has directed letters patent to be passed under the Great Seal granting the dignity of a Baron of the United Kingdom of Great Britain and Ireland unto Vice-Admiralty Right Hon. Sir Frederick Paterson Pitzhardinge Berkeley, G.C.B., and his heirs male, by the name, style, and title of Baron Fitzhardinge, of the city and county of the city of Bristol.

The Evangelical Conference will this year hold its meeting at Geneva, the first services to commence on Sunday, Sept. 1. Representatives from the Church of Evangelical Protestants will be present from all parts of the world, and several English noblemen will take part in the proceedings. Lord Robert Montagu is expected at the meeting.

The RUSSIAN NAVY.—The following details respecting the Russian navy have been published in the Invalide Russe, and may be taken as effective of the navy was:—Admirals, 8; other officers, 3245; civil functionaries, 98; sailors and marines, 36,216. The number of steam vessels and functionaries were fewer than at the end of 1859, but the sailors were 2200 more. At the end of 1864, 14 admirals, first and second class, were appointed to serve afloat, and the rest for protecting the coasts. At the end of 1859 the fleet was divided into 3 squadrons. Nine ships of the line, 12 frigates, 22 corvettes, 12 clippers, 79 gun-boats, 2 yachts, 25 schooners, 8 transports, 40 small steamers, 11 sloops, and 4 despatch boats. These vessels were of 58,853-horse power, and armed with 2574 pieces of cannon. Sailing vessels: Ships of the line, 9; frigates, 8; corvettes, 4; brigs, 2; schooners, 2; luggers, 3; tenders, 13 transports, and 12 yachts, the number of guns being 1477. At the end of 1865 the number of vessels and of their guns in 1859. In 1865 the fleet was increased by the launching of the following vessels:—At St. Petersburg, a ship of the line, Sysoy Velikie; at Nicholaieff, a frigate, Oslabia, 48; a corvette, Bogatyr, 17; a floating battery, and various small vessels. At Cronstadt, a screw-frigate, the Oka, 6 guns; and the ship of the line Sinope and Cornwallis (number of guns not stated). At Archangel, a frigate, the Severnaya, of 16 guns, and a steamer Sokolnick, of 6-horse power and 8 guns. At Nicholaieff, two corvette, Tastuti and Kreitsette, each of 9 guns. At Sebastopol, a corvette Vladimir, and a steamer Ingour, of 6 guns. At Abo, a sailing yacht, Zabaga, for the grand Duke Alexis. At Sinerebourg, two armed clippers, Abeck and Vostock, and one, the Ural, at Nordshen, in England, an armed clipper, Rakamock, of 7. At Havre, in France, two gun-boats. More will follow. In addition to these vessels there are several other vessels for the fleet was commenced both in Russian ports and abroad.

The BRITISH ARCHÆOLOGICAL ASSOCIATION. — The programme for the eighteenth annual meeting has been issued. The assemblage will open at Exeter during the week including Wednesday, the 19th of August. The proceedings will be conducted according to a published plan, of which we shall be afterwards thoroughly glad to avail ourselves, and to be visited are:—Monday—Remains of Rougemont Castle and other antiquities in the city. Tuesday—Examination of Colleton Barton and Upton Pyne; visits to Cowleetaw and Crediton. Wednesday—Visit to Ford Abbey; visits to Colway St. Mary, Colway Manor, and Chard. Thursday—Visits to Newton Abbot, Haccombe; Compton Castle, by Castlington to Torquay. Sir Richard Hoare, Bart., Hon. Church and Abbey; visit to Babbacombe and Kent's Cavern. Friday—Excursion to Tiverton; Collumpton; Bradfield House; Bradfield Manor House. Saturday—Visit to Cadbury Castle, Darlington Hall; Berry Pomeroy Castle; Totnes. On the Monday following the Congress will meet. It is proposed to arrange a visit to Salisbury, Dartmoor and Bodmin on examination of some of its most remarkable antiquities. A discussion on the memorandum issued by the Master of the Rolls' Records' Third Club, from whom a most obliging invitation has been received, will afford an opportunity of inspecting some of the records deposited in the vicinity of Clapham. During the congress week the association will be received by the Lord Lieutenant of Devonshire, the Lord Bishop of Exeter, the President; Sir John T. Coleridge, and S. S. Walrond, Esq. Papers will be read and discussed during every evening. Among the papers which have promised are the following:—Mr. Planché on the Knts at Devon; Mr. T. Wright on a paper given by Mr. Roach Smith, on Roman Remains; on the beginning of the eleventh century, and on the Exeter municipal records; Mr. Pettigrew on a paper on antiquities found in Kent's Cavern; Mr. Hunter Gutheridge; Mr. R. Lovell on unpublished Devonshire MSS. in the British Museum; Mr. Gutch on Devonshire Wills.

VAIL PAINTINGS IN THE PALACE OF WESTMINSTER.—The following is the report by the Select Committee appointed to inquire into the propriety of employing Mr. Herbert in the full painting of the walls of the House when the roses will be ready for occupation, or in what manner, if the painting of the walls cannot be finished shortly, the room may be opened for the meeting of the Session:—The House during the sitting of Parliament:—The Committee have examined Mr. Herbert and other witnesses, and have also received a report from Mr. Barry, R.A., in which he says, "I am not in a position to say one word in opposition to the opinion of the Committee, that the room could only be completed for the meeting of the Session in the month of February to the end of July, and never before twelve o'clock or after five o'clock, and that Saturday and Sunday should be considered as far as possible in effect. It is also certain that it may be finished sooner. As it is only necessary to paint the walls for the convenience of the Members, the Committee are unwilling to recommend to the House any such interference with the ventilation of the chamber as would be indubitably produced, unless the execution of the others is given up. The Committee can see no reason for the delay complained of by Mr. Herbert. The Committee represented to Mr. Herbert that the room would only be required for a month or two days in the week, from about the middle of February to the end of July, and never before twelve o'clock or after five o'clock, and that Saturday and Sunday should be considered as far as possible in effect. It was also suggested

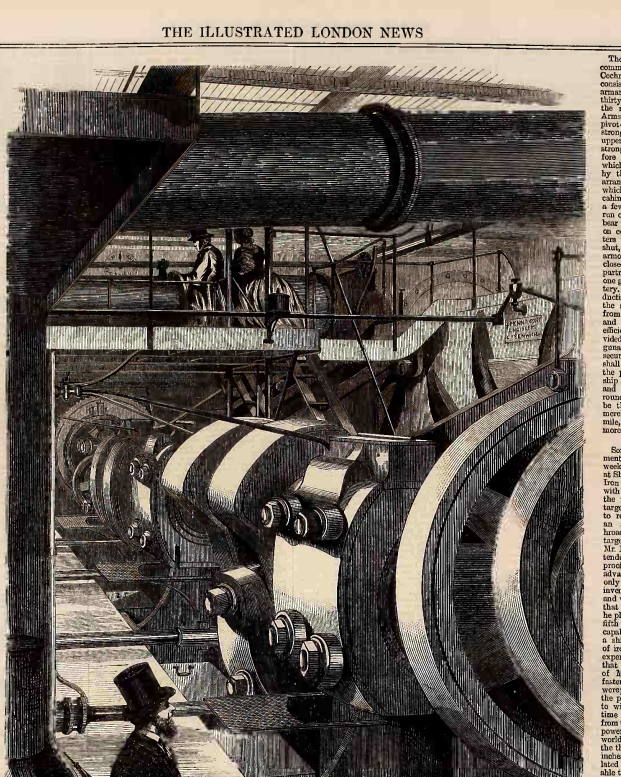


HER MAJESTY'S IRON-CLAD STEAM-FRIGATE WARRIOR, 40 GUNS

HER MAJESTY'S IRON-CLAD STEAM FRIGATE WARRIOR.

THIS vessel, the first completed of our new iron-clad ships-of-war, and by far the noblest and most efficient fighting ship in commission in the world, was handed over to the Government by her builders on Thursday last, and left the Victoria Dock for Greenhithe, where she will complete her equipment.

The rapidity with which the works have been carried on since the ship was launched is most creditable to the contractors, the Thames Shipbuilding Company, and the manner in which the whole of the works of a novel and exceedingly difficult character have been executed has given perfect satisfaction to the inspectors appointed by the Government. That there should have been some delays in a ship of this kind will excite no surprise in the mind of any person who is capable of judging of the quality of the work, and who is aware of the repeated changes and alterations which have been made by order of the Admiralty from the original design and working drawings. Every change or modification which has been made since the lines of the ship were first laid down has been for the purpose of making the Warrior more perfect; and no persons, except those who are of the most captious disposition, will feel disposed to quarrel because the ship has met with some trifling delay in her completion. As compared with the French ships, the Warrior has this point of superiority, that she is not only iron-clad, but she is throughout constructed of iron, and there will be, therefore, no trouble about unseasoned or decaying timber in any part of her structure, the only timber employed being used as a bed for the outer or armour plates. The shell or framework of the Warrior is formed of wrought scrap iron. The keel or portion to which the ribs are bolted is formed of immense slabs of iron 3 ft. 6 in. deep and 1¼ in. thick; the ribs which spring from this are wrought in T-shaped beams, made in joints of 9 ft. in length by 2 ft. in depth, and are placed 3 ft. 8 in. apart, except for a distance of 10 ft. on each side of the keel, where they are placed half this distance apart. The framework is formed of plates ⅜ in. in thickness, the plates at the bottom 1¼ in. thick. Her length over all is 420 ft.; between perpendiculars she is 380 ft., extreme breadth 58 ft., and extreme depth 42 ft. Her tonnage is 6117 tons; and her engines, which are screw, are of 1250-horse power, and these, with the boilers and



THE ENGINES OF H.M. STEAM-FRIGATE WARRIOR.

armaments, will give a total weight of over 10,000 tons. It is gratifying to note that we have at least one other advantage in the Warrior over La Gloire—that is, that she will carry her main-deck guns nine feet out of water, while those of the French ship are but six feet. The main and upper decks are of iron, covered with timber; the orlop-deck is of timber, and both are supported by rolled wrought-iron girders of great strength. Solid wrought-iron beams are placed transversely, at intervals of five feet, inside the ribs, and these again are strengthened by cross girders. The bows and stern are divided into twenty-seven watertight compartments, and are shut from the engine-room and fighting parts of the ship by wrought-iron transverse bulkheads. So accurately does each plate fit into the other, that it is only by the closest inspection that one can trace the lines which mark where the plates join. A finer or cleaner piece of ironwork was never turned out of hand.

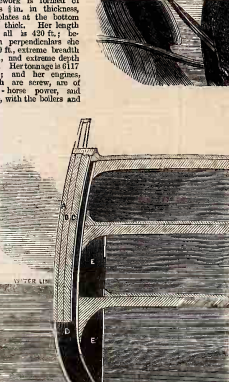
The Warrior is fitted with Messrs. John Penn and Son's patent trunk-engines, of 1250-horse power, similar in construction to those fitted to many of her Majesty's ships, having two cylinders of 112 in. diameter each, with 4 ft. length of stroke, and are intended to make about fifty-five revolutions per minute. About 150 ft. of wrought-iron shafting, of 17 in. diameter, intervene between the engines and the screw. The screw is made of gun-metal, and is capable of being disconnected from the engine-shafting, and hoisted on deck while sailing for the repairs. The screw, with its hoisting-frame and apparatus, weighs about 35 tons.

There are ten boilers arranged side by side in about 80 ft. length of the ship, and having the stokehole between them; there are forty furnaces, each about 3 ft. wide and 7 ft. 6 in. long, and at full steaming will burn about 130 tons of coal in twenty-four hours. The boilers, which will contain 300 tons, are of the usual tubular construction, having about 4400 brass tubes for the smoke and heated air to pass through before it reaches the chimneys. There are two chimneys, each 7 ft. 6 in. diameter, and are made on the telescopic principle, so that they may be lowered to the level of the hulwarks when not in use or while sailing.

These are by far the largest engines ever constructed for man-of-war or any other purpose, and when tried under steam at moorings in February last appeared to work with as much ease and regularity as those of the smallest class. The whole quantity of fuel which can be stowed in the bunkers is 900 tons, giving sufficient for seven days' full steaming. Working expansively with the valve shut off at half, or quarter, there will, of course, be a corresponding diminution in the consumption of fuel, and the ship may be under steam for the whole of fourteen days, working, of course, at a reduced rate of speed.

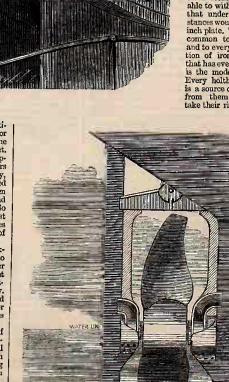
The Warrior is under the command of Capt. Arthur Cochrane, and her crew will consist of 600 men. Her armament will consist of thirty-four 68-pounders on the main-deck, and two Armstrong 100-pounder pivot-guns and four Armstrong 40-pounders on the upper-deck, and two Armstrong fachpieces. In the fore and aft portions, which are not protected by the enormous plates, arrangements are made by which the bulkheads of the cabins can be removed in a few minutes, and guns run out to the portholes to bear upon the enemy; but on coming to close quarters these ports would be shut, the iron doors of the armour-plated bulkhead closed, and the centre compartment would become one great impregnable battery. A considerable reduction has been made in the size of the portholes from that first designed, and a very simple and efficient plan has been provided for bringing up the guns to the openings and securing that the muzzles shall be in the centre of the portholes. After the ship has taken in her guns and stores she will go round to Portsmouth and be thoroughly tested, not merely at the measured mile, but in a very much more practical manner.

Some important experiments, as we stated last week, have been made at Shoeburyness, before the Iron Plate Commission, with the view of testing the merits of two new targets, formed so as to represent a portion of an armour-cased vessel's broadside. One of these targets was constructed by Mr. Fairbairn, and was intended to show how shot-proof ships might with advantage be built of iron only; the other was the invention of Mr. Roberts, and was designed to prove that wooden vessels may be plated over, and at one-fifth the cost rendered as capable of resisting shot as a ship constructed wholly of iron. The result of the experiments has shown that the 9-inch iron plates of Mr. Fairbairn's target fastened to a 4-inch skin were perfectly able, as far as the plates were concerned, to withstand for a long time a concentrated fire from the heaviest and most powerful ordnance in the world. It also showed that the thinner plates of three inches, rolled into an ungrolled form, were equally able to withstand a missile that under other circumstances would fracture a 4½-inch plate. The weak point common to both targets, and to every other description of iron armour plate that has ever been devised, is the mode of fastening. Every bolthole in a plate is a source of weakness, as from them all fractures take their rise,



A Armour plating, 4½ inches thick. B Teak Backing, 8 inches thick. C Teak Backing, 10 inches thick. D Frame. E E Wing passage.

SECTION OF THE BOWS OF H.M.S. WARRIOR.



SCREW OF THE WARRIOR.

*** *The Charge for the Insertion of Births, Marriages, and Deaths is Five Shillings for each non-domestic.*

BIRTHS.

On the 6th inst., at 15, Cranbury-place, Southampton, the wife of John Carden, Esq., of a daughter.

On the 2nd inst., at St. Leonards, Exeter, the wife of Ludwig Wahlert, Esq., late R. M. of Prussia service, of a son.

On the 5th inst., at Redclyffe, New Brighton, Cheshire, the wife of William Hughes Durnford, Esq., of a son.

On the 3rd inst., at Harewood House, Hanover-square, the Countess of Harewood, of a son.

MARRIAGES.

On the 22nd of July, at the Cathedral of Gibraltar, by the Rev. T. Seamour, Canon and acting Chief Chaplain, Adolphus, second son of Baron von Anethan, Belgian Minister, Chapkin Esq., to Adelaide, second daughter of Baron de Vicchy, Belgian Consul, Gibraltar. On the same day, at the Cathedral of Gibraltar, by the Rev. James Mitchell, Chaplain, by the Rev. Canon Seamour, and the Rev. H. O'Connell, R.N., John, second son of the late John Fraser Gumbert, Esq., of St. Petersburg, to Lina, youngest daughter of Baron von Anethan, Belgian Minister, Chapkin Elle, and twin sister to the above Adolphe.

On the 6th inst., at Shenton, by the Rev. A. M. Hopper, M.A., Philip John Worsley, Esq., of Buckingham, son of Philip John Worsley, Esq., of Nunhead, Surrey, to Mary, second daughter of Thomas Lombe Taylor, Esq., of Shenton, Norfolk.

DEATHS.

On the 28th ult., Richard Plantagenet, second Duke of Buckingham and Chandos, K.G.

On the 4th inst., at Tregaer House, Pembrokeshire, the Earl of Tregaer, in the 81st year of his age.

On the 2nd inst., at Wilton House, Salisbury, Lord Herbert of Lea.

THE FARM.

Corn has been ready for the sickle before the first day harvest (as at all completed), and every kind seems to have ripened almost simultaneously in the more early counties. Some have fallowed a wheat from Beery, weighing 63¾ to 64 lbs., has been sold in London at 72s. per quarter, and new Kentish sold at 48s. Samples from all parts speak pretty favourably of turnips, mangolds, and potatoes; but the weather is wanted for these crops, because, and disease has been so variable, even in adjacent counties, that a prophet may say we can exactly as he likes, with the most positive certainty of proving right.

Owing to certain fears of contagion, the show of Dark Polls and Aberdeens was not so large as both as it might have been; and among the shorthorns Mr. Dudding's Magic Bells realised a high price of her during the last month. With the exception of a little show at Saltoun, this is the first time she has been exhibited. The cross, especially Booth with shorthorn bulls, made a good feature; but the Suffolk horses of bred as birds dunnest of long looked at in the land of the Clydesdales as the latter would in an Ipswich showyard. The meeting at Brigg was a most successful one, but the shorthorns lost much of their strength by the absence of Mr. Tuxford, in consequence of one of the sudden deaths of some seven of the best, including Gilderoy, Gem, and a splendid cowpokey, after a very short illness. Hence only three were left in the cow class, which was won, as well as the two-year-old heifer class, by Mr. Rankin, of Hall Garth. Resolution, Hindoostan, Pride of Southwicke, and Victoria Cicely, brought the sales and a second to the Duke of Richmond; Mr. R. Dudding, of Paxton, had two fives for yearling bulls and bull calves, and so had Mr. J. Lyon for Gloster Lass, while the £20 prize for the best bull above one year old went to Mr. J. B. Stanhope's George V., a very highly commended in the two classes at Leeds. Messrs. Borton, Wright of Norton Heath, and Charles Clarke were the principal exhibitors, and in the horse department there was a remarkable entry. The cart sire Young Napoleon, who was, at the age of 22 cwt., was carried by his old friend Simpson; and Lord Yarborough's ship for three-year-old fillings brought out 20, and was won by Mr. George Walker, of Bigsby, and his heirs for over. About 900 people were on the ground watching the judging, and it has been decided to hold the meeting at Lincoln next year. The show of hunters at Islington was a remarkably good one, and the judges took nearly an hour and three-quarters going through the thirty in the principal class. Ultimately Mr. Rendall's Jack and Nick or Nothing were placed in the positions they had held at Leeds, to the great disappointment of the backers of Mr. Gibbon's Ben, who was expected that the Royal stud would have been reserved. Adam Bede, who beat Ben both, was not entered here.

The Cork show has been a very large one, with forty-eight shorthorns, fifty-seven Aylesbury, and seventy-three Leicesters as its principal competitors; and Mr. Nelson, the celebrated trainer of the Gunter Duchesses, on the shorthorn bench. The worse for wear Kingcraw won the first yearling bull and cow prizes; Mr. Rowland Campion was first with Ophelia in the two-year-old heifer class, and took the Duke of Leeds' £50 challenge cup, which he says the best bred in the county of Cork. In the yearling heifer class the Dundalk spring selection between Captain Bull's Pride of Ashee and Mr. Cooke's Florentine was reversed in the former favour. Two accounts from the Royal Irish Society's meeting at Belfast have not yet reached us, but we hear that there has been an increase in the isle of Man, that the Lord Bishop sent a pen of sheep to the yard and a laundry at the dinner, and that sons of Booth's Welcome Guest, Fawley's Royal Oak, and Second Comet fetched long prices the winners.

The sales of the Shropshire sheep have gone on favourably, and, as a specimen of the difference between the opinions of judges, it is stated by *Bell's Weekly Messenger* that at Messrs. Cunnis's sale a high-commended ram sold for 16gs., or 16gs. less than one which had earned no such token. One of Mr. Mansell's commended ewes, failing to sell for 50gs. to Mr. Charles Randell; one of Mr. Minor's (Astley House) by Mansell Wellington to Mr. Hewer; one of Mr. Horton, of Harnage Grange, has let his first prize sheep, Duke of Kent, for 35gs. The Shropshire breeders are still very busy disavowing all connection with the Babraham Young Elegance, and declare that they should be sorry to see first cross with them; and that Mr. Foster, who had him, slaughtered fifty or sixty of a rate on account of the alteration in character and loss of size. They also consider that at the Royal the Shropshire prizes are given too much to the get of a Down cheviot. The sales will be Shropshire sales on Monday of the Paterson stock at Lord Ernle's, Bradford, and on Wednesday at Edord Park, near Tamworth. Mrs. Gillett's, of Bryan Norton, and Mr. J. Gillett's Cotswolds will be sold at Oxford on the same day; and Mr. Kimberly, Mr. Caddock's, and Mr. Bull's at Banbury, on Thursday.

In its summary of the steam-trials at Leeds the *Mark Lane Express* says:—

It was Mr. Fowler's horse engine galloping away with a 6-furrow plough that excited so much surprise and attention. Six acres of clover lay were ploughed at a depth of 7 inches in 7½ hours. The consumption of coals was, of course, great—getting on for 9 cwt.; but the governors were off the engine, and we sat at a great speed, with a pressure of 80 lb. However, our obstinate friend was the entire cure of the ploughing to amount to 1s. 9d. per acre. Mr. Howard's ploughing came in to 1s. 8d. more than this. The six acres were finished in nine hours, and the coals burnt exceeded 11 cwt. The ploughing was well done, and the furrow-slice very evenly cut and nicely turned. We must briefly refer to what these small engines did in the field. Their work, of course, must not plough, for no plough was smashed the previous day. The 6-prong cultivator, working 9 inches deep, made 1 of leg ground in four hours 20 minutes, with a consumption of 5 cwt. of coals. The steel harrows were the cure of this cultivation, which was about 3½ inches deep, at 6s. 6d. per acre. Their work was half an acre in an hour, and used 1 cwt. of coals. This was at the depth of 8 inches, and was quite at 6s. 6d. per acre. The scarifying was at the like depth, and we estimated the cost of the operation at 6s. 6d. per acre. The time was not finished in 5½ hours, and 4 cwt. of coals were burnt.

We have given the 6-horse power, by their awards and in their report, to illustrate with greater accuracy the superiority of the engines over horse-labour. But as we fully indorse their decision, we have no hesitation in recommending that each engine should have the cost it requires his hand to be broken up as a modern steeple with a common 10-horse engine.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

NOTWITHSTANDING the disturbance of the Federal troops in America, and that the demand for money stock has been by no means small, the Bank of England has added to their reserve firmness, and prices have had an upward tendency. The advance in the value of money has been caused by a rise in the exchanges at New York to 108, and to the steady drain of gold from Australia.

The supply of capital in the discount market has further increased, but the demand still continues, though to some comparatively active, at the annexed rates:—

	Per cent.
Short Bills	4 to 4½
Three Months' Bills	4 to 4½
Four Months' Bills	4½ to 5
Six Months' Bills	4½ to 5

In the Stock Exchange money is somewhat freely offered, at from 3 to 4 per cent. on Government, and on the security of Consols.

On the Continent Money is in very moderate request; nevertheless, no change of importance has taken place in the quotations, which are as follows:—

	Bank Rate per cent.	Open Market, per cent.
Paris	6	3½
Vienna	6	5
Berlin	5	4½
Frankfort	5	4½
Hamburg	5	4½
Amsterdam	3	2½
Brussels	3	2½
Madrid	5	4½
St. Petersburg	6	5

The new Sardinian Loan of £20,000,000 having been successfully negotiated, business has been done in it here, at from 88 to 88½ ex div.

From various quarters, but chiefly from Australia, nearly £600,000 in bullion has been received, the greater part of it been disposed of to the Bank of England.

The decline in the Bullion Market on Monday were much restricted, and prices ruled a shade lower than on Saturday. Spanish Doubloons were 73s. 6d. per ounce; Three per Cents, 90 to 90½; Exchequer Bills, March, 1862, 1s. to 3s. pm.; Ditto, June, 1862, 1s. to 3s. pm.; Ditto, Small, 2s. to 4s. pm.; Bank Stock, 214 to 216; India Stock, 220 to 222; Ditto, New, 5 per Cent., 100 to 102; Ditto, Old, 5 per Cent., 110 to 112; and India Bonds, 1s. to 3s. pm. Consols for Account, 90¼ to 90½; and Ditto for Money, 90¼ to 90½.

The following quotations have been made for Foreign Securities:—Brazilian Five per Cents, 1829, 99½ to 100; Ditto, Four per Cents, 1839, 94½ to 95; Ditto, Four per Cents, 1858, 94½ to 95; Ditto, Five per Cents, 1861, 100½ to 101; Buenos Ayres Six per Cents, 1857, 103½ to 104; Chilian Six per Cents, 1853, 107½ to 108; Ditto, Deferred, 92½ to 93; Ditto, Three per Cents, 1853, 67½ to 68; Ditto, Three per Cents, 1855, 67½ to 68; Ditto, Three per Cents, 1857, 67½ to 68; Ditto, Three per Cents, 1858, 67½ to 68; Ditto, Three per Cents, 1859, 67½ to 68; Ditto, Three per Cents, 1860, 67½ to 68; Ditto, Three per Cents, 1861, 67½ to 68; Ditto, Three per Cents,

NEW BOOKS.

Now ready, 10s., cloth,

THE LITERARY WOMEN OF ENGLAND.
Vol. I.—Part the Thirteenth of
The Third Edition of CHRISTIAN KEN. By the Author of "Morton Hall."
"The story of the season."—Morning Post.
SAUNDERS, OTLEY, and Co., 66, Brook-street, Hanover-square.

NEW ILLUSTRATED BOOK.
Price Two Shillings, elegantly bound and in Gilt-book.
HOME INFLUENCE: a Tale for Mothers and Daughters. By GRACE AGUILAR.
GROOMBRIDGE and SONS, 5, Paternoster-row.

STUDIES FOR SCHOOL-BOOKS.
BUTTER'S READING AND SPELLING, in easy gradations, upon an entirely new and original plan. Price 1s. 6d. each, cloth boards.
BUTTER'S MONOSYLLABIC, SPELLING BOOK AND DICTIONARY. 272th Edition. Price 1s. 6d. bound.
SIMPKIN and MARSHALL, Stationers'-hall-court.

IN A FALSE POSITION, a New Tale, by R. SHELTONE MACKENZIE, Illustrated by Julius Pettie, appears this day in the ILLUSTRATED TIMES. Price 3d.
London: J. K. HILL, PETTIE, and Co.; and all Booksellers.

THE BOY'S OWN LIBRARY, Part 4, contains—The Schoolfellows, Illustrated. Sailor of War. The Rifleman—Structure, Habitat, Beauty of Arboreous Vegetation—Lessons in Life—Sir Ralph Rochford's Conference—Practical Precepts.—London: S. O. BEETON, 248, Strand, W.C.

Price 1s. 6d., the Popular Edition of
THE NEW BANKRUPTCY AND INSOLVENCY ACT, with Notes and Explanations to the respective Clauses. By C. C. BRANDON, Esq., of Gray's Inn, Barrister-at-Law.
MESSRS. LEA, 52, Warwick-lane, E.C.

ROBIN GOODFELLOW.
A new Weekly Journal of Fun and Frolics,
Conducted by
CHARLES MACKAY, LL.D.
Part I., price Sixpence, also No. 6 price 6d., ready.
Office, 192, High-holborn, W.C.

This day, No. 7, price 6d., Monthly, 256 columns of closely-printed Literature, Science, and Art,
THE SIXPENNY MAGAZINE.
London: WARD and LOCK, 158, Fleet-street.

This day, complete in vol., price 5s., cloth boards,
THE PREBENDOOTERS.
By GUSTAVE AIMARD.
WARD and LOCK, 158, Fleet-street.

This day, price 2s., Ornamental Boards,
JEST AND EARNEST;
or, The Latest Rules to Observe in Conversation.
London: W. KENT and Co., Paternoster-row.

Now ready, 3rd Edition, price 1s.; by post, 1s. 1d.,
STAMMERING: THE CAUSE and CURE. By the Rev. W. V. CALALY, A.M.—London: ROUTLEDGE and Co., 20, Soho-square. Of all Booksellers.

FIRE BURNT NEW WORK ON IMPEDIMENTS OF SPEECH. Second Edition, price 1s., by post 1s. 1d., cloth boards,
ON STAMMERING AND STUTTERING;
THEIR NATURE AND TREATMENT.
By JOHN HULME, Esq., Author of "Essays on Education."
"Dr. Hulme has made a valuable addition to a difficult department of medical science. His remarks on the history, nature, and causes of stammering and stuttering are highly interesting, instructive, and, at the present season, important. We all interest ourselves in the matter of which it treats we can only recommend Dr. Hulme's book to the attention of others."—Lit. Gaz. Journal.
London: LONGMAN and Co.

AMERICAN WAR.—ADAPTED to BLACKS and WHITES. A GENERAL ATLAS of the WORLD, 1 MAP of the SEAT of WAR, 1 MAP of the SOUTH, 16 MAPS of the States, and the places to which attention is now being directed. Strongly half-bound, and in one book of 45,000 names. Price 6s., half-bound morocco, gilt leaves.
"One of the best of modern publications in this department."—Athenæum.
EDINBURGH: A. and C. BLACK; and all Booksellers.

THE QUEEN: a New Illustrated Journal and Review, Weekly. Price 3d. Specimen sent ready.
London: 210, Strand, W.C.

Now ready, 18mo., cloth boards, 1s.
BEETON'S ILLUMINATED FAMILY BIBLE, Part I., price 6d. 21 Steel Engravings.
London: S. O. BEETON, 248, Strand, W.C.; and all Booksellers.

THREE HUNDRED BIBLE STORIES, with nearly 200 Bible Pictures, a Pictorial Sunday-book for the Young. Price 3s. 6d., cloth boards, gilt edges; or 5s. 6d., morocco elegant. Part I. of the GRAND BIBLE for Families, Illustrated Edition, 6d.

FIELD'S NEW GUINEA FAMILY BIBLE is now ready. A large handsome volume, bound in best morocco, with gilt edges, and illustrated with numerous references and family registers. A fine Marroquin Gilt-book. Only to be had at 192, Fleet-street, E.C. Sent free by parcels-post on receipt of Post-office order for 21s. Agents wanted in the Country.

NEW FIVE-GUINEA HARMONIUM, by ALEXANDRE, the best of all makers. In oak case, with 4 stops and knee-swell. Perfect for the cottage, school, or chapel. Price Five Guineas.—At CHAPPELL'S, 50, New Bond-street.

NEW SIX-GUINEA HARMONIUM, by ALEXANDRE, with five octaves, two fronboards, and knee stops. These instruments are lower in price and superior to all other New Harmoniums.—Lists of Alexandre's Instruments on application to CHAPPELL and Co., 50, New Bond-street.

NEW CHURCH HARMONIUMS, with two rows of Vox Humana Reeds.—No. 1, with double bass board, 4 stops, and 34 rows of vibrators, in rosewood case, 15 guineas. No. 2, with 5 stops, and 34 rows of vibrators, in handsome oak case, 20 guineas. Lists of Alexandre's pianos. These instruments surpass all others for church purposes, and are equally adapted to the requirements of the drawing-room. They are especially recommended to assist the ill effects of damp, which is the common objection urged against the use of the Harmonium.—At CHAPPELL'S, 50, New Bond-street. Lists of Alexandre's Harmoniums free by Post.

HARMONIUMS at CHAPPELL'S.—The HARMONIUM by ALEXANDRE is the only instrument of the kind that possesses the independent Vox Humana Reed, which is the only reed that imitates perfectly, and is also the only one that is not affected by damp.—CHAPPELL, 50, New Bond-street.

EVANS'S ENGLISH HARMONIUMS, 10 guineas, manufactured throughout in England, and in every possible variety, by the very best workmen that can be obtained. The most complete and perfect instrument that has ever reached from purchasers of those celebrated instruments, BOOSEY and SONS, Holles-street.

LE SOMMIER ELASTIQUE PORTATIF.—E. HEALE and SON have patented a method of making their mattress portable. The great objection to the usual spring mattress is its bulk and weight, rendering it unmanageable.
The Sommier Elastique Portatif is made in three separate parts, and when taken to pieces is not more than 6 inches thick, and can be carried by one person. Being all wool and hair, and no metal or heavy wood, in which the usual spring mattress is very liable; the price, per foot, as under, is less than half that of the ordinary spring mattress:—
3 ft. wide by 6 ft. 3 in. long £7 10 0
4 ft. 6 in. 9 0 0
5 ft. 10 10 0
6 ft. 12 0 0
4 ft. 6 in. wide by 6 ft. 3 in. long 9 0 0
5 ft. 10 10 0
6 ft. 12 0 0
The Sommier Elastique Portatif, therefore, combines an advantage of comfort, durability, and economy, unattainable by any other bedding.—E. HEALE and SON, Manufacturers of Bedsteads, Bedding, and Bedroom Furniture, 196, Tottenham-court-road, and 3, 4, 5, and 6, Tottenham-court-road.

GARDNERS' £2 2s. DINNER SERVICES.—A Dozen Full-sized Dinner Plates, the most choice pattern, by Mason and other celebrated makers, commencing at £2 2s. Dessert Services, Breakfast Services, Tea Services, &c., at the same extraordinary low prices. Purchasers to the Nobility are invited to examine the stock, which is the largest and most magnificent out extant, 51, 52, per dozen.—GARDNERS', 453, Strand (near Somerset House), late 19, Coventry-street. Established 107 years. Illustrated Catalogue free by post.

6, OXFORD-STREET, W.
OSLER'S CRYSTAL CHANDELIERS, Wall Lights and Mantelpiece Lustres for Gas and Candles. Glass Dinner Services for 12 persons, from £4.
Glass Dessert Services for 12 persons, from £4.
Glass Tea Services, from 30s. Glass Decanters.
Ornamental Glass, English and Foreign, suitable for presents.
Table Glass, Cut and Engraved, of the newest patterns.
Glass Globes and Shades.
Birmingham—Manufactory and Showrooms, Broad-street.

GARDNERS' LAMPS are the BEST.—The most elegant, most noiseless, and cheapest astronomy in London. Moderator Lamps, 6s. 6d. each; Palmer's Candles, 6d. per lb. Lamps cleaned, repaired, and polished equal to new. Price Lists sent free by post.—GARDNERS', 453, Strand (near Somerset House), late 19, Coventry-street. Established 107 years, at the corner of Hedge-lane.

MAPPIN BROTHERS' TABLE KNIVES, RAZORS, and POCKET KNIVES.
MAPPIN BROTHERS, LONDON-BRIDGE.
SHEFFIELD, and 4, QUEEN'S-BUILDINGS, S.W.
Messrs. MAPPIN BROTHERS' TABLE KNIVES still maintain their unrivalled superiority. Their Razors and Pocket Knives are manufactured by the very best quality, in the secure ivory handles which the next cause loose in hot water.

THE CIVIL WAR IN AMERICA: FIGHT AT HAINSVILLE, ON THE UPPER POTOMAC—ADVANCE OF THE WISCONSIN MEN (FEDERALISTS) ON THE SECESSIONIST POSITION.—SEE PAGE 145.

THE CIVIL WAR IN AMERICA.

BATTLE OF BULL'S RUN.

The Federal army, under General M'Dowell, sustained a disastrous defeat at Bull's Run on the 21st ult. Bull's Run is a stream which intersects the railway from Alexandria to Manassas, and the road from Centreville south, running through a succession of gorges and hills, between steep wooded banks—a kind of Alma, which the Confederates have occupied strongly in advance of the main line of their defences. The most clear and detailed account of the battle which we have received is contained in the Washington correspondence of the *New York Times* of the 23rd ult. This is dated Washington, Monday morning, July 22, and is as follows:—

The attack was made in three columns, two of which, however, were mainly feints, intended to amuse and occupy the enemy, while the substantial work was done by the third. It has been known for a long time that the range of hills which border the small, swampy stream known as Bull's Run had been very thoroughly and extensively fortified by the rebels, that batteries had been planted at every available point, usually concealed in woods and bushes which abound in that vicinity, and covering every way of approach to the region beyond. These are the advanced defences of Manassas Junction, which is some three miles further off. Until these were carried no approach could be made to that place; and after they should be carried others of a similar character would have to be overcome at every point where they could be erected. The utmost

THE PORT OF DIEPPE.—SEE PAGE 148.

that military skill and ingenuity could accomplish for the defence of this point was done. General M'Dowell was unwilling to make an attack directly in face of these batteries; he would be needlessly lavish of life, and must inevitably result in a very serious loss of life. After an attack had been received upon, he would be uncovered to find some way of *turning* the position. His first, therefore, was to try this on the southern side—to throw a strong column into Manassas with that direction, while a feigned attack should be made in front. On Thursday, when the troops were advanced to Centreville, it was found that the roads on the south side of these positions were almost impracticable—that the roads were narrow, crooked, and steep, and that it would be almost impossible they were narrow, crooked, and steep, and that it would be almost impossible they were narrow, crooked, and steep, and that it would be almost impossible they

"If you stop him I'll blow your brains out." My attempts to save Uncle Saul's property were then and there discontinued. . . . What occurred at the hill I cannot say, but all the rush from Centreville for miles presented such a sight as can only be witnessed in the track of the runaways of an utterly demoralized army. Private dragoons, sabred, spurred, and beat their horses, or leaped down and abandoned their teams, and ran by the side of the road; wounded men, servants, and mere humdrums, vehicles of all sorts, commissariat waggons thronged the narrow ways. At every shot a convulsion, as it were, seized upon the whole mass of beast, horse, wood, and iron, and throbbed through it, giving new energy and action to its desperate efforts to get free from rest. Again, the cry of Cassius, "What can ye hear?" was heard, and said it to a man who was panting beside me. "I'm afraid of you," replied the ruffian, pushing his piece at me with pulling the trigger. It was not loaded, or the cap was not on, for the gun did not go off. I was unarmed, and I did go off as fast as I could, resolved to keep my own counsel for the remainder of that day. And so the flight went on. At one time a whole mass of infantry, with fixed bayonets, came down the bank of the road, and men, falling in with a ran, must have killed and wounded those among whom they fell. As I have said, the road became impassable for blocked up by a pair by guns that galloped and passed on towards the front. But wounded men still rode faster, shouting out, "Make way! Make way coming!" Again I ventured to ask officers whom I overtook, and said, "If these runaways are not stopped the whole of the ground packed into Washington will be filled with a panic, without saying a word, spurred his horse and dashed on in front. I do not know whether he succeeded in his movement or not, but the rout continued was now suddenly checked, and, pressing on through the wood at the roadside, I saw a regiment of infantry blocking up the way with their backs turned to Centreville. A mounted man was leaning over his horse's neck, and was saying, "Stop, or I'll—I'll—" At the same time the officers were shouting, "Will you be a set a man?" I addressed one of them, and said, "Sir, I am a British subject, and I must pass, coûte que coûte, anyway. I have been robbed of my cap this disgraceful rout (as I hold), and have been telling them there are no cowards within miles of Alexandria." "I can't let you pass, Sir!" I was told by the General Scott's pass. The Adjutant read it, and the word was given along the line, "Let them pass on!" and as I took through, mounted on my mule, I saw the Long-bridge in time to pass over without the counter-go. It was about this time that a man of the regiment surrounded by a group of officers, some of whom had "G" on their caps. The owner, as I took him to be, was in great distress, and called out as I passed, "Oh, you villain! You've left me, Sir! These men say they are cut to pieces." "I can't tell you," "I'm in charge of the bank, and I will deliver them all if I live." "Are you a gentleman, and I can depend on your word. Is it safe for me to go on?" "Not knowing what the state of things may be ahead, I cannot say. Perhaps you had better go back." "I'll go!" "Begorra, to tell me we're not at all—only retreating on the cool time for manœuvring!" "Sir, I am a gentleman, and I speak truth. Oh, that's illegible!" On getting to the title on point, however, the counsel for the defendant. Of course I left off there. I left the officer passed me through on the production of General Scott's signature. The Bridge was by this time in sight, and I was glad to see the rear of the Potomac, just glistened by the clouded moon, shone the gay lamps of the White House and the President's residence probably enlightened for the night. In silence I passed over the Long-bridge. Some few hours later it quivered under the weight of the tide of unarmed men. The bridge was crossed, and met with relief arms were waiting to cross over into Virginia, staging and cheering. Before the morning broke I was asleep in my bed at the Club, keeping Maryland quiet. For the hundredth time I repeated the cautious assurance that the rest of my property was safe, and that I myself was well, and others to hear it. The clocks had just struck eleven p.m. as I passed Willard's. In the basement in front of the hall was a crowd. The rumours of defeat had come in, but few of the many who had been fed upon me and the rest had complete information. Some few, possessed of this intelligence, Seven hours had not elapsed before the streets told the story. The "Grand Army" was all to no end, had represented a disorganized, an army thoroughfare, without arms, orders, or officers, standing out in the drenching rain. Where were the most unaccountable phenomena were witnessed. The last attempt but I could scarce credit my information in the morning, when he told me that the army, utterly routed, had fallen back upon Washington to defend the capital, leaving nearly five hundreds of artillery, 8000 horses, ammunition waggons, and provisions in the hands of the enemy! Let the American journals tell the story that they can. I have told mine as I saw it. . . . I am not in much talk now (of "masked batteries," of course) of outflanking, and other manœuvres. The truth seems to be that the army was simply overwhelmed, kept out for twelve or fourteen hours in the sun exposed to long range fire, and then, as all accounts represented, gave way in confusion. There came a most difficult operation—to withdraw this army, so constituted, out of the presence of an unpursuing enemy who had rejoiced in the full possession of the baggage, which was without guards, and was in the hands of ignorant drivers, was not understood and desired alarm, and was directed upon a point, which became frantic on the appearance of the enemy, and on the operation of the fear of the enemy. . . . Let me say that I express no opinion as to the affair of yesterday. In the first place, the reprise of the Federalists, and I am, might have had no extraordinary success before beyond the mere failure—when politically was of greater consequence than it was in a military point of view for the discovery of the enemy's force. I have retired on their lines at Centreville seems to have ended in a cowardly confession of weakness, and such a conclusion is the last one to which I myself and I should have considered impossible, as, with some experience of camps and armies, I have seen nothing to warrant the belief that the army of Columbia, as it was at the commencement of the recent retreat, was not, but it was complete in the number of men. . . . But new regiments, with their numerous field officers, and with but few officers with battle-fields without officers, who have had the experience, and with three months' pay in their pockets, are the foes of the enemy as the expiration of their term of service.

ESTIMATED STRENGTH OF THE NORTHERN AND SOUTHERN ARMIES.

In another letter by the *Times* Special Correspondent, written on the 19th ult., he estimates the effective strength of General M'Dowell's army at 30,000 infantry, with about sixty field guns, and ten squadrons of cavalry. The Confederate General M'Clellan's army of Columbia, at 35,000 men, and General Patterson's division at 22,000. The reserve at Washington he estimates at 16,000 men, the troops in Maryland at 7400 men, and the corps lying at Fortress Monroe and Hampton at 11,000. The Southern army under General Beauregard at Manassas Junction we have seen, estimated at 60,000 men. To this force must must include the reserves, and a portion of the force in the intrenchments along the line of the Potomac, in the District of Columbia, where, as there is a corps of 15,000 men." The rest of the Southern army he reckons at 18,000 or 20,000 men at Norfolk, and 8000 to 9000 at Aquia Creek, besides General Johnson's corps of more 10,000 men.

OUR ILLUSTRATIONS.

THE DISTRICT OF COLUMBIA.

The interest which at the beginning of the civil war in America centred about Washington has latterly shifted from the capital on account of the onward march of the Federal troops. But the battle at Bull Run, so disastrous to their cause, has not daunted the enemy; thence, make it a question whether Washington itself will not have to stand the brunt of an attack from the Secessionist troops, flushed by their late victory. Our map, reduced from the Official Survey, given on the preceding page, cannot fail to heef interest as the present junction, north and south-eastern boundary of the District of Columbia are formed by the main and eastern branches of the River Potomac. It is situated upon a plain, raised into gentle eminences here and there, and fringed by a distant range of hills. The streets are laid out, as to the four quarters of the compass, and are diagonally intersected by spacious avenues, which converge from every direction upon Capitol Hill as a focus. The northern and western boundary of the city is an undulating ridge, the verge of which the line of fort, Fort Stevens, Fort Gomery County, Maryland, are distinctly visible. Toward the northeast and south-east features present nothing of more efficient aid to defensive operations than a succession of slopes and undulations. On the western verge of the city the ground rises almost abruptly, affording an excellent site for a battery, which commands the western half the horizon. Upon the spit of land jutting into the main branch of the Potomac stands the half-finished Washington monument. Around it is a span of many acres, commanding the western bank of the river, the bridge of the Washington and Alexandria Railroad, the only approach to the city from that direction. Along the south-west boundary of the city lie three commanding elevations, which, occupied with men and artillery, would render the approach of a storming force from any point of the compass a matter of great difficulty. All that part of the town having a land boundary is inclosed by similar elevations, rendering it quite possible to surround the city with batteries, advantageously planted, commanding the entire plain. The northern boundary of the city is the one from which assault is most to be apprehended. The river which protect it on the west and south-west form an impregnable barrier, and, guarded as they are, a land attack from either of those directions need not be feared. Seven miles above the city, at a place called Little Falls, the fordage of the Potomac is regarded as practicable, unless the east bank is well protected. The approach to the city in that direction would bring a storming force within range of a row of batteries commanding the whole of the ground. While the opposite bank, overlooking plain leaves such a storming party but little chance of effective strategic operations. The assailants would encounter first the fires of the batteries, and then the musketry fire of the troops behind the parapets.

Respecting the apprehended danger of the capital the *New York Herald* of the 31st ult. says:—

The danger which now menaces Washington is more formidable, and all the troops from the north and west can be spared for the capital of the country will be sent forward at once. The army, too, must necessarily be supplied with wheeled carriages to fulfil its possible service, and Mr. Lincoln is now engaged in strengthening the cavalry arm of the service. It is to be hoped that this war will not end in a short triumphal Union campaign. But we have been told that the Secessionists have determined to put our Government to the extent of its army, and by the total defeation of the last regiment to put a stop to the retreating movement of the rebels. The object of the rebels is to overrun and conquer all much of our forces southward. The Secessionists, in a single day and at the point of the bayonet, could capture the national capital, and by thus accomplishing the most prompt and prudent effort to strengthen our forces in that quarter. Every effort should be made to collect all other loyal troops, all parties and all classes of our loyal people, should be now made subordinate to the preservation of the capital. Let all other questions be laid aside for these days may dispose of upon men to that point; and if we hold the capital for the present we may go to the rear and recruit and reorganize our forces for a more successful action, action! Let our Governor and State and municipal authorities, especially the local M.P. for the city of New York, come at once to the rescue, and move forward their reinforcements, without delay, to the protection of Washington.

SUMMARY BETWEEN THE FEDERAL AND THE SECESSIONIST TROOPS ON THE UPPER POTOMAC.

Our Special Artist in America writes from the Federal Camp, on the 7th ult., says he managed to pay a flying visit to Patterson's division at Martinsburg, getting up in time to witness his gallant and successful attack upon the Secessionists at Falling Waters, Williamsville, on the Upper Potomac. In reference to this brisk encounter he writes from Hagerstown (Maryland) on the 6th ult.:—"The general advance of the Wisconsin men through the wheatfields, after fording the river to attack the enemy's position. Their behaviour (he says) received M.P. for the city of Dublin, and was a stand. Some of the Irish greenness of opposition to the Reform Bill produced the "Chandos clause." He was a great advocate of the Ballot, and, in short, was a thorough Liberal. He remained a member of the Commons until the demise of his father, on the 11th of January, 1859, when he succeeded to the Peerage. In 1860 he was made Lord Privy Seal, and remained in office until the dissolution in the Cabinet on the question of the repeal of the paper duties. He was created a Knight of the Garter in 1842, having from 1838 been a G.C.H. He was also a Vice-Lieutenant and one of the Deputy Lieutenants of the North Yorkshire Cavalry. His Grace was the author of "Memoirs of the Courts and Cabinets of George III.," and was engaged on another work on more historical interest when he was seized by his fatal illness. The Duke is succeeded by his only son, Richard Plantagenet Campbell Grenville, K.G., second Duke and fourth Marquis of Buckingham, Earl Temple of Stowe, and Viscount Cobham of Kent, in the Peerage of the United Kingdom, Earl Nugent in the Peerage of Ireland, soldier and Tory Member for Wycombe, Viscount Langton, and a senior representative of the Royal houses of Tudor and Plantagenet, as the only child of Richard, Marquis of Buckingham, by Lady Anne Hope Brydges, daughter and heir of James, third and last Duke of Chandos. He was born on the 11th of February, 1797, and married, on the 19th of May, 1819, Lady Mary Elizabeth Campbell, second daughter of the present Duke of Argyll. She bears the honorable title of Baroness of Dundonald, and has been for many years Lady of the Bedchamber to the Queen. Her husband, who now succeeds to the Dukedom, was created a Knight of the Garter in 1842, having from 1838 been a G.C.H. He was also a Vice-Lieutenant and one of the Deputy Lieutenants of the North Yeomanry Cavalry. His Grace was the author of "Memoirs of the Courts and Cabinets of George III.," and was engaged on another work on more historical interest when he was seized by his fatal illness. The Duke is succeeded by his only son, Richard Plantagenet Campbell Grenville, K.G., second Duke and fourth Marquis of Buckingham, who was born on the 10th of September, 1823, and married, on the 2nd of October, 1847, Caroline, only daughter of Robert Harvey, Esq., of Langley Park, Bucks, and has issue three daughters. His Grace has been M.P. for Buckinghamshire from 1846 to 1857, and was from February to December, 1852, a Lord of the Treasury, and for a period Keeper of the Privy Seal to the Prince of Wales and Equerry to the Queen. He was formerly Warden of the Stannaries; he has held the post of chairman of the London and North-Western Railway. That very useful and popular nobleman, Lord Grenville, Earl Temple, Marquises and Dukes of Buckingham, have for centuries had a high position at the Court of the British Sovereign, and have formed Royal and most noble alliances. The first Duke's grandaunt was the wife of Lord Chatham and mother of William Pitt, and the present Duke is the heiress of the princely Bridges, Duke of Chandos. The sale, a few years ago, of the Stowe heirlooms, and magnificent seat at Stowe of the Duke of Buckingham, was regretted almost as a national calamity.

LORD HERBERT OF LEA.

The Right Hon. Sidney, Lord Herbert of Lea, P.C., better known as Mr. Sidney Herbert, was one of the most distinguished and most popular politicians and statesmen of his day. He was the second son of the late Reginald Pole Carew, eleventh Earl of Pembroke, and was only son by his second wife, Catherine, only daughter of Simon, Count Woronzow, Russian nobleman, and Lady Catherine and heir penmentrix of Robert Percy, twelfth and present Earl of Pembroke. He was born on the 16th of September, 1810, and was educated at Harrow, and at Oriel College, Oxford. He entered political life at an early age, in 1832, as M.P. for South Wilts, which he represented for the rest of his life; and he has from 1841 to nearly the time of his death filled various offices of State, as Lord of the Treasury, Secretary at War, and Minister of the Admiralty, and in 1845. He was, in 1855, for a brief period, Colonial Secretary; and he was Secretary for War from 1845 to 1846, from 1852 to 1854, and from 1859 until his retirement in the present year. His ministerial ability placed him in the foremost rank as a statesman, and his high character made him a

undoubted influence with the public. His death, that some foreign nations have so shaped their action as if they supposed the early destruction of the Union probable. Such a supposition is unwarranted by any fact in our history, and is based on a false and delusive, and confirmed that even an increased force is demanded. These enormous preparations, and a disciplined army of 75,000 men will soon be engaged in a conflict with a great and powerful nation, and are compelled to submit to the necessity of a blockade of their ports, which is necessary before we are driven to the acknowledgment that the Union is dissolved. They recognise the necessity of a blockade, which could be made an effective one by proclamation and blockade, by which all communication between the two is cut off. They recognise the necessity of the seizure of arms of the enemy, and the capture of citizens of the United States, for they are now waging an indiscriminate war upon them, and the seizure of their property, which is contraband. We have then compares the present invasion to that of Great Britain in 1781, yet which was repelled by a force of 5000 men. Manifestly in the one case are the outrages committed on defenceless females by those pretending to be our countrymen, which in all ages do not disgrace the savage. In the case of the deliberate malignity which, under pretext of suppressing an insurrection, makes war upon the whole people of a country by capital punishment, and seeks to prevent their obtaining medicines necessary to their cure? The sacred claims of humanity, which in all ages have been respected by civilized nations, even

REVIEW OF THE CUMBERLAND VOLUNTEERS.

A GRAND review of the Cumberland Rifle Volunteers took place in Rickerby Park, near Carlisle, on Friday, the 26th ult., when the whole battalion was inspected by Major Harman, the Government Inspector for the Northern District, in the presence of from 10,000 to 12,000 spectators. Being the first time the Cumberland volunteers have had an opportunity of mustering for the purposes of battalion drill the event was eagerly looked forward to by all the corps throughout the county, and a general holiday was observed in the afternoon in Carlisle, which had the effect of giving great éclat to the proceedings. Rickerby Park, which had been placed at the service of the volunteers by Mr. Head, of Rickerby House, for the occasion, is situated on the banks of the River Eden, almost close to the town, and is well adapted for such an interesting display as that of Friday last. The ancient pile, richly ornamented by clumps of trees scattered over the gently-undulating ground, and by the River Eden, winding circularly round the holms, forms a landscape of much beauty; but these are not its only attractions. The river from the scene of the review is one which suggests many cherished reminiscences, comprehending as it does some of the principal buildings of Carlisle associated with memorable events in the history of the "merrie city." Standing high on the hill in the centre of the town the Cathedral rears its graceful pinnacles and Gothic gables, and shows the tracery of its great, east window, justly said to be the finest in the kingdom; to the right the grey walls of the castle, with its square keep, battered in times of old by invading shot and shell; and further to the right still Scotch bridge spans the river, and the frangipontine suburb of Stanwix, with its church, a prominent feature, nestles among the trees. On the left the picture is equally interesting—the round towers of the Court Houses are the principal buildings of interest; and beyond the city the Cumberland and Westmorland hills in an atmosphere of light blue show dark shadows darting on them as the sun gleams through the clouds. Still further to the left, beyond the castellated waterworks, the lower ranges of Talkin and Tindal fells complete the picture.

Although the morning threatened rain, and, indeed, several sharp showers fell, the afternoon proved beautifully fine. All the volunteers were upon the ground by two o'clock, and by that hour a vast concourse of people had assembled. There are eleven corps in the county, and ten of them were represented in large or small numbers. The total strength of the rifle volunteers of all ranks who mustered was 656; and if to this number we add about a hundred of the Yeomanry Cavalry and Carlisle Artillery Volunteers, who kept the ground, we have the total volunteer force on the field at about 750. The vast crowd of spectators ranged themselves on three sides of the square of kept ground, the fourth side being occupied by tents, where Mr. Head had provided refreshment for the volunteers. The line behind the saluting-flag was occupied principally by carriages, containing well-dressed ladies, but people on foot crowded round and in front of the conveyances, and skirted the side of the river. The holms on the opposite side of the river also commanded a good view of the review, and a crowd of people occupied the banks. In the midst of this square the volunteers, in varied uniforms of grey and scarlet, gave a picturesque to the scene, as they moved across the greensward, now wheeling and forming into line, now breaking out into long scattered bodies of skirmishers, and re-forming into close masses and impenetrable squares, and ever and anon changing position and assuming some new and unexpected combination. The most interesting part of the proceedings of the day was, perhaps, the "marching past"—that chosen for our Illustration. Major Harman, who by this time had inspected all the corps, took up his position near the saluting-flag, and the whole battalion marched past in quick and afterwards in double-quick time, the first companies, being those which have had the most experience, executing the movement in a manner worthy of regular troops. When subsequently the whole force on the ground, including cavalry and artillery, marched past in slow time, in review order, with the bands playing in the centre of the square, the scene was an imposing one. The volley-firing and skirmishing were performed with great precision, and, considering that this was the first gathering of the kind, the battalion drill was executed in a most praiseworthy manner. Upon the conclusion of the manœuvres Major Harman addressed the volunteers, praising them highly for their marching, silence in the ranks, their general steadiness, and the manner in which they had executed the manual and platoon exercises. They were a very fine body of men, and he was sure there could not be better material for soldiers. If he were about to go into action again he would not wish to be associated with a finer regiment than the one he saw before him that day.

Our Engraving is from a sketch taken by Mr. W. H. Nutter, of Fisher-street, Carlisle.

THE LATE LORD HERBERT OF LEA.—SEE PRECEDING PAGE.

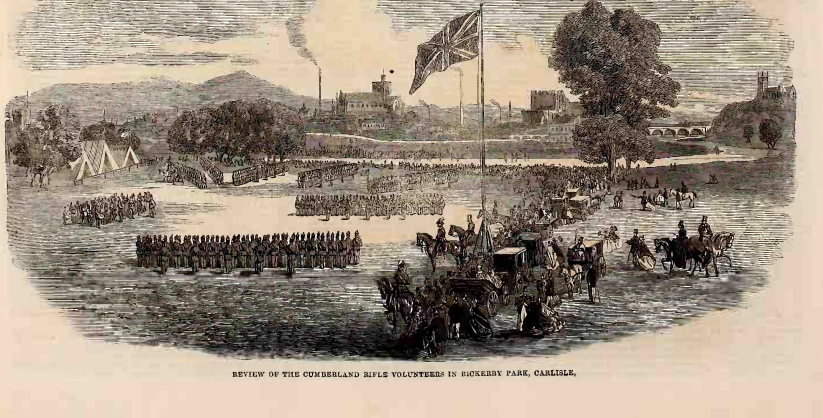
LIFE IN JAPAN.

(By our Special Artist and Correspondent.)

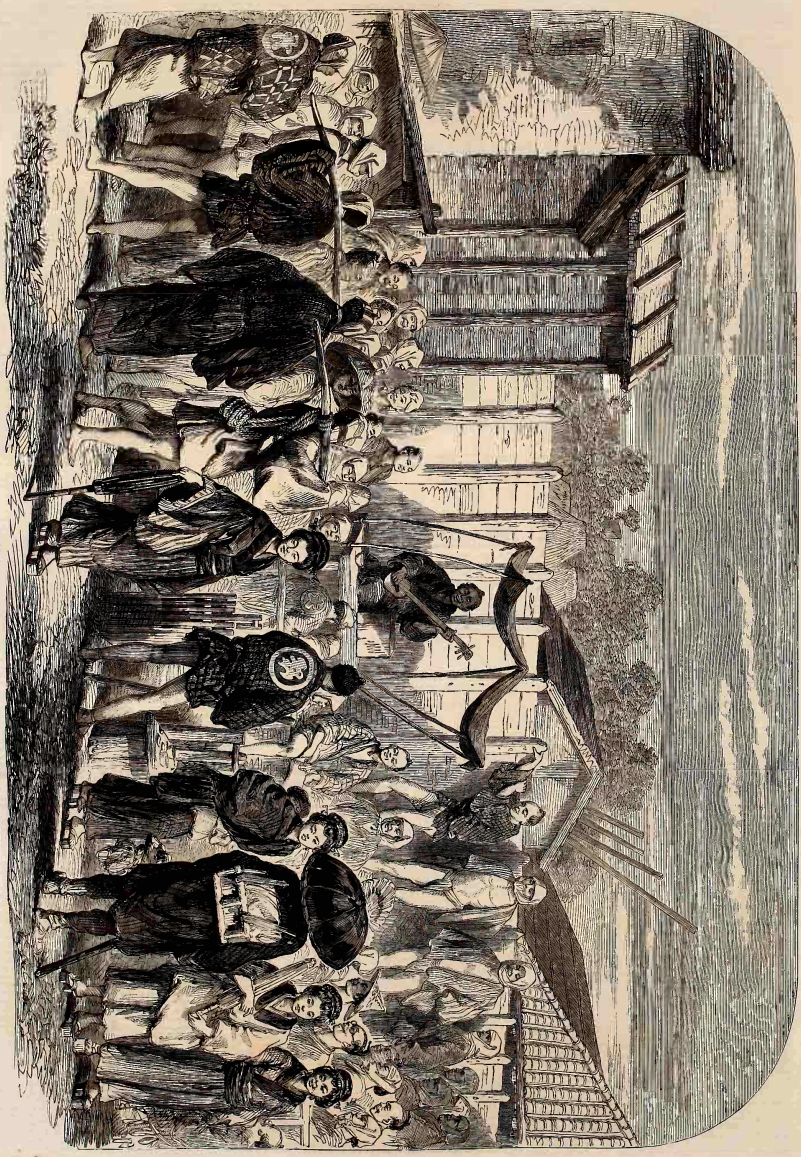
NAGASAKI, Japan, May 19.

AFTER the recent events in Japan a few Sketches from this country may prove interesting to your readers. I shall therefore wander about in search of the picturesque, and forward to you the most characteristic ones by every opportunity. I should have come here after leaving Pekin, but the cold weather interferes rather with the flexibility of the artistic finger, and therefore I deferred my visit till the genial rays of the spring sun had clothed the hills with verdure and given a richer tone to the landscape, producing that serenity of mind so necessary to the production of the fine arts. The Peninsular and Oriental Company's steamer Cimsan being the first vessel advertised to leave for Japan, I secured my passage, and arrived here on the 26th of April. The day was bright and cloudless; a gentle breeze just rippled the deep blue waters of the sea as we sighted the first rocks of the interesting island. Imagine our delightful emotions on nearing the goal! On we steamed, every turn of the screw bringing us nearer and nearer to Nagasaki, and disclosing new beauties; wooded hills and steep rocks, firs, cedars, and bamboos; white-sailed junks, and sharp-bowed fishing-boats, with longitudinally-split sails. As we steamed direct to the hills we could see they were terraced to the summits, the beautiful light traces of the young wheat being exquisite to gaze upon. A signal-staff crowns the summit of a hill; two guns were fired to announce our approach. Now we discovered numerous batteries in all directions. Every gun has a dog-kennel-looking little wooden house over it. We passed some villages embowered in trees, the cottages having thatched roofs, like those in Marlin. A wooded island was pointed out to us as the celebrated Pappenberg, where the Christians were precipitated into the sea. There is a battery at the foot, and probably another higher up, hidden among the bushes. We passed this, and, looking straight before us, discovered the white houses of Decima and the grey roofs of Nagasaki; around us an amphitheatre of hills, junks, sharp boats, villages, and the chimneys of the Japanese factories.

Numerous sampans came alongside; the boatmen having on dirty dressing-gowns and no breeches, and towels round their heads. The Europeans of the settlements came off for their letters, and at night we went ashore to get our first impressions. Rather an odd time to choose, but it had the charm of novelty, and gave one a dream-like feeling in harmony with the occasion; we jumped into a boat and went on shore. A musical native party on the water were singing, accompanying themselves on a guitar of the period. After stumbling about over a lot of stones we arrived in a street paved with flags, and wooden cottages on each side; all of a dingy brown, and missed the brilliant shop-signs of China. A curious shuffling of straw sandals and clacking of wooden patters are sounds peculiarly characteristic of the country, and never to be forgotten; the streets were crowded with young and old men, women, girls, and children, every second party was singing the last favourite Japanese song, giving a grunt at the end of each verse most curious to hear—a regular sigh! Every one looked slovenly in the extreme in their dressing-gowns. The girls had great snakes round their waists, tied in square behind. All turned in their toes, and nobody walked properly. Pastrycooks' stalls, beautifully neat, appeared now and then, and the vendors, with nothing on but a bit of a linen round their loins, were curled away at the almond cakes most dexterously. The shops were mostly open, and the men kneeling down on the mats were selling their goods. The doors were raised about a foot from the ground. A square wooden box, lined with metal, containing a charcoal fire for boiling tea and lighting pipes, was in every house. At night almost everybody carries a lantern. The wood-work of the houses is remarkably neat, and the interiors wonderfully clean. Having finished our stroll we returned to bed, much gratified with what we had seen. The next morning was wet and gloomy, gusts of wind sweeping down from the mountains, and rain fell in torrents. The custom-house officers came on board, two-worded men and boys, with surly countenances, and the interpreter asked numerous questions, in precise English, even to the number of babies on board, and as to their sex: they came in a European boat with a pennant



REVIEW OF THE CUMBERLAND RIFLE VOLUNTEERS IN RICKERBY PARK, CARLISLE.



SKETCHES IN JAPAN BY ONE SPECIAL ASSIST THE SOUTHERN (A DAILY SCENE) IN YOKOHAMA.

and red flag, with a white ball in the centre. We drank sherry with them. The boat that accompanied them was manned with blue and white striped sailors.

Again landed, and again landed, and went to the tea-house, great rending buildings, with steps and large rooms all matted; they made them into my size with screens. The girls were at their toilets, doing up their hair in the manner peculiar to the country; some of the women had their teeth and red and golden lips. We had to take off our shoes as the streets were muddy. Both sides of the street are occupied by these houses full of girls. About four o'clock in the afternoon we came to the native bath-house in state of nature—men, women, and children the native bath-house in state of nature—men, women, and children —i.e. the same square with a fire underneath, nothing daunted by our looking scaped themselves, splashed about, nothing daunted by our looking at them. We went into another house where some Japanese men were only using themselves, eating and drinking tea, while another was playing on a kind of guitar, the banjo. They invited us to join them, while we did. In front of us was a beautiful garden, and on the walls of the room in which we sat were hung and blossom hung in clusters. Numbers of priests, with low swords, walked about the town. We saw a number of girls in mourning (white dresses and white veils), with white handkerchiefs on their heads, and black scarfs round their waists; also an advertisement of a Japanese circus that is to come here at the Italian opera-house immediately on the water's edge; at others the hills are rounded by going to the sea (at apparently a lovely lake. We stopped at night two or three times. The weather was magnificent. Now and then we passed hills of fellig-beans. The sailors had red, and white turbans, and others had a peculiar grey by way of cloth hanging down their heads and uttered a peculiar cry by way of salutation. We passed several forts in course of construction, built on the European model, with stone and masonry, and brass guns on the top. One day we caught a glimpse of the high road to Jeddo, with trees planted on both sides. On the 6th we arrived at Kanagawa, where we camp two more days than at Nagasaki, but beautiful. Two Japanese war-steamers were lying in the harbour, and a few European-looking forts added to the scene. The harbour is on the left of the town, and we took inland. It is the place where the Europeans live. The streets are wide, and the houses are built of wood, with the fronts all open, and with very roofs relieved by white, so beautifully neat and finished that it is a pleasure to look at them. The shops have a most tempting display of all sorts and cuts. Now and then is a European house built of sand that hardens; even the doors and windows are of the same kind of mud straw. The shops have counters, and have a very nice appearance. We went to the Yokuhama Hotel. Most people here live on the ground floor, and some of the rooms of the hotel are fitted up in English style.

I was delighted with the foreign look of the place: nothing European about it. The houses are all of wood on account of the earthquakes. But the strangest thing of all is to see the Japanese remove an entire house by a general clearance on bamboo rollers and beams. Every few yards there are fire-buckets piled into a pyramidal shape, and look-outs with a bigbell. Then there are the guard-rooms and guard of European marines. All the streets here are armed with them and pouch-belts. They look picturesque when out for exercise with the curious hats, some like the top of an egg-cup cut off, and others with lacquered flaps and bows. There are a good many Chinamen here.

We visited a Japanese merchant's house. I never saw such a pattern of cleanliness as that in the interior of his apartments afforded. His wife handed us tea and cakes in a perfectly ladylike manner. It is the same in a Japanese tradesman's house. We had dinner here, and went over to Kanagawa, a nice little town. At the roadside tea-houses, girls attend to the wants of passers-by. One of them was pointed out to me as the prettiest girl in the town by her pocket-handkerchief. Here we saw a funeral. The followers' sword handles were done up in white cloth. Having seen all that was worth seeing, we walked back to Yokuhama through pretty lanes. This thatched cottages and a certain sameness in the women and their neatness and cleanliness put me strongly of Manilla. Storytellers every afternoon stand at the corners of streets. The town boasts a theatre, and I passed by the building—a wooden one—in the afternoon, and saw the women's on the other; a ticket-taker is placed at the door; and there are players there, as at the others, with tickets and numbers on them. The police walk about at night with their rings on an iron rod. The Japanese are gentle and obliging, and like the white people.

Among the Sketches I have inclosed is a large one of the storyteller at Yokuhama. He takes up his post on a table every afternoon, and recites to an admiring audience as to stand and squat around him sometimes he accompanies himself on the banjo, as I have shown. The day I sketched the crowd induced him to sing and play, and he did and grins was the delight when they saw the fellow taken off. The men for the most part have their towels round their heads, and are not remarkable for dress or, in fact, any breeches at all. The girls are on their wooden pattens, and they seem to find no difficulty in running about in them.

Other Illustrations sent with this letter will shortly be given.

DISPPE.

Dieppe, a seaport town of France, the capital of an arrondissement of the same name in the department of Seine-Inférieure, is situated on the mouth of the Arques, on the English Channel. The town proper is separated from its suburb of Pollet by the port, which is accessible at high tide by a flying bridge. It extends about a mile along the coast; and to the westward, on a chalk cliff, stands the castle, an edifice of the fifteenth century, commanding both the town and harbour. The town is well built, the streets are wide and regular, and the houses mostly of brick, ornamented with stone. Dieppe has become much resorted to in summer as a watering-place, and has a handsome bathing establishment. It is a place of very extensive general trade, which has been much increased since the completion of the line of railway connecting it with Paris. Shipbuilding is carried on here, and there are manufactories of cotton, woollen articles, and paper. Dieppe is one of the chief fishing ports in France, employing annually nearly a hundred vessels for cod fishery, and many more of the lobster kind. The seaport, inclosed by two jetties, is large and secure, and admits vessels of 600 tons. It is, however, dry at low water, and the entrance is narrow and somewhat difficult. Dieppe is a packet-station, and there is a regular communication by steamer with Newhaven, Brighton, and Southton. The population of the town is about 17,000. Three centuries ago Dieppe was the most flourishing seaport of France, and one of the first in Europe. The fleets of its adventurous merchants traversed every sea. Sure of finding an indeed Angra, riding in the Tagus, with its merchant squadron, bound for the coast of Portugal in quest of spices, still exists among the Canaries. Its skilful and hardy sailors distinguished themselves by their geographical discoveries and early settlements in the ninth and fourteenth centuries. They were among the first visitors of the New World, exploring Florida, and opening the fur trade in Canada. They established the earliest European colony in Senegal, whence, as well as from the East Indies, they drew the costliest gems, precious stones, metals, and dyestuffs, which they for a long time exclusively supplied their luxurious countrymen. The importation of elephants' teeth from Africa is said to have given rise to the ivory manufacture of carved ivory, which still exists there, and is almost peculiar to Dieppe. The rivalry of the port of Havre, and its superior advantages in internal communication up the Seine, did great injury to Dieppe; and the revocation of the Edict of Nantes, and the English bombardment, inflicted severe blows in addition. Although the extensive equipment of vessels for the cod and herring fisheries has long contributed largely to the support of the town, yet these are much fallen off, and are insufficient to revive its pristine importance.

CHESS.

TO CORRESPONDENTS.

A SUBSCRIBER.—It pended us as it points out. We now have from the editor of the Illustrated London News, stating that the publication of the July number is postponed for a short time, owing to the present pressure.

A. T. (Bath).—Your solution of the twelve match between Messrs. Anderson and Kolisch the plan which we have published is correct. Mr. Anderson has the time of an hour in which to make the necessary moves, and general opinion. On this account he intends to adopted with exquisite success and general approbation. On this account he intends to adopt the same plan in the forthcoming match with Mr. Steinitz.

Mr. Wormald showed the game to Lord Lyttelton, who was much interested in it, and expressed his admiration of them as specimens of play. The arrangement has now received the sanction and approval of the Council, and it is probable that it will be established in future.

Mr. Wormald showed the game to Lord Lyttelton, who was much interested in it, and expressed his admiration of them as specimens of play. The arrangement has now received the sanction and approval of the Council, and it is probable that it will be established in future.

F. T. G.—We have not heard of Mr. Barnett for some time, and can give you no information regarding his matrimonial movements.

J. P. (Leicester).—Mr. Steinitz is still in New York. The next match he will play will be with Messrs. Paget and Potter early next year. For chance!

Mr. Lyttelton.—Mr. Paget has not yet fully recovered, and we advise you to undergo analysis.

Many thanks for your prompt and courteous response to our inquiry.

J. P. (Leicester).—Mr. Steinitz is still in New York.

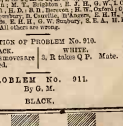
SOLUTION OF PROBLEM No. 910.

WHITE.	BLACK.	WHITE.	BLACK.
1. B to R 4th	Any move	2. B takes Q V. Mate.	
2. B to K B 2nd	Interposes.		

PROBLEM No. 911.

BLACK.



WHITE.

White to play, and mate in four moves.

CHESS IN LONDON.

Match between Messrs. Anderson and Kolisch.

The latest between these distinguished players, and the twelfth performed, was played on Tuesday evening last, and has already been drawn. The result is not satisfactory. We regret, of course, to see a game of any kind terminated by such means, but it is not by a few games that we can form any conclusion as to the relative strength of two players, or to the superiority of either can be fairly established. Had not the first four games resulted in favour of Mr. Anderson or Mr. Kolisch had won the first four games without his opponent scoring one, that fact, in the absence of any counter-balancing victories obtained by the other combatants, would not have sufficed to prove that the victor was a better player,—but a decided advantage would have been gained. In any case, the first four games have been equally defeated,—*à fortiori*, the difficulties of a single game between them equally defeated,—*à fortiori*, the difficulties of a single game between them are increased, and it is more reliable for the question. Our own opinion is that Mr. Anderson in his best day attained a much higher standard of play than Mr. Kolisch has reached; and we cannot admit that the result of the present brief encounter proves that he is a strong player of fifty games. Mr. Anderson may not be able to play it here, but Mr. Kolisch can easily go to Berlin; and if he does so, and fails, there will not be difficult to pronounce definitively upon their relative capabilities. Till then, we take leave to reserve our opinion.

Annexed are the third and fourth games:—

GAME IV.

(Sicilian Opening.)

WHITE (Mr. K.)	BLACK (Mr. A.)	WHITE (Mr. K.)	BLACK (Mr. A.)
1. P to K 4th	P to K 4th	(He might, we think, have played P to Q 5th.)	
2. Kt to K B 3rd	P to K 3rd	15. B takes K B P	R takes B (ch)
3. P to Q 4th	P takes P	16. R takes B	P takes R
4. Kt takes P	Kt to K B 3rd	17. B to K 3rd	P to Q 5th
5. B to Q 3rd	B to Q B 4th	18. Q to K R 6th	P to K B 4th
6. B to K 3rd	P to Q 4th		
7. P takes P	B takes P	(After this, fairly position is nothing else. His best play appears to be B to K 3rd. In any case, however, he would have had a difficult game.)	
8. Castles	B to Q 3rd		
9. P to K R 3rd	Castles		
10. Kt to Q B 3rd	Castles	(Very well played.)	
11. P to K 5th	P to K 5th	19. K takes Q P	
12. Q R to Q sq	B to Q B 2nd		
13. P to Q B 4th		20. B takes Kt	Q to Q 2nd
		21. B to K 3rd	Q to K 3rd

(The opening on both sides is played with considerable skill. Mr. K. appears to have a strong game. White would probably have continued with P to Q 5th instead of P to K 5th, and thus have obtained a powerful attack.)

14. Kt to K B 2nd	Q to Q 3rd
	P to Q R 3rd

And Black surrendered.

GAME IV.

(Irregular Opening).

WHITE (Mr. A.)	BLACK (Mr. K.)	WHITE (Mr. A.)	BLACK (Mr. K.)
1. P to K B 4th	P to K 4th	(The novelty of a Pawn or Pawns here was first introduced by Mr. Boden, and has since been a favourite impediment of defensive tactics, and occasionally of attack also. Subjoined is the usual continuation.)	
2. P to K 4th	P to Q 4th		
3. B to Q Kt 5th (ch)	Kt to Q B 3rd	19. P takes K P	Kt takes P
4. P to K 5th	P to K B 3rd	20. Kt to K 4th	B to K 3rd
5. P to Q B 4th	B to Q R 3rd	21. Kt to K B 3rd	B to K B 3rd
6. P to Q B 5th	B to Q 2nd	22. P to Q B 6th	P takes P
7. Castles	Kt to K B 3rd	23. B takes P	B takes B
8. P to Q 4th	P to K 3rd	24. P to Q 7th	P to Q B 4th
9. B to Q Kt 2nd	Castles	25. R takes B	R takes B
10. Q to K 2nd	Q to K Kt sq	26. R to K B sq	R to K B 3rd
11. Q R to Q sq	P to K Kt 3rd	27. Q to K B 2nd	P to K Kt 4th
12. Kt to Q 2nd	P to K 5th	(ch)	
13. P to K R 3rd	P to Q 5th	28. R to K B 7th	

And White wins.

CHESS ENIGMA.

No 1211.—By Mr. P. Deacon.

White: K at Q R sq, R at K R 6th, B at K 3rd, Kt at K B 5th. Pn at K 4th and Q Kt 2nd.

Black: K at K B 5th, Q at Q R sq, R at K R 7th and Q Kt sq, B at Q 6th and Q R 2nd, Kts at K B 6th and Q Kt 6th; Pn at K B 2nd, Q Kt 6th, and Q R 3rd.

White, playing first, to mate in six moves.

LITERATURE AND ART.

The special correspondent of a London daily newspaper who undertakes to stop the retreat of a defeated army, to restore order and confidence among masses of disheartened fugitives, and who otherwise assumes the functions of an honorary commander-in-chief, is certainly a novelty. Cæsar, it is true, wrote his "Commentaries," and the first Bonaparte his bulletins, but then neither Julius—or J. Cæsar of Rome—nor Citizen calls him—nor Napoleon, were professionally literary men. Mr. William Howard Russell, LL.D. of the University of Dublin, and ambassador extraordinary from *Printing House Square* to the United States of America, seems to have been "everybody's friend" on the occasion of the disastrous rout of the Army of the Potomac. Perhaps, by whatever name the horrible fray of the 21st of July, 1861, is history to be known. Mr. Russell essayed to stop the rout of the wild career, to put an end to the "stampede" to dissipate the fears of cavalry in the rear, with which the runners-away were beset. Civilian as he is as Crimean and Indian Mutiny reporter and Light Dragoon "per pro" he has some claims to be considered as an old soldier; but it is almost needless to say that he got very little clear view of his pains, and testifies that the most very narrowly escaped having his brains blown out by "stampeding" Northerners. What says old Butler in "Hudibras"—

> "Some have been wounds improve
> With often get——"

The *Renaissance* bids us to leave the quotation unfinished. Altogether Mr. Russell is a shocking coward; although, were he to be, we should infinitely prefer hiring in the smug editorial sanctum of the *Army and Navy Gazette* in Wellington Street, Strand, W.C., to be followed by the "rampage" either with the "grand army of the Potomac" or with the legions of General Beauregard. Who was the Scottish Janeite described by Sir Walter Scott as having the nickname of "Craig in Peril" given to him, from his well-nigh miraculous avoidance of hanging at the hands of the Duke of Cumberland's adherents? Mr. Russell never fell an uncomfortable sensation in the region of the cervical vertebræ? Are his dreams never troubled by visions of Judge Lynch?

We are glad to hear that Mr. Russell met our Artist-correspondent, Frank Vizetelly, at Gravelotte, and that he was doing well, followed by the inseparable Nimrod, who, with an eloquent tail, seemed desirous of a monstrous platform nearly blocking up the apartment. Why does not Mr. Herbert use a "bridge" as the theatrical scene-painter does—a simple plank accommodated to the tail, sustained at both ends by pots and brushes, and working up and down by means of a windlass between two properly-placed chairs? Mr. Russell would take up no more room than a large bottle-pizzle read, and might be easily transported from place to place. We tell truth, many of the wounded received in the late battle of Gravelotte through a short probation in the scene-room of a theatre. The large and freshaded process of distemper is an admirable intermediate stage between the field hospital and convalescence. A critic in *Saunders and Otley's Country Gentleman* has discovered that he is reptile with pleasure from Thomson's "Seasons" down to Tennyson. Our own reminiscence of "Tannhäuser" are connected with a dreadful lyric performance we once heard in the Bois de Boulogne, and which gave us the horrors for a fortnight. Ah! the screaming, the jangling, the harping, the booming of the Wagnerian Tannhäuse waltz—the Venusberg waltz! Of course, a very wonderful opera, and was composed by the famous Herr Richard Wagner, and when we saw it the prima donna was the equally famous Mademoiselle Johanna Wagner, "Wagner with the golden hair." Herr Wagner is said to be, par excellence, the composer of the "Music of the Future." We are glad that he is not the composer of "Tannhäuser" belongs to the "Music of the Past."

Sir Edward Bulwer Lytton's "Lucretia; or, the Children of Night," will appear in *All the Year Round*. Mr. Trollope's newly-developed comic epic of Frowen, Jones, and Robinson given, we are told, has doubled circulation for the publication in which it appears. *The Guardian* says that nobody can understand what Mr. Trollope means. However, the delightful author of "Barchester Towers" and "Framley Parsonage" is not a humbug, and on his return he will doubtless tell us in very intelligible language what he "thinks of the Civil War."

Among the curiosities of literature should be reckoned the "joint-stock books," published for a philanthropic purpose. Such a book was the "Cook's Own Book," published in Boston, U.S., in 1832, by Messrs. George Send, Charles Noller, almost every French literary celebrity of the day contributing. The profits of which were given to the widow of a thirty years since indeed, and the profits of which were given to the relief of the family of the publisher. The *Gentleman's Magazine* for June-Marrow, likewise a publisher. [1833 gives an account of a similarly conducted affair, and we have finally engaged in getting up a joint-stock book whose profits were to smooth the wavy pillow of a widow, but we were forestalled by the publication of the work but a few weeks. Yet another joint-stock undertaking now claims our notice. Everybody has heard of Mr. Thomas Hood's "Song of the Shirt." Poem by Thomas Hood, Esq., has appeared in a pamphlet, called the "Victoria Regia," published by Partridge and Co., Paternoster Row, the profits of the fair sale, edited by the graceful and accomplished Miss Adelaide A. Procter, and containing original contributions from Alfred Tennyson, Robert Browning, M. Taine, Mary Howitt, Alfred Tennyson, Professor Maurice, Dean Milman, Anthony Trollope, Miss Dinah Mulock, Miss Christina Rossetti, Miss Jean Ingelow, Mrs. Gaskell, Mrs. Lynn Linton, Mrs. Grote, and many more. A goodly gathering; and we need scarcely say that the success of the "Victoria Regia" has not been small.

The Padre Venosta, learned theologian, copious linguist, fervid orator, exquisite poet, and accomplished man, died at Rome, on Saturday last, aged sixty-nine. He had belonged since his fifteenth year to the order of the Jesuits. Padre Venosta had the brilliancy of his discourse and the extent of his erudition, earned the title of "the Italian Bossuet." His great work was "The Influence of the Sixteenth Century." His panegyric on Pius VII. passed through twenty editions; but the book on which he most prided himself—even as Jeremy Taylor thought of "The Rule of Conscience" his sermons *opus*—was entitled "De Methodo Philosophandi," a defence of the scholastic philosophy, and which brought him into sharp collision with the Abbé Lamennais. From Koningsberg comes also the news of the death, in his seventy-eighth year, of Dr. Drumann, the historiographer of Imperial Rome.

NAVAL AND MILITARY INTELLIGENCE.

The examination for admission into the Royal Military College, Sandhurst, will take place on Dec. 16, and that for the admission of candidates to the Royal Military Academy, Woolwich, on Jan. 8, 1862.

The Duke of Cambridge has awarded the good-service pensions placed at his disposal to the following officers:—Major-General L. A. Hall, Royal Engineers; Captain S. Goddard, 18th Foot; Captain C. Grant, 23rd Regiment; and Captain J. Brennan, 60th Rifles.

Admiral Sir Barrington Reynolds, K.C.B., died last Saturday morning at Penair, his residence, near Truro; and Vice-Admiral Sir Thomas Herbert died on Friday morning at his residence in Grosvenor-square, after a protracted illness.

Arrangements are making for commencing at once the military roads in connection with the fortifications at the south-west of the Isle of Wight. A railroad of 3 miles in length is to be established in the neighbourhood of the formation of the roads.

An examination by the Council of Military Education of candidates for commissions in the Army will copy the *Gazette* Service *Gazette* take place at the Royal Hospital at Chelsea next 4th of November.

As a penalty for the late delay in the arrival of the Channel fleet from Ireland, it is reported that moorings are at a very early date to be carried from Portland Breakwater for the use of the Channel squadron, when not required for the artificial harbour. As the pier advances further moorings will be laid down.

Yesterday week a numerous party of officers and men of the Royal Marines at Chatham were marched to the ramparts, where they were exercised in sounding operations with the ranges of the new Admiralty Engineers. A party of troops of the Line were also practised in embarking and disembarking from one of the vessels of war in the harbour.

Colonel Smith, late Assistant-Adjutant-General at the Cape of Good Hope, has been appointed to succeed Major-General Charles Downing, Deputy Inspector of Recruiting, who has been appointed Militia in Ireland, who relieves Major-General Trollope, C.B., late 62nd Foot, in command of the troops at Cork.

The officers of the Army Medical Department feel greatly dissatisfied at the recent appointments to their rank and superintendence made on them by the Royal warrant of October, 1858. There is little doubt that this branch of the service will be the first to suffer in the event of war, and it is most essential that, in this important branch of the service, its members should enjoy the confidence of the country under such circumstances as our Parliamentary discussion.

THE CURRAGH CAMP.—Another grand review of the troops present at present encamped on the Curragh took place on Wednesday week in presence of a large assemblage of spectators, who collected from the adjoining counties. The Right Hon. Sidney Herbert, M.P., visited the camp, and was attended by his aide-de-camp, Captain Cardwell, of the Coldstream Guards, attached himself to Lord Carrick's company, and manœuvred with them during the day. The troops were marched on the ground by Major-General the Lieutenant, with many of the nobility, were present on the occasion. After the review a dinner party and distribution of prizes took place at the Royal Highness. In the evening the Prince honoured with his presence a dramatic performance in the hall, the scholars of the Curragh Infantry School, and the benefit of the soldiers' wives now in camp.—After the torrents of rain which fell during the week all the tents were struck on Monday, and the troops sent to the outside. Deep drains had to be cut through several parts of the camp to carry off the water, and by this arrangement and the fine weather of the Sunday the weather was unexpectedly fine but forbidding, and not a single person was out on the ground. On Tuesday the troops were as given o'clock, attended by Major-General Bruce and Staff, and marched to the ground in the Protestant Church, where he preached a short service, after which he walked back to his quarters, where he partook of breakfast. The Royal Dragoons, a certain number of which have been under canvas for the last month, and a portion of which are now under canvas, were also present on the ground. It is stated that there will be a concentration of troops at the Curragh camp that has not been seen for years, and that it is intended to be present at the grand review to be held in presence of her Majesty the Queen, the Prince Consort, and the 30th Brigade at Aldershot, which, should it be stated orders will be issued for the troops to march to Merry-borough in the county of "The Blues." The Prince, who is now in his eighteenth year as an officer as a soldier, will march with the troops, as he appears to be most anxious to have the very best example to the soldiers in the encampment.—*Freeman's Journal*.

THE VOLUNTEER MOVEMENT.

Last Saturday was a more than usually exciting day among the metropolitan corps. At Highgate the 14th Middlesex had a grand field-day, on occasion of the inspection of the prizes gained by the corps in the Queen's (Westminster) Rifles met at Richmond Park, and went through a series of military manœuvres, under the command of Colonel Fitzroy. A number of corps mustered on Wormwood Plain, where they were reviewed by Major-General Sir Frederick Smith, Inspector of Volunteers for Middlesex, and he thought all the corps had gone through the various movements very creditably, but the one very noticeable point was the steadiness of their fire. The annual meeting of the members of the 2nd or South Middlesex Rifles took place last evening, at their headquarters, the Horse-shoe Tavern, Wallace-green. The members of the 37th Middlesex (Bloomsbury) Rifle Volunteers went through the movements of a field day at Wimbledon. The regimental prizes at this corps will be shot for in the first week of September.

At Lambeth, a review of the 3rd Surrey Rifles took place on Saturday, which is chiefly composed of working men, took place. The men also engaged in athletic sports.

During the past week detachments of the 14th Kent (Woolwich Dockyard) Artillery have been engaged in practice with 32-pounder and 56-pound gun guns at the Government Marshes, Plumstead. The result was highly satisfactory, both at a range of 1000 yards the target was several times hit.

Sir George Wombwell has received upwards of 600 volunteers, representing all parts of Lincolnshire, at Newton-le-Willows, on Saturday last. The display was a martial one from the close of the proceedings in the afternoon, and continued, called to the front and addressed in terms of complacency by Sir George Wetherall.

The volunteers who have just completed their training camp at Hythe were seventy-two in number. The prizes were as follows:—The first long-range prize for an Enfield rifle (to be won by a gentleman of the corps, and not by any other object of the same value as the winner may select). Second long-range prize for the same weapon, value £5, at 600 yards; 500 yards, 400 yards, and 200 yards. The silver cup, which, Short-range prize, for the most points at between 150 and 200 yards, shall consist of the value of £5, and the winner may select. The prizemen were:—1st long range: Colour-Sergeant Lincoln, 2nd Corporal Hall; 2nd long range: Lieutenant Hall, 1st Corporal Hall; 3rd: Captain Edward A. Maclie, 4th West York (Wakefield).

The ladies of Streatham have presented prizes to the 4th Surrey Rifles, which were shot for on Saturday last, the ranges being 200, 300, 400, and 500 yards, three shots at each distance, Henry Martini rifle. The first prize was won by Lieutenant Corpland, with 47 points. On the same day a May rifle, presented by Ensign Thompson, was shot for, the ranges were 100 and 200 yards, 10 points. This prize was taken by Mr. T. Kingsmill, with 13 points.

The match rifle contest between the members of the 1st Surrey (Salisbury) Rifle Volunteers came off on the practice ground at Laverstock, near Salisbury, on Wednesday (Thursday last week). The first prize, open to all competition consisted of the silver challenge cup, presented to the corps last year by Mr. Alexander Mail, to which was added a handsome gold medal, given by Major Leach, the prize being for the best shot at 200, 500, and 600 yards, five rounds at each distance. A second prize, a pair of pistols, presented by a friend of the corps, was also given by Major Leach for the second-best shot at the same ranges. The first prize was forty-three points out of a possible 75. The highest scores made were 17 each by Corporal Sheppard and Private Watson, of the 2nd company, and Corporal Baker (who was the champion shot last year, with 18 points), of the 1st company. On shooting off the tie Sheppard was declared the winner of the first prize and Watson of the second. The badges and cap presented by the Mayor of Salisbury and a silver pocket flask were next contended for at 200, 500, and 600 yards, with five rounds at each distance. There were forty-three competitors, and after some excellent general firing, particularly of the two longer distances, the first prize was won by Private W. Stilford for 21 points, and the second by Ensign G. Brown for 20. The two next prizes were also of a very efficient, and consisted of a silver cup and a pair of silver salvellers, with spoons, the ranges being 400 yards, with five shots each. Corporal Baker, 1st company, made the highest score, 19 points; Sergeant Farrant and Chapperton six each. On the tie being shot off the former carried the second prize.

A series of matches among members of the 1st Administrative Battalion of Gloucestershire Rifle Volunteers, on Tuesday week, at the Cheltenham Recreation Ground, took place. The first prize, a Wesley Richards rifle, given by Colonel Paine, Inspector-General of the 1st battalion, was competed for by the three companies of the Cheltenham Company, and was won by Lance-Corporal Cole for the Cheltenham Company. The second prize, a breech-loading rifle, presented by Captain Gyde, of the Cheltenham Rifles, of Holford Castle, competed for by the members of each company in the three companies, was won by Captain Nelson, of the 16th (Leckhampton) Company. The third prize was a silver cup, given (through Dr. Watson) by two ladies of Bath, and was also won by Cole.

Yesterday week the 1st battalion of the East York Rifle Volunteers, commanded by Major Saltmarshe, was inspected by Colonel Price Hewitt, on various military manœuvres were executed to a great extent by the men, and were followed by the presentation of a silver badge, the gift of Mr. Bolton and Hendersdale to the Howden Volunteers. On their behalf Mr. Clark, of Knedlington Hall, presented it to Captain Clarke, for the use of the corps.

On Thursday week several companies of the North Riding Rifle Volunteers, consisting of the Richmond, Northallerton, Bedale, and Masham Companies, assembled at Northallerton. They were inspected by Port Chichester, who put them through the battalion and other drill, and highly commended them for the manner in which they acquitted themselves.

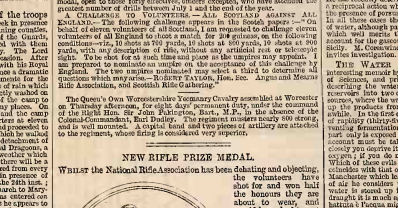
The various corps composing the 1st Suffolk Administrative Battalion had a field-day yesterday week on Mills-green. The battalion, which was under the direction of Colonel Ainsworther and Major Tyrell, executed a variety of evolutions in a manner which, on the close, called forth the praise of the officer in command. On Monday the 3rd Suffolk battalion had a field-day at Hadenwell, under the command of Lieutenant-Colonel Thellusson. The East of Stradbrook, Lord Lieutenant of the county, inspected the battalion. A company of the 6th Suffolk Rifle Volunteers, under the command of Captain Ransome, among the members of the Stradbrook company, has been won by Mr. Pulham.

A number of the No. 1 corps of the Norfolk battalion competed on Thursday week for prizes of £5, £3, and £1. The first prize, which took the form of a handsome silver cup, was won by Private Sergeant Cunningham, of the third by private Thompson.

The Queen's Own Worcestershire Yeomanry Cavalry assembled at Worcester on Thursday afternoon, for eight days' permanent duty, under the command of the Right Hon. Sir John Pakington, Bart., M.P., assisted by Major and Colonel Chamberlain, Earl Dudley. The regiment musters nearly 800 strong, and is divided into four troops, each troop and two pieces of artillery are attached to the regiment, where firing is considered very superior.

NEW RIFLE PRIZE MEDAL.

WHILST the National Rifle Association has been debating and objecting, the volunteers have shot for and won half a million rounds, and are about to wear, and would have to put up with a mere leaden dumpy or a dumpy, flabby, pewter Queen's Bisley Swan, of Ayrshire. Has anyone ever seen a medal for reward, and, after a great deal of labour, has succeeded in imitating nearly the whole of the Scottish Rifle Union? To adopt a medal, the design of which was suggested by him Messrs. Hunt and Roskell, of New Bond-street, by whom the medal was produced.



It consists of a simple but sufficiently distinct design, in which Britannia is seen crowning the victor in a rifle contest. The reverse of the medal is left open for the legend inscribing around and around the obverse and under the tablet a small inscription recording the contest, the date, and the name of the winner. The conditions of its being won and worn, can be placed. It is also furnished with a swivel and ribbon. The Earl of Eglinton has ordered a gold medal, and the council of the Scottish Rifle Union following his example, the medal bids fair to be adopted as a national one.

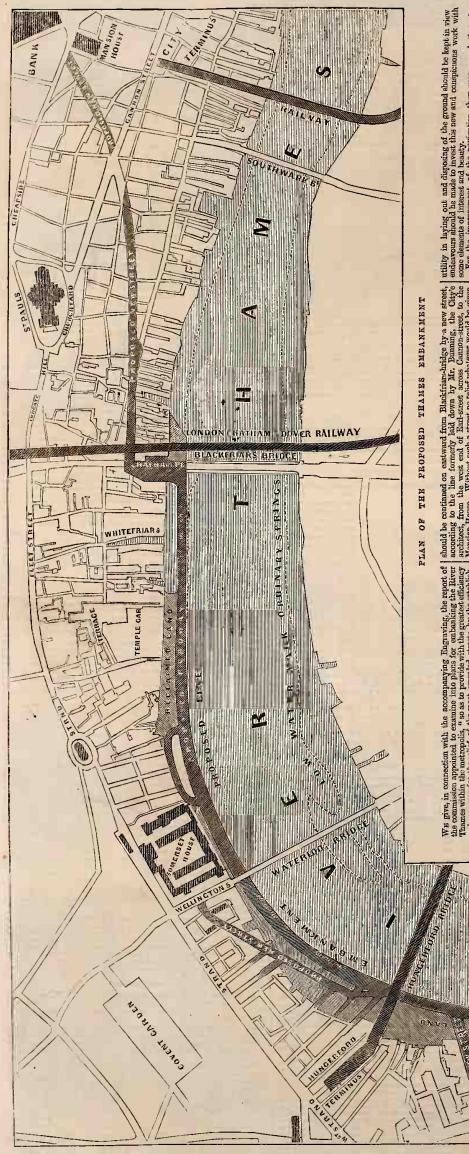
GUIDE-BOOKS.

Punctual to the moment of requirement, the guide-books of the year have been issued in increased numbers, and in most instances with the eleventh edition of "Black's Picturesque Guide to the Lakes," which fact speaks for itself and for the value of the book. Messrs. Adam and Charles Black, of Soho-square, have Wales and Surrey, which volumes have been compiled from the best topographical authorities, and which, containing historical, archæological, and botanical, romantic descriptive matter, are rendered strictly practical by the system of route and branch routes which have been compiled on a novel and convenient principle.

Mr. Stanford publishes a manual for the traveller, under the title of "Stanford's Library Companion for Tourists in Wales," which, as the name implies, is descriptive of natural scenery, historical, archæological, and legendary. It has been prepared by Mr. Thomas R. G. Wallcott, whose name is familiar in connection with previous works of this nature, and, as a whole, it affords the advantage of a single and comprehensive guide-book to a portion of the country which has hitherto been scattered in a host of books, it contains much more than is suggested by its simple title.

Mr. John Murray has issued his "Handbook for Travellers" one for North Wales, a district which within the last two years has been made more accessible to the tourist by the construction of railways. The volume is, as usual, compiled with great care, and is fitting assistance to those who seek their autumn relaxation in this direction.

"PLEASE, SIR, MAY I GROW?"—At stated periods the governors of Christ's Hospital receive applications on behalf of his examination as may have complaints to make or petitions to prefer; and of the numerous communications which are thus addressed to the committee, "Please, Sir, may I grow?" it sounds odd to hear the boys call out, "Please, sir, may I grow?" It sounds odd to hear the boys call out, "Please, sir, may I grow?" It sounds odd to hear the boys call out, "Please, sir, may I grow?" It



PLAN OF THE PROPOSED THAMES EMBANKMENT

We give, in connection with the accompanying Engraving, the report of the commission appointed to examine into plans for embanking the River Thames within the limits of the metropolis, and for the formation of a new and spacious thoroughfare, for the improvement of the navigation, and for the drainage of the low-level sewer without disturbing the Strand or Fleet-street, and also to report upon the best means of providing increased railway accommodation. The report does not simply introduce to the commissioners was made known to the public by advertisement in the newspapers, and more than fifty plans were sent in accordingly.

The main features of the majority of the plans are an enlarged roadway to the Strand, and the formation of a new street from the Strand by the way to the Victoria Embankment; in others, railways in addition to the railway and docks have been proposed; while in a few a solid embankment, with a roadway only, from Blackfriars to Westminster-bridge is stated. Amongst these latter is a plan submitted by Mr. Bazalgette, one of the engineers to the Metropolitan Board of Works, which is more simple than any of the other designs the land open which an efficient and economical scheme may be founded. They however, express their high approval of the principle of the plan, and of the manner in which it is displayed in many of those designs which contemplated the construction of docks and railways.

The wharf property between Westminster-bridge and the Temple Gardens is of the most part devoted to the coal trade. The accommodation which it affords for the landing and delivery of coal by the new system of unshipping in the docks into railway trucks, and the consequent relief to the streets from the passage of carts. They are of opinion that public convenience no longer necessitates the continuance either of the coal or any other trade in the immediate neighbourhood of the Strand, and that the formation of the proposed street and suburban docks for the sake of preserving the existing wharves would be a needless sacrifice of property, and would be attended with the formation of the embankment, and add to the beauty of the river. The wharf property, however, between the Temple Gardens and Blackfriars-bridge is so important in a commercial point of view that they recommend its preservation.

Having regard to these and other considerations, the commissioners are of opinion that if the public convenience requires the construction of a new street from the Strand to the Victoria Embankment, the best line for such a street would be from the Strand, by the way of Milford-lane, to the Temple Gardens, and thence by the Victoria Embankment to Blackfriars-bridge; and that the new street should be formed of a width of 80 ft. between Westminster-bridge and Blackfriars-bridge, by means of an embankment and roadway; and that the new thoroughfare thus created should be continued on eastward from Blackfriars-bridge by a new street, according to the line formerly laid down by Mr. Bidmeiar, the City's architect, to the City-road, and thence to the Eastern Counties Railway Mansion House. Without such a street no relief whatever would be given to the crowded thoroughfares of Ludgate-hill, St. Paul's-churchyard, and Cheapside.

The line of embankment at Westminster would coincide with the present line of the shore, and the roadway would be carried on a viaduct, which would nearly follow the line laid down for the Corporation of the city of London in 1841 by Mr. Walker, Captain Bolton, Mr. Saunders, and Mr. Cubitt, and would be 100 ft. wide, and 30 ft. in height from the bed to above Trinity high water.

The road would commence at Westminster by a junction with the Victoria Embankment, and would be 80 ft. in width, on the eastern boundary of the Temple Gardens; from this point the road would be reduced to 70 ft. in width, and carried on a viaduct supported on arches, and would pass in front of the Temple Gardens, and be constructed so as to leave a breadth of water for the convenience of the City wharves of not less than 200 ft. The Victoria Embankment would extend between the piers under the ascending road would be left available for barges to lie, and afford easy access to the water between the structure and the shore.

From Westminster-bridge to the eastern boundary of the Temple Gardens the river wall would be carried out 100 ft. beyond the line of the whole breadth; which breadth opposite Richmond-terrace would be 220 ft. From the eastern boundary of the Temple Gardens to Blackfriars-bridge the river wall would be carried out 50 ft. beyond the present line, and the whole breadth would be 170 ft. The depth at low water would be about 20 ft.

With respect to the appropriation of the reclaimed land, the commissioners would recommend that as much of it as shall be in front of the Houses of Parliament should be laid out as a garden, and that the remainder should be appropriated as shall be found most convenient for the accommodation of the occupiers of the houses, and that the portion in front of the Temple Gardens should be laid out as a garden, and added to the Temple Gardens; and that the remainder should be dealt with in a similar manner. The other portions of the reclaimed land may be let upon lease for the benefit and recreation of the public and may also be appropriated for building purposes.

The commissioners are of opinion that the new street should be formed by the way of Milford-lane, as it would be about 20 ft. wider than the present line of the streets in the Strand; and that a new street should be formed passing from the new street in front of the Temple Gardens to the Victoria Embankment, which would offer eligible sites for building purposes, and also that the new road, if it should hereafter be thought fit so to settle the ground, may be carried over the Victoria Embankment to the Chelsea-road.

They, however, feel it their duty to recommend that while economy and utility in laying out and disposing of the ground should be kept in view endeavours should be made to invest this new and conspicuous work with such architectural character as may be practicable.

For the improvement of the navigation they recommend that the existing shoals between Waterloo and Westminster Bridges should be removed, and that the channel should be made of a uniform width rather than a uniform low-water channel of six feet in depth at ordinary spring tides, and that the channel should be made as straight as possible, and by this means the current is more equalised in velocity. If a straight line be not practicable, the curves should be as few and as large as possible. The effect should be produced on the river from the diminution of its capacity by the proposed embankment, and the consequent increase of velocity and higher up the river by dredging, or by a tidal reservoir, to compensate for the loss of capacity for the reception of the tidal water. The latter would naturally devolve on the conservators of the River Thame.

The embankment and street proposed will afford an opportunity of making a complete system of sewerage for the district on the north side, and at the same time facilitate the construction of the sewer eastward of the Houses of Parliament.

The commissioners are not prepared to recommend the construction of an embankment on the Surrey shore at present, but if hereafter it should be found necessary to provide increased railway accommodation, the plan proposed for the Middlesex side will not in any way interfere with it.

The commissioners have not considered it necessary to enter into the enhancement and roadways, and also acquiring the property on the City side, and forming the new street to the Mansion House, at £1,500,000. They have, however, stated that they have no doubt that the money required for the purpose could be raised on loan, to be repaid by annual sums at the disposal of any of the reclaimed land on the bank of the river for building purposes.

Parliament having appropriated the coal dues to provide for the outlay necessary for this great work, it only remained for the commissioners to consider the best means of applying the money to the most beneficial purpose.

In carrying out the magnitude of the work, the important and varied interests to be dealt with in a similar manner. The other portions of the reclaimed land may also be let upon lease for the benefit and recreation of the public and private, which will be affected, and the utmost economy for the early completion of the undertaking, are objections that the coastal and navigation interests of the country, and the large interests involved, have been specially submitted by her Majesty, in order to ensure the speedy and economical completion of the undertaking, that the commissioners have not considered themselves an opportunity for the improvement of the river and subcommission of inquiry.

The report is signed by William Cubitt, Joshua Jebb, Douglas Galton, Edward Bazalgette, Henry A. Hunt, John Robinson M'Clean, and Henry Law, Engineer-in-chief, secretary.

THE ILLUSTRATED LONDON NEWS.

No. 1103.—VOL. XXXIX.] SATURDAY, AUGUST 17, 1861. [WITH A SUPPLEMENT, FIVEPENCE

BULL RUN AND ITS CONSEQUENCES.

THE Americans of the North have taken their utter rout in very good part. The panic which struck the "army of the Potomac" has been met by a corresponding display of fortitude on the part of the community at large. Congress and the Administration have acted in a truly Roman spirit. The Canne of Virginia has not caused them to despair of the Republic. Renewed vigour has been the only order of the day at Washington. Northern journalists, to their credit be it said, have not sought to extenuate nor disguise the disgraceful facts which accompanied the flight of the army in which they took so much pride. Exposures worse than those of Mr. Russell are freely published in the journals of New York, Boston, and Philadelphia. The first thought has been, not "What will England and France say?" but "What are the causes of this great disaster, and how shall we act so as to do better next time?" Consciously or unconsciously, they have emulated the spirit of English journalists during the disasters of the first Crimean winter. National vanity has given way before loftier considerations, and, just as the unsparing confessions and criticisms of our newspapers paved the way for reform and reorganisation in every branch of the service, so the application of the same remedial agency in the United States, when backed up by the unsubdued confidence of the people, augurs well for the recovery of their military prestige. Sooth to say, we like the Northerners better under this aspect than in that late hectoring mood when they boasted that the Southern armies would all be driven into Texas by January next, after which Mr. Davis and all his Cabinet, and Beauregard and his Generals, were to be hanged; while we English were specially selected as the objects of the undying vengeance of the victors, because, in common with the rest of Europe, we recognised the Confederates as a belligerent power, and because, in common also with the general current of European public opinion, and in perfect good faith and the most friendly spirit, we ventured to argue that peaceable separation was a better solution of the problem for all parties than a civil war on the largest scale, of the fiercest character and the most doubtful results. The first frost of adversity has withered this vainglorious spirit. The North recognises in the South a foe formidable on her own soil; and

THE CIVIL WAR IN AMERICA: CONFEDERATE PRISONERS CAPTURED BY UNITED STATES' PICKETS BETWEEN FAIRFAX AND MANASSAS JUNCTION, VIRGINIA.
FROM A SKETCH BY OUR SPECIAL ARTIST.

the anti-British rabies is so extinct among them that the tender of a regiment of British volunteers which was made to the authorities of the State of New York in April, and supercilliously rejected, has been graciously accepted by the Federal Government in July. The spoiled children of fortune need a little adversity to bring out the finer points of their character. The dazzling sun of a marvellous prosperity had shed its influences upon them so long that they cannot know themselves, and dreamt the world was at their feet. Now that that era has passed away, and a destructive tornado is scattering to the four quarters of heaven the accumulated fruits of a long peace, the men seem more heroic than before. The Southerners share equally with the Northerners in this apparent increase of stature. Sacrificing without a sigh every luxury and many of the necessaries of life—a poorly equipped and cared for in many respects as the French patriot armies of 1792—they rise in the sympathies much more now when fighting on the heights of Manassa for their national independence, as the French fought in the same cause on the heights of Valmy, than when their chiefs were dominant at Washington, browbeating and challenging every anti-slavery representative, when enthusiastic meetings were presenting gold-headed canes to the ruffian assailants of Charles Sumner, Horace Greeley, John Hickman, and other non-duelling, anti-slavery champions, and when Palmetto volunteers rushed to the field, not, as now, against foemen worthy of their steel, but to hunt down the brave, virtuous, and homeomathic of the quaker Free-State settlers in Kansas. The Southern chivalry have nobler game before them now than the tarring and feathering of defenceless individual Northerners in their midst; and the fiery ordeal they have chosen for themselves cannot fail to give a grandeur to their character which will enable them to emerge from the onlooking world than was ceded to them when they occupied the pride of place in the Government of that Great Republic which need not be less truly great because they have left it.

The North has at length got over one absurd and dangerous illusion to which she had hitherto clung with a strange obstinacy—that is, that "in every State, except, perhaps, South Carolina," there was a majority in favour of the Union, and that all the Secessionist movements were the result of a plot on the part of a few disappointed politicians and intriguing theorists, in which the bulk of the people took no part. The fact is, that except in Western Virginia and in Eastern Tennessee, where the Stars and Stripes are still flying, the Unionist party has no existence whatever in the seceded States. No one in Europe has ever shared in this illusion. It has been evident to us all along that the North was, with the above-named exceptions, terribly unanimous and terribly in earnest. But the North have fallen into that common human failing of believing things to be as they would desire to have them, and the consequence has been that they have had to suffer a rude awakening. The battle of Bull's Run shocked them to a sense of reality. Southern fanaticism in behalf of independence by the side of their own love of empire. The Northern troops found themselves opposed to a regiment of coloured men who fought with no want of zeal against them. Louisiana has called her free negroes to arms, and South Carolina has not scrupled to put a coloured contingent her stalwart Cherokees. But the North, partly through prejudice of colour, and partly through a fraternal feeling towards the Southerners, will allow no coloured men to serve under the Stars and Stripes. The North stupidly prefers to enlist Canadian three-months' men, who cool-y walk off the field of battle on the day of the engagement because their time was up that day! Now, when one side conquers its prejudices and employs all possible weapons, while the other hampers itself with restrictions, and fights with a sort of reluctance and a fear of injuring the adversary too much, it is easy to see which of the latter fights under great disadvantages. And this conclusion, too, the North is beginning to take to heart.

The task which the North has undertaken now for the first time appears to her in all its magnitude. It is nothing less than to conquer, and afterwards to administer as conquered, as large as Western and Central Europe, inhabited by six millions of freemen and three and a half millions of slaves. In addition to this the border Slave States which still remain in the Union must be overawed and held to their allegiance. Never has a Democratic Republican nation, such as the North now is, imposed upon itself such herculean labour. It is no disgrace but rather the glory of the North that the instruments fit for carrying out such a policy are not readily obtainable. Certainly they are not to be found in Washington at present. The grand army of the North is pleasantly described by the New York *Tribune* as "a huge picnic party," and again as a "considerable mass meeting." The regulars shower contempt upon the volunteers; the volunteer privates have a profound distrust of their officers; the Commander-in-Chief blurts out his animosity towards the Secretary of War to every chance Congressman or editor he meets. It is everywhere admitted that the advance to Richmond was the idea of "General" Greeley, the editor of the New York *Tribune*, which his journal was powerful enough to force on the Cabinet, while the Cabinet forced it upon General Scott. Mr. Moses Grinnell, a leading member of the Union Defence Committee, and a man who has no personal ends to gain, publicly denounces the Secretary of War, and he is followed by another gentleman of equal social standing, who calls for the removal of the Secretary of the Navy. The Secretary of the Treasury, who retains more of the public confidence than any other member of Mr. Lincoln's Cabinet, has been unable to borrow a paltry million sterling in New York for pressing exigencies, and has been compelled to resort to the limited money markets of Boston and Philadelphia, which have responded without enthusiasm to his proposals. And, in the rear of all, that portion of the unemployed working classes in the large cities which has not enlisted is beginning to assemble in mass meetings, and declare their adhesion to the socialist ideas that every man has an abstract right for himself and family to be fed at the public crib of the city or State. The Southerners have always said that to this complexion the starving working classes of the North must come at last in the event of the prolongation of the war. This evil has not reached any magnitude as yet, but it is an ugly sign at the very beginning of a war, and lends a sinister meaning to the expostulations of the most earnest organs of the war party that the war *must* be short and fought with the industrial classes will not, and cannot, bear the stress of a long period of public commotion.

Very much, then, has to be done, and we are told in the same breath that very little time will be allowed for doing it. It would be well if the weak points (for aggressive purposes) of the volunteer army were confined to incompetent officers. We need not dwell on those droll pictures of "Colonels" painted with such admirable candour by the American journals for the use of some future epic poet or as matter for some sequel to the witty "Biglow Papers"—how one Colonel, riding well up in the van to Washington, confessed his entire ignorance of the wherebouts and fate of his regiment; how another, sent with despatches from General Scott to General M'Dowell, then in the thick of the fight, refused to deliver them, pleading that, if General Scott wanted his head shot off, he might go and deliver them himself; of a third who relieved himself of his overwhelming doubts and difficulties on the morning of the battle by the happy expedient of getting dead drunk. All this is about to be remedied by the establishment of a Board of Examiners! But there are other things not so easily remedied. What are we to think of fifteen out of seventeen Pennsylvania three months' regiments refusing to stay with General Patterson one hour beyond their stipulated time when he was in dangerous proximity to General Johnston's army? What of the two Pennsylvania regiments which, on the eve of Mr. Lincoln's entering from the field because their time was up and the other of which marched, indeed, to the field of battle, but refused to participate in a charge after twelve o'clock for a similar reason? Can anything great be achieved with such material? Unless the Northern people are other things than so enlightened themselves there were others of the recently enlisted in that city which evidently had no heart in the work before them. The New York 12th ran away twice in the slight skirmish of Thursday which preceded the grand attack of Sunday; another New York regiment actually scrupulated at the moment of taking flat on their faces before a discharge of artillery that it was found impossible to keep them on their legs, their propensity to fall on their knees when a musket was discharged being irresistible. It is not difficult to account for this. Many of the regiments in New York city consist of the floating scum of the Union, but have enlisted to escape from starvation. The Pennsylvania regiments, too, have many of them a strong proslavery bias, and would probably prefer defending the line of the Potomac to advancing upon Richmond on political as well as military considerations. It is New England that is the mainstay of troops. These men fight for an "idea" they have a profound dislike both of slavery and slaveowners, and would gladly see this war made one of liberation to the slaves. No wonder that they fought with spirit. The 69th (Irish), 79th (Highlanders), and 71st (New York militia) regiments, including the Garibaldi Guard (who covered the retreat and did not fled, doubtless deserve the praise they have received. But the true metal is sadly alloyed by the dross which is intermingled with it, and which must immensely detract from the value of the whole.

What, then, are the prospects of the war being "short and decisive" in favour of the North? A number of new and raw regiments are only now pouring into Washington. These and others must be hardened into an army. General Scott loudly declares that the troops must be organized in movements, in a large "camps of instruction," before they will be fit for the arduous duty of crushing out the revolution. But this long course of professional training is just that against which the American naturally recalcitrates. This is why he has swept away the regular army, regarding it as a necessary evil of industry. If the American volunteer overcomes his objection to regular training in this instance, it will be a grand proof of his devotion to the cause for which he is fighting.

The logic of this exposé leads whither, if not to the conclusion that the Southerners are greatly aided in the North achieving a permanent success in her present line of policy? Now that she is no longer self-blinded by illusions, she is beginning to perceive this, and her awakened intellect is thrown back on this dilemma—emancipation of the slaves or recognition of Secession. Already, indeed, a Northern movement, in favour of the recognition of the former idea, but the people and politicians of the Middle and Western States are not yet prepared to follow the leadership of Messrs. Lloyd Garrison, and Wendell Phillips. If anything could sting the men of New York to stifle their scruples on this score it would be the stories which, whether true or false, are firmly believed at the North, of the bayoneting and mutilating the wounded, firing the hospitals, and shelling the ambulances by the Confederates. Messrs. Davis and Beauregard cannot fail to know that these cruelties are as impolitic as inhuman. Half the people of the more than half the army of the North are as little infected with what the Southerners call the damnable heresy of "negro-worship" as they are themselves, and regard the arming of the slaves with positive aversion and as not consistent with honourable warfare. This sentiment is a great protection to the South, and nothing will so soon dispel it as a disregard of the laws of civilised warfare by the South herself. By pursuing a strictly defensive strategy, and by twice abstaining from an attack on Washington when he had power to make it with a good prospect of success, Mr. Davis is disposing Northern Conservatives to give him credit for moderation, and to believe in the sincerity of his oft-professed desire for peace. All that is gained by this prudent policy will be lost in the storm of revengeful passions aroused by the atrocities of the Confederate soldiery.

From the number of well-cared-for wounded prisoners at Richmond it is evident that the barbarities (so circumstantially narrated in Northern journals and authenticated by the testimony of well-known army surgeons) were, happily, only partial; but the Southern leaders may rest assured that the public opinion of the civilised world only waits fuller confirmation to visit the excesses of a portion of their victorious army with the same stern and one-sided reprobation which it meted out to the Russians after Inkermann. In the meantime, if it should turn out that the political institutions and social and economic conditions of Northern civilisation present almost insuperable difficulties to the prosecution of a great aggressive war, this fact will not detract from among their admirers in Europe. If there is anything which makes the democracy of the North a less kindly soil than the democracy of France for the development of a Napoleon I. and the establishment of a Napoleonic system, so much the better for their own domestic liberties, for the cause of peace on the Western Continent, and of Republicanism throughout the world.

FOREIGN AND COLONIAL NEWS.

FRANCE.

Thursday's *Moniteur* announces that, on account of the national fête, the Emperor has either remitted or commuted the punishments of 1236 prisoners, of different categories, who had been condemned for civil crimes. The *Moniteur* also publishes a numerous list of appointments to the Legion of Honour.

Prince Metternich had an audience of the Emperor on Wednesday, at Plombières, in order to take leave. The Emperor afterwards set out for Chalons.

The new Boulevard Malesherbes at Paris was opened by the Emperor on Tuesday evening, in the presence of an immense body of troops and National Guards and crowds of the populace. Having received the congratulations of the Municipal Council, and of the prefect of the Seine, his Majesty replied in a speech in the course of which he adverted to the effects of the Commercial Treaty with this country, the conclusion of which, he observed, has been followed by a doubling of the exportation of articles of Parisian make. He also pressed upon the municipality the duty of reducing, to the utmost limit their finances would allow, the taxes upon articles of prime necessity, as a means of giving a spur to industrial enterprise.

There was a review yesterday week by the Emperor and the King of Sweden in the Champ de Mars of a corps-d'armée of 60,000 men, 5000 of whom were cavalry and artillery. The weather was magnificent, and the troops were in capital trailing. The various balls and fêtes which were to be given in honour of the Swedish Monarch were countermanded, owing to the absence of the Empress. The Emperor and the King of Sweden breakfasted by the camp at Chalons, returning the same evening, near midnight, to the Tuileries. The King of Sweden left on Monday to pay a visit to Queen Victoria.

Auber, now an octogenarian, has been honoured with the Cross of Grand Officer of the Legion of Honour. The insignia were handed to M. Auber at the Conservatoire by Count Walewski, Minister of State, who set at his side, and the entire assembly rose and greeted the aged with the loudest plaudits.

The appeal of M. Mirès has been postponed to the 19th.

The Abbé Pelicqp, the founder of the Jesuits' College at Vaugirard, has just died at Meudon.

ITALY.

Baron Ricasoli has issued a circular despatch addressed to the Italian Envoys at foreign Courts, in which he presents and commends to their notice a document, and the review which it takes of the past is comprehensive and hopeful for the integrity and independence of the new Kingdom. Acknowledging the obligations which are due to the "august and generous ally" who assisted in achieving the unification of Italy, it preserves complete, perhaps studious, reticence with regard to external questions; but the future it speaks of as difficult and full of snares and peril. Europe, meanwhile, is represented as armed, and strong, and the fitness of its people for constitutional government, must, however, it is argued, be convinced of their right to possess the entire peninsula, and will find a guarantee of repose and peace by favouring the restoration of the part that is wanting to them.

Signor Bastogi, Minister of Finance, has been raised by the King to the rank of Count, and appointed Grand Officer of the Order of St. Maurice and Lazarus, on account of the services rendered by him in the conclusion of the national loan.

General Fanti has proceeded to Chalons, in order to be present at the military movements.

The Italian Government has consented to cancel its decision in reference to a regiment from Naples, and the Swiss soldiers formerly belonging to the regiments in the service of Francis II.

AUSTRIA AND HUNGARY.

The Upper House of the Hungarian Diet adopted by acclamation, on Saturday last, the Address to the Emperor Francis Joseph which M. Desk had framed, and which had been previously approved by the Lower House. The Address sets forth fully the principles at issue between the Emperor-King and his subjects of the kingdom of Hungary, and affirms that the Pragmatic Sanction in all its parts without exception, relating to recognise as constitutional anything which is in opposition thereto. Consequently all acts of the Reichsrath at Vienna are declared to be unlawful; the rights of the Hungarian Diet to levy taxes and vote supplies is insisted upon; the present administration of the country, especially the despotic conduct of officials, is pronounced unconstitutional and illegal, and subject to punishment according to the laws, and regret is expressed that the "Royal Rescript" has rendered mutual understanding impossible, and frustrated the means of negotiation.

On Wednesday the Emperor received the Address of the Hungarian Diet, to which he replied by a short speech, couched in general terms. The Emperor's reply is said to be expected to-day (Saturday). The dissolution of the Diet appears certain.

RUSSIAN POLAND.

The people of Warsaw, in spite of the authorities' menaces, and of the presence of large bodies of troops in the streets, celebrated the national festival of Poland with great ceremony on Monday last. The Exchange and all offices and shops were closed, and in the evening the city was illuminated. No collision seems to have occurred between the troops and the population, though some arrests were made.

On Thursday week a bloody affair took place in Warsaw between the people and the military, in which one person was killed.

An important popular demonstration took place at Lublin on Monday. The military commander, by his energy, however, suppressed the conflict without any more serious consequences than that a certain number of persons were wounded.

TURKEY.

The fall of the Minister of Finance is expected very shortly. A change has been ordered in the uniform of the military officers. Important army reforms are in progress. The arrears of the garrison of the capital are about to be paid in calmes. Omer Pacha has been ordered to act against Montenegro.

INDIA.

The intelligence from India possesses no special interest. The papers are generally occupied with the discussion of the financial schemes of the Government, which seem to meet with very little favour at their hands.

CHINA AND JAPAN.

In both China and Japan it is gratifying to learn that the most cordial and friendly relations subsist between the native authorities and the representatives of foreign Powers, our own included. The importance of having Consuls of ability and experience at the several ports is daily becoming more apparent, and demands the immediate and earnest attention of the British Government. It is expected that we shall have

to maintain a considerable body of troops at Tien-Tsin for some time yet. Order was restored in the rebels. They were busy with in the neighbourhood of Chin-Kiang, engaged in desultory efforts to achieve its capture, but with what prospect of success does not appear. Some cases of piracy and murder had to have occurred in and about Shanghai.

AUSTRALIA.

In the colony of Victoria the public mind was absorbed with the approaching dissolution of the Assembly, and the consequent general election. Nothing had been heard of the exploring expedition into the interior of the continent, and serious fears were entertained for the safety of its gentlemen composing it.

Great flood had visited New South Wales in May, but at the end of the month the river was pretty generally subsided. Whilst they lasted they were the occasion of very extensive disasters.

NEW ZEALAND.

Affairs in New Zealand continue in a most unsettled and unsatisfactory state. The spirit of hostility and misunderstanding among the natives does not abate: strong measures are again talked of; and the Governor has issued a proclamation denouncing unimpaired submission to the sovereignty of the Queen and the authority of the law, the restoration of all property, and a general pacific disposition, as the only steps to be taken to put the colony's peaceful subjects, native or European, for the forces they may have sustained during the late disturbances.

THE CIVIL WAR IN AMERICA.

By the Montreal Company's steamer North American we have telegrams to the evening of the 3rd inst.

THE WAR IN OHIO.

The Confederate army has advanced its pickets to its old positions to the north of Fairfax Court House. It is reported that they are fortifying Fairfax, and that the defences of the Potomac are equally as in it trenchements on the south side of the Potomac, and is undergoing the process of reorganisation, under the vigorous superintendence of General M'Clellan, who is invested with the supreme rule of Commander-in-Chief within the military department of Columbia. The three-months regiments have gone or are going home, and are replaced by the volunteers for three years. General M'Clellan has issued an order commanding the departure of all women and children from the camps, and orders are enforced Washington at hotels and boarding-houses, and appointing a provost-marshal to carry out this order. The latter has already closed up the shaking-houses in the city, and the disorderly houses and disorderly conduct of late so rife in the camp had begun to diminish. The sanitary condition had greatly improved. It represents that the personal habits of the men as filthy in the extreme, that the camps are all unbranched, and that the sinks are in an intolerable condition. The supply of food by the Federal Government is excellent and varied. The clothing of some of the regiments furnished by the States is very poor, but that furnished by the Federal Government is described as good as can be desired.

OTHER MILITARY MOVEMENTS.

The army of the Upper Potomac, under the command of General Banks, has retired into Maryland, as Mr. Banks judged Harper's Ferry to be untenable.

General Butler, stationed at Fort Monroe, fearing an attack, has evacuated Hampton, burning that village on his retreat.

The report of the defeat of the Federal troops in Western Virginia, near Charleston, was unfounded; but General Wise when last heard of was in full retreat, throwing legs of trees athwart the roads to impede the progress of General Rosecrans at the head of the pursuing forces.

In Missouri there have been some minor engagements, resulting to the advantage of the Unionists. General Fulton, commanding the Confederates at Memphis, has issued a proclamation stating that he will bring 20,000 men to the aid of the Secessionists of Missouri.

THE LOSS AT BULL RUN.

An official account of this battle has not yet been published, and perhaps never will be. The following statement of the Federal losses makes up, killed, 280; wounded, 720; missing, 477—total, 1,468. The Confederates acknowledge a loss in killed, wounded, and missing, of 1,000 men. The Northern wounded are kind treated by the Confederates at Richmond. Among the prisoners was Mr. Ely, member of Congress, from New York. He fell into the hands personally of the Federal army. The killed include two colonels, one lieutenant-colonel, two majors, and seventeen captains; and there were lieutenants and two acting sanjors-general, eight colonels, one lieutenant-colonel, three majors, sixteen captains, and thirty-three lieutenants.

THE NORTHERN STATES.

Mr. Davis, in a telegram to his wife, announces the victory as a "clearly bought" one. The Congress of Richmond received the news with great delight, and immediately thanked General Joseph E. Johnston the result of the day, and concluding with the families of the patriots who had fallen in defence of Southern independence.

Robert Toombs, of Georgia, has resigned the secretaryship of State, while Mr. R. M. T. Hunter, late United States' senator, from Virginia, has accepted the office. The latter's reasons be accepted for this change, but it is probably to allow Virginia, the battle-field of the two sections, to be represented in the Executive Department of the Confederate Government.

All the conscientious of New Orleans, through whose hands two-thirds of the cotton crop of the United States must be past, have signed a document calling upon planters to keep their cotton at home, and pledging themselves to do so by until the blockade is entirely raised.

The New Orleans *True Delta* incidentally states that three-fourths of the men who had left that city and the State (Louisiana) in defence of Southern rights were Irishmen.

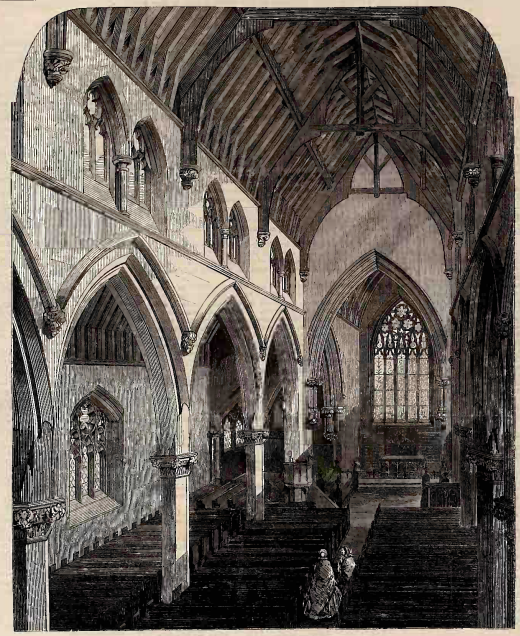
The Richmond Bank Convention has adjourned, after advising the Government to issue 100,000,000 dollars in Treasury notes.

CONGRESS.

Congress has passed the financial measures necessary for carrying on the war, but not without considerable and unexpected opposition from the Western members to the imposition of new taxes. At one time they succeeded in striking out the enacting clause of the bill, which has afterwards reconsidered this vote. The loan bills, and the bill confiscating the property of traitors, have always met by the same resistance of the socialists, passed with only the slight opposition which the peace party could offer; but the tax bills ended in a double compromise between the Eastern and Western members, and between the Senate and the House. The Morrill Tariff was made more protective than before. The land bill was passed, and

ST. LUKE'S CHURCH, EUSTON-ROAD, ST. PANCRAS.

THE foundation-stone of this church was laid by the Marquis of Blandford, now Duke of Marlborough, on the 2nd of July, 1850, and the foundations were built up to the level of the floor. The works were then discontinued for want of funds until 1860, when they were recommenced; and the church, less the tower and spire, was completed, and consecrated by the Lord Bishop of London on the 30th of May last, the Rev. Charles Henry Andrews being the Incumbent. The church consists of nave, aisles, a west-end gallery, and ample chancel; and seats 1200—600 adults and 600 children being free out of this number. The site was given by the Skinners' Company, and the church has been erected by grants given by the Ecclesiastical Commissioners, Incorporation and Diocesan Societies, the munificent gift of £1000 from the Earl of Ellesmere, and the remainder by subscriptions raised by the Late Vicar, the Rev. Canon Dale, and the Incumbent, principally obtained out of the district of St. Luke, which is very poor. The church is of the Decorated style of the fourteenth century, and, when the tower and spire are completed, will be a handsome structure and a great ornamental feature in the Euston-road. It has been erected from the design of Mr. John Johnson, of the Adelphi.



NEW CHURCH OF ST. LUKE, EUSTON-ROAD, ST. PANCRAS.

THE ROYAL AVIARY.

THE Royal aviary is situated very near the new dairy, a view of the interior of which we gave a week or two back, both being in the locality of the charming Home Park. The aviary is, however, of older date, but, from its picturesque appearance and situation, we have been induced to give our readers a view of it. The long range of buildings is divided into various houses for the convenience and occupation of the feathered tribe, some of which are of great beauty. In front of the building is a network of wire inclosing a little paddock or run, also having divisions for the separate kinds of birds or fowls: these are nicely paved, and have a strip of gravel on one side, with a patch of grass, so that the birds may amuse themselves in their habitual pickings. There is a broad terrace in front of these, forming a nice walk; beyond this and the aviary is a semicircular basin filled with water, in the centre of which is a fountain. On the opposite sloping sides of this ornamental piece of water are some tame goats, the gentle gambols of which have often amused the junior branches of the Royal family in their hours of relaxation and amusement.

THE ROYAL AVIARY, NEAR WINDSOR.

CAROLINIAN PICKETS FLYING BEFORE THE FEDERAL TROOPS.

THE advance of the Federal troops on Fairfax was so rapid that the pickets thrown out by the Confederate army on an obstructed road which the Federals avoided were nearly cut off. They fled precipitately over the obstacles intended to stay the progress of the Unionists. An illustration of this scene is given on the next page.

CONFEDERATE PRISONERS.

THE Engraving on our first page depicts a group of prisoners taken by United States' troops on the second day of their advance on the Confederate positions in Virginia—the last-named forces steadily retreating to their stronghold at Bull's Run.

CATALOGUES FOR THE INTERNATIONAL EXHIBITION OF 1862.

THE following general announcements relative to the catalogues in connection with the forthcoming Exhibition has been officially published:—"Her Majesty's Commissioners intend to issue three catalogues—two relating to the Industrial Sections of the Exhibition, and one to the Fine-Arts Section. Advertisements, as well from exhibitors as from the general public, will be received for all three catalogues. The catalogues which have reference to the industrial sections will be called respectively 'The Industrial Catalogue,' and 'The Illustrated Catalogue;' the third will be 'The Fine-Arts Catalogue.' All matter which is intended for insertion in the body of the catalogues must be sent in to the secretary of her Majesty's Commissioners, F. R. Sandford, Esq., 454, West Strand, before the 1st of February, 1862, after which date no alterations or fresh insertions can be guaranteed. 'The Industrial Catalogue' will be a list containing the name and address of each exhibitor, and a very brief description of his goods. It will be in one volume demy 8vo, will be sold for one shilling (in the Exhibition building), and will be produced wholly at the cost of her Majesty's Commissioners. 'The Fine-Arts Catalogue' will be the same as the Industrial Catalogue in size of page, print, and price, and will also be produced at the cost of her Majesty's Commissioners. 'The Illustrated Catalogue' will be an extended form of 'The (Shilling) Industrial Catalogue,' containing in addition matter which especially affects the interests of the exhibitors. It will be printed in super-royal 8vo, so that it may range with the

THE CIVIL WAR IN AMERICA: CAROLINIAN PICKETS FLYING BEFORE THE ADVANCE OF THE FEDERAL TROOPS ON FAIRFAX.—FROM A SKETCH BY OUR SPECIAL ARTIST.

catalogues of 1851 and 1855, and will be published in parts. The name, address, and business of every exhibitor will be printed in large type (small pica), with a brief general description of the objects exhibited by each. The printing and paper of this portion will be provided at the cost of her Majesty's Commissioners. One or more classes will form a part, and each part will be sold for one shilling (in the building). Editions of 10,000 of each part will be printed off from time to time."

THE CAVES OF JEDBURGH.

Walter Scott in "Old Mortality" gives a vivid picture of one of those terrific retreats wherein the persecuted champions of the Covenant sometimes sought refuge from the cruelty of their enemies. The western counties, as he remarks, particularly distinguished themselves by their opposition to the prelatic system. "Three hundred and fifty ministers who had been ejected from their livings wandered through the mountains sowing the seed of covenanted doctrine, while multitudes of fanatical followers pursued them to reap the forbidden crop." And it is supposed that the admirable description he has given of the hiding-place of Burley derived some touches from a place of concealment chosen by these fugitives, called Creehope or Creh-up Linn, in the parish of Closeburn, Dumfriesshire. In this romantic and appalling covert the water in its passage over a hill of red sandstone has in the course of ages scooped a profound gorge, so narrow at the top that in several places an active man may leap across. The sides of this stupendous ravine, overhung by luxuriant foliage, exhibit rocks of the most fantastic and picturesque forms, while the roar and agitation of the water, which at a tremendous depth is seen to roll and leap along, produce upon the spectator a sense of awe and terror which are indescribable. Dobs Linn, on the heights of Polmoodie, another of these savage haunts, is popularly believed to have been the scene of a tremendous encounter between the Evil One and two famous Covenanters. These men, named Halbert Dobson and David Dun, compelled by the fierceness of the pursuit to take refuge, constructed themselves a resting-place in a hidden hollow, where they lived like beasts of prey for many weeks in safety. At length, however, though apparently secured from human foes, they were said to have been assailed by the enemy of man, who came upon them one night mowing and grinning as if to disturb their devotions. Less alarmed than incensed at their diabolical visitor, the recluses attacked him boldly and so belaboured him with their bibles that he was fain to transform himself into a pack of dried hides, and in this surprising shape he rolled down the cascade. The popular verses which record this extraordinary combat are still remembered in Ettrick Forest, and tell how—

Hob Dob and David Din
Dang the Deil over Dobson's Linn.

After Creehope and Dobson's Linn, the most interesting of these lurking-places are the Caves of Jedburgh, which form the subject of our Illustration, and which popular tradition has long pointed out as the lair of many hunted religionists, and the scene of innumerable hairbreadth 'scapes and supernatural occurrences.

THE CAVES OF JEDBURGH—HIDING-PLACES OF THE COVENANTERS.

LORD CARLISLE ON THE STATE OF IRELAND.

The Lord Lieutenant was present at the annual banquet of the Royal Agricultural Society of Ireland at Belfast on Thursday evening, and delivered a speech which will be read with considerable interest. He said:—"In my judgment, Ireland has never exhibited such an exemption from general crime, from political agitation, or from physical distress and privation as that which she now enjoys. With respect to the decrease of population, there can be no doubt that the famine and pestilence which worked such fearful havoc upon the immediately preceding decade left its work also on that which has succeeded it. But there is no question that the continuous flow of emigration as the chief cause of the great reduction which has ensued in the number of the people. If the number of emigrants from Ireland itself, exclusive of those who have left other parts of the United Kingdom, is allowed for, there would have been in the last decade, from 1851 to 1861, an increase in Ireland close upon 400,000. Now with respect to the productiveness of the country within the same periods. The land under cultivation, either under tillage or in meadowing and pasture, in 1841 was 13,000,000 acres; in 1851 it was above 14,000,000 acres; in 1861 it is above 15,000,000 acres. The live stock was valued in 1841 at £21,000,000; in 1851 at £27,000,000; in 1861 at £30,000,000, and this independently of the improvement of quality in the animals, which, I believe, is by every one admitted to be very great, amounting, perhaps, to 25 per cent. Along with this great increase of productiveness there has been a very striking diminution of the small holdings and of the wretched cabins of the peasantry. The value of property rated to the relief of the poor in 1851 was £11,614,000. In 1860 it had increased nearly a million—it was £12,289,000. Now, with this large amount of funds for the purpose of drawing upon, I find that the total expenditure of medical as well as ordinary poor-law relief in 1851 amounted to £1,150,000. In 1860 it had fallen to £558,000, being less than half of what it was ten years ago. Lastly, with respect to crime, it appears that the offences specially reported to headquarters in 1850 amounted to 10,039; in 1860 they had fallen to 3531. I feel most thankful that

the genius of Ireland is becoming every day more and more alive to the manifold and multiform refinements and claims of her agriculture. And most pleasing, indeed, in one point of view, though painful to excess in another, is the contrast which is presented by such a sight as the show-yard now open in Belfast, with the scenes which are being enacted among that great people, which has so many common ties and common interests with us across the western waters. Here, gentlemen, we see an area—itself connected with all the operations of busy and extended commerce—now spread before our gaze with the representative specimens of every form of peaceful agricultural use—the sleek herds and fleecy flocks, the iron implements and lustrous chattels. There, gentlemen, we read of nothing but unwaked batteries and the angry glare of bayonets, and the fierce charge and the panic rout. May the time soon come which will enable us and other friendly nations to say that we have done with all enmities as and other friendly with children! May the time soon come which will enable us and other friendly with children! May the time soon come which will enable us and other friendly with children! May the time soon come which will enable us

METROPOLITAN NEWS.

The sale of a portion of the late Sultan's jewels was brought to a close on Friday, the whole realising £14,049.

The Archduchess of Austria, now on a visit to this country, went yesterday week to see a few of the more interesting places in the city of London, attended by some of the members of her suite. Her Royal Highness visited, among other places of note, the Tower, the Bank of England, Guildhall, and the Mansion House.

Mr. Lewis subpœnaed his constituency last Saturday, but confined his remarks chiefly to topics of interest to his constituents, such as the Thames embankment. He apologised for the absence of his colleague, Lord Thurso (subpœnaed, it is stated, "was compelled to be absent with his family on a Highland visit"), and for his own absence on previous occasions, which was very interesting occasions.

On Friday the thermometer registered in the streets of the metropolis 120 deg. Fahrenheit in the sun, and from 85 to 97 deg. Fahrenheit in the shade, a fact almost unprecedented in Q.—country; whilst at the Royal Humane Society's receiving-house, Hyde Park, and other similarly-exposed situations, the amount of sunstroke cases was quite abnormal.

On Tuesday nearly 600 of the children of the Ring Edward Street District Schools, the first new school-treat of the season, and the School of Industry, Albert-street, Spitalfields, were taken for their annual holiday to Epping Forest, where they had luncheon and refreshments of all kinds. The cost of the provisions, as well as the other expenses incurred in this annual holiday, are borne by Mr. H. B. Gurney.

A labourer at the London Docks died last week from congestion of the brain produced by the excessive drinking of brandy. During the absence of the deceased's fellow-workmen, the body of which he was "carding the number," namely, boring a hole and inserting a straw or small tube into one of the bales, to ascertain what quality will be found to consist of overproof spirit that he was found in a state of insensibility. The stomach-pump and other remedies were resorted to in vain.

A gentleman, named Charles Routledge, residing at Nottingham, has been taken into custody on the charge of causing the death of his son, a child two years of age. Last Saturday night the prisoner had a quarrel with his wife, which terminated in a violent fight, and the child was struck by its father, and died immediately died. At the coroner's inquest, held on Wednesday, the jury brought in a verdict "that the deceased came to his death from the effects of a sudden fit of apoplexy."

Mr. Commissioner Fane on Monday announced from his seat in the Bankruptcy Court that he would not for the future grant any fiat to be addressed to the Prime Minister, expressing his feelings as to the manner in which the Government had treated him in the matter of his pension, and requesting a full attendance of any persons who might be interested in the matter. On Tuesday, accordingly, a large number of creditors attended, when the Commissioner said he had determined to postpone reading the letter until the meeting of the legal year in October next, when he would do so.

Frequent complaints have been made of the large assemblage of betting men who habitually congregate on the pavement in front of Tattersall's, and who have time to time been made, but without any apparent result, the subject of police admonition. A few days ago, however, Mr. Hibbert and several of the officers have been summoned to appear at the Guildhall, where, after hearing witnesses, the Lord Mayor committed to gaol for a week the three men who were the principal offenders for their appearance.

The births of 1730 children (681 boys and 678 girls) were registered in London last week. In the ten corresponding weeks of the years 1871-80 the average number was 1,617. The excess of births over deaths, as derived from the returns of corresponding weeks in the ten years 1871-80, is raised by a correction for increased population to 1,000. The deaths in 1881 were 1,034. If the deaths from the epidemic of that year are excluded, and the average number for the increase of population, 1,034 is raised to 1,100, which remains for the week less by about 60 than that estimated by calculation.

On Tuesday a fire occurred on board one of the Shaftesbury Steamboats, Westminster, to Richmond, took place by two steam-boats. On landing they proceeded to the Queen's Head, Petersham, where, after a short stay and a slight refresh, they were provided with a substantial dinner of veal, ham, and pigeon-pudding, to which numerous and heartily-given sentiments followed. The usual after partaking of tea and cake, the party returned to town much gratified with the happy day they had spent together. The company amounted to 200, and was 300.

The Braidwood testimonial fund now amounts to about £900. At a meeting of the committee appointed to act in the matter it was the immense compliance had voted a sum of £500 to the widow and family of the deceased, and that the personal estate had been sworn under £100, the widow and family were placed above the reach of dependence. It was, therefore, suggested that the money collected should be left in the hands of the trustees, solely for whom welfare he always felt the deepest concern. The question stood over for discussion at a future meeting.

A fire broke out on Sunday morning on the premises occupied by Mr. R. Hunt, engraver and printer, No. 4, Scrubbs-lane, Kensal-rise, and rented by Mr. Jackson, the building, composed principally of timber, was two stories high and had a frontage of 30 ft. In the upper story of the house the firemen spread to other buildings formed of similar material in the immediate neighbourhood, but the lower story, containing engines and the hand machines were worked for a long time before any impression could be made upon the flames, but by one o'clock in the morning the fire was under the control of the firemen. Mr. Henderson dispatched a few men to the spot, and upon their arrival found that a quantity of job-printing machinery had been taken out. It was extinguished without much difficulty, the damage being confined to the roof and the inside and sides of the house.

The children attending the Christ Church Schools, St. George's East, were taken on Thursday week in a special train of thirty-six carriages to Loughton, in Essex, for their annual excursion, and they numbered about 1,700. For the large party about a ton of cold and 100 gallons of liquid food had been provided for the refreshment of the children, and accompanying were the Marquis of Westminster and Mr. Hanbury. Though the weather in the early part of the day was somewhat unfavourable, the children amused themselves very much, the afternoon and evening being spent in racing, football, hopping matches, and other juvenile sports and games. At 7 p.m. the luncheon of the district, the Rev. G. G. Morton, and Messrs. Williams and Hughes, the churchwardens, were present at the tea, and added much to the happiness of the juvenile party. Yesterday week the infants attending the schools to the number of 400 were entertained at the parsonage by the Incumbent.

The Great Eastern arrived at her moorings in the Mersey at 8.30 on Thursday evening. She left Quebec at four o'clock on the morning of the 6th inst., and was detained about twelve hours crossing the bar in the River St. Lawrence.

The report of the Select Committee on the admiration of destitute aliens has been issued. It is a valued Government compromise with the cries of children. The Committee say that for children who have completed a certain age without habile provision in the Board or Voluntary Schools bill, and until that measure shall have been tried no other provision as the subject of aliens should be made.

In the new Coinage Act, which will take effect on the 1st of November, there is a clause making it a misdemeanour to deface coin by stamping words thereon, under which penalty any one will be liable for a first offence one year. Further, it is declared that the tender of coin so defaced is not a legal tender. By way of this, can be treated as counterfeit coin, and the person uttering the same.

THE CHANCELLOR OF PAPER.—The Chancellor of the Exchequer has given directions and made the necessary arrangements with the Commissioners of Stamps and Taxes for the issue of stamps for the duty on grant or drawback on the stock of paper in hand to stationers, pastebroad-makers, publishers, and others, and for the duty to come into force on the 1st of October next, the day on which the paper duty expires.

THE NEW REFORM ACT.—On Tuesday the new Act for the superintendence of vessels used by the Revenue officers of both sides of the Solway and St. Albans was printed. It provides that after the dissolution of the present Parliament the Act shall be repealed, and the power of the Act shall vote two divisions, to be called the northern and southern divisions, and in all Exam Revenue officers to be appointed by the Lords of the Treasury. Under an additional member, "after the passing of the Act," is given to the southern division of Hertfordshire, during the legislature of the Act, and the power of the House of Commons is, as soon as may be, without any motion, or in the house to make provision, to limit the number of the Members of Parliament to form a borough to retain one member after the 1st of December next.

VOLUNTEERS' FULL EXEMPTION.—The new Act to exempt the volunteer forces of Great Britain from the payment of tolls has just been printed. This statute, its hoped, will settle the vexed question, and all that remains is to make public the penalties incurred by infringing the Act. It provides that any toll-collector or other person who shall take, demand, or receive any dues, duties, pontage, or toll for or in respect of any volunteer officer or soldier, horse, or other beast, carriage, waggon, or cart, entitled to exemption under the Act, shall forfeit and pay for every offence a sum not exceeding £5. The Act is not to extend to Ireland. It came into operation on Tuesday, the 9th inst., when it received the Royal assent.

THE SOCIAL SCIENCE ASSOCIATION.

The annual meeting of this association was opened on Monday in Dublin with a long address from Lord Brougham, the president. After some introductory compliments to Irish genius, Lord Brougham met the objection sometimes made that the association had accomplished but few of its objects by pointing out with abundant examples that the progressive science had been always slow, and that "gradual progress" governed the moral as well as the natural world.

LAW REFORM.

Lord Brougham then touched on the subject of law reform, and showed what had been done. "The important propositions for only respecting charitable trusts made by a committee of distinguished colleagues for Sir Fitzroy Kelly, to a great extent been adopted by the Education Commission, under the Duke of Devonshire, and were now embodied in the Endowed Schools Act, which, after three years, after the fullest investigations, are so strongly recommended, have become all but law, and entered into the statute book. Another bill which affects the greatest credit upon the Lord Chancellor. It has not passed through the ordeal of the House of Commons; but, it has been an important amendment of the law. Five Acts have been passed containing a large part of the recommendations of the criminal statute law. Two succeeding Sessions for F. Kelly introduced a most important bill for remedying the defects of the Law of Evidence. That bill, after undergoing many changes, passed the Commons both times, but fell through in the Lords. Lord Selborne has since taken the matter in hand with the utmost energy, and Sir Fitzroy's, remove a great part of the defect constituted of. Finally, a most important bill for the amendment of the Law of Bankruptcy, and a excellent colleague, Mr. Vullers, its author, expected, reducing the time of the bankrupt's discharge from twelve years to five, and thus saving annually over the whole estate, and distributing the payment of rates more justly and equitably. The order of the Lords' proceedings, however, is not, it is probability, be followed by others to remove the whole defects of the settlement law."

SANITARY SCIENCE.

Lord Brougham concentrated his observations on the repeal of the paper duty, and on the increased interest in the cause of general education. Speaking of sanitary science, he said:—"The difficulty of sanitary legislation is a most important part of the duties of the department; and, as the association has always been ready to assist in the preparation of measures, it may have no doubt in affirming the Lady's Sanitary Society, which acts under the Queen has proved the most valuable aid to the Government in the work of health, it help now admitted that much of the debility, disease, and premature death in the large towns is attributable to the defective state of the dwellings provided. The society circulates many tracts upon the subject, has lectures delivered in various parts of the country, and has published a manual for medical students instructing the parochial clergy in the work, and in many cases lending assistance in the way of pecuniary grants. Were poor women are familiarly instructed on matters connected with health."

THE IRISH CONTACT SYSTEM.

"The Criminal and Incumbered Estates Acts (and the Landlords) presents very satisfactory results; and it may be at an this meeting that we should move specially on the subject. The Irish Land Act, which is the most important subject is but small, and it is devoutly to be wished that they were materially. But the Incumbered Estates Act, which is the most important, is satisfactory; and, allowing that the great migration since the famine year has greatly diminished the number of the tenantry, the condition of the greatest credit upon the instructors of youth and the ministers of religion, the increase in the number of the Irish Protestant clergy, and the rise in the allotments for offences inconclusive, unless we regard the proportion of these improvements to the rental. In 1841 the rental was £13,000,000, and in 1881 and in 1860 at 1 to 1221. The number of juvenile offenders decreased in still greater proportion, and the Irish Prisons closed at one time taught to the statistics and characteristics of the Irish convict system.

THE IRISH CONVICT SYSTEM.

"This was the topic next referred to by Lord Brougham. He said:—"Above fifty companies for manufactures have been established in the last Congress, but the number of failures is very large. For a capital of £500,000 a return had been in the former the manufacturing state of matters, and the capital of £1,000,000 in the latter. The Co-operative Cotton Spinning Company, capital £1,000,000, has been a most successful one, and show the creation of many other co-operative societies within the last twelve years, all registered under the Friendly Society Act. The Co-operative movement is also preventing the evils of the credit system to the working classes, and so doing away with a great cause of the commercial distress. The Co-operative Stores at Colne and Rochdale illustrate the value of co-operative unions in that district. But the societies established, and which have been long in a most flourishing state, expend the whole profits on their return, and the consequence has been the establishment of that distinct ability the last three weeks of a short with 700 looms upon the Co-operative principle.

"The social Reform Association statistics to show the condition of the working classes in Ireland. The employment of women was most advertised in Belfast, where 20,000 were employed in the linen trade. Belfast, Dublin, and Cork were the chief reforms in Turkey, the emancipation of serfs in Russia, the success of Prussia, and the progress of Italy to be united kingdom, the political returns in France, were the other topics briefly touched on by the noble Lord, who, at the conclusion of his address, was loudly cheered.

The long vacation commenced last Saturday, and will continue to the 4th of October.

A return just issued shows that last year the crews of British ships numbered 224,000, and foreign ships 57,000.

The University of Breslau has been celebrating a jubilee. Amongst the degrees conferred were several non-English names. Mr. Darwin received that of Doctor of the Medical Faculty; Professor Huxley that of Natural History of Creation and Geography; and by the Philosophical Faculty Mr. Grote, Professor Max Müller, Sanscrit; Professor Thomas Henry Huxley, Professor of Natural Science, and Professor Sir Richard Owen, Professor of Anatomy. The acknowledgment of his merits in the history of the nobility, and Mr. Hill, in honour of his essay "On Liberty," have been conferred by Emanuel Geibel.

ASCENT OF MONT PELVOUX.—Mr. Edward Whymper sends us the following account of his ascent of Mont Pelvoux, in the Dauphiné Alps, 8.—"For the sake of your readers who are interested in Alpine exploration I beg to inform you that I, with Messrs. Reynolds and Pendlebury, had the pleasure of ascending the Pic d'Arche, the highest point of Mont Pelvoux, on the morning of July 31. We started from the village of La Bessée, in the valley of Argentiere, with a porter from the Valley of La Pisse, who had been on the mountain before. We slept at the summit of the Col des Ecrins, and followed two nights on the rocks—the first at an elevation of about 8200 and the second at 10,000 ft. The ascent of Pelvoux is one of considerable interest, and from a plateau about 600 feet below. To reach this plateau took us from a quarter to half an hour, and from the plateau to the summit, by a route, and at a quarter to two we stood on the summit. Among the most prominent mountains visible were the Meije, the Ecrins, the Olan, Mont Dora, and the Viso. Close at hand a very high peak, in the Valley of St. Christophe, was pointed out to us by our guides as the Pic de Neige des Cavales, but evidently higher than Monte Viso. The early excited in 1828 by the French Government to the Pic de Neige des Cavales, but evidently higher than Monte Viso. The reason to believe that we were the first to stand on the highest point of the Pelvoux mountains.—Edward Whymper."

BOMBARDMENT OF PORTO NOVO, ON THE WEST COAST OF AFRICA.—The following official report has been received by British consul at Porto Novo on the 28th of April, of which a brief account of the bombardment of Porto Novo on the 19th of April, which a brief account of Abeokuta:—"The expedition consisted of the Brune and Felicite, with 200 men of the Houssa force, under the command of Major Ross. Four of these were armed with 24 and 12 pounder howitzers, the remaining six were armed with rifles. The expedition left Lagos on the morning of the 19th, at 9 a.m. on the afternoon of Thursday, and, after two hours' hard work, pulling against the current, arrived at the entrance of the Porto Novo lagoon. The Brune was immediately followed by the brune; and then, in the space of two hours and a-half, the whole force was landed. The Houssa force, with the exception of one company, was then sent forward to reserve. Some ten canoes made a miserable attempt to ease the enemy's fire, but they were soon driven off, and the Houssa force, with little resistance, then going up the street at their best pace. Next morning, at 6 o'clock, the force left for the town of Porto Novo, which they found to be some almost of the town a heavy resistance was opened upon them from the top of the town, which was soon silenced by the fire of the rifles, for some little time. When once the hosts opened fire with rockets, field, and the howitzers, the enemy's fire slackened. From this point it was found difficult to clodge them, until rockets and round shot found out their weak point, and sent them flying in all directions. Good house was committed in their accustomed ranks by the grape and canister of the boats, as well as the well-directed shells of the marines. The opportunity was now seized upon by Captain Foley and Jones to land and spike a second gun and carry off their last flag. It was now seen how great had been the havoc inflicted upon the enemy, by whose own account they admit their loss to be 1000 killed and as many wounded. After this the firing became very weak and desultory, so the English assured themselves by firing shot and shell at the principal houses left standing. About four p.m. the gun-boats and Bonita cleared away for Lagos, and retained the squadron outside the bar. The loss on the side of the English was only one man killed and five slightly wounded.

SCIENTIFIC NEWS.

REVOLUTION IN PHOTOGRAPHY.—In the *Cosmos* an extract is given from M. Worsley, of Aix la Chapelle, in which he states that, after experimenting for many years, he has succeeded in obtaining positive proofs from his photographic portraits without employing nitrate of silver or any other of the present agents of photography. These are replaced by a chemical compound much more sensitive, and which renders all previous processes, except the negative is without defect. He states that all his pictures, whether large or small, have received prizes and great testimony. The specification of the invention was not given.

BEETROOT SUGAR.—Having determined in previous researches the conditions which every normal juice must accumulate must in beetroot, M. Leplay has contributed to the French Academy of Sciences a number of further experiments instituted to determine the absorption of water and accumulation of these foreign bodies in beetroot which hinder the crystalline structure of the sugar. It has long been believed that beetroots containing many metallic sugar produced during the keeping of the roots during the fabrication of the sugar. MM. Sapelier and Dubrunfaut, prior to 1849, determined that molasses, on the contrary, contains ordinary sugar the crystallisation of which is prevented by the presence of bases with which the manufacturer has been unable to eliminate. M. Leplay's experiments show that these bases are not found in the root in the ground, but are found and formed roots that in that of the long-keeping ones. The beetroots when operated on which have been kept for a given time. In the beetroots, after the growth of the plant, and is at its minimum when it arrives at maturity. A further detail will be found in the *Journal des Savans*.

THE OZONE in the atmosphere of Pisa has been measured by M. De Luca. Between the summit of the tower and the base the difference was constantly seen. The observers of the tower of Schools and Universities was more intense under the influence of a moist or less intense wind, and of a cloudy or rainy sky (whether accompanied or not with electrical disturbance) than under the influence of a calm air and serene sky. The indications of the two papers on the subject, and to define a maximum or a minimum. The indications of Houzeau's paper were generally more precise and sure, provided one gives a proper interpretation to the observations. We do not yet know whether stenochoric acne action on this paper directly or indirectly. The paper of the counterpart of the observations is given too. It is, however, difficult to admit that ozone is in a free state in the air. By its powerful affinity it ought to unite itself to the nitrogen with which it is in contact in the air, and it ought to be in the state of nitrate that it acts on the papers by decomposing the chloride of potassium with which they are soaked. This is what M. De Luca lately given to the French Academy of Sciences.

SUMMARIES OF VOYAGES.—The steamer of the Australia Ocean near the Danube has been for some years going on. We have now two accounts of it, observed by Mr. Ellis, of the Royal Navy, and from each other by Captain Wilmaker, and the Melbourne, Captain Cooke, on March 29, 1881. The latter says:—"At 4 p.m. the Danube was seen on the starboard bow, and at the same time felt the ship tremble from stem to stern, which lasted four or five minutes. The engines were stopped, but the propeller still struck more than the hush, grating noise produced by the ship taking the ground." The Danube left her track for Port Phillip on April 1.

THE INFLUENCE OF COAL-TAR on the decomposition of organic matters is further considered in a paper recently forwarded to the French Academy of Sciences by M. Bechamp, who has found that it facilitates the properties of coal-tar and plaster about two years ago. Some months ago he drew attention to the fact that when the urine of cows was mixed with coal-tar and with a great number of animal and vegetable products. The experiments in this last paper (which is dated from Lille) are stated to be of a similar nature, relate to the action of the alcoholic solution of coal-tar on liquid and solid organic substances.

SULPHIDE OF PHOSPHORUS is proposed as a substitute for phosphorus in lucifer matches. It is made by heating in a flask, or by placing four parts, by weight, of phosphorus and one of sulphur, coarsely powdered, in a glass tube, and heating them with a spirit lamp, at a temperature of 100 deg. Fahrenheit. In a few minutes the liquid sulphide is formed. The water is then poured on the mixture in the tube, and the excess of the sulphuret readily mixes with the solution. The sulphide is fluid even at 32 deg., and is not affected by water. It is less inflammable than phosphorus, 1 per cent of the sulphide, with powdered glue, and the other ingredients, such as peroxide of lead, nitrate of lead, and sand, are added to form one of the most excellent matches with much less scent than the ordinary ones made with phosphorus alone.

THE OPAH (Lampris luna).—Dr. Gray, in the *Annals of Natural History*, announces that a specimen of this very rare fish was caught at Herne Bay on the 7th of July, and is now in the British Museum. The Museum by Mr. Simpson, of the Bruce Tavern, Strand. Another specimen, caught about the same time, is in the possession of Mr. Cole, and is now exhibited in the Liverpool Museum. The first ray of the ventral fin in a remarkable character by which it is distinguished from the allied genus Orthagoriscus.

THE ECLIPSE OF 1860, AS SEEN IN NUBIA.—Mahmoud Bey the astronomer of the Khedive, and a member of the Egyptian Academy of Sciences his account of the observations of the eclipse of July 18, 1860, in Nubia. He set from Cairo, accompanied by a company of 100 men, (when he had previously trained in preparing the map of the Delta ordered by the Viceroy), and engineers, and a number of camels, carrying tents, provisions, and ammunition. After eight days' toil in a steamer he arrived at Syene, in Upper Egypt, and then, after a short visit to the ancient cataract of the Nile, sailing boat, and then, owing to the river being blocked up with masses of stone, he was a miserable journey of seventeen days to Wadi Halfa, on the Nile, and on Bengalese fifteen days previous to the eclipse, he immediately proceeded to establish his station on the summit of a hill, the highest point of the right bank of the mosque of Mohammed Ali. The academy's commission in their report on Mahmoud Bey's observations, which, as the sky was unfavourable on that day, they do not believe that any error in time has been made. The duration of the totality was 1m. 59s., and there is no doubt as to the exact time of the lunar shadow that the sun had set while still eclipsed, and the last point of contact was not observed. The observations of Mahmoud Bey were made by spots and the reappearance of three of them. His account of the corona resembles that given by Airy in the report of the eclipse of 1851, seen in Algeria. Seven protuberances were perfectly observed. At just six the seventh appeared, like the others, a little after the sun had begun to be remarked red. In spite of the general terror at the eclipse, several of the natives observed the phenomena, and the Bey has collected several of these persons affirmed that during the totality of the eclipse they saw a small satellite close to the centre of the eclipse, and that the phenomenon lasted as much as affirm the cause of this phenomenon, whether optical or physiological. Mahmoud Bey has appended to his report a collection of meteorological observations. It is now twenty years since the meridian Egyptian planet, under French influence, and as a consequence of the labours of Mariette at Cairo, in the neighbourhood of the Pyramids, which so powerfully recall the ancient application of astronomy to the arts. The names of various objects have proceeded from the able chief of the observatory, Mahmoud Bey—especially the account of his Nubian expedition—will be read with interest in the new establishments, and entitle him to a place among the philosophers of the day.

Another Baltic steamer is supposed to have been lost, the S.C. Pearson, of Hull, which quitted Riga on her return on the 28th ult., and ought to have passed Elsinore within three days after, but has not been heard of.

A boiler explosion took place at a cotton-mill belonging to Messrs. John Ashworth, Walmsley, and Co., at Bacup, Rossendale, on Wednesday evening. The engineer was blown over a wall into a brook. He was scalded about the hands, face, and neck, and his injuries are considered to be of a serious nature. He is recovering.

BIRTHS AND MARRIAGES.—A correspondence between Mr. Muir, British Consul at New Orleans, and General Manning, Alcalde-Chief to the Government of Matamoras, Mexico, in which the murder of British subjects by the Confederate recruiting parties, was published in Texas, Mexico, and Louisiana, and has been commented on by the press. The number of cases in which British subjects had been improperly seized and maltreated by the Confederate authorities was stated to be considerable at the moment. Efforts appear to have been made, however, to procure the immediate release of such persons whenever the facts became known.

THE FRENCH TIR NATIONAL.—The rifle matches at Vincennes will terminate on the 18th. They commence each day at eight o'clock in the morning, and the firing at the distances of 200 metres opening and being announced by the firing of a cannon. Among the most ambitious amateurs are a party of Swiss, whose skill in the use of the rifle is one of the professional prizes, and are remarkable for the keenness of their aims, and their shooting appears to be quite unerring. Among the most successful marksmen have been the Carabineers mountains, and some members of the band from the Pyrenees; but the Parisians, who have been practising for months past in Gâtes Gérard, the Bon-Allier, who may be seen walking about from one target to another apparently as amateurs.

ORMSKIRK AND SOUTHPORT AGRICULTURAL SOCIETY.—The annual exhibition of this society took place at Ormskirk on Wednesday. The entries were more than usually numerous in every description of stock, and in horses especially, which were very superior in merit. The day was showery, so that this department of the exhibition was shown as a great disadvantage. In the implement department no observed scarcely anything new, and the old implements are so well known that we need not describe them. The poultry show included some splendid specimens, more whose real merits it must have been difficult to decide. Of the horticultural department we cannot say much, many of the specimens of vegetables being of most sorry quality, although prizes had been awarded to them. Some beautiful plants were shown, but the number of exhibitors was small, and the prizes were principally taken by Lord Skelmersdale and Mr. Colonel Hulme, absent in tea tea, about 4,000.—*Manchester Guardian*.

LITERATURE AND ART.

A DESPERATELY dull time is this for literature and art. A Herculean task it is to collect materials wherefrom to cull our customary quota of small talk. There is nothing doing in town; there is nothing doing in the "Row;" the artists' studios are deserted; the artists themselves are off sketching; the exhibitions are all closed; the great books picture, and vanity notices of the season are over; even the ingenious speculators who make fortunes from the display, at a shilling entrance-fee, of a single painting, instead of a whole gallery, advertise the "last week" of their Holman-Hunt chefs-d'œuvre, and "Command" refusing the Crown." We have plenty to say; and, unfortunately, it is not of a literary or artistic nature. For instance, antiquarians will scarcely be interested in the announcement that the King of Swabia is a visitor to our beloved Metropolis, that he has made a week's love to a princess (who cooked-hat, and that he has been to a grand review in the Long Valley at Aldershott; philosophers will not care to be told that the harvests is progressing favourably, and that one day's sunshine is worth a million of money; people will scarcely be thrilled to entertainment in the fact that the police intelligence of last week recorded six cases of stabbing brought under the cognisance of police magistrates in one single day; nor can we hope to gain the suffrages of artistic readers by telling them that the Pope is at the bottom of the Neapolitan brigandage, and that the Hungarian Diet, in their petition of Right, persist in speaking of "King" Maria Theresa, instead of the more famous enchantress of the magnetic, "Mirianne pri rege nostro."

Aha! we have a clue at last—a star appears on the horizon—a sail in sight appears. The wrongs of Hungary remind us of the wrongs of Poland. The wrongs of Poland lead us naturally to the fact of "Literary Association" of their friends in the country; not only the late political and patriotic address presented by the citizens of Warsaw to the British Consul, Colonel Stanley, but also the letters of the sympathy shown by her towards "the widow stained with the blood of her martyred children, a slave, with fetters on her hands;" but likewise the fact that the Times has an admirable correspondent at Warsaw, no other than Mr. Sutherland Edwards, author of "The Russians At Home," who has been addressing some very graphic letters to the journal in question, and giving, besides some curious glimpses of Polish life and manners, an intelligible account of the Polish question itself. Mr. Edwards is not a Russophobe, and, indeed, takes a somewhat too lenient view of the Muscovite character, he runs no risk of offending governmental susceptibilities in northern Europe by his researches; otherwise, if a writer in a respectable newspaper in a free and distant country might be at the present moment saying but a hint of ease.

Dublin is connected. The exhibition of the Royal Irish Academy, the capola of the Four Courts; Sackville-street is looking more magnificent than ever; and the doorsteps in Stephen's-green have positively been scrubbed in honour of the visit of Lord Carlisle. Talk of Wellington, and the sages of the Social Science Association. Lord Brougham's opening oration, or "inaugural" as the phrase now would call it, was a wonderful exercitation de omnibus rebus et quibusdam aliis, a jumble of all sorts of miscellaneous information. The criminal law, the Church of Scotland, cheap newspapers, the poor laws, Miss Davie Parkes, M. Michel Chevalier, the Sultan Abdul Aziz and his fast set, abortive bill for Parliamentary Reform, the recent decapitation of the serfs in Russia, the agriculture of Belgium, and the "improved machinery" of Punch and Judy. This desultory amusement scene to be a great success; although when we are asked to regard social science as a new discovery we are always reminded of what M. Jaucibin in the Georgics Gallicanæ terms "le bon vieux temps" taking pose. The dissensions in the section of jurisprudence are expected to be more violent and interesting than those which shook the assembly in it to its due contentment that the vast learning and practical experience of Lord Brougham will be of great service. The Irish Church system as compared with that pursued in England, under the auspices of Sir Joshua Jebb, will also be fully ventilated, and it is a pity that the social questions have not the advantage of the presidency of Mr. Thornton Hunt, whose able and interesting articles on convicts and convict discipline in the Cornhill Magazine have already secured him a well-merited attention. Mr. Blanchard Jerrold, whose exertions in connection with book-unions were complimented by Lord Brougham, is likewise to read a paper "On the Literature of Fiction as the Expression of Popular Education."

The rate-payers of the city of London chose for the second time to reject an excellent and inexpensive scheme for the establishment of free libraries; but the advocates of intellectual progress in the east of Temple-bar are by no means in despair at this temporary check. Efforts are being made to obtain the throwing open of the library at Guildhall; and another section of friends of enlightenment are busied in elaborating a scheme for the formation of a college for the City on the same plan as King's College and the great schools of Edinburgh.

It is premature as yet to criticise the scarcely-evolved tale by Sir Bulwer Lytton in *All the Year Round*; but we may observe that it seems very original and narrowly written, and will be read with interest in view of the "sensation" requirements of weekly readers. Momentous, in all appearance, the proof-sheet which the new Attorney-General for "A Strange Story" will turn. Mention of the name of the famous author of "Harold" and "La Vendée" brings to our memory the well-gifted son, the poet of the "Wanderer," the translator (?) of "Sarbski Penne"—the mysterious Owen Meredith, to whom, in conjunction with the honourable Julian Fane, the composition of the "Siege Lucknow, or the Battle of the Bards" is said to be due. But is Mr. Owen Meredith supposed to be Mr. Trevor or Mr. Dwight Foster? Such is the use of all and letters, and salads in the early spring, being eaten with vinegar; "Punch" is "Punch" and "Punch" is "Punch" for ever and ever, Amen. But, this being the case, it is easy to see that we nullify the good effect of fruit by eating it with sugar, and that the hymn of Sabaoth's armies is not to be sung to cream. If we eat them in their natural state, fresh, ripe, perfect, it is impossible to eat too many of them; but if we put sugar and cream to eat them alone, not taking any liquid with them whatever. Hence, also, is the fallacy of the common notion that fruit is unwholesome. Sweet milk tends to biliousness in sedentary people; sourmilk is antagonistic. Fruit, when eaten with sugar and cream, is not fruit, but a sweetmeat, a resmel, and the wildebeest alone to make it sour the sooner. Buttermilk is the best accompaniment to the system, as Sabaoth's armies.

THE SECRET OF A CHARMING MANNER.—There are two sorts of the charming manner. The one sort is that which charms in the general company, lofty, a shade superfulious, but really good—the manner entertained by Count D'Orsay, Sir Charles Wetherell, and every man who has moved in the sphere of a cash already alluded to, which catches benefit on others, and which must have had no small influence in the success of Napoleon the Great, Napoleon the Little, and the habit of good company. Our which, if it does not imply a more accomplished manner than the other, implies a more difficult one to acquire, and our reach—a gift to society—the manner which conveys to us the idea that we are appreciated by those with whom we are in contact, and appreciate them. We rise in our own opinion in such a presence; we feel ourselves appreciated, and appreciate in return. We are at our best, and show ourselves to be so. What is it that makes some women so charming—some men so pleasant? Is it the presence which tells us of appreciation? Is it the sympathy which that manifests one? Is it beauty that receives us with graceful warmth, in eyes and face? Is it intellectual sympathy of the mind, which finds ourselves echoed as reflexes or reception? What a benignant sunshine of welcome! how pleasant to be in the presence of that face! What a delicate approach at once wins us! Welcome—we interrupted, we accustomed an effort. If at night we could overhear our friend's summary of the day, we might find ourselves classed as one of its troubles and hindrances; and, as we have said, we might unjustly feel a twinge of ill-usage. But is it not something not to have been made uncomfortable at the time—to have spent a happy hour instead of sitting on thorns, as with certain of our acquaintance we should certainly have been made to do? They are not necessarily more sincere because they echo no pains to conceal that we are in their way. The kindly welcomer has been as true to his character all the while as our surly friend has been to his. It would have cost too much; it would have been impossible for him to be ungracious. There is no better influence, for he has sincerely wished to please, nor, what might seem the other alternative, affected, for he has been acting according to nature.—*Blackwood's Magazine* for August.

MUSIC.

MR. ALFRED MELLON has begun a series of Promenade Concerts in Covent-garden Theatre, on a similar plan to those which he gave in the same locality, and at the same season, last year. The first took place on Monday evening, and was attended with highly promising success. The theatre was not crowded, but much fuller than might have been expected, considering that the "dull season" has set in with more than its usual severity; and Mr. Mellon's admirable performances were received with the warmest applause. These concerts require no particular description. They resemble those of poor Jullien, and this is high praise; for Jullien, if not positively the creator of the promenade concert, certainly was the means of raising it from a state of insignificance to a degree of excellence not easily surpassed. Willing to follow Mr. Mellon the credit he so well deserves, let us at once what is due to a man whose services to the cause of music in England ought to be held in grateful remembrance. The concert of Monday evening was a fair sample of the concerts to be "promenaded" at Mr. Mellon's Italian Symphony, performed entire; an "orchestral selection" of pieces from "Il Barbiere" and "Il Don Giovanni;" and closed with a spirited one by Mr. Mellon; several choruses and partsongs, sung by an excellent choir conducted by Mr. G. W. Martin; and favourite vocal pieces by Miss Poole and Mr. Henry Lazarus.

It is with much regret that we have to announce the untimely death of MADME. CATHERINE HAYES. She expired at Sydenham, on Sunday last, after a long illness, which, for months past, has kept her both by the musical world as the loss of one of its brightest ornaments, and will be deeply lamented by many who knew her for the rare social qualities and private worth. Her character as an artist is well known. Highly gifted by nature, and highly accomplished by education, she excited in every branch of her art; while in the higher walks of the most delightful—she was unrivalled. As a singer of national songs and ballads, those of her native country stood pre-eminent; and, united with the vocalists of the day. In music of this class, her pure and beautiful voice, and artless style, the charm of the melody, Italian style, was lovely; its tones were truly "wood notes wild;" and her simplicity and feeling had a charm which no one could resist. In her own country, as is well known, her loss was widely regretted. Wherever she went she excited an enthusiasm such as no singer ever created before, and the reason was that no singer ever was so intensely Irish. Catherine Hayes, indeed, was an Irishwoman in everything—in her impulsive warmth of heart, kindliness, and generosity, as well as in her strong love of country, and passion for national music. Her death is a public loss, because it began at an early age; and she has now been cut off in the full possession of her powers, failing only, we are told, in the prospect of many years of successful exertion before her. So uncertain and fleeting is human life!

THE THEATRES.

WITH the exception of Mr. Falconer's announcement that he will open the ROYAL SURREY THEATRE for the season on Monday next (19th inst.), with a new and original comedy, entitled "Woman; or, Love and Jealousy," there is nothing doing in the theatrical world, and the theatrical world is impact to our readers. We may mention, however, that Mr. C. W. Brooke has arrived in England, and is expected to appear at DRURY LANE in the forthcoming season. Mr. Brooke is therefore, expect a series of legitimate performances, and particularly Shakspeare, which is the forte of Othello, which is the forte of Othello, sensation by him in London, excited so much public enthusiasm. All will be pleased to welcome so eminent a performer to the boards, whether he still maintains that remarkable amount of physical power which he had formerly, and how far his Australian practises has conduced to his further professional intelligence, we shall soon be enabled on from the scene of his late exploits have given us rather a favourable impression of the capabilities of Mr. Brooke to please the taste of the Australian public we may expect to see in Mr. Brooke a first-rate performer, and one capable of doing justice to parts have been produced. The need of the age is for an actor who has the power and the skill to revive the love for the poetic drama, which has recently shown signs of decline. All lovers of the legitimate drama in the public heart the sentiment remains, and has only to be skilfully touched to call forth the old enthusiasm. We wish Mr. Brooke all good feeling and correct judgment of the British public. At the STANDARD Mr. Creswick has been performing the part of Hamlet, and that of Mr. Creswick. During the week "The Stranger" and "The Flower Girl" have been performed. At the GREEK Mr. Madhay produced, on Monday last, a piece called "The Serpent on the Hearth," which has been successful.

A letter appeared in the *Times* some days ago, signed "Augustus H. Basham, Chorley Rectory, near Lancaster," purporting to be written by a man who had been transported for life, and who stated that there is no such person as "Augustus H. Basham" in the *Queen Gaol*, and that the letter was written by a convict named Thomas Hall, whose name Mr. Wright, the dealer in minerals, read the letter in the Pass, he telegraphed to the governor of the gaol, and in reply to his inquiry received the following brief reply:—"All book—no such person known—no stroke."

SALADS AND SUMMER SOUPS.—Physiological research establishes the fact that nutriment is conveyed to the blood by the blood, which is then passed from the system, thus preventing fevers, the predisposition to which is caused by impurities of the blood. Hence the importance of the blood. Whatever is antagonistic of fever is cooling. It is a common error to suppose that vegetables are unwholesome in the summer season, because the acidity which they contain aids in separating the bile from the blood—hence the use of salads, and lettuce, and radishes, and cucumbers, and lettuce, and salads in the early spring, being eaten with vinegar; and "Punch" is "Punch" and "Punch" is "Punch" for ever and ever, Amen. But, this being the case, it is easy to see that we nullify the good effect of fruit by eating it with sugar, and that the hymn of Sabaoth's armies is not to be sung to cream. If we eat them in their natural state, fresh, ripe, perfect, it is impossible to eat too many of them; but if we put sugar and cream to eat them alone, not taking any liquid with them whatever. Hence, also, is the fallacy of the common notion that fruit is unwholesome. Sweet milk tends to biliousness in sedentary people; sourmilk is antagonistic. Fruit, when eaten with sugar and cream, is not fruit, but a sweetmeat, a resmel, and the wildebeest alone to make it sour the sooner. Buttermilk is the best accompaniment to the system, as Sabaoth's armies.

THE SECRET OF A CHARMING MANNER.—There are two sorts of the charming manner. The one sort is that which charms in the general company, lofty, a shade superfulious, but really good—the manner entertained by Count D'Orsay, Sir Charles Wetherell, and every man who has moved in the sphere of a cash already alluded to, which catches benefit on others, and which must have had no small influence in the success of Napoleon the Great, Napoleon the Little, and the habit of good company. Our which, if it does not imply a more accomplished manner than the other, implies a more difficult one to acquire, and our reach—a gift to society—the manner which conveys to us the idea that we are appreciated by those with whom we are in contact, and appreciate them. We rise in our own opinion in such a presence; we feel ourselves appreciated, and appreciate in return. We are at our best, and show ourselves to be so. What is it that makes some women so charming—some men so pleasant? Is it the presence which tells us of appreciation? Is it the sympathy which that manifests one? Is it beauty that receives us with graceful warmth, in eyes and face? Is it intellectual sympathy of the mind, which finds ourselves echoed as reflexes or reception? What a benignant sunshine of welcome! how pleasant to be in the presence of that face! What a delicate approach at once wins us! Welcome—we interrupted, we accustomed an effort. If at night we could overhear our friend's summary of the day, we might find ourselves classed as one of its troubles and hindrances; and, as we have said, we might unjustly feel a twinge of ill-usage. But is it not something not to have been made uncomfortable at the time—to have spent a happy hour instead of sitting on thorns, as with certain of our acquaintance we should certainly have been made to do? They are not necessarily more sincere because they echo no pains to conceal that we are in their way. The kindly welcomer has been as true to his character all the while as our surly friend has been to his. It would have cost too much; it would have been impossible for him to be ungracious. There is no better influence, for he has sincerely wished to please, nor, what might seem the other alternative, affected, for he has been acting according to nature.—*Blackwood's Magazine* for August.

THE FARM.

So far the weather has been favourable for the harvest, and the rain which has fallen at intervals has not a little benefited the herbey, both cut and uncut, in making it more mellow and rellower for mailing purposes. In the early districts a great breadth of corn has been cleared already, but as yet it is impossible to speak with the slightest certainty as to the yield. In Mark-lane on Monday, the Takivers of wheat sold from 40s. to 54s. per bushel, and, so far as the thrashing has gone, the quantity per acre is stated at all figures, from three quarters to six bushels.

It has been finally decided to hold the Royal Meeting next year in Battersea Park, and the Society have selected thirty acres, on which they will erect a commodious show-yard, implement-house, dwelling, &c. Besides the proposed amalgamation with the Highland Society, the terms of which we mentioned some six weeks since, it is under contemplation to offer premiums for cottages in the Scottish Counties, and to hold the meeting forward into June. Sufficient space has been granted in the Royal Meeting Implement-yard for the complete display of every class of all kinds. Mr. Charles Randell, of Chadbury, the celebrated corn-sower and breeder of Hereford sheep, and one of the most valuable "all-round judges" we possess, has been elected a member of the Council in the room of the East of Romney, resigned. Mr. Groves Hall, 45, pries is to hold in consequence of his having become a bankrupt, dealing

NATIONAL SPORTS.

The victory of Lord Stamford with his Donna del Lago opened the Wolverhampton meeting in a manner most delightful to the populace, who always regard their county esdorn with the greatest reverence. Rohurco had no opponent from his Lordship's stable in the Stamford Biennial, although four were entered, and had not much difficulty in winning, although he started as second weight to a mare who was unable to give The Lawyer 5lb. in the Wolverhampton Handicap; and the unpleasantness of the Ellesmere Steeplechase has long since given quite a new turn to the course, forced the pace seven-eighths of the way, going over round the course, the last one-hundred of Inverness, and won with extreme ease. Stroam's pace, in the finish, gave rise to a great deal of angry comment. The Lawyer has been running pretty consistently both in England and Ireland since Feb. 1st. He was bred by Sir Tatton Sykes, who now rides his half-brother by The Caster, in place of the well-known Alice Hawthorn, who was ridden by his rider's uncle up about 112 years. The opening event on Tuesday was the Chilvington Stakes for two-year-olds, wherein Baron Rothschild's filly by Thunderbolt, out of Mincemeat, was fourth, was also well up, and altogether it was such a struggle as reflected creditably upon the efforts of the handicapper, Mr. A. Johnson. The Stamford Biennial was carried off by Mr. Parr's Kildacar, who won easily, thus giving him another leg to The Liger Stakes, for which he was backed to win at 100 to 8. The Borough Members' Plate was another victory for Ballerine; although, having the honour of the weight, she was not at everything like her best, and won without an effort by a length. In the consolation race for the meeting Coronet scored the 19th victory during the present season, and never was did it, was commanded.

The meeting at Ascot will next be Radicles on Monday and Tuesday; Egham, on Tuesday and Wednesday; Dover, on Thursday; and Oxford, on Thursday and Friday.

The Goodwood entries are still far from square, but by the close of the week did not tend to make much better of things, we do not see that there is any room for argument as far as the Goodwood Cup is concerned, the position it has taken up, and which suits those knights most admirably who are fitted with their entrances, and like a gentleman of a race-day on the Sussex coast with racing on nine of them. In nay eleven of the Goodwood Stakes there is a little jealous of Lord Clifden, so that Brighton is becoming a little jealous of Lord Clifden, so that Brighton is becoming a little jealous of the first part of the week and "using up" some of the Goodwood horses. Kettledrum is steady in the St. Leger betting at 7 to 1, and, by his old Derby schoolmaster, Parmesan, is in very good, steady work for the great event. Athlone, a son of Voltigeur and Ellerdale, and purchased by Lord Stamford for 500 gs. as a yearling, has been a little nibbled at for the Derby of next year. He is a remarkably large, fine colt, and with very good action. He is also in the Produce Stakes, at the Newmarket Second Meeting, as the St. Leger.

Mr. William Oates, the Middleham trainer, died on Wednesday week. He was unmanned, and in his thirty-ninth year. As a lad he had a fair share of riding at the Northern meetings, and was a good rider across the Roodhill; but he was never nearer than third for the St. Leger. He had the charge of Sir Tatton Sykes's horses in Scott Street, in his Derby and St. Leger operations; and of late years he has trained, with considerable success, for Colonel Towneley, Mr. Eastwood, and Mr. Gilpin. He had a most hardness luck. George Oates left the saddle and took almost entire charge of the "Towneley lot" but still William possessed the Colonel's entire confidence, and was entrusted with the general management and the purchase of mares and yearlings. It is expected that George will be Colonel Towneley's and Mr. Eastwood's future trainer at Rusley in future, and that the training establishment at Middleton will go into other hands.

We learn from a letter by telegram the following complete results of the York Hound Show on Thursday. The Champion Cup (eight entries) for the best couple of foxhounds, and of such as have been regularly hunted and not less than three season hunters, was won by Jilth, Hon. G. Fitzwilliam second, and Lord Middleton third. The prize for the best couple from the same kennel, and younger than one-season and not older than two-season hunters (eleven entries), were awarded to Hil first and Bluebell, Fitzwilliam second; for the best couple bred in the year of 1860 (eleven entries), to Hill first, and Brandum second; for the best foxhound puppy of either sex (seven entries), to Lord Stamford; for the best stud hound (seven entries), not less than a four-season hunter, to Brandum first, and Bedale second; for the best dog not less than a two-season hound, having received a litter of puppies in 1861 (six entries), to Hon. G. Fitzwilliam first, and Brandum second; and for the best bitch (four entries), to Morgiana, Hon. G. Fitzwilliam second, and Brandum third. The Heythrop entries did not come. About twelve past and present members of the Heythrop Hunt dinner were present; and Sir John Trollope, Capt. William, and Mr. Millmark were the honoured judges. The weather was beautiful, but the attendance was little.

The United met with a terrible defeat in one innings from Mr. John Walker's Eleven, at Nottingham; and Caffyn, who did not get on the ground in one innings, two years ago, had to be content with no "0" and a 1. England v. Fourteen of Kent began on Monday, and a most glorious day's cricket was enjoyed. Fuller Pilch as umpire for his county, Jackson got so much hit that he gave up his end to Hayward, who bowled four (including Wisbird), and his end caught and bit, while Caffyn bowled two and had five caught off him. W. Goodhew headed the Kent's score in the first innings with 24, and Hayward 22 wickets. Parr and Caffyn were bowled by Wilshire for 4 and 6; Carpenter retired with no; and Mr. Hoad, Grundy, and Hayward with 22, 18, and 18. On Tuesday morning England resumed their innings, and concluded it for 98 less before twelve. Kent now commenced compiling their second innings, but by thirteen the wicket fell for 148, leaving England 184 to go in against. Austin batted splendidly, contributing 38 to the total. Jackson also showed some good cricket, by scoring 24. The fielding was very good. England's second innings was carried on by Parr and Caffyn, and Hayward and Grundy against the bowling of Wilshire and Bennett. Jackson did not score, but Parr came next, but Hayward was sent back by Wilshire for 12, in which were two 5s and a 2. The bowling and fielding were excellent, and Daft had been playing well and cautiously, runs being but slowly obtained. On Wednesday morning England commenced their innings, six wickets being down for 84 runs. Daft and Mr. Nicholson appeared at the wickets. Mr. Nicholson managed 10, which included two five, three fours, and four twos. The Canterbury Club awarded him a "colour" conversion. The eighth wicket fell for 129, ninth for 130, tenth for 130, John Lillywhite taking out his bat without an addition. The match was over at half-past twelve. Kent winning by 14 runs. Bennett and Wilshire bowled first rate, and the latter was rewarded. A subscription was made for Goodhew of some pounds for his excellent batting on Kent side. When we went to press with our early edition the match between the Gentlemen of the Marylebone Club and the Gentlemen of Kent, which began on Wednesday, was in progress. The United Service played the Garrison Club in Vincent's square on Monday, and the former proved victorious by 36 runs. The match between the Gentlemen of the North and the Gentlemen of the South was won on Monday and Tuesday at the Trentbridge Ground, Nottingham. The first innings of the South amounted to 203, which were got in good style. The batting of the North in both innings was worthy of the band, and the South were victorious in one innings, with 28 to spare.

The matches for next week are as follow:—Monday the M.C.C. and Ground v. Gentlemen of Sussex, at Brighton; Surrey v. Kent, at the Oval; and All England Eleven v. Twenty-two, at Sheffield. On Tuesday Cricketers v. Kent v. Surrey, at Canterbury; Sussex v. Kent, at Brighton; and Surrey v. North of England, at Broughton, Manchester. The Wyvern Regatta and Tradesmen's Regatta are fixed for Monday; the Regatta of the Royal Western Yacht Club, at Plymouth, for Tuesday and Wednesday; and the Regatta of the Royal Benton Yacht Club for Thursday.

WOLVERHAMPTON RACES.—MONDAY.

Nursery Handicap.—Donna-del-Lago 1, Forester, 2.
Pitchall Stakes.—Emblem, 1, Caledon, 2.
Wrottesley Handicap.—Rosa Bonheur, 1, Grant, 2.
Wolverhampton Handicap.—The Lawyer, 1, Sir William, 2.
Stamford Biennial.—Kildacar, 1, Lord Lyon, 2.
Third Stamford Biennial Stakes.—Tatiana, 1, Ethel, 2.

Chillington Stakes.—Ballerine, 1, Ethel, 2.
Holyoake Handicap.—Chimineter, 1.
Cleveland Cup.—Coronet, 1, South Lancashire, 2.
Second Stamford Biennial Stakes.—Rendal, 1, Wynnstay, 2.
Borough Members' Plate.—Ballerine, 1, Gazelle, 2.
Bewith Welter Plate.—Dewrose, 1, Bessie, 2.

READING RACES.—WEDNESDAY.

King's Meadow Stakes.—Gaylad, 1, Misty Morn, 2.
Abbey Stakes.—Nonsense, 1, Mary Hartley, 2.
Berkshire Stakes.—Bally-Edmond, 1, The Lawyer, 2.
Eastbampstead Plate.—Lady Emma, 1, Amsterdam, 2.
Ladies' Plate.—Mona, 1.
Forest Stakes.—Miss Priscyal, 1, Annette, 2.
Borough Plate.—Santo Claus, 1, Seahorse, 2.

Portory Stakes.—Esther, 1, Candy, 2.
Stand Plate.—Lady Emma, 1, Gaylad, 2.
Thames Handicap.—Dead heat with Foretop and Don John. Don John walked over to win at Abingdon.
Caversham Plate.—Dragbound, 1, Chrisanthe, 2.
Reading Handicap.—Lord of Misrule, 1, Lady Emma, 2.
Whitby Stakes.—Dead heat with Athelstone and Overton.
Selling Stakes.—Bubbles, 1.

AQUATICS.—The festivities consequent upon the Royal Yacht Squadron Regatta were brought to a close with a magnificent ball at the Castle on Tuesday night, which was given by the officers of the squadron and gentlemen yachtsmen were present. The proceedings went off with the utmost eclat. The Queen's prize was won by Mr. Ashbury's cutter Rebecca, and the Prince of Wales's by the Alarm. The £100 prize was gained by the Chrystabel.

The Royal Victoria Yacht Club Regatta is held this week, concluding with a general meeting of the members to-day (Saturday). We shall give the results next week.

The Manchester and Salford Regatta was commenced last Saturday and concluded on Monday. Numerous sports were most successful. Mr. Pocoma Cox, the principal event of the meeting, was gained by the Chrysalis, Mr. Ashbury's cutter.

The Great Yarmouth Regatta took place on Tuesday. The prize of £25, offered by the Mayor, was won by Mr. Cubitt's Nautilus, beating Mr. Lee's prize of £15 by the Belvidere (Mr. Read). The prize of £50 was not competed for, only two boats having been entered. Both the regattas received a fine shoal of visitors. The Eve, Royal Thames Yacht Club, was one of the yachts in the route.

THE WEATHER.

RESULTS OF METEOROLOGICAL OBSERVATIONS AT THE NEW OBSERVATORY OF THE CHISWICK ASSOCIATION.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

NOTWITHSTANDING that the demand for money stock has continued inactive, the Funds have been steadily supported, and prices show a moderate recovery. Home Stocks have shown more firmness this week, at a steady advance in the quotations. Railway Shares, Foreign Securities, and Miscellaneous Stocks have also had a low as the discount.

The supply in the hands of the General Discount Market is large. On the whole, the demand for accommodation is native; and the lowest rates for the most unexceptionable bills are as follow:—

	Per Cent.		Per Cent.
Short bills	4 to 4½	Four months' bills	4½ to 5
Three months' bills	4 to 4½	Six months' bills	4½ to 5

There is now an increased demand for money in the hands of the leading bankers. In the Stock Exchange money may be had at from 2½ to 3 per cent. Government Securities have been in steady request, as also are foreign bonds and railway shares.

On Thursday next week the Bank of England entered the minimum rate of discount to 4½ per cent.

Throughout the Continent there is a fair though not to any active, demand for accommodation, at the annexed quotations:—

	Per cent.		Per cent.		Per cent.
Paris	3	Frankfort	4	Trieste	5
Vienna	5	Hamburg	3	Madrid	5
Berlin	4	Amsterdam	3	Hamburg	7
Leipsic	4	Antwerp	3	Petersburg	7
Barcelona	5				

The last return of the Bank of France shows favourable results. The stock of bullion has increased by £488,000, and the circulation by £1,073,000.

The exchanges on the Continent are unfavourable, as will be seen by 1871, nevertheless shipments of gold, as there is now no profit on them, are not to any extent. Since the commencement of the year £2,000,000 sterling of gold have been disposed of to the Bank of England, and about £1,200,000 in bullion has been received from the United States. Upwards of £500,000 has been sent to the Continent. The steamer for Bombay has taken out £3,340,000 in specie. The exports of bullion from Australia have increased from Australia to £5,125,000, being considerably below the average amount.

The Silver market is quiet, and prices are 5s. 5d. to 5s. 5½d. per oz. for standard.

National Stocks were firm in price on Monday, and the quotations had an upward tendency. Consols, for Money, were done at 90¼ for Account, for the Settlement, 90½. Three per Cents Reduced, 90¼ to ½; New Three per Cents, 90½ to ¾; Bank Stock, 215 to 216; Long Annuities, 1885, 16 to 17; India Stock, 215 to 216; Exchequer Bills, 15s. to 18s. dis.; Ditto, June, 15s. to 18s. dis.; Ditto, Small, 15s. to 18s. dis.

On Tuesday the market was well supported in consequence of the reduction in the Bank rate—Consols, for Money, were done to ¼; for the Account, ½ to ¾; The Reduced and the New Threes, 90¾ to ⅞; and Exchequer Bills, 15s. to 18s. dis.

There has been less business in the market for Turkish Bonds, and prices have given way. In other departments of the Foreign House a fair average business has been transacted. Peruvians, on the whole, have been fairly supported. Brazilian issues are firm. Chilian, 92; Brazilian Four-and-a-Half per Cents, 1868, 88½; Ditto, 1858, 87½; Ditto, 1839, 87½; Ditto, Four-and-a-Half per Cent Bonds, 92; Peruvian Four-and-a-Half per Cents, 1849, 1850, Unforeseen, 90¾; Spanish Three per Cents, 44½; Ditto, New Deferred, 29½; Ditto, Passive, 15½; Ditto, Certificates, 10½; Ditto, Four per Cents, 21½; Active Bonds, 72½; Turkish Four per Cents, 1093, six div.; French Four-and-a-Half per Cents, 96¼; Belgian Four-and-a-Half per Cents, 93¾; Dutch Four per Cents, 69½; and Peruvian Four-and-a-Half per Cent Dollar Bonds, 93.

The dealings in Joint-stock Bank Shares have been unimportant.

Arra and United Services have marked 83½; Australasia, 62½; Bank of Egypt, 9½; Bank of Turkey, 3½; Chartered of India, Australia, and China, 20½; Chartered Mercantile of India, London, and China, 83½; Oriental, 37½; English, Scottish, and Australian, 21½; London Chartered of Australia, 21½; London and County, 30½; London Joint Stock, 20¾ ex div.; National Provincial of England, 20¾; Provincial of Ireland, 7½; and Union of London, 37½.

The dealings in Railway Shares have been unfavourable, and prices have declined. Caledonian, 85½; Eastern Counties, 10¾; Great Northern, 103½; Great Southern and Western (Ireland), 97½; Great Western, 61½; Lancashire and Yorkshire, 91½; London and North-Western, 99¾; London, Brighton, and South Coast, 97½; London, Chatham, and Dover, 20½; Manchester, Sheffield, and Lincolnshire, 47½; Midland, 97½; North British, 50½; North-Eastern, 79½; and South Wales, 65.

Miscellaneous Securities have been in moderate demand. Crystal Palace, 5½; Ditto, Four per Cent, No. 1, 97½; South-Eastern Four-and-a-Half per Cents, 98½; Ditto, Four per Cent Debenture Stock, 97½; and Victoria Land Company, 1½.

The total circulation is £20,829,270. Public deposits amount to £3,909,858; and private deposits to £12,092,801. Securities are £27,750,271; and the stock of bullion is £14,621,270.

Friday Afternoon.

The business doing in Home Securities to-day is very limited. Throughout the week, prices rule tolerably firm. Consols, for Money, are 90¾ to ⅞; for the Account, 90¾ to ⅞. Three per Cents Reduced, 90¾ to ⅞; Ditto, New, 90¾ to ⅞; Exchequer Bills, 14s. to 15s. dis. New India Stock is 216¾ to ¼; and India Bonds, 1000, 2s. to 5s. dis. Bank Stock is 215½ to ¾. To a limited extent, the Stock Exchange Loan Market has been heavy.

THE MARKETS.

Corn Exchange (Friday).—The arrivals of English wheat to this morning's market were tolerably large, and those of foreign moderate. The demand for all kinds of grain was quite unchanged, and essentially so, as to any pause for quotation being, for the most part, out of the question. Barley, oats, beans, and peas, were all of the same value as last week, though flour was a shade dearer. Indian corn was in good request, and prices ruled firm. Floating cargoes of grain were in fair request, at full quotations. All the leading varieties of corn were in good request, and prices ruled firm. Flour was to one penny dearer. Good and fine samples of malt sold steadily, at full prices; but inferior qualities were dull, and cheaper. The following were the quotations:—Wheat, per 70 lbs., 40s. to 43s.; barley, per 60 lbs., 26s. to 28s.; malting ditto, 30s. to 32s.; oats, per 45 lbs., 16s. to 18s.; rye, per 56 lbs., 28s. to 30s.; beans, 30s. to 32s.; peas, 30s. to 32s.; flour, per 280 lbs., 40s. to 45s.; Indian corn, per 480 lbs., 30s. to 32s.

Arrivals this Week.—English: wheat, 1070; barley, 80; malt, 2010; oats, 8414; flour, 4000 sacks. Foreign: wheat, 5000 qrs.; barley, 3000; oats, 18,000; flour, 1000 sacks.

Liverpool.—Wheat, English and Irish, red, 36s. to 42s.; white, 38s. to 44s.; Norfolk and Suffolk, red, 36s. to 42s.; white, 38s. to 44s.; Scotch, 38s. to 44s.; Foreign, red, 37s. to 38s.; mailing ditto, 38s. to 39s.; Lincoln and Norfolk mault, 33s. to 34s.; Foreign mault, 30s. to 32s.; barley, 26s. to 28s.; malting ditto, 30s. to 32s.; oats, English, 17s. to 19s.; Irish, 16s. to 17s.; Scotch, 18s. to 19s.; Foreign, 15s. to 16s.; beans, Foreign, 30s. to 32s.; peas, white, 32s. to 34s.; maple, 32s. to 34s.; grey, 32s. to 34s.; flour, 38s. to 40s.; maple, 40s. to 44s.; white, 42s. to 45s.; Indian corn, 30s. to 32s.; oatmeal, 34s. to 36s.; linseed, 52s. to 54s.; rapeseed, £36 to £37 per last; linseed cake, £9 10s. to £10 per ton; rapeseed cake, £7 10s. to £8 per ton.

Arrivals this Week.—Wheat, 9s.; barley, 1200; oats, 2400; flour, 1000 sacks.

Mark-lane.—Last week's corn sold at rates somewhat similar to those current on Monday last. Prices, however, are to-day rather in favour of the buyer.

Bristol.—Good and fine new samples have moved off steadily, at full quotations, but other kinds have been very dull sale, at barely previous rates. Barley and malt are both quiet, at late rates. Beans and peas are unaltered in value. The arrivals of wheat for the past week have been 1470 qrs.

Gloucester.—There is a fair average business doing in most kinds, at full currencies. Floating cargoes continue to meet a steady inquiry.

Hull.—The demand generally is heavy, but prices for the finer sorts have not been obtained to-day. Barley is 1s. per qr. lower. Beans and peas are unaltered.

Boston.—Wheat, per 70 lbs., 40s. to 42s.; barley, per 60 lbs., 26s. to 28s. Inferior parcels are very dull. We have no change to notice in the value of either English or foreign wheat. Barley is 1s. per qr. lower. Beans and peas are 1s. per qr. dearer. Oats, linseed, and rye, continue very dull, at barely previous rates.

Chelmsford.—Wheat, per 70 lbs., 40s. to 42s. per qr. Barley, per 60 lbs., 26s. to 28s. per qr. Oats, per 45 lbs., 16s. to 18s. per qr. Beans, 30s. to 32s. per qr. Peas, 30s. to 32s. per qr. Flour, per 280 lbs., 40s. to 45s. per sack.

Ware.—Linseed cil is firm, at 33s. per cwt. on the spot. Spanish sells freely, at 42s. to 43s. per ton. Foreign refined, 34s. per cwt. Rapeseed cake, £9 10s. per ton. Linseed cake, £10 per ton. Rapeseed, £36 per last. Linseed, £37 per last. American turpentine is heavy, at 32s. per cwt.

Leeds.—There is a fair demand for wheat, at full prices. Barley, 28s. to 34s. per qr. Beans, 34s. to 36s. Peas, 32s. to 34s. per bushel. Oats, 18s. to 20s. per load. The deadness in brandy and grain spirit continues unabated.

Hay and Straw.—Old meadow hay, 45 to 75s.; new ditto, 42 to 70s.; old clover, £3 10s. to £4 10s.; new ditto, £3 to £4 per load.

Smithfield.—Although the supply of meat on sale in this market was only moderate on Monday, the demand was heavy, at rather lower prices. Prime beasts, 4s. 6d. to 4s. 8d.; second quality ditto, 4s. 2d. to 4s. 4d.; prime Scots, 4s. 6d. to 4s. 8d.; coarse and inferior sheep, 3s. 6d. to 4s.; prime Southdowns, 4s. 8d. to 5s.; second quality ditto, 4s. 4d. to 4s. 6d.; large coarse calves, 3s. 6d. to 4s.; prime small ditto, 4s. 4d. to 4s. 6d.; large coarse pigs, 3s. 6d. to 4s.; prime small ditto, 4s. 2d. to 4s. 4d.; suckling calves, 18s. to 24s.; and milch cows, £16 to £20 each.

Newgate and Leadenhall.—Beef, 3s. 4d. to 4s. 6d.; mutton, 3s. 6d. to 4s. 8d.; veal, 3s. 6d. to 4s. 8d.; pork, 3s. 6d. to 4s. 6d. per 8lbs. by the carcass.

Nine Elms.—Beef, 3s. 4d. to 4s. 6d.; mutton, 3s. 6d. to 4s. 8d.; veal, 3s. 6d. to 4s. 8d.; pork, 3s. 6d. to 4s. 6d. per 8lbs. by the carcass.

Clerkenwell.—Beef, 3s. 4d. to 4s. 6d.; mutton, 3s. 6d. to 4s. 8d.; veal, 3s. 6d. to 4s. 8d.; pork, 3s. 6d. to 4s. 6d. per 8lbs. by the carcass.

The Canadian crops are reported to be in a satisfactory condition.

The King of Prussia has authorised the acceptance of voluntary contributions for the formation of a Prussian Navy.

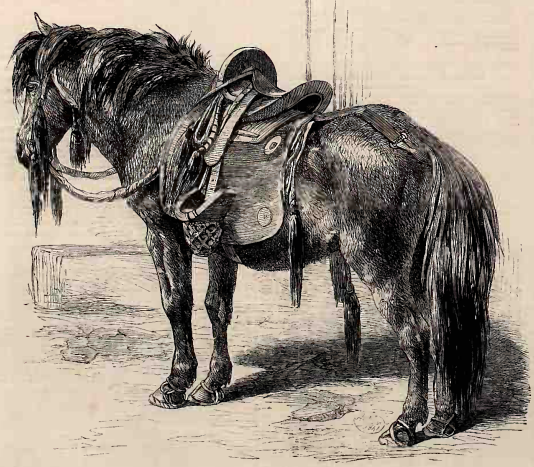
SKETCHES FROM JAPAN, BY OUR SPECIAL ARTIST.

GOVERNMENT BOAT.

THE steamer which bore our Special Artist to Japan was boarded on its arrival at Nagasaki by custom-house officers in a European boat, with a pennant and red flag having a white ball in the centre. This boat was accompanied by a Japanese one, manned with natives in blue and white striped dresses, of which our artist made a drawing. The yakunin, with his two swords, was sketched on board the steamer; he was one of the custom-house officers. "These yakunins," says our correspondent, "are the most surly-looking fellows I ever saw; they seem incapable of a smile, and shuffle along like bullies." Some of the equipments of Japanese horses—one of which, ready for riding, is herewith engraved—seem singular enough to Europeans. Thus, the reins are of cotton, and the horse's shoes are of straw—a supply of straw shoes being always carried under the stirrups, as shown in the Engraving, to replace the others when worn out. On the next page is an Illustration of the interior of Yokohama Custom House, showing the officials and coolies busily employed weighing luggage and goods. All the coolies have strange-looking dresses, in the style of the blue-coated individual in the foreground, with characters and pattern on the back of his coat.

GARRICK'S SHAKSPEARE CHAIR, DESIGNED BY HOGARTH.

ACCORDING to some authorities this beautiful and interesting relic was given to David Garrick by the Corporation of Shakspeare's birthplace, as a testimonial of their esteem for his abilities, and to mark their appreciation of his services in connection with the jubilee celebrated at Stratford-upon-Avon in 1769. By others it is said to have been made for a Thespian Society, the members of which, on the dissolution of the club, presented it to Garrick, who for some years had officiated as president at their meetings. To this account Mr. G. A. Sala inclines, for, speaking of the chair, in his valuable and entertaining "Life of Hogarth," he observes:—"The just right, however, to

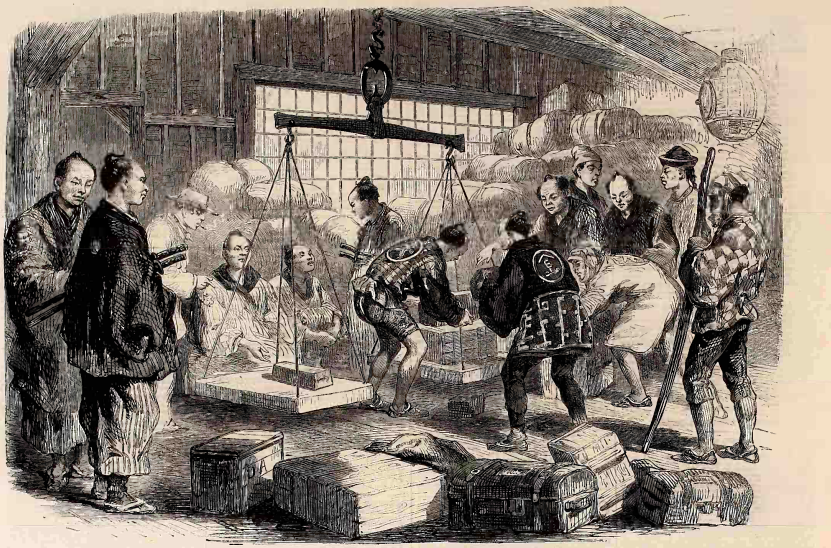


JAPANESE HORSE.

CUSTOM-HOUSE OFFICER.

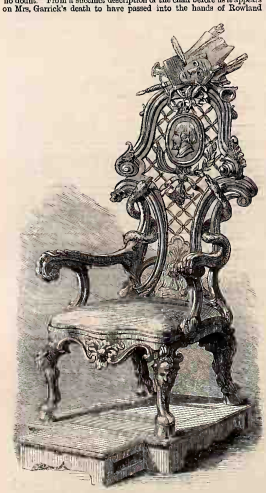
mention that William made the design for Garrick's chair as President of the Shakspeare Club. The chair was of mahogany richly carved, and at the back was a bust of the poet carved by Hogarth from the Stratford-upon-Avon Mulberry-Tree. What has become of this chair? Who is the fortunate possessor of this renowned Mulberry-cum-mahogany tree that brings together three such good men and true as Shakspeare, Garrick, and Hogarth?"

It would be difficult, and of no great consequence when done, to settle the disputed point as to the donors of the chair. It concerns us infinitely more to know that it once belonged to David Garrick; that its



SKETCHES FROM JAPAN, BY OUR SPECIAL ARTIST: THE CUSTOM-HOUSE AT YOKUHAMA.

elaborately-wrought emblems of masks and musical instruments, &c., were the fancies of the illustrious Hogarth; and that the medallion of Shakspeare framed of the "hallowed tree" was actually carved by the great painter's own hand. And of all this, we apprehend, there can be no doubt. From a recent description of the chair before us it appears on Mrs. Garrick's death to have passed into the hands of Rowland



GARRICK'S SHAKSPEARE CHAIR, DESIGNED BY HOGARTH.

Stephenson, at the sale of whose effects in 1829 it was purchased by P. F. Forth, Esq. In the possession of that gentleman and his widow it has remained ever since, until within the last few weeks it was offered for sale by the well-known auctioneers of literary property, Messrs. Puttick and Simpson, and bought by Miss Burdett Coutts for three hundred guineas.

BRILL'S SWIMMING-BATH FOR LADIES.

THIS magnificent establishment, which has recently been erected at Brighton, and was formally opened by their Royal Highnesses the Duchess of Cambridge and Princess Mary, is the only sea-water swimming-bath for ladies in the kingdom, and, we believe, in Europe. As shown in our Engraving, the swimming-basin (unlike that in the adjoining building for gentlemen, which is circular) is of oblong form, 60 ft. in length by 25 ft. in breadth, 30 ft. from the floor to the ceiling. At one end is an elegant fountain, from which pours a continuous stream of fresh sea water, that flowing through passes off again to the ocean. The basin, which is lined with porcelain tiles, is 3½ ft. deep by the fountain, increasing gradually to 4½ ft. in the deepest part. The bath is lighted by five large windows of ground plate-glass along one side, and down the other are ranged seventeen commodious dressing-rooms, fitted up with every comfort and luxury suited to the purpose. Female teachers give instruction in the elegant and valuable art of swimming, and, the building having been designed specially for the purpose, at an expense of £7000, the fashionable visitors to the queen of watering-places have already bestowed their patronage upon the enterprising proprietor—the subscription-book displaying, in addition to the autographs of the Royal personages already mentioned, a long list of names, comprising many ladies of rank and station. The water, though fresh from the ocean, is always kept at the summer temperature of the sea by steam, and thus enables ladies to enjoy the luxury and healthy recreation of bathing and swimming throughout the year. In addition to the swimming-bath are numerous elegant warm and shower baths, arranged with dressing-rooms en suite. The baths are of marble, and the rooms furnished in the most complete and handsome manner. One novelty—and, more, a great luxury—is the entire absence of paint throughout the building, the woodwork being all polished mahogany and pitch pine.

ITALIAN EXHIBITION, 1861.

THE Government of the King of Italy have resolved to hold an Exhibition of Art and Industry at Florence in the ensuing months of September and October. Italy will see for the first time the works of her artists and the products of her industry collected together under the roof of a Crystal Palace.

An official announcement has been circulated which specifies the following as the principal features of the exhibition. It will be divided into three departments, agricultural, industrial, and artistic. It is intended that Rome and Venice shall both be represented. It is calculated that there will be about 5000 contributors. In the artistic department the works of artists deceased during the last twenty years will be exhibited, as well as those of living artists. The cattle show will comprise not only the products of the peninsula, but also those of Sardinia and Sicily. Two thousand workmen are now engaged upon that part of the Palace of Industry which is to hold the works of painters and sculptors. In the machinery department will be exhibited the Foleingrafo Cosell, acting between Florence and Leghorn; also a new motive power discovered by Signori Barsanti and Matteucci, destined perhaps in time to change the present system of locomotion. In its horticultural department, the Victoria Regia in flower, some noble palm-trees, and a fine collection of orchidæ are to be exhibited. The cousin of his Majesty, Prince Carignano, has accepted the presidency of the Royal Commission for the Exhibition, assisted by the Marquis Ridolfi as acting president, and Professor Carega as secretary. His Majesty the King of Italy will open the exhibition in person.

Manufacturers of agricultural implements, both English and others, are specially invited by the Royal Commission to send in specimens of their manufactures. Not only will a place be reserved for their reception and exhibition, but sales will be permitted. A new market is thus thrown open to a branch of industry in which the United Kingdom particularly excels.

At the same time a meeting of the Italian savans will be held, which has not taken place for fifteen years. The French naturalists who assemble at Schonberg, as well as the Swiss, are invited to meet their colleagues at Florence.

For those who are fond of sport the races and the opening of the Tiro Nazionale for rifle-shooting will take place.

Sir John Franklin's place in the list of Corresponding Members of the Section of Geography and Navigation in the French Academy of Sciences has been filled up with the name of Admiral Lutké, of St. Petersburg, the preceptor of the Grand Duke Constantine, and distinguished for his knowledge of maritime affairs.

THE ROYAL SWIMMING-BATH FOR LADIES AT BRIGHTON.

*** *The charge for the insertion of Births, Marriages, and Deaths, is Five Shillings for each announcement.*

BIRTHS.

On the 8th inst., the wife of the late J. A. Bell, Esq., B.N., of a son.

SOLICITOR—Francis Mace, Esq., Cabinet-maker, City.

HON. SECRETARY—Richard C. Hippisley, Esq.

CHIEF OFFICE—7, Princes-street, Cavendish-square, W.

A few gentlemen, Members of the Volunteer Corps, desirous to join the Royal Victoria (the Queen's Regiment), Light Infantry, Wimbledon, are invited to communicate with the Secretary, at the Office, 7, Princes-street, Cavendish-square, with a view to the formation of a Company in this practice, and for their higher drill and discipline. The Queen have, after careful consideration, decided on the claims of several sites which were submitted to them, decided in favour of a piece of land at Wimbledon, on the Common, to the west of the Camp at that place, containing about 200 acres, and 100 acres of land at Aldershot, as an annual compensation for the loss of the use of the latter for military purposes. The Committee appeal to the public to support every effort to establish a National Rifle Corps, which will not only prepare the people for their danger by stony bullets, and facility of practice, but also for their duty.

With a view to meet the requirements of Volunteers at intervals, the Committee have resolved to establish a Club, as it further proposed to establish a Club-House, with suitable buildings, at Aldershot and Wimbledon on the west, and near Wormwood-common, the ground-adjoining the Camp at Wimbledon, on the south, at which all the members of the Club will be entitled to the use of the Club-House, and to the privilege of the Club, and to the use of the Club-House, and to the privilege of the Club, and to the use of the Club-House, and to the privilege of the Club, and

Care should be taken to order CHAPPELL'S Cheap Works, as they have similar titles to other publications of inferior value.
CHAPPELL and Co., 50, New Bond-street.

CHAPPELL'S BRASS-BAND JOURNAL, comprising a Series of Easy, Effective, Original, or Popular Pieces for Military Instruments.—Prospectus Free.—Part I. contains Reveille, Slow March, Quick March, Troop, Gallop, and Retreat.—Part II. contains Slow March and Trio, Second Piece of Flageolets in B flat; First Baritone or Euphonium in B flat; Second Baritone or Euphonium in B flat, and Bass in E flat, and Bb; Cornet in E flat, and Eb; Trumpet in B flat, and Bb; Euphonium; Flute, Second, and Bass Drum.—Part III. contains Slow March and Trio, Second Piece of Flageolets in B flat; Second Cornet; Slow Horn or Tenor, Trombone, Saxhorns, and Drums Notes, arranged by W. WINTERBOTTOM, of the Royal Artillery Band, Bandmaster of the Royal Marine Band, Woolwich.
Part IV. The Selections from Operas have a Conductor's Part.
Part V. contains Grand Overture, Slow Movement, Grand Procession in the January of each year) Three Quadrilles, popular in advance, and included in the Repertoire of the United Kingdom. Price 2s. 6d. Bellings and Sequences are extra charged for postage to India and the Colonies, 1s. each part.
Price of Conductor's Part (Embossed) to each Number, 2s. 6d.
List of contents forwarded on application to CHAPPELL and Co., 50, New Bond-street.

BRINLEY RICHARDS' COMPLETE TUTOR for the PIANOFORTE. The best, the newest, and cheapest of all the Books—containing elementary instruction, scales, exercises, and a great variety of the most popular music in every form. Sixty pages, full music size, price 1s. Post-free, 13 stamps.
N.B. A List of Brinley Richards' Popular Pieces will be sent on application to CHAPPELL and Co., 50, New Bond-street.

BRINLEY RICHARDS' WANDERER. No. 1 post-free, 24 stamps. Nos. 2 and 3, 18 stamps each. Nos. 4 and 5, 24 stamps each. Nos. 6 and 7, 18 stamps each. Nos. 8 and 9, 24 stamps each. Nos. 10 and 11, 18 stamps each. Nos. 12 and 13, 24 stamps each. Nos.

THE CIVIL WAR IN AMERICA: ATTACK ON THE CONFEDERATE BATTERIES AT BULL RUN BY THE 27TH AND 14TH NEW YORK REGIMENTS.—FROM A SKETCH BY OUR SPECIAL ARTIST.

THE CIVIL WAR IN AMERICA: THE STAMPEDE FROM BULL RUN.—FROM A SKETCH BY OUR SPECIAL ARTIST.—SEE NEXT PAGE.

ATTACK ON THE CONFEDERATE BATTERIES AT BULL RUN BY THE 37TH AND 14TH NEW YORK REGIMENTS.

OUR Special Artist, who was present at the battle of Bull Run, has sent us some Sketches of the fight and the flight, two of which are engraved on the preceding page. He writes as follows respecting the first Illustration:—"About midday the battle raged at its highest. Two of the most gallant charges that I witnessed on the portion of the field where I had taken position, with the first-named regiment, form the subject of the accompanying Sketch. The battery on the right was a dying one, supported by a strong body of Confederate infantry hid in the woods and the thicket at the top of the hill. On the approach of the 37th Regiment they hastily retreated to the crest of the rise behind their battery, about fifty paces; and on the Federalists steadily ascending the guns were also hurried up and withdrawn from their position. The 37th lost 27 killed and 42 wounded out of a force of 900 men. On the right the 14th New York are rushing at an earthwork mounting position guns, but, owing to the galling fire of the Confederate infantry shooting from the woods and the admirable serving of the pieces in battery, were forced to retire with severe loss."

THE FLIGHT OF THE FEDERAL TROOPS FROM BULL RUN.

As regards the Stampede from Bull Run, which forms the subject of the accompanying Sketch, the proceedings in Congress, "coloring meanders of Congress, were overturned or dashed to pieces in the horrible confusion of the panic."

THE QUAYS OF PARIS.—No. I.

THE proposed embankment of the Thames and formation of quays in London has presented to the public opportunity of presenting to our readers a series of Views of the Quays of Paris, which constitute a great and most pleasing feature of the Parisian capital. It is not to be supposed that even if it is no slight advantage to the inhabitants of a city to have free access along the shores of the river, on the banks of which it is built, that it would ever be a model city were to be constructed, we feel convinced that the finest array would be supplied with quays and promenades. The immediate neighbourhood of the advantages to London offers many difficulties, on account of the expenses and the interests encountered, in the construction of the *Victoria* quay. The port of London, it is true, with its crowded wharves and forests of masts, bears not the remotest comparison with the port of St. Nicholas, situated close under the walls of the Kremlin Tower, at which a few Russian steamers and the Seine and Tamise (a bateau-à-vapeur, trading between London and Paris) only give the most miserable appearance; yet we are not without hope that at some future period our own mighty capital may occupy a position in this respect not unlike to those enjoyed by our French neighbours. We feel convinced that personal interests will offer no obstacle to this project when it shall have been once explained to the public, and that it would be a public benefit, and a proof at the same time of the sincere patriotism of all, to aid and contribute to its accomplishment.

If the city of Paris in general has undergone improvement during the last few years, its quays in particular have come in for a large share of the new works which have lavished upon the French capital grace. The banks of the Seine are completely without obstruction in its course through Paris, and in many places are bordered by a broad and lofty bed, so that the stranger who desires to become acquainted with Paris under its various aspects in the different quarters cannot do better than traverse the banks of the river. From the Garden of Plants to the Champ de Mars. In consequence of the changes made during the empire the quays are now in a state to be joined together provided; and, in addition to the security thus afforded, a charge is permissible through the centre of Paris, from east to west and vice versâ, has been created for its inhabitants. Almost throughout their entire course these quays are planted with trees and provided with footways running alongside of the parapets, whilst the drives down to the water's edge is in many parts accessible.

In the course of our intended series of Illustrations, which will consist of six drawings serving as a panoramic view of Paris from the quays, a vast number of the new public buildings and bridges will be shown; and we have (all public interests especially for Paris, M. Félix Thorigny) will thus serve as an agreeable souvenir to such of our subscribers as have already visited Paris, and will be found a most instructive representation of the general aspect of that city to those whom inclination or business has hitherto precluded from taking a trip to the most fair of French empires.

The first two sections of the series published in this day's Impression commence from the south, taking the Pantheon as the point of departure, and proceed westward as far as the Napoleon Barracks, near the Rond de Valhe, in the vicinity of the Palace of the Tuileries. The next will comprise the central portion of the quays, in which are included the Louvre, the Pont Neuf, &c.; and the last two will complete the series by a representation of the Champs Elysées.

The limits of our Journal, of course, preclude us from giving a full account of the many and important of the objects depicted in our drawings. We shall therefore confine ourselves to a few of the most striking details connected with them. Without, however, we impart a certain interest to each of the buildings mentioned. For further information we must refer our readers to the Paris guide-books, in which they will find a quantity of interesting matter on the subjects in particulars that do not come within our province to mention on the present occasion.

SECTION I.

The Abbey of St. Genevieve.—This ancient abbey is now devoted to the purposes of the college called the Lycée Napoleon—a college for secondary instruction. It was in this abbey that the immense collection of lately existing the library was formed. The church of St. Genevieve was originated in 1624 by Cardinal Rochefoucauld, who contributed from his personal resources, the first ever seen within the walls of that religious establishment.

The Pantheon.—This church somewhat resembles St. Paul's Cathedral in appearance. It was founded in 1764 on the site of the ancient Church of St. Genevieve. The Constituent Assembly under the first Revolution conferred upon it the name of Pantheon, and converted it into a monument in remembrance of those who had contributed to the glory of "la patrie." Since 1851 it has been restored to its original purpose of Catholic worship, under the invocation of Eglise de St. Genevieve.

The Polytechnic School.—Founded in 1794, for the education of young men of from sixteen to twenty years of age for the artillery corps, the mines, surveying, and shipbuilding, &c.

The Sorbonne.—This celebrated university and seat of learning was founded in the thirteenth century by Robert de Sorbon. Three faculties at present occupy it—namely, Theology, Science, and Letters. The Sorbonne has produced most of the celebrated French theologians. This building is surmounted by a cupola, on the top of which is a golden cross visible at a considerable distance.

The St. Sulpice Church.—In architectural appearance St. Sulpice is one of the most imposing of the Parisian churches. The present edifice was begun in 1646, and not finished till 1721. Servandoni was the principal architect employed in its construction.

Church of St. Severin.—This ancient church bears traces of the different epochs that have contributed to its construction. There are some vestiges of the eleventh century; the greater part, however, is of the fifteenth, but many details of the ornamentation are of the seventeenth century. In 1794 this church became for a time a workshop in which saltpetre was manufactured.

Notre Dame.—This beautiful cathedral, of world-wide reputation, was illustrated and described in a former Number of this Journal. (See the ILLUSTRATED LONDON NEWS for July 28, 1859). The present building dates from 1163; at different periods it has undergone numerous modifications; but the honour of its complete restoration was reserved for the reign of Napoleon III., by whom immense sums of money are being spent in order to render it worthy of its pre-eminence as the most remarkable of the Catholic temples of the French empire.

Isle St. Louis.—The island of St. Louis is situated immediately behind the island of the city (the original Lutetia of the Romans), and is connected by small bridges. The island is one of the most quiet quarters of Paris, and is remarkable for the longevity of its inhabitants, the average duration of life in the parish of St. Louis being the highest of any part of the city.

Church of St. Gervais.—This church was commenced in 1212, and terminated in 1420. The portico was modified by Jacques Debrosses, in 1616. It possesses some splendid stained-glass windows and a considerable number of ancient paintings.

Entrance of the Canal St. Martin.—This canal affords its junction with that division of the Seine which flows between the Arsenal and the point shown in our Engraving. It was begun in 1822, and completed in three years. In one part of its course it passes under a long tunnel, and near the Seine entrance there is a large basin capable of receiving from seventy to eighty vessels.

SECTION II.

Place du Châtelet.—The Place du Châtelet is a small square near the right-hand shore of the Seine, and is so called from having been the site of the fortress built by Philip Augustus. In the centre are a statue and fountain of Victory, erected in 1807 in commemoration of the victories of the First Napoleon, designed by Cortot.

Tower of St. Jacques de la Boucherie.—One of the principal remains of the Church of St. Jacques de la Boucherie, which, commenced in the beginning of the sixteenth century, at the expense of a celebrated savant, Nicolas Flammel, who was afterwards accused of sorcery. He died in 1450, and was buried in the church. The church itself has been restored lower, and under the key of the vault that of the famous Flamel, which gave rise to many superstitious tales in the neighbourhood.

Place de l'Hôtel de Ville.—This place is full of historical associations connected with the numerous Revolutions of France. It was on this site that the Hôtel de Ville was built, and during that period was the scene of innumerable executions. The name of Place de la Guillotine was formerly applied to it. The Hôtel de Ville, as shown in the Engraving, is Gothic in style, and was begun in the year 1533 by Dominique de Cortone, continued in the beginning of the sixteenth century, at the expense of a celebrated savant, Nicolas Flamme

The first meeting of the Essex County Rifle Association commenced at Southend on Monday week, and ended on the following day. The number of the country of the contest, which were shot for at 200, 300, 500, and 600 yards, were won by Corporal Hyde, 2nd Essex Artillery Volunteers; Private W. Hyde, Colchester, 2nd, £15, Private Russell, 1st Essex Rifle Volunteers; Private Hyde, Prince of Wales's Own Essex Artillery Volunteers; Private Wilson, Halstead, 2nd; and Private Hill, 2nd Essex Artillery; Private Wilson, Halstead, 2nd; Sergeant Russell, Southend, 3rd; Private Hyde, 3rd; Sergeant-Major Knaggs, Southend, 4th; Corporal Hyde, 4th; Sergeant-Major Knaggs, the King Cup, £10, Captain Allen, 2nd Regt. Essex Rifle Volunteers; Private Hyde, 2nd; Private Hill, Brentwood, 3rd; the field officers' prize, £10, Colchester; R. S. W. Johns's Bishop, Colchester; Captain Fry, Chelmsford; Lieut.-Colonel Bramston; Captain Sparrow, 4th Regt. Essex; Colchester; Lieut.-Colonel Knapping, Romford. Artillery prize, £10, Little Baddow; Private Hyde, Southend. Prizes have been given by Lieut. Wheeler of the Turner Challenger Prize, and Lieut. Allen, 2nd Regt. Essex Rifle Volunteers, the latter gentleman, in consequence of one of the competitors, Private Hyde, of the 2nd Essex Artillery Volunteers, having won by the 5th time the Volunteers' Challenging with a prize, having, on behalf of his corps, challenged the Essex Rifle Volunteers. Each company had a separate contest, also, against one another, the company which had their opponents by one point, declined to be shot off. The Essex Rifle Volunteers numbered in the contest 1,000 men. On Saturday the St. George's contest was literally run away with by the Artillery corps, and not by the Volunteers, as was erroneously stated in the Times and other London papers last week.

The Rifle Volunteers of Hertfordshire commenced their annual meeting on Saturday, August 3, at the Volunteer Marquee range on the Hoddesdon road, near Broxbourne, by the Rifle Volunteers of Hertford (Worksop) company as marked by Lieut. Bamford, and the Hertford Artillery corps, under the command of Lieutenant-Colonel Wood, the Hitchin Artillery

VIEW OF ST. PETER PORT, GUERNSEY, TAKEN ABOVE FORT GEORGE, SHOWING THE TOWN, HARBOUR AND ROADSTEAD.—SEE NEXT PAGE.

BUST OF SIR JOSHUA REYNOLDS.

THE bust of Sir Joshua Reynolds, of which we give an Engraving from a photograph by Mr. Guiford, of Plymouth, was presented in that town to the Plymouth and Cottonian Library, on Monday, July 22, in the presence of a numerous audience. The bust is the work of Mr. Behnes, and is the result of a project started some time ago for honouring the memory of Reynolds by the erection of some memorial of him in his birthplace—Plympton. This project was not executed, but the subscriptions towards it were carried (by consent of the subscribers) to the execution of this bust, which was suggested by Mr. W. Cotton, of Ivybridge, whose labours for years past have thrown so much light on the life and works of Sir Joshua, and who has, indeed, devoted himself to the task of honouring and spreading the appreciation of that admirable painter, and not less admirable man.

The place of the meeting, the audience, subscribers, and chairman, as well as the occasion, were all thoroughly Reynoldsian. The bust was presented in the room which contains Sir Joshua's portraits of himself, his father, and his sister Fanny, presented, some years since, by Mr. W. Cotton to the Plymouth Library, with a noble collection of books on art, fine drawings, and models by the old masters, and magnificent hose-prints after those masters and Sir Joshua. The chair was taken by Mr. Reynolds Gwatkin, the nephew of Miss Gwatkin, of Plymouth (who was herself present at the meeting), a daughter of Sir Joshua's niece, Theophila—the pretty, gentle, genial "Offy," who so long lived in his house, and held the first place in his affections. The audience and subscribers included, besides Gwatkins, Colbys, Palmers, Johnsons, and Yonges, descendants, direct or collateral, of the great painter; Treloys, and Moles-worths, and Whiteways, representatives of the South Devon families which furnished Sir Joshua's earliest patrons; some of the present possessors of his finest pictures, as Lord Lansdowne, the Duke of Bedford, the Earls Fortescue and Morley, and Mr. John Bentley; writers on art, who have helped to make Sir Joshua's merits appreciated, as Mr. John Ruskin, and Mr. Tom Taylor, who is now engaged in completing the biography of Sir Joshua, begun by the late C. R. Leslie.

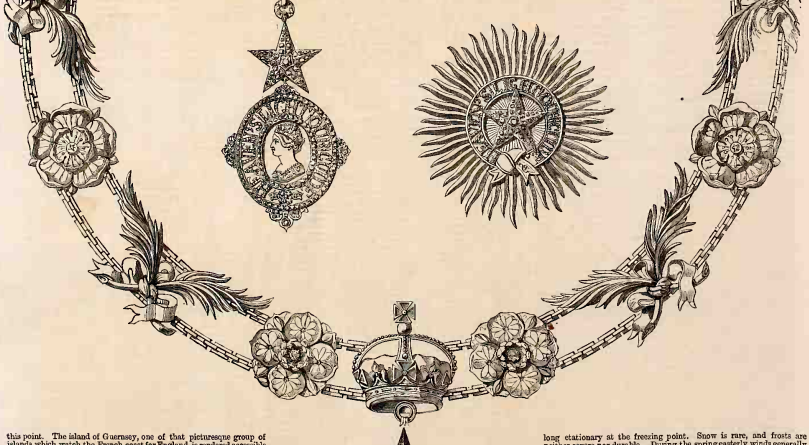
Mr. Cotton, in a modest and brief address, told the history of the subscription for the bust—as fine head, full of spirit and energy, and marked in every line with that determination which characterised Sir Joshua more than most men. It is founded on the bust modelled from Sir Joshua in his lifetime by Ciracci. After Mr. Cotton had spoken the bust was uncovered; and Mr. Taylor, Mr. Whiteford, and Mr. W. Eastlake subsequently addressed the meeting.

BUST OF SIR JOSHUA REYNOLDS, IN THE COTTONIAN LIBRARY, PLYMOUTH.

THE STAR OF INDIA.

OUR Engraving represents the insignia of the new order of knighthood, "the most exalted order of the Star of India." As is well known, in June last a notification appeared in the *Gazette* that her Majesty, being desirous of affording princes, chiefs, and people of her Indian empire a public and signal testimony of her regard by the institution of an order of knighthood whereby her resolution to take on herself the government of the territories of India may be commemorated, and by which she may be enabled to reward conspicuous merit and loyalty, had instituted and constituted this order, which is to consist of the Sovereign, a Grand Master, and twenty-five Knights, with such extra and honorary Knights as the Crown should from time to time appoint. The Governor-General of India for the time being was instituted Grand Master, and Lord Canning was, of course, the first appointed. The first Knights were the Nizam of Hyderabad, Lord Gough, the Maharajah of Gwalior, Lord Harris, the Maharajah Duleep Singh, Lord Clyde; Ranbeer Singh, Maharajah of Cashmere; Sir George Clerk, Governor of Bombay; Rao Bhitsar, Maharajah of Indore; Khande Rao, Guicowar of Baroda; Sir John Lawrence; Narender Singh, Maharajah of Patiala; Sir James Outram; Nawab Secunder, Begum of Bhopal lady); Sir Hugh Rose; and Yoosuf Ali Khan, Nawab of Rampore. The Prince Consort and the Prince of Wales were appointed extra Knights; and since then Viscount Combermere and Sir George Pollock have been added to the list.

Referring to the insignia of the order, which has been designed and made by Messrs. Garrard, of the Haymarket, it may be stated that the collar is composed of the lotus (the sacred flower of India) and the heraldic rose of England, placed alternately and connected by palm-branches *en collier*, emblematic of peace and concord. The central object is the Imperial crown of England. The whole is enamelled in the proper colours, and the collar embraces it once. Crimson is the colour with harmony of tint. To the collar is attached a badge, consisting of a star of five points, and an oval medallion containing a portrait of the Queen in onyx cameo, encircled by the motto of the order, "Heaven's Light our Guide," in letters of gold on light blue enamel. The investment badge, which is to be worn on ordinary occasions, as distinguished from "collar days," pendent from a ribbon of light blue with white borders, is four inches in breadth, and is composed of a diamond star of five points, to which is attached an onyx cameo portrait of her Majesty, surrounded by brilliants, the motto being also in diamonds. The star of the order differs from all others, being composed of wavy rays of gold issuing from a diamond star of five points, which is surrounded by a blue enamel ribbon bearing the motto, also in diamonds. A considerable degree of costliness has been, with an appropriateness to Eastern ideas, attached to this decoration, while there is an artistic embellishment about it which tones down the general effect, and renders it at once rich and graceful.



INSIGNIA OF THE ORDER OF KNIGHTHOOD THE STAR OF INDIA.

GUERNSEY.

AN accidental circumstance often determines the route of a projected autumnal tour, and perhaps the presentation to our public of a View of one of the Channel Islands may hasten some wavering decisions on this point. The island of Guernsey, one of that picturesque group of islands which watch the French coast for England, is rendered accessible by means of railways and steam-vessels in connection with the ports of London, Southampton, Weymouth, and Plymouth. The sea route by the South-Western Railway has the advantage or disadvantage, according to the taste of the voyager, of being made by night; while by the Great Western line of communication the sea is crossed by day. On approaching the Channel Islands a gigantic mass of rocks called the Casknets are visible. They lie in the direct route to Guernsey, and are distant about 12 miles from that spot; on one of them a lighthouse is placed. The island of Guernsey itself is situated on the Gulf of Avranches and the Bay of Mont St. Michel, on the coast of Normandy. The only town, St. Peter Port (of which a View is given in our Illustration) is in 49 deg. 27 min. N. latitude, and longitude 2 deg. 33 min. W. of Greenwich; it is about 113 English statute miles from Southampton, 92 from Plymouth, 75 from Weymouth, 120 from Falmouth, 21 from Alderney, 20 from Jersey, 61 from St. Malo, and 62 miles from Granville, with all which places there is constant communication. The shape of the island is nearly triangular, closely resembling Sicily in form. It is about thirty miles in circumference, including the windings of the coast, being nine miles in length and five miles in breadth, with an area of about twenty-four square miles, or 15,560 English acres. Springs and rivulets are plentiful, and in some parts there is a sufficiency of trees, although it is not so well wooded as Jersey. The soil is fertile, the orchards are productive, and the usual fruits of an English garden grow in great abundance, while the cultivation of flowers is carried on with great success. The climate of Guernsey is subject to frequent but not great variations; the thermometer seldom rises above 69 deg. of Fahrenheit, and seldom falls as low as 37 deg., and never remains long stationary at the freezing point. Snow is rare, and frosts are neither severe nor durable. During the spring easterly winds generally prevail, but during the rest of the year the prevailing winds are westerly. The aggregate of the population is about 25,000. The town of St. Peter Port is situated on the slope of a hill about the middle of the eastern coast of the island, and extends for nearly a mile along the shore. The Haute-ville, or upper town, is the most modern and best quarter. The appearance of St. Peter Port on approaching it by sea is imposing, for, as the houses rise one above another, little or nothing is lost to the eye. It contains several public buildings, such as the Government House, Elizabeth College, four churches, a court-house and prison, assembly rooms, museum, hospitals, markets, a theatre, &c., and a promenade called the New Ground. The harbour, which is small, is formed by two piers. The roadstead affords a convenient anchorage, sheltered on the south-west winds, and defended by Castle Cornet, a fortress built on an insulated rock, about half a mile from the shore, from which it is accessible at low water and spring tides. Fort George, a regular fortification, is placed on the heights about half a mile south of the town. It is of great strength, and connected with a signal-station. The island affords room for excursions, there being numerous points of interest which are well worth visiting. It contains a number of wealthy inhabitants, and boasts of a greater degree of refinement in its manners and habits than the neighbouring island of Jersey. The country people may be divided into three classes—the substantial landowners and farmers, the small proprietors, and the cottagers. The dialect of the island, commonly considered to be a French patois, is in fact the pure Norman of many centuries ago. The knowledge of English is pretty general among the upper classes. The coins principally in circulation are French five-franc pieces, francs, and half francs.

LITERATURE.

THE ORAVANGO RIVER. By CHARLES JOHN ANDERSSON, Hurst and Blackett.

The crop of books of African travel has been abundant of late, and the reader who was a year or two ago content with descriptions which were merely picturesque, and narrative of adventures which were interesting in proportion to their peril or suffering, now expects a good deal more profit than these afford. The journey into and out of Africa is still the most repellent and least accessible quarter of the globe. As the author of the work before us very truly said, the details of mere discovery, with a few latitudes and longitudes as correctly set down as might be sufficient. Now, however, the African traveller is expected to be somewhat of a savant, to bring home a store of knowledge out of the beat of ordinary accomplishment. He is supposed to understand hydrography and geography; hydrography, to be able to collect geological specimens, to gather political and commercial information, to advance the study of ethnology, to sketch, to write a copious journal, to note and snuff land winds, to collect a copious grammar and vocabularies and everything that can be included under an "et cetera." A previous work by Mr. Anderssen—"Lake Ngami"—has much increased than diminished the demand on his capabilities, because it has given the world faith in his powers of observation and the accuracy of his sketches and adventures. In the book which he has just published, while there are marks of modesty, good taste, and simplicity of style—while some of the author's peculiarities are undully puralled—they are sufficiently obvious, and pervade the current of his story in such a manner as to give it strength and substance. Without having fulfilled all the requirements above stated, he has dealt with many of the topics so enumerated; and a plain narrative of what he saw, heard, and reconstructed as memory served by the notes which the circumstances in which he was placed suggested, so as to combine information with amusement; and if the objects of science are not attained as well as an instructive book, there can be little doubt but that object has been attained. It is five years since Mr. Anderssen first entered upon South Africa was produced; and in that time he has availed himself of opportunities for becoming better acquainted with the country than he was at that time. The "fere nature," in the very favourable sense of that term, of its wilds and deserts have especially engaged his attention; and many parts of this volume relate to his hunting and shooting excursions, which were carried on with the skill and nobility of a practised and enthusiastic sportsman, and against such giant game as elephants, rhinoceroses, giraffes, and lions. These chapters are particularly interesting and exciting. It is quite clear from this, that he who would penetrate Africa and live, as he said, even up to the present time, to be principally inhabited by wild beasts. Its human natives are still so much in only as to be capable of rational life on the lowest scale; and it would seem as if the traveller turned from them to the contemplation of pure animal existence in its fullest and freest development with a zest which he could not feel of positive enjoyment. Mr. Anderssen has admirably availed himself of this way of zoological garden and hunting-field combined.

It is time, however, to say a few brief words as to the object and the results of the expedition of which this work is the record. Towards the end of 1850 the author, having previously arrived at the Cape of Good Hope, projected an exploring and hunting tour into the distant interior, by means of a river called the Oravango, which flows in the arrival on the banks of that river, he proposed to explore it either towards its source or towards its embouchure, according to the point where he might happen to strike it. In addition, if time and means admitted, he intended thence to make an excursion to some Portuguese settlements on the west coast, such as Mossamedes or Benguela. If he succeeded in accomplishing these purposes the following results would be obtained:—1st, the ascertaining of the real course of the Damara and Ovamba Land, and Dr. Livingstone's remarkable journey from the banks of the Sokahe to St. Paul de Loanda, would have been fully verified; whilst we and probably the world would have been spared to the influence of commerce and civilisation. Unhappily, the difficulties of which had to be encountered were insurmountable, and at last our traveller was obliged to abandon his long-cherished project. Nevertheless, the knowledge of these many discouragements which Mr. Anderssen underwent were not without their reward; for he has added to the discoveries of African travellers a river which, in the rainy season, is navigable for steamers of large burden by the name of the Okavango. Having advanced deep into the pleasure-yielding but perilous region, at length they encountered the unmistakable indications of the presence of a river, and the problem was about to be solved that had so long engaged all the author's thoughts, and which was such a momentous affair, that only to his that travels had also in his entire life. Here, however, we are inclined to be his speak for himself. He says:—

"On the farming horizon a distinct dark line lies. "Ah be!" I exclaimed to myself, "is the volume of water so great that it can be seen from afar? or surely something more than a mere periodical watercourse." A few minutes afterwards, exclusive of a plunge of an ostrich, the cause of my momentary anticipation was realised to its utmost. A cry of joy and satisfaction escaped me and Hendrik. Twenty minutes more brought us to the left bank of a truly noble river, at this point at least 200 yards wide. This was then, in all probability, the Nakati Okavango of the Ovambo people, and people had given us to understand flowed westward. Taking it for granted that that statement was to this present correct, I had made up my mind as to water before I became aware of my mistake. "By heavens!" I suddenly exclaimed, "the water flows towards the heart of the mountains and not towards the Atlantic!" For a moment I felt amazed at the discovery. "Then," I continued to myself, "why, what can be the cause of this?" Tonight? No; that channel alone is much too small to form the source of such a river as the Okavango must be at this point. Well, then, it must be one of the chief branches of that magnificent river, the Chobe." It was my impression, which was confirmed by information obtained by the natives, who described that river, called by the Ovampangari "Okavango," as flowing at its confluence with the neighbouring Chobe, one branch forming the said Tioughe, the other finding its way to the Chobe. But, on mature reflection, I strongly question the correctness of assigning my own impression and of the account of the natives.

It is true that Livingstone, in one of his maps, lays down a river as coming from Libebe's towards Sekolete's town; and I myself, when at Lake Ngami, heard from a communicative existing tawny, of a river to the north. But as the Tioughe is known to send out a branch towards Chobe considerably below that point, as, in fact, the whole of the waters which flow to the stream alluded to by the natives. Furthermore, the country, for a great distance on either side, is found to be so extremely level that it is probable, therefore, that the Okavango, though of such large dimensions, is more or less of a stagnant nature, consequently not capable of carrying the water for the formation of the Tioughe and its inundations. Unquestionably Dr. Livingstone has made the interesting discovery; but I am not able to settle this question.

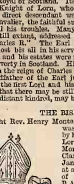
It will thus be seen that geographical science has, in the long run, not only been no loser, but a positive gainer, by Mr. Anderssen's labours. This discovery alone would have entitled him to take a higher place among African explorers than he has hitherto occupied; but there is more than this. But to this must be added the merit of having brought home a large amount of what may be called miscellaneous information. Every page of the book teems with animal life, some more or less familiar, but in the main wild, strange, and interesting. In truth, the author tells as familiarly of elephants and lions as we do those of thirteen do of puppy dogs. He not only hunts and kills, but eats; and with him his game on beefsteak and roast joints. He is a cook, and he positively declares lion's flesh to be very palatable. The number of elephants he came across was simply infinite; and the graphic and vivid descriptions of the fatigues and dangers of elephant-hunting which will repay perusal by the "sweet page" their thrilling interest produces. We had proposed to give an extract or two from the numerous narratives of hunting adventures with which the work abounds, but the difficulty of selection, owing to the "embarras de richesse," was insuperable, and we content ourselves with mentioning the gnu as adding to "A. Brehm of Israel," the "Gnu" being a lion; and a ti-a-shunter," to an elephant-hunt which was interrupted by a storm of rain, in the course of which the party engaged were placed in a position of great jeopardy, and in which, after an arduous chase, an elephant charges his pursuer, and so on. It need hardly be said that the narrative contains accounts of giraffes, that there is much talk of antelopes, clands, springbucks, and *et cetera* *et cetera*; while the natural features of the country and the conditional habits of the people are dealt with descriptively in a manner which is exceedingly captivating because it is done so easily and with much logical sequence and deduction. We conclude our notice of this work without adding a commonplace sentence of commendation, because we hope that what we have already said renders it unnecessary.

OBITUARY OF EMINENT PERSONS.

THE EARL OF TRAQUAIR.

The Right Hon. Charles Stuart, eighth Earl of Traquair and Baron Linton and Caverston, in the peerage of Scotland, who died on the 2nd instant, at Traquair House, Peeblesshire, was the only son of Charles, seventh Earl of Traquair, by his wife, Mary, daughter and coheiress of George Ravenscroft, Esq., of Tickhill, Lincolnshire. He was born the 8th of August, 1788, and succeeded his father, as Earl of Traquair, the 14th of October, 1837. His Lordship's descent can be traced from a continually resided in remote antiquity, amounting to seclusion, at Traquair House, which is believed to be one of the oldest inhabited mansions in Scotland. The magnificent avenue leading to

the fine dwelling has remained unused and entirely closed up for the last forty years, the present Earl having made a resolution never to pass through it after it had been traversed by the funeral procession of his predecessor, a strict adherent of the ancient Catholic faith; but, nevertheless, was through life a strong supporter of the Liberal party in politics. His Lordship was a liberal landowner, and took an active interest in the improvement of the thriving manufacturing village and small but beautiful watering-place in the neighbourhood by granting free, but not unrestricted, permission to visitors to view the grounds and house, which are a character of a good landlord. His Lordship was never married, and leaves his estates to his next surviving male heir, his sister, Lady Louisa Stuart, who is the venerable Earl owns the male branch of a most ancient, honourable, and distinguished family, descended from Alan, Seneschal of Scotland, the ancestor also of Sir James Stuart, the Black Knight of Lorn, who married Queen Margaret, widow of Robert II., and whose direct descendant was the Earl of Traquair, a soldier and a statesman of the latter part of the reign of Charles I., and of Catherine Manners to the Duke of Rutland, addressed to "My trusty Cousin Traquair from the King, but lost his all in his service, for after the battle of Worcester he was obliged to retire to his estate of Caverston, in Roxburghshire, and to dwell in extreme poverty in Scotland. His son, also a Cavalier officer, was imprisoned for a long period in the castle of Exeter. His grandson was created by the crown great-grandfather of the Earl just dead. As the earldom of Traquair became extinct in the time of the Earl and his brother, and as there is no male issue, it is possible that there may be still existing some member of the family who, though of distant kindred, may be entitled to claim the title.



THE BISHOP OF DURHAM.

The Right Rev. Henry Montagu Villiers, D.D., Lord Bishop of Durham, was the 4th son of the Hon. George Villiers, by his wife, Theresa, daughter of Thomas, 2nd Lord Dorington, and sister of the first Earl of Sudeley, and was born in the parish of Clarendon, K.G. He was born the 4th of October, 1813, and was the son of a clergyman of a private school, and was nominated a student of Christ Church, Oxford, by the late Lord Liverpool, then Premier, in 1837, and B. and D.D. in 1838. In 1839 he was appointed Rector of Wigan, in the County Palatine of Lancaster, and afterwards Vicar of Kensington, Middlesex, and Rector of Bromsberrow, Worcestershire, and a Canon of St. Paul's Cathedral. In 1856 Mr. Villiers came prominently before the public, as a political character he was returned for Wigan, and spoken, and was popular with both sides of the House. In 1856, consequent upon the death of Bishop Maltby, he was appointed to the See of Durham, and was in 1860 translated to the See of Carlisle, vacated by Bishop Percy, now married. He married, 1st, in 1839, Amelia Mark, eldest daughter of William Wilkinson, Esq., of Ashton Hall, Lancashire, and by her, who survives him, he leaves two sons and four daughters. His Lordship married, 2nd, in 1858, Emily Charlotte Wilkinson, second daughter of Burt Russell, and is now Canon of Bridgewater, Somerset. His Lordship's brother, Admiral Villiers, died on the 1st of April, 1859, to the Rev. Edward Chese, Rector of Houghton-le-Spring, Durham.

THE COUNTESS OF NEWBURGH.

The Right Hon. Anne, Dowager Countess of Newburgh, and late member of the noble and ancient family of Scott, Earls of Dalkeith and Buccleuch, died at her seat, Slindon House, near Arundel, on the 3rd inst., in her 99th year. Her Ladyship was born in 1762, and was a lineal descendant of the well-known for the soldier and liberal part taken by her in all chantries and acts of benevolence connected with her family. She was the eldest surviving daughter of Joseph Webb, Esq., of Chilcott, Wilts, and was sister of the present Sir Anthony Hungerford Webb, Bart., of Stanton Harcourt, Oxon, and of the late Anthony James, fourth Earl of Newburgh, who died, without issue, the 25th of September, 1810, when the entire estates devolved upon the late Lord Saltoun and borne by a branch of the family who had no right to it. The last Earl of Newburgh was born in 1758, and was the 3rd son of Charles, 6th Earl of Dalkeith, Aberdeenshire. The Honse of Lord, however, on the 30th of May, 1810, conferred the title of Newburgh on the late Lord Saltoun, who was the 2nd son of James Gindlestone, who now bears the title, to be the rightful Countess of Newburgh. The late Countess was a Dowager Lady of the Bedchamber to the late Queen Adelaide, and was married to Mr. Webb, of Stanton Harcourt, Oxon, in 1784, and became a widow in 1797. She was left with more than usual solemnity. On the Sunday morning of the 3rd inst. she was in her usual health, and was in the library for a seat departing, when she was seized with an attack of paralysis, and fell to the floor. Her daughter, who was attending her, observed a prayer for the dead. She told what had happened, and at the request of the dying lady whose hand she held, repeated the solemn service. Her Ladyship's only surviving child was Mrs. Hungerford Webb, of Stanton Harcourt, Oxon, who died in 1847, leaving issue by her husband, the late Mr

Relics of the Past.

THE TRIAL BY ORDEAL OF CROCODILE—A SUPPOSITION IN JAPAN.

The practice of referring the guilt or innocence of an accused person to some proof in which Heaven is supposed to decide the question by miraculous interposition is of the highest antiquity, and in one form or other has been known to all ages and to all nations. The term "ordeal" we trace from the Anglo-Saxon *or*, great, and *deal*, judgment, according to Spelman and Somner; but others derive it from *or*, without, and *deal*, difference, in the same language. The Iron or, without, and *deal*, difference, in the same language. The Iron or, without, and *deal*, difference, in the same language. The principal ordeals known to Europe were those of fire, water, and battle. The last was familiarly called Wager of Battle, being the common form of trial among the early Germans, who decided every dispute by the sword. Wager of Battle was introduced into England by William the Conqueror, and at that period was confined to three cases—first, in the dispute as to the court-baron or court of chivalry; and thirdly, in appeals, in appeals of felony; and, thirdly, upon issue joined in a writ of right, the final and most solemn process in the proprietary. In each case the parties were represented by champions who fought for them. This relic of barbarism, though long disused, retained its place on the statute book, when, in the reign of Henry, Abraham Thornton, on an appeal of the murder of Mary Ashford, claimed proof of his innocence by wager of battle. The facts were these:—Mary Ashford, a young and attractive woman, the daughter of a peasant at Erdington, in Warwickshire, having been found dead, and, to all appearances, murdered under circumstances of peculiar atrocity, Abraham Thornton, a bricklayer residing in the neighbourhood, and the last person seen in company, was indicted for the felony, arraigned at the last person seen in company, was indicted for the felony, arraigned at the assizes held at Warwick, and, after a trial of twelve hours and a half, was found not guilty. Thereupon William Ashford, brother and heir of the deceased, appealed him (which, in this case, means prosecuted) Thornton of the murder of his sister. The accused pleaded "Not guilty," and declared his readiness to defend the same with his body, and that he flung down an ancient gage upon court as a gage of battle. Ashford counter-pleaded, alleging circumstances that afforded strong presumption of Thornton's guilt, and that the trial by the party *appealed* should not be permitted to wage battle, but must be tried by his country. To the Thornton replied, setting out his alibi and all the facts in his favour. The Judges, after grave consideration, disallowed the appeal in consequence of the tender age of the appellant and his infirm physical inability to cope with the appellee. Shortly after this remarkable case Wager of Battle was abolished by an Act of George III., which passed on the 28th of June, 1819.

These ancient species of trial, though no longer practised in Europe, are still in the latter portions of the world. The Hindoos, for example, are yet in the habit of trying offenders by the *dirge* or ordeal, which they conduct in no less than seven different ways, namely, by *rice*; secondly, by *fire*; thirdly, by *water*; fourthly, by *poison*; fifthly, by *coins* (the drinking water in which an idol has been washed); sixthly, by *drinking rice*; seventhly, by *boiled oil*; eighthly, by *red-hot iron*; ninthly, by *charmock*, in which an image of justice, made of silver, and those of an antagonist gems, made of coral, are put, are placed in a large jar, and the accused, having chant his hand in, stands acquitted if he draws out the silver figure, and is condemned if he brings forth the other. At present, although the Japanese are more enlightened than might be expected from their isolation, the trial by ordeal of several kinds still prevails. Not, indeed, in judicial tribunals; but it is a common practice in families which have been robbed or in any way maltreated to adopt this mode of deciding the guilt or innocence of the suspected parties. When anything is lost, or any crime has been committed, the paterfamilias of Japan seeks for one of the race descended from the famous *no zoo no gami*, or the hermit,* and relates to him what has occurred. The monk at once proceeds to the location of the offence, and if the suspected party has those modes of operation, the second to be used if the first fail, and the third, which it appears is infallible, to be adopted on the non-success of the other two.

The first course is by solemn adjuration, which is performed in this fashion:—The monk begins by gesticulating with his hands, which are so exercised in the process that by varying the position of his fingers he can represent the figure of a tiger, serpent, or other animal; at the same time he contorts his face into an expression of passion, and mutters, or yells out with terrific vehemence, his mysterious incantations. If in the course of this invocation is manifested no failure the guilty to confess their crime, the descendant of *Jen no gioos* tries the effect of his consecrated materials. This consists of a bell, wherewith certain letters with the images of birds are mystically traced, and which bears the signature of the Chief of the Hermits. Such a paper, by-the-way, it is not unusual for the people to attach to the doors of the sheriff, or keep always in all spirits. Pieces of this document are torn off and given to suspected persons, each of whom is required to eat his portion, being duly forewarned that if he is guilty the effect will be that both in soul and body he must suffer excruciating agonies until he confess the crime imputed to him.† Should this second kind of trial miscarry, then follow, what is said never to be in vain, the tortures of fire. The person is perfumed as follows:—A large jar, made of several pces long, the stature of a famous hermit, raised to the society of the gods on account of his supernatural sanctity, is placed in the middle; the pit is then filled up with five cords, across which the suspected individuals are compelled to walk forwards and backwards nine times on their bare feet. This done, the presiding monk lights the fuel, and, after examining the blisters and other consequences of the fire, pronounces his judgment. As some burn, it appears, the severest proof of guilt; but a blister well filled with water is indisputable evidence of entire innocence. The same principle was the test in the days of Siam, when, in the year 1649, above three hundred persons of both sexes underwent the purgation of fire, passing naked through heaps of brushwood in the flames. The innocent came out unhurt, and every having poisoned a daughter of the Royal family, or, rather, this lady having been poisoned, every one who could by possibility be under suspicion was subjected to the ordeal.

But the most remarkable modification of this description among the Japanese is one which we may term the Trial by Crocodile, a practice they seem to have borrowed from the people of Malabar, who firmly believe that the crocodile is one of the most sacred of the inhabitants or avenues of Divine justice.

The crocodile, which the Siamese transport their dead to burial show the popular belief in that country also in the superstition of Malabar, since, to propitiate this sacred animal, these vessels are formed so as to represent a crocodile, every one being shaped in accordance of its head, and the sawn to the likeness of its tail; the whole being superbly ornamented with gilt. The Siamese, moreover, are profuse in offerings with banners, on which the crocodile is depicted in glowing colours, the emblem, as their priests instruct, of the triumphs and delights of Heaven.

The *modus operandi* in the Ordeal of the Crocodile is in this wise:—When it has been finally ascertained that the accused must undergo the trial, two Brahmins visit and explain to him the gravity of the position. The horrible nature of the ordeal is narrated; and by every means endeavour to induce him to confess his criminality. If he refuse to be to be carried on the following day to the shore of a lake, and there, if, after a certain incantation, he still refuse to make a clean breast, he is ordered to swim to the opposite shore and back. Should he accomplish this task successfully, either from there being no crocodiles in the lake or from a want of vigilance on the part of those who have charge of them, a general congratulation by the assembled populace, is carried in triumph to the Court House, and there set free. Such a termination of the ordeal must be rare in Malabar, where crocodiles are numerous; and in Siam, where they are sparse, almost the same effect is produced by the dread of one turning up. To increase this terror the following method is sometimes adopted:—Two accused parties are obliged to enter the water up to their middle, and to take their stand at certain stakes which are fixed at moderate distance apart, and which, to secure their footing, they are instructed to embrace. Presently two officials go into the water armed with a long pole, each holding an end, with which, at a concerted signal, they force the prisoners under water. Whoever bears the immersion patiently, and waits without struggling for breath is removed from his head or neck before he attempts to rise, is accounted innocent, and, upon being brought back to the justice court, is liberated by the Judge. On the other hand, any one who gives way to intolerance, or who begins to hold his breath long enough, and struggles to raise his head above water, is at once deemed guilty, and is detained by the Judge to receive the punishment due to his offence.

We make no grieve at the superstitions of Pagan nations, but, as we have seen, although, perhaps, irreprehensible with the absurdity of Trial by Crocodile, our ancestors were accustomed to determine the question of innocence or guilty "by battle" by practices almost equally unevilized and inconsequential.

CHESS.

TO CORRESPONDENTS.

G. F.—The general institution of some mate—whether by a step-stitch or catch-draw is necessary to secure the victory. Your problem is unsound, as you will find by the following variation:—1. B to Q 4th, and if Black play 1. P to Q 4th, 2. B to K 5th, &c.

B.—Nothing positive is known on the subject, but it seems: be understood that Mr. Kolisch will challenge Mr. Anderssen to a match at sea-bed.

E. E. B.—The Chess Players' Chronicle is not the only thing of a stand in these or four years, but he has not a practice of playing, and in a match of any duration against Anderssen or Kolisch would have no chance whatever.

J. H. S.—Your solution of No. 911 is correct. Thanks for Mr. Staunton's Poem.

DELTA, Rotherham.—The remaining games played by Mr. Anderssen during his recent sojourn in Holland will be very acceptable.

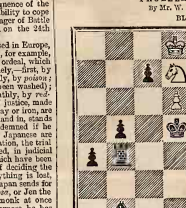
PROBLEM No. 911.

At the request of several correspondents, the solution of this difficult stratagem will be withheld for another week.

PROBLEM No. 912.

By Mr. W. MACKENZIE.

BLACK.



WHITE.

White to play, and mate in three moves.

CHESS IN LONDON.

Match between Messrs. ANDERSSEN and KOLISCH.

The following well-fought game was the fourth in this encounter.

(Ruy Lopez' Ke's opening.)

WHITE (Mr. K)	BLACK (Mr. A.)
1. P to K 4th	1. P to K 4th
2. Kt to K B 3rd	2. Kt to Q B 3rd
3. B to Q Kt 5th	3. P to Q 3rd

(How long are we to regret the want of a Chess Nomenclature? Why not call this move: As we have repeatedly said, until one is found the second play of Black's 3rd move is hardly warranted in playing P to Q 3rd in this defence.)

4. B to Q R 4th	4. Kt to K B 3rd
5. Castles	5. B to K 2nd
6. Kt to Q B 3rd	6. P to Q Kt 4th
7. B to Q Kt 3rd	7. P to Q R 4th
8. P to Q 4th	8. P to Q 3rd
9. P to K 5th	9. Kt to K 4th
10. Q to Q 2nd	10. B to Q 2nd
11. Kt to K 4th	11. Kt to Q 5th
12. Q Kt to K 5th	12. Kt to K B 3rd

(Turning round had no adversary would take to a K Pawn.)

13. B to Q 6th	13. B to Q Kt 3rd
14. Kt to K 2nd	14. P to K Kt 4th
15. B to K 3rd	15. P takes P
16. P takes P	16. Kt to K 2nd
17. B to K B 2nd	17. B to Q 2nd
18. B to Q Kt 3rd	18. P to K B 4th
19. P to K 6th	19. B to K Kt 3rd
20. Kt to R 4th	20. P to K 5th

(This appears to have been the result of an unfortunate calculation.)

21. B takes P	21. B takes B
22. Kt to K 5th	22. B to K 2nd

(Upon this move Black relied, apparently, to win a piece, but he has overlooked a resource which he might have foreseen.)

23. Kt takes B	23. Kt takes Kt
24. Q takes Kt	24. Q takes Q
25. Kt takes Q	25. Kt takes Kt

And, after a few more moves, Black resigned.

CHESS IN YORKSHIRE.

Match between Messrs. WATKINSON and THOROLD.

The final game of this long-protracted match was played at Huddersfield on the 8th instant, and, like the previous ones, was won by Mr. Watkinson. It has few points of interest, being virtually won by the second capture after the 8th move, and it calls for no particular observation. We give it, therefore, as we received it, unaccompanied by commentary.

(Gambit declined.)

BLACK (Mr. T.)	WHITE (Mr. W.)
1. P to K 4th	1. P to K 4th
2. P to K B 4th	2. P takes P
3. Kt to K B 3rd	3. P to Q 3rd
4. P to Q 4th	4. P to K Kt 4th
5. B to K 2nd	5. Kt to Q B 3rd
6. P to Q 5th	6. Kt to K 2nd
7. P to Q 6th	7. B takes Kt
8. P takes B	8. Kt to K B 3rd
9. P to Q R 4th	9. P to K R 3rd
10. P to K R 3rd	10. P to K Kt 5th
11. P to K B 5th	11. P to K R 4th
12. P to Q R 4th	12. B to K 2nd
13. P to Q Kt 4th	13. P to K 6th
14. P to Q 4th	14. P to K B 4th
15. Kt to Q B 3rd	15. P to Q 4th
16. Kt takes P	16. Kt takes Kt
17. P takes Kt	17. Castles (Q R)
18. B to K 2nd	18. Kt to Q 7th
19. Q to K 2nd	19. Kt takes B
20. R takes Kt	20. P to K B 3rd

The game was protracted for several more moves, but at length Black resigned, the score on the conclusion being—Watkinson, 7; Thorold, 4; drawn game, 0.

ST. ANN'S CHURCH, STAMFORD-HILL.

This church, which, with the adjoining buildings of parsonage, schools, and model cottages, has been built at the sole expense of Fowler Newsam, Esq., of Stamford-hill, was consecrated on July 29, by the Lord Bishop of London. His Lordship arrived at eleven o'clock, and was met in the church porch by the founder, several gentlemen of the district, and about fourteen of the neighbouring clergy in their surplices. The customary forms in consecration were then proceeded with, after which the morning service was read by the new incumbent, the Rev. John D. Letts, M.A., Domestic Chaplain to Earl Fortescue. The lessons were read by the Rev. W. J. Hall and the Rev. J. S. Winter, Vicar and senior Curate of Tottenham. The sermon was preached, and afterwards administered the holy communion. There was service again in the evening, when the Venerable Archdeacon Sinclair delivered an appropriate discourse.

The style of architecture chosen for this building is that of the second Pointed period of the date of Edward III. In plan it has nave, aisles, transepts, organ chapel, vestry, and a chancel of no unusual magnitude. The several dimensions are as follow:—Nave, 73 ft. by 29 ft.; aisles, 61 ft. by 9 ft. 6 in.; transepts, 24 ft. by 23 ft.; organ, chapel, and vestry, 13 ft. by 17 ft. The tower, which is at the west end of the south aisle, is 18 ft. square, and, with the spire, is 127 ft. high. The height of the nave to the ridge is 60 ft. The walls are constructed of brick, faced with Kentish ragstone; and the windows, doorways, buttresses, and dressings generally, of Bath stone.

The fittings of the chancel are of oak, of a very ornate character; the desk is of good, bold design. The pulpit is executed in Caen stone, and is very rich in detail and carving: the entire arrangement of the projecting bookshelf are happily introduced, and are very effective. The chancel is paved with Minton's tiles, which present a pleasing harmony of colour towards the east end: the sacrarium is very beautiful in design and composition of colour. The reredos over the five side lights of the spire, are ornamented and emblazoned in the richest style of mural painting and gilding. The organ is placed in a chapel at the east end of the north aisle, communicating into the chancel with suitable arches. That towards the chancel, as well as the one on the opposite side, is supported on a specity of coupled shafts, as the soffits have figures of the apostles, with labels intertwined with graceful foliation. The carving of the part reflects great credit on Mr. Goman, the gentleman who has had charge of Mr. Myers on his; indeed, the carving throughout the church is very beautifully composed and artistically executed, and reflects great credit on the whole of the workmen of much manual labour, without taking the composition into consideration. The whole of the windows of the aisles, the transepts, and the large west window are filled with stained glass, painted in subjects, and will executed by Mr. Waites, of Newcastle. The seats in the nave of the church are of deal, and varnished; the pews are also painted with Staffordshire tiles, in patterns. The church will hold 625 persons, including 150 children. The site being very uneven, there was a considerable expense was necessitated on the foundations, as the ground was a loose, wet clay; they were carried down unusually deep, and made very much stronger than is usually the result of the work not the slightest settlement appears throughout the building.

The chancel is of Norman design. It has also good traceried windows, richly moulded doorways, and a very good-proportioned tower and spire. The chancel is terminated by an apse, which is a great feature both inside and out, for on which the principal effect has been frequently adopted. The design of the east end of the building is of very artistical character, and is worthy of particular notice. And the apse form a composition which architects have not often the opportunity to indulge in.

The parsonage adjoining is of a mediæval character, to harmonise with the church, but it embraces all the modern comforts and improvements in the arrangement of the plan.

The foundation-stone of the buildings was laid July, 1861, and in an working months the whole of the buildings, comprising the church and parsonage in a manner highly creditable to himself: it is undoubtedly, as he states, the best church he has built. Besides, he has had the land season and the pride of workmen against him. Mr. Talbot Bury, of Welbeck-street, Cavendish-square, was the architect of both buildings. The cost of the church and parsonage exceeds £11,000.

The West African mail, which arrived at Liverpool on Saturday last, brings intelligence of the recent success attendant upon the efforts of our squadron in suppressing the iniquitous slave trade, the Prometheus having captured a vessel of 400 tons, with 600 slaves on board. Another, the Vanguard, has taken the Arabella, with a full cargo of unfortunate human beings, and the Bloodhound has taken the Ardra, which was on her very brisk when the Bloodhound has taken the Ardra, which was on her very brisk when the Bloodhound has taken the Ardra, which was on her very brisk when

FORTHCOMING GRAND INTERNATIONAL STEEPLE-CHASE AT BADEN-BADEN.

BADEN-BADEN, the neutral city of Europe, where Kings throw aside the formalities of Royalty and diplomatists assume the status of ordinary individuals, is becoming more and more the rendezvous of the élite of all the countries of the world during six months of the year. Each annual return shows an increase in the number of the crowned, coroneted, and otherwise distinguished heads that figure during the season at this cosmopolitan resort, attracted thither by the reputed efficacy of the waters—too often but the legitimate excuse for seeking the various pleasures with which the Grand Ducal capital has been made to abound. There is no spot in the world in which the populations of the universe are so completely represented as at Baden. Besides Europeans of every country, groups composed of Americans, Asiatics, Africans, and Australians stroll and chat in and about the Maison de Conversation from May far into October; and this trysting-spot was visited in 1860 by nearly fifty thousand persons, comprising some of the most distinguished representatives of all nations.

The waters are, of course, the sole-dissuit principal object of attraction; but the season has its particular periods of amusement, commencing with the concerts and balls in June and July; shooting towards the end of August; grand fêtes, theatrical representations, and races in September, the month during which the pleasures of Baden-Baden are at their apogee; and more music and hunting in October, when—as, indeed, throughout the season—the charming excursions and promenades in the environs are extremely agreeable.

Horseracing is but a recent introduction into the Grand Duchy; but the meetings that have already taken place have been attended with the greatest success. In addition to the ordinary amount of three days' flat racing, there is to be this year a grand international steeplechase (gentlemen riders), open to all the world, on Sept. 5. At first it was arranged that only horses bona fide the property of the members of the French Jockey Club, the Union and the Royal Clubs, in Paris; of the Goodwood, Bibury, and Croxton Park, in England; or of the German Jockey Club, would be allowed to compete for the beautiful prize, of which we give an Engraving in to-day's Number; but the committee have since decided that, in addition to the above, the race shall be open to all comers upon the simple recommendation of two members either of the French or of the German Jockey Club.

It is fully expected that this international race will prove to be one of the most remarkable on record, as, on account of the importance of the stake, the most famous horses from all the racing quarters will be brought together. To the sum of 300 fredericks offered by several sportsmen at Baden will be added as object of art presented by his Majesty the King of the Netherlands and his Highness the Duke of Nassau. The value of this special prize, the offering of Royalty, is estimated at 20,000f. (£800), so that the stake will altogether be worth about 41060. The work of art in question is a reduction in silver of the celebrated statue of William I. of Nassau, Prince of Orange, surnamed the Taciturn, the first Stadtholder. Its execution has been confided to the firm of Hunt and Roskell, of Bond-street, London. The original statue is by the Count de Nieuwerkerke, the Director of the Fine Arts in France, and ornaments the Place Royale at the Hague.

In order that each of our readers as are interested in horseracing may have due information, and thereby an opportunity for competing in this great inter-national struggle, we cannot do better than translate the following conditions from the official programme:—

"*Baden-Baden Races, Sept. 5*, 1861.—Steeplechase (Gentlemen Riders).—Splendid silver statuette, presented by his Majesty the King of the Netherlands and his Highness the Duke of Nassau, added to a purse of 300 fredericks (£360), for horses of any age, race, or country. Weight, 11st. 6lb. Any winner of a steeplechase or hurdle-race exceeding in value £90 to carry 10lb. extra; exceeding £180, 15lb. extra. Entry, 10 fredericks (£8 10s.). The entries to go to the second horse, less 20 fredericks for the third. Distance about four English miles. The list of entries will remain open till four o'clock in the afternoon of Sept. 1, up to which time engagements will be received by the Baron de Geman, one of the stewards, at Baden. The course will be gone over by the different competitors the day before the race, as usual on similar occasions."

We hear that this important steeple reunion has already excited much attention in the racing circles of London, Paris, Berlin, and Vienna; and the racecourse of Baden-Baden will no doubt be the scene on the 5th of September next of a most exciting race, taking place as it will at the height of the *saison des eaux*, when so large a portion of the world's aristocracy of rank and mind is sojourning in the neighbourhood of the health-imparting Brunnen.

SILVER STATUETTE OF WILLIAM THE TACITURN, A PRIZE FOR THE FORTHCOMING INTERNATIONAL STEEPLECHASE AT BADEN-BADEN.

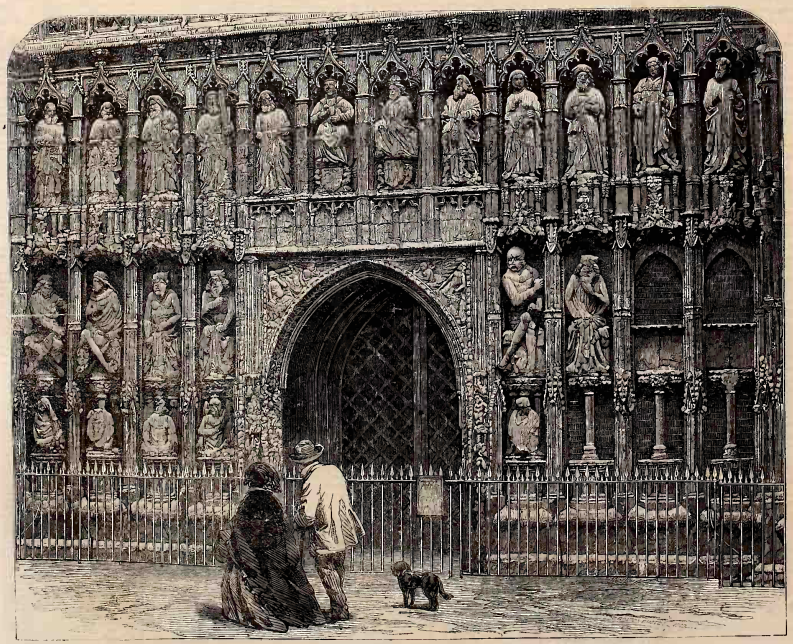
THE ILLUSTRATED LONDON NEWS.

No. 1104.—VOL. XXXIX.] SATURDAY, AUGUST 24, 1861. TWO SHEETS AND COLOURED SUPPLEMENT } TENPENCE

OUR HARVEST.

In this country our whole economy seems to be based on a system of equipoise. It is avowedly the case in our political constitution; it is to be traced more or less in our social arrangements; it certainly exists in our climate; and, by no means least, it prevails in our producing power. We are essentially a commercial and manufacturing people; but the balance of our prosperity is unquestionably preserved by our agricultural development. If anything were wanted to prove that the time has not yet arrived when our urban industry is to be wholly predominant as our means of wealth and subsistence it was to be found in the experience of last year. When a Chancellor of the Exchequer deliberately states that a bad harvest cost England twenty-three millions in money, the assertion proves the value of the principles by which our dealings with the question of the food of the people are now regulated, and equally proves the existence of that balance of production to which we owed our safety. Happily for us those branches of our industry which depend on commerce and manufacture provided for us the money which went to supply our agricultural deficiency; but the very fact of that demand on one source of our prosperity demonstrated unmistakably the necessity of the other. The nice adjustment of our economic machinery was found equal to the occasion; but that is no reason why we should not be unwilling to see another and an immediate strain put upon its capability. Who but remembers the circumstances of this time last year, which converted us all into watchful meteorologists, when, after a summer deluge, we hoped against hope for that sunshine which would avert from us a blighted autumn? That misfortune, however, came upon us: the harvest was drowned; and although Nature, bountifully rectifying her inequalities, opened to us the vast supplies of other lands—Egypt, America, Russia, Germany, and even France—and we obtained such stores of corn as perhaps never were made the subject of sea transit before, and we suffered no hunger, though the severity of the crisis was not aggravated by those famine prices of bread which artificial and unjust legislation used to create, yet we paid so heavily in money for that which we were only too glad to obtain that he would be a bold man indeed who could view without apprehension a repetition of the operation. The hope and the prayer for such climatic influences as would secure us this year against a deficient harvest have been therefore earnest.

There have been times, indeed, when apprehension with regard to the harvest has reached almost to the height of panic. A favourable seedtime, and a fair period of early growth, seemed



THE BRITISH ARCHÆOLOGICAL ASSOCIATION AT EXETER: WEST SCREEN OF EXETER CATHEDRAL.—SEE SUPPLEMENT, PAGE 203.

as if they were about to be neutralised by a wet June and a stormy July; and the worth of sunshine a fortnight ago was estimated at the rate of two millions a day. Although there has been a good deal of rain, it has been accompanied by a remarkable continuance of high winds, which constituted at least a drying process for the corn; and if the ripening effects of the sun have not hitherto been all that could have been wished, yet it may now be safely said that we have the promise of at least a good and almost a bountiful harvest. Already in many parts of the country—in Kent and the eastern counties especially—most of, if not all, the corn has been successfully gathered, and, while the yield is average in quantity, the quality is said to be excellent. It is stated on authority that the well-filled ear will yield the largest proportion of flour ever known. So generally is this the case that of 1200 quarters of new wheat sold in the London Corn Market last week there was a difference of only 5s. between the value of the best and the inferior, while samples of last year's yield are still selling at from 34s. to 68s. per quarter. Perhaps, on the whole, this is a more advantageous state of things than that which belongs to a very abundant yield, and which is usually accompanied by a great diversity of quality. Flour prepared from mixed grain is not considered to be of the best kind, and is sold in the shape of bread which is at once unwholesome, unnutritious, and unprofitable; in fact, is to them dear rather than cheap, as it seems. It is believed that three or four millions of foreign wheat will be found adequate to supply any deficiency of quantity in our home growth. For this it is to be more than probable that neither the places of supply nor the means to pay for it will be wanting.

In our estimate of the effects of our own harvest on the necessities of the coming year it is indispensable that we should not keep out of sight the significant fact that the harvest in France is decidedly deficient. One source, if not the main one, is curious enough. We all know that France is the head-quarters of cookery, that there the transmutation of doubtful substances into pleasant edible matter has reached a remarkable perfection. Some wags of that country—notable among them M. St. Hilaire—have long devoted themselves to attempts to increase the circle within which animal food is now bounded, and it is more than suspected that efforts to introduce hippophagy which have been recently made have become actually more to the hold accomplices of the name than the sensation of the thing. Although it has not yet been ascertained that the famous sauce with which a man might eat his grandmother has been applied to that cannibalic process, yet we know that many things, such as snails—frogs of course—and other such "small deer," enter into that not-as-dear as which Henry IV. sighed for, and every one of his subjects should always have a fowl. But we did not know until now that there was such succulence in the common birds of the fields and the hedgerows as to cause them to enter so largely into the consumption of the people, and to be called on each year to diminish their own existence, but operates directly on the harvest in France. Owing to the absence of these little insect-eaters the corn has been devoured by a grub or worm, and the authorities, having received an able and decided report from a Commission of Inquiry, are about to put in force a system of warfare on the cock robins hawk similar to those by which we foster our pheasants and partridges. But, however half ludicrous the cause, the effect is certain, that France will have to import corn largely this year.

Whatever may be the condition of the crops in America, the state of the body politic renders any large cereal exportation from that country at least problematical. No doubt efforts will be made to convert as much of its produce into money as is possible, if only for the purpose of bringing within that territory the sinews of war. Looking at the question from this point of view, we cannot but see an additional, although a remote, cause of congratulation in the hopes of an adequate harvest in this country. Supposing that we had to demand and to pay for in money a similar supply of corn from America this year as we had to ask in 1800, and supposing that that country was able to give us half that we asked, there would be at once a direct stimulus and sustentation afforded to that unhappy civil war which is raging. The influence of England's fiat in every country in the world, openly or silently, as the case may be, and probably even before his hereditary and now constitutional more felt, however little acknowledged, than is that region which we yet call, and hope still to call, the United States of America. It will be something to be proud of if the plenty of England should indirectly contribute to the peace of America. It would not be difficult to point out how the absence of this disturbing cause which interfere with the facile working of our political, social, and commercial arrangements, and which turn on a good or bad harvest, would operate on the tranquillity of Europe; but with that part of the subject we do not propose to deal.

Let us trust that we are now able to congratulate ourselves that we have escaped what was certainly a great danger and might have proved a great calamity. We have heard of late *ad nauseam* of the political indifference, amounting to somnolency, of the people of this country; but it needs no ghost to tell us whence such apathy is derived. In our local governments, in our parishes and our vestries, it is often—if not always—found that the most prosperous men in their own affairs are the least busy in those of their special and particular public. The fact is that full employment and adequate return for labour leaves our sinewy artisan and our skilled mechanic little time to trouble themselves with abstract defects in the machinery of the State; and their idea of injustice, if it be aroused at all, is directed more towards the question of wages and short or long time than to the assertion of mere political rights. But suppose famine prices of food, with its necessary accompaniments of commercial depression, diminished trade and manufacture, and all the evils of enforced idleness and distress pressing on the millions who now are reaping the blessings of employment, then one trade at least, that of agitator, will flourish, and, as usual, the cry of political oppression will be raised, and the delusion that representative rights and peace and plenty are necessarily coeval and inseparable will become rife, and that to an extent which it is not easy to measure. It is undoubted that the disappointment of positive capital last year for the purchase of cotton has had a direct effect on commerce in general; and, rich as we are, it is more than doubtful whether we could bear another equal or nearly equal displacement of that kind this year. It is, therefore, with a view to an interest, and that wide and deep as it is large, all-comprehensive, and instant interest of the whole community, that we anticipate, not without good reason, well-filled barns and all the glories and joys of a good harvest. All that wise legislation and the adoption of true principles in regard to the supply of the prime article of food can do to meet the exigencies of Nature, as exemplified in diversity of seasons, has been done in England, and the means provided have been proved adequate to ordinary and even to extraordinary emergencies. But as it is not in the power of man to meet every exigency, which is dependent on the decrees of Providence, let us be thankful, indeed, if in this season we have evidence of the beneficence which bids the earth to bring forth her increase to glad the heart of man.

FOREIGN AND COLONIAL NEWS.

FRANCE.

Accounts speak of the Emperor of the French as thoroughly enjoying her retirement at Biaus-Bonnes, and deriving great benefit from her visit. Her Majesty's nephew and children, the Duke and the Duchess of Alba, are daily with her. The Emperor and the Prince Imperial are at the camp at Chalons, where they are to spend a short time, and are accompanied by about 20,000 men. On the frontiers at Saint-Bonnes, whence they proceed together as *Travelle* to Biarritz.

The *Moniteur* denies the report that M. St. Georges had been replaced in his post of director of the Imperial printing establishment for embezzlement in the finance department, and says "the reason for this change has nothing to do with M. St. Georges's connection with the establishment, upon the honourable character of which no imputation is cast."

The last of the Convention concluded between Great Britain and France by which the free emigration of Frenchmen to the French colonies has been published. It provides for the residence of British consular agents to regulate the embarkation of the labourers at other British or French ports, and requires the consent of the emigrant or the due care of the labourers on the voyage, for the manner of their behaviour, the non-separation of families, their return to their native places in certain cases, and other arrangements for the proper management of the emigration. The Convention is to come into operation from the 1st of July, 1861, and to have effect for three years, after which, unless the notice be given for its cessation. The British Governor-General of India is to have the right to suspend emigration from the French colonies to one or various French colonies, in case he has reason to believe that proper measures have not been taken for the protection of the emigrants. In any such case, however, the French Government will have the right of putting an end to the Convention altogether if it should think proper.

ITALY.

Some Ministerial changes at Turin, and a misunderstanding with General Garibaldi at Naples, are reported. A despatch of last Saturday week announced the resignation of Signori Cantelli and Biaxio, and that Count Cavour and Cialdini had undertaken the management. The latter report was repeated on Saturday by the *Opinione*. Under date of Sunday, however, we are told—"The rumour of General Cialdini's resignation is unfounded. He will remain at his post until the accomplishment of his mission. Signori Cantelli and Biaxio have resigned, and will remain in office only till Parliament has been prorogued."

Frequent telegrams report progress in General Cialdini's mission of suppressing brigands and reactionists. News from the province of Avellino states that the reactionists had been completely beaten or taken in flight.

The 11th of next month is the anniversary of the entry of Garibaldi into Naples, and the Government are preparing great fêtes for the occasion. It is thought that Garibaldi will himself be present.

The Fête Napoléon, Thursday week was celebrated at Turin by a religious service at the Church of the Lazarites; at Naples by "a magnificent illumination and procession."

At Rome the fête was equally well observed. The Pope gave his solemn benediction to the Military Corps at the Vatican, the streets were illuminated, and General Goyon gave a grand dinner. "Tranquillity and perfect order," adds the telegraph, "prevail at Rome, although a number of Mazzinian agents have received a subscription to the Cavour monument continue, notwithstanding the efforts of the police to prevent it."

The first anniversary of the Archiconfrèrhood of St. Peter's Pence has just been celebrated at Rome. Monsignor Nardi, the Roman Catholic Archbishop of Corfu, has been the principal promoter. The 85,000,000 Catholics of France have given in two years 4320,000 sterling; Austria has given 3200,000; Catholic Belgium's subscription to the Canon monument continues, notwithstanding the efforts of the police to prevent it.

The first anniversary of the Archiconfrèrhood of St. Peter's Pence has just been celebrated at Rome. Monsignor Nardi, the Roman Catholic Archbishop of Corfu, has been the principal promoter. The 85,000,000 Catholics of France have given in two years 4320,000 sterling; Austria has given 3200,000; Catholic Belgium's subscription has sent 880,000; while the Irish have raised 470,000. The Roman Themselves, Spain, Portugal, the end the Marches, have only attained the sum of 8000, and of this nearly the whole is understood to be contributed by the clergy and the convents.

RUSSIAN POLAND.

The growing fermentation which in Poland is further manifested by serious disturbances which occurred last Saturday at Kalisz in consequence of the arrest of an apothecary. Crowds assembled and demanded his release, which seems to have been granted. The demonstrations of popular discontent were rather increased than restrained by this concession, and on the Marshal, the civil commissariat had been called out and had threatened to fire on the people that the multitude dispersed.

Intelligence from the proper carrying out of the provisions of the new electoral law and an explanation of the manner in which the electoral lists have been formed is published at Warsaw on Monday, in reply to complaints from several citizens. M. Wielopolski has been appointed a Privy Councillor of the first class, and a Senator and Councillor of State. He also retains the two ministerial portfolios which he already holds. The Emperor, in an autograph letter, has expressed his thanks to M. Wielopolski for the zeal which he has displayed in the public service. General Suchozanet, Governor of Warsaw, left that city on Monday night.

THE EAST.

The Sultan continues to effect reforms.

The leaders of the insurgents in the Herzegovina are said to have declared that they will not lay down their arms until the son of Omar Pasha is reported to have approved their proposal that commissioners from the Austrian and Russian Embassies at Constantinople shall meet them on their islands.

Prince Michael opened the Skuptschina at Belgrade on Monday. In his speech he announced to the Assembly the preparation of several legislative measures and the organisation of a national militia. The Prince also spoke of Prince Gortschin's mission to Constantinople, to attain the object of which, he said, nothing would be neglected.

With regard to the emigration of Christians from the neighbouring Turkish provinces the Prince said, "The Servians, united to the Christians of Turkey by the ties of race and religion, could not remain indifferent to their fate. Servia was therefore open to them. The security of the frontiers of the Principalities and of Turkey is thus assured." The Prince has merely addressed a congratulatory letter to the Sultan on his accession to the throne, sending a deputation, as was expected.

LATEST NEWS FROM ABROAD.

The following telegrams were received at Mr. Reuter's office yesterday (Friday):—

AUSTRIA AND HUNGARY.—Pesth, Aug. 22.—The following is the text of the Royal rescript, in reply to the address of the Hungarian Diet, as read to both Houses of the Diet to-day by Field Marshal Count Haller, the Royal Commissioner:—"Seeing that the Hungarian Diet has not obeyed the requests which have been addressed to it, and that we can hardly expect any further beneficial action from a Diet which, by the continued subsidence of disagreements, by entirely misunderstands its highly important mission in such difficult circumstances as to declare the way to be absolutely closed against any possible arrangement, because its demands, which in their extent exceed the bounds of admissibility, could not be acceded to, we find it necessary to dissolve the present Diet, and at the same time reserve ourselves the right of assembling a new Diet, possibly within six months from this time."

Pesth, Aug. 22.—A collision between the military and civilians took place at Arad on the evening of St. Stephen's Day on account of national airs having been sung by the populace. Five of the people were wounded on the occasion.

SWITZERLAND.—Berne, Aug. 22.—The proposals of the Italian Government in reference to the Tessino hitherto not being acceptable to the Federal Council, the latter has resolved upon the temporary occupation of the Confederate on this question.

MONTENEGRO.—Paris, Aug. 22.—The *Pays* of this evening says:—"Three engagements have recently taken place in the Herzegovina in which the Turks were the aggressors. Omar Pasha, however, issued a proclamation declaring that the Sultan accords all the demands made by the Montenegrins."

ROME.—Paris, Aug. 22.—The *Patrie* of this evening says:—"Mgr. Chigi has been appointed Papal Nuncio at Paris. It is said that the Duc de Grammont will return to Rome."

PRUSSIA.

The King of Prussia arrived at Cologne from Meyence last Saturday evening, and was met at the station by the Prince and Princess, who had arrived from England in the afternoon. His Majesty and their Royal Highnesses proceeded to the Cathedral, which is illuminated, in an open carriage, and were saluted with the most enthusiastic acclamations. His Majesty afterwards made his appearance at the balcony of the palace, when he was received with the most spontaneously rung by the people. On Sunday morning the King took leave of the Prince and Princess, and continued his journey to Osland, where he intends to remain for three weeks. Their Royal Highnesses departed for Gotha by Dusseldorf and Cassel.

AUSTRIA AND HUNGARY.

The Emperor has, it seems, resolved on dissolving the Diet at Pesth. Field Marshal Count Haller arrived as that city on Wednesday, amended in said, with the Imperial authority to close the Chamber.

In anticipation of such an issue, the Lower House held a sitting on Wednesday to consider their way through the gloomy future. The House passed by acclamation a motion proposed by M. Kossuth calling upon the House, in case of the dissolution of the Diet, to enter an energetic protest against the violation of the Pragmatic Sanction and the arbitrary acts committed by the Government. Baron Vay afterwards spoke in the same sense, and was cheerfully received. The deputies embraced each other before separating.

The Upper House of the Hungarian Diet continued on Thursday in the declaration passed in the Lower House that the dissolution of the Diet is an illegal act.

It is generally thought that the dissolution of the Diet will be the precursor of grave events.

The town of Talya, near Zemblin (Hungary), was almost entirely destroyed by fire last week. Three churches were burnt down.

The *Patrie* comments in not very measured language upon the fact of the Bishop of Oxford having preached in the Catholic manner, where, by the permission of the Governor, they went through their evolutions.

SOUTH AUSTRALIA.—The *South Australian Register* of the 26th of June brings us very satisfactory statements of the colonial prosperity:—"Perhaps in no period of the colony's history have the indications of general progress been more strongly marked. The population has increased, since last year, the wheat produce being considerably greater than was anticipated by the most sanguine. The quantity of cereal produce for the year 1860 is in excess of the exports of the corresponding period of 1860. And the present season, so far as we can learn, will be equally favourable. The crops have been got safely into the ground, a large additional quantity of land has been broken up, and the rains have been most abundant. The pastoral interest has also been greatly benefited by the improvements in the seasons. The lambing has been unusually good, and the clip of wool is likely to be heavy. The increase in mineral produce will be considerable, when the arrangements now making for smelting our copper ores are completed. In connection with this the Government will probably show the population of the colony to be upwards of 140,000. The immigration to the end of the year is estimated at 1,500 persons over the number who have left the colony in the same period. The land sales up to the 31st December last were 30,000*l.* more than during the corresponding period of last year. The railway receipts have also been largely increased.

According to the journals of Constantinople, locusts have appeared in the district of Bulair, and a swarm of 20,000 okes in weight is about 30*l.* have already been destroyed.

The Earl of Derby's visit to Liverpool last week, cut the first sod of the Ruthbeal and Newcastle Railway. This railway will run from the Ruthbeal station of the Limerick and Foyne Railway by the town of Ruthbeal to the town of the same name, a distance of about eighteen miles, and is a favourable business of the town of Limerick, and the extensive farming districts of the county of Kerry lying north of it.

Several of the magistrates acting for the counties of Worcester and Bedford, in which the Redditch needle trade chiefly are situated, have published a protest against the assertions contained in the report of the Select Committee on Combinations and Conspiracies, as to the state of morals in the "Black Country." Lord Lyttelton, the Lord Lieutenant of Worcester, and Mr. Charles Cocking, M.P., describe it as "exaggerated and undeserved."

GARIBALDI AND CAVOUR.—The *Diritto* of Turin publishes intelligence from Caprera to the 7th, giving some account of Garibaldi's health and opinions on affairs in general:—"Signor Basteli, who has been entrusted with his medical treatment by Signor Cordova, and who visited the 4th never left the house. Since that day he has remained in bed, and now nothing remains of his wound but a slight pain. Basteli has left with a worthy theology by the use of the vapour baths. Every one knows with what energy he directs in Rome the subject of the reconciliation with the communion of Rome. Garibaldi is the declared enemy of the Ministry, and does not, he says, leave the island. He has formally declared that the Ministry has been overthrown by public opinion, and that the country is dissatisfied and better from all nations who are labouring for the great cause of independence and unity. Rescues for abandoning the cause of Italy, and he gives in according to that political intelligence which in the present time he has at his hand in connection with such matters, and the personal welfare of his country.

STATISTICS OF THE POPULATION OF FRANCE.—An important and valuable work entitled "Statistique de France," has just appeared. A few days since by the Ministry of Agriculture and Commerce, contains some interesting details respecting the population of France in 1856, 1857, 1858, 1859, and 1860. It appears that the number of marriages in 1857 was 283,100 of which 185,000 were celebrated in the country, 98,100 in the provincial towns; and 207,200 in the rural districts. The tables show that the number of marriages participated in during large towns than in the country; and the number of marriages, instead of decreasing, as some persons suppose, is gradually increasing. It also appears that 14 per cent of widowers marry again, and only 7 per cent of the widows. Second marriages are also more frequent in towns than in the country. In the department of the Seine 1 out of every 11 women marries a second time; in the rural districts, 1 out of 16. The disproportion between the number of births in the country and in the Seine than in the rural districts. The tables give rise to an interesting observation relative to the proportion between the sexes. The returns of births show that the proportion of male children is greater in the country than in towns: for the years 1856-57. If this difference should continue to manifest itself with the same regularity it would seem to show that the greater number of boys are born of parents whose ages are nearly the same. In 1856 the average duration of wedded life in France was twenty-five years; in 1860 it was only twenty-three years and two months, and the rate of mortality above a district increase. One-third of the men and about half of the country people in France are unable to sign their names. In the latter, however, every 1 man in 10 and 1 woman in 4 are unable to write. The populations of the provincial towns hold an intermediate position between the Seine and the rural populations.

THE CIVIL WAR IN AMERICA.

By the steamers Anglo-Saxon and City of Baltimore we have received New York journals to the 9th and telegrams to the 10th inst.

BELLIGERENT OPERATIONS ON SEA AND LAND.

There has been some fighting since our last in Western Virginia and Missouri to the advantage of the Federalists. General Rosencrantz, in the former region, has telegraphed to Washington that the rebels in the Kanawha valley have surrendered, and requested that the mail service may be re-established. He arrived at Dog Spring, nineteen miles south of Spring field, Missouri, on the 5th inst., and has taken place in which the Secessionists were worsted. In the latter a body of United States cavalry, under Colonel Lyon, 270 strong, had a skirmish on the 2nd inst. with a body of infantry more than ten times their number, was driven back with a loss of killed and 30 wounded; while 40 of the flight of the former were killed, and 44 wounded.

The coast of North Carolina, which has never been thoroughly blockaded, is swarming with privateers, who prey upon Northern commerce, and take their prizes into port without molestation. Newbern, in that State, is a favourite rendezvous. Land batteries are erected at several points to protect the privateer from her pursuer. *Sir Alexander*, a steamer plying between Galveston and Louisiana, was captured on the 1st inst. by the blockading squadron off Galveston Bar and on the 1st inst. the United States' frigate St. Lawrence sunk a privateer off Charleston. The privateer, watching the ship-of-war for a merchantman, came out of Charleston harbour, and fired into her. The St. Lawrence returned a broadside with shell, which struck the crew over the starboard bow, and the remaining thirty-six have been sent to Fort Mifflin, before Philadelphia.

ARMY NEWS.

The "grand army of the Potomac," the army of the Upper Potomac, and the garrison in and around Fort Monroe are inactive, and their correspondents to say nothing of his movements, a caution which the prudence and patriotism of the editor will doubtless follow. From the Fort Monroe letters we learn that the new three-year volunteers "are not equal to the deputed three months men, and the cause of secession is the more well filled." From other sources we are informed that the young commander, who inspires the greatest confidence, is brigading the newly-arrived regiments.

General Butler, at Fort Monroe, reports that he is in possession of 900 negroes—men, women, and children, and writes for a further supply. War to know what he is to do with them, advising, at the same time, that they be liberated. The reply of Secretary Cameron has not yet appeared.

BULL RUN.

Full Southern accounts of the battle of Bull Run inform us that Jefferson Davis did not arrive on the field of battle until after the day was won, and that it was the arrival of General Kirby Smith with 9000 fresh troops changing the defeat of the rebels into a rout and the fortunes of the day. Not more than half of Johnston's division effected their junction with Beauregard in season to take part in the fight. An engine-driver bringing up troops from Richmond purposely ran the train off the track and delayed the arrival of the reinforcements. He was shot after conviction by the military for the cause he was supposed to be serving. General Lee, of South Carolina, Colonel Bartow, of Georgia, and Colonel Johnson, of Kentucky, were killed on the Confederate side. Colonel Wade Hampton, the richest man in the South, was severely wounded in the leg.

General M'Dowell has at last made a report of the Federal loss at Bull Run—Killed, 19 officers and 462 men; wounded, 64 officers and 947 men; missing, 50 officers and 1216 men. He also reports the loss of 23 pieces of artillery, 100 boxes of cartridges, 87 boxes of rifled-cannon ammunition, 99 boxes of all sorts of ammunition, 400 artillery-wagons, 3000 bushels of oats, 2500 muskets, and 8000 knapsacks and blankets.

THE CONFEDERATE STATES.

The Southern Congress is still in session at Richmond.

The Southern journals give a list of clergymen who are officers in the Confederate army.

It is stated that much British gold is in circulation at Richmond, which has been advanced for the new cotton crop.

CONGRESS.

The Federal Congress adjourned on the 6th inst., until the first Monday in December next. One of the measures was the increased pay of the soldiers and sailors by two dollars per month. The legislation of the late special Session, with the executive measures already accomplished, is a revolution in the finance of the Republic and armed the President with the prerogatives of a military despot. Among other far-reaching changes is one affecting the sub-Treasury and bank policy, for which the Democratic party strove so successfully a quarter of a century ago. The proceeds of the 250,000,000 dollars loan may remain in solvent banks until drawn out by the Government, instead of being paid immediately into the Treasury or sub-Treasury in gold and silver.

The assessments on gold and silver watches and pleasure-carriages were struck out of the tax bill by 77 votes to 66, seven members not having voted.

The President, it is said, yielded a very reluctant assent to the Act confiscating slaves used in aid of the rebellion.

Members of Congress were paid their 300 dols. salary, one sixth in gold and five sixths in Treasury notes, bearing six per cent interest. Henceforth all Government salaries will be paid in this sort of money. These notes remain in two years, and cannot be used by the banks for 5 per cent commission.

THE NORTHERN STATES.

The steamers from Europe bring frequent consignments of arms, chiefly on account of the several States.

Immigration has set off last autumn in consequence of the civil war, being at New York, the principal port, 50,000 for the first seven months of this year against 60,000 in the corresponding period of 1860.

The watering-places are deserted, and the hotel-keepers ruined; the prostration of business having left the Northern pleasure-seekers no money to spend, and the consequent stagnation of trade has thrown people out of employment.

The heat has been very great of late. On the 4th inst. the thermometer at St. Louis marked 105 degrees in the shade, and the next day fifteen deaths from *coup de soleil* were reported in the papers of that city.

Cholera, Mullen, and Co., the second dry-goods jobbing-house in the United States, and the owners of the largest store in Broadway, have failed, with liabilities amounting to more than £600,000. Their receipts from the South have been entirely cut off, and those from the West very scanty so.

CALIFORNIA.

Lady Franklin and her niece have arrived at San Francisco from the Sandwich Islands. The Irish of this city have held a meeting and resolved to send the remains of the late Irish exile, T. B. M'Manus, to Ireland by the first New York. The funeral preparations for him had taken place on the 20th instant, and the remains were to have been forwarded by the steamer sailing on the 21st.

THE BORDER STATES.

The West Virginia Convention met at Wheeling on the 6th inst., and received an address from Governor Letcher, for ever. In this they are acting in defiance of the Governments both of the United and Confederate States. The former desires the mountaineers to maintain their connection with the rest of Virginia, in order to be able to reorganize their local Government as the legal State Government. The latter would declare open rebellion against the Union if the State are obvious.

The people of Baltimore have given a public dinner to Messrs. Buckingham, of Kentucky, and Vallandingham, of Ohio, at the Eutaw House, in token of their appreciation of the courageous adherence by these two gentlemen of the cause of peace during the late special Session of Congress.

An explosion of a steam-boiler took place last Saturday at the new mills of Messrs. Benjamin and John Jones, in Newington, by which the engine-driver and his son were killed. Other workmen were so severely injured that some who were conveyed to the hospital are not expected to recover. The walls and roof of the building were blown into the air. The cause of the explosion is believed to have been a want of water in the boiler.

COUNTRY NEWS.

On Monday Mr. Bailey read a paper on "Cotton" before the Trade and International Law Section of the Social Science Association.

A monument to Bishop Hooper is to be laid by the Mayor of Gloucester, in that city, on the 26th inst. There is to be a grand ecclesiastical gathering on the occasion.

The work for the formation of the Locke Park at Barnsley has been commenced; and it is expected that all will be completed before the end of the year.

The ceremony of dedicating to public use a recreation-ground and drinking-fountain took place at Reading last Saturday, in the presence of a large crowd.

At Barnard Castle, on Wednesday week, a house occupied by an elderly woman, named Ann Chapman, caught fire, and before the flames could be extinguished the unfortunate woman was suffocated.

At Stalybridge, on Saturday last, the foundation-stone of a new mechanics' institution was laid by Mr. David Harrison in the presence of a large assemblage.

The South Lancashire election on Saturday last issued in the return of Mr. Egerton (Conservative), 9714; for Mr. Gaskell (Liberal), 9598.

George Smith, the young man who shot his father at Bromley, in Kent, on the 29th of May last, at Bromley, has confessed made a full confession of his guilt—fortify after he was compelled to "the condemned cell."

The marriage of Dion Boucicault, the dramatic author, with Miss Agnes Robertson, took place on Monday night. Not an article of furniture was saved. The flames were first seen by the bridegroom's mother.

As Mr. Moylard, of Grafton-street, Liverpool, was passing from one room to another the fall, breaking a leg which she was carrying at the time. A surgeon was immediately called, and reduced the fracture. Medical aid was instantly sent for, but life was extinct.

The new cemetery at Cheltenham has been consecrated by the Bishop of Gloucester and Bristol. The ceremony was then performed in the cemetery, Boston, to the late Mr. Herbert Jepson, member of that borough, and his son. It is of polished granite, in the form of an obelisk, on a square pedestal.

Frank Crossley, M.P. for the West Riding, laid the corner-stone of the new Methodist New Connexion Chapel in Horton Lane, Bradford, Park, Harrogate, on Tuesday week, in the presence of a large concourse of friends and gentlemen.

The inaugural address of the British Association is to be delivered by Mr. Fairbairn, on the evening of Sept. 4, at Manchester. The members are to be presented to the Mayor, by permission of the Earl of Ellesmere, at Worsley, to the number of six hundred, on the 12th proximo.

Mr. Peter Ellis, of Bolton, has died at the age of 104, one of a woman named Kain, living in Rochdale-road, Manchester, it was stated that she had had 22 of her children she had killed by everything but the 23 whilst intoxicated.

Mr. Frederick Peel has had a pleasant meeting with a body of his constituents at Drayton Manor, on the part of the people of Derby paid the right hon. gentleman a visit at his seat in Warwickshire, where a cordial and hearty welcome was given to Mr. Peel by his numerous and influential friends in a brief speech.

Mr. Hubbard, and his colleague in the representation of Sheffield were on Wednesday evening entertained at a banquet given in their honour by the Liberal Association, when addresses were delivered on public affairs at the moment, especially our foreign relations, and the present position of America, Australia, and Abyssinia were discussed.

At Warminster Common, Peter Tucker, aged fifty-nine years, had been engaged all day reaping, and when in a great perspiration drew some cold water from a pump and drank it. He was immediately seized with one of the cold water on the system, causing an accumulation of blood in the heart and the rupture of a vessel.

The inhabitants of Exeter have presented to Dr. Dinham, a well-known local physician, a piece of plate as a testimonial of their esteem for his skill and kindness in assist him in the good work in which he is engaged—namely, the building of a new Dispensary and Hospital for the sick poor. The nature of the testimonial, and the various sources from which it had spread.

Messrs. Ransome, Sims, and Sons launched from their shipbuilding yard at Ipswich, on Tuesday, a magnificent new steamer, built for Messrs. Ayrton, Saunders, and Co., of Liverpool, and named the *Orwell*. She is called the Ilva, is intended to carry light but valuable cargoes of tea, silk, &c. She is of 1000 tons burden, and is expected to be ready for sea in a few weeks.

The Lord Lieutenant of Ireland, and Sons launched from their shipbuilding yard at Richmond, on Tuesday, a magnificent new steamer, built for Messrs. Ayrton, Saunders, and Co., of Liverpool, and named the *Orwell*. She is called the Ilva, is intended to carry light but valuable cargoes of tea, silk, &c. She is of 1000 tons burden, and is expected to be ready for sea in a few weeks.

Some almshouses erected at old Ruckenham, Norfolk, by Mr. Colman, of Carrow Hall, were opened on Tuesday week. The new edifice some of the poor inhabitants were duly installed into their respective habitations and the whole of the day was devoted to festivity. Tea was provided each of the ten houses with 2s. per week and a ton of coals per annum. The trustees are Messrs. J. J. and R. J. Colman, Mr. Edward Lee Hamblett, and several clergymen and other gentlemen. Prizes were also distributed among the children attending the school of Old Buckenham.

SERIOUS CHARGE AGAINST IRISH GOVERNMENT OFFICIALS.—Mr. Matthew Phibbs was hanged in front of the county goal of Sligo, on Friday, for the murder of Mr. William Callaghan, in Ballymore.

The bridge which was in course of construction over the River Bellin (about a mile from the Bowden Station on the Cheshire Midland Railway) fell on Monday, injuring four persons.

LANDSLIP.—The district of Slamannan, Falkirk, is in great commotion owing to an extraordinary movement of the late heavy rains—namely, the disruption and at a short distance of some land, called Auchinroy Moss, between Slamannan and Limerigg. A mass of land in Lesmahis, residing in Slamannan, and lacking corn from a farm-steading, on Monday morning, observed several portions of the land west from the dyke bottom, to the extent of at least three-fourths of a mile. This dyke is the boundary of a certain portion of the Slamannan estate. Great fissures have been done, a parish road having been covered, a quantity of arable land also taken from a portion of the Limerigg road rendered quite impassable. On Tuesday work the place was visibly moving.

A sad accident occurred near Flamborough on Monday. In the morning seven gentlemen went from Bridlington Quay to Flamborough in a boat worked by a boatman and a boy. One of the gentlemen, on reaching Flamborough, came up the cliff by the Scarborough road, while the others stuck to the boat, which left on her return voyage under the double disadvantage of a strong breeze and a heavy swell. Before she got round she shall caught the over-weighted craft, which hitched to one side. The passengers were thrown into the water, and the boat, relieved by the squall, righted under water, and in an instant the boat went down. Two fishing-vessels were at hand, but only two persons could be saved, the boatman and the youngest perishing. At the inquest, which was held on Tuesday, on the bodies recovered, a verdict of "Accidental death" was returned, the jury censured the boatman for overcrowding his boat.

FIRE.—On Thursday week a fire broke out in the flax-spinning mill of the Messrs. Emerson, Belfast. The hands (women and girls) were at work at the time, and became terribly alarmed on perceiving the flames, as the staircase had caught fire. From a window these stokes hung, one girl, named Alice Mulligan, leaped to the ground, and sustained such injuries that she died in the afternoon. Two or three other girls were also injured by jumping from the windows, but not seriously, while a great many of the others escaped by descending in the descending lift, or by means of a rope attached to the window. The damage done to the property to the extent of about £20,000. It is believed that the fire originated from a lucifer match. There were in the "Old Ark Cotton Mills" a block of buildings which were destroyed by fire. The mills were not insured in consequence of the high premium asked and which fell on the several of the factories were seriously damaged by the water. The fire originated in the upper flat of the building, destroying the entire stock of two drapers, and injuring that of a third to the extent of £2000. It is stated that the mill will not be rather seriously damaged by the fire. The damage, however, while the engine-driver was endeavouring to save the ruin and destruction of the property, but that was in vain which such considerations could not be of any avail to the fire. The damage is estimated at £2000, and the proprietors are not insured.

MURDER.—William was therefore sentenced to fifteen years' penal servitude.—Lord Stanley has appointed Mr. Edward Ellis, Q.C., to be Recorder of Mr. Baron Martin, returned in the case of John Warburton, of Rochdale, who was charged with the murder of his wife Ann Warburton, whose body was found in the canal at Rochdale.—Captain Wilson, formerly of the ship Express, which traded between Liverpool and the west coast of Africa, was charged at the Liverpool Assizes of his steward. The witnesses for the prosecution—all coloured seamen—told a story of almost incredible brutality. The jury contented for a few minutes from the statements of these men were not to be relied upon, and that the accused did from his ill-will to the captain. The jury at once acquitted him upon a verdict, and, one of their number having been seized with sudden illness, they left Mr. Baron Bramwell to finish the business. He was then tried on several other counts charging him with acts of barbarous cruelty towards other men for the purpose of intimidation.

A schoolmaster at Chesterton, William Bainbridge, has been committed to the Quarter Sessions, Huntingdon, for three months' imprisonment for cruelly punishing a scholar, the magistrates saying that the prisoner "had so nearly murdered the child as he could."

A murder was committed at Fen Ditton, near Cambridge, last Saturday night. A young man, named Thomas Harvey, irritated by the objections of some property he had purchased, struck the auctioneer in the presence of her brother and several other persons. The murderer having behavioured in a most cruel manner to her own wife, threw himself on the ground in a fit of rage, and struck her with the fury of a madman, inflicting such injuries upon the woman that death was the expected result. The murderer was then secured and has not been heard of since.—Another murder has been committed at Hull. A man named Hall struck a gamekeeper over the head over his bones, on Sunday afternoon. Her throat was cut, and her nose, and the lower portion of her countenance was dreadfully mangled. The assailant was absent from home at the time. The police are said to be on the track of the man who killed the gamekeeper. Mr. Baron Bramwell, in his charge to the jury was observed.—A third case of death by violence occurred in Manchester on Monday. A man, named Alexander Dickson, was found in his wife, whom he accused of having pawned his clothes in order to satisfy her craving for drink. He struck her with a poker, which he threw at her head and dashed immediately. Death resulted from a fracture of the skull; and Dickson was then committed to take his trial for wilful murder.—An attempt at murder and suicide took place on Tuesday at Worcester. A young man, named Charles Pardoe, was charged with a young woman, and ordered to quit her threat, and then drew the razor across his own throat. Neither of the wounds proved to be dangerous.—On the 4th inst. a shocking instance of juvenile ferocity was displayed at Birkenhead yesterday week. Two boys, named Jones, aged 13, and Hall, aged 12, were in the yard, when one of them pulled out a knife and stabbed the other in the neck, causing instantaneous death. The boy Jones was taken into custody.

IS A PERAMBULATOR A NUISANCE?—This question has been already answered in the affirmative by the Queen's Bench, but at the Bristol Assizes, on Monday, was an indictment preferred against Mr. Maddox for an assault on a child in consequence of a perambulator. He has been for years a vexed question as to a right of the public to have a path to the Victoria Rooms, and to the Clifton Down. Mr. Maddox, Mr. Miles, was passing along the road, pushing before her a perambulator containing her child. The defendant, Mr. Maddox, is the owner of the disputed property. She said she had a right to go that way, and she should pass on. The defendant resisted upon the ground that she could not pass, and he had given her shoulder. The lady, however, was too nimble for the old gentleman, and she picked up the child and carried it over the disputed property. Mrs. Miles said the perambulator was a very small one. The judge asked if it was a child's. Mrs. Miles said it was. The judge asked if the Court see it.—Other witnesses stated that Bath chairs were continually driven on the path which Mrs. Miles had taken with her child.—In fine time immemorial—The perambulator was here put upon the table. It was a basket wicker one. The judge asked if Mr. Maddox wished the baby put into it.—Mr. Smith said he thought the baby and Mrs. Miles ought to be put in perambulator.—Mrs. Miles declined to put the baby in perambulator. She said she had a right to go that way, and she should pass on. The defendant resisted upon the ground that she could not pass, and he had given her shoulder. The lady, however, was too nimble for the old gentleman, and she picked up the child and carried it over the disputed property. Mrs. Miles said the perambulator was a very small one. The judge asked if it was a child's. Mrs. Miles said it was. The judge asked if the Court see it.—Other witnesses stated that Bath chairs were continually driven on the path which Mrs. Miles had taken with her child.—In fine time immemorial—The perambulator was here put upon the table. It was a basket wicker one. The judge asked if Mr. Maddox wished the baby put into it.—Mr. Smith said he thought the baby and Mrs. Miles ought to be put in perambulator. Yes: counsel thought the defendant to put them in perambulator.—The Judge and Court were convulsed with laughter at the ridiculousness of the circumstance, which was the first occasion of the width of a baby's crinoline.—Evidence having been heard, Mr. Justice Byles summed up. He said that the law was clear, and he might that had been put forward in the indictment. The real question was this—was the perambulator in which the child was placed a nuisance in the position in growing it? The perambulator was 14 in. in weight, and 15 inches in width. Had the defendant a right to put the child and carriage in the road, or might they be heard at the old stile, "What thing is it that thrusts on here upon me, in the morning, on my way to work, and on the large as a child? A little first was it on four legs, its knees were in front: then we walked upright, upon two legs, and walked about with a stick in our hand: and now if we meet a stick, or perhaps two crutches. A child, then, with its trust you might see a child in a wicker cart, walked with a stick or crutches. There formerly was a thing which was not now very common—a soldier's escort that was in a

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, AUGUST 24, 1861.

OUR kith and kin on the other side of the Atlantic are beginning to graduate in their self-constructed new school—war. It was a very pretty pageant as long as it was confined to strutting about in fantastic uniforms, winning the smiles of the New York beauties and fulminating furious tirades in newspapers. It is quite another thing now when what might have been a substantial success, or, at the worst, a drawn game, at Bull Run, has been converted into a *stampede*, in which "devil take the hindmost" seems to have been the only order of the day. Nothing comes out clearer now than that the illstarred attitude of the Northern states was undertaken on shallow to unwarlike and inexperienced politicians, and in utter defiance of the advice of the very few men of actual military experience who have commands in their army. A more wholesome condition of affairs has been inaugurated by the Bull Run rout. The thinking men are now advocating their posts in favour of volunteers who consider three years a far more reasonable allotment of time for fair drilling; and the American press generally has come to an understanding with the General, which tardily recognises the impolicy of publishing for your antagonist's benefit a daily programme of your movements and intentions, and the public of the States are universally recognising the truth and weight of the axiom so often laid down and so repeatedly laughed at by the public before the days of our volunteer corps by officers of experience, that drill—drill—drill is essential to the formation of an efficient soldier. Drill reduced to practice means the almost mechanical movement of the human machine in one direction or another, instantaneously consequent on the utterance of the word of command, whether by mouth or bugle. It is in this that the Northern levies were deficient, and it was for want of this that they were routed—a good lesson to our own volunteers, which Colonel M'Murdo has not been slow to impress on them.

The resignation—for such it really is—of Cialdini is a very sad disaster to the new Italian kingdom. The only substantial feature of grievance in the new Constitution was the removal of the centre of the Neapolitan Government to Turin. The only man so far discovered who seemed capable of grappling with such a grievance was Cialdini. He appears, however, to have been for the hampering influence of the Administration dispersed at Turin, and to have longer felt the weight of a certain foreign pressure constantly brought to bear, and he has at last thrown up in disgust a hand he felt he was debarred from playing in his own way, and which he at the same time felt he must play in his own way or not at all. It is a pity, as all true friends of the new kingdom had confidence in him, and his resignation will amazingly strengthen the hands of the brigands.

It is proverbial that trifles form the stock commodity for great men's quarrels—we are far from numbering the long-vexed Schleswig-Holstein question in the catalogue of trifles, but we may safely aver that to nine-tenths of our readers the points at issue are as utterly unknown as the track across the Rocky Mountains or the marriage portion of that celebrated Delaware tenant the Bending Willow? We only notice the matter here in order to call our readers' sympathies in behalf of a small country gallantly resisting the encroachments of a large one. It is notorious that Prussia, to whose amenities Englishmen have no particular claim to be indebted, has long been endeavouring to impress on Europe that its policy is the true index of German will. To assert that the claim may be reasonable, but we doubt if the other, specially the maritime, nations will recognise it when it is used to crush a small friendly Power under the hoofheel of a backram-clad idea.

The lamentable breach between Austria and Hungary has, we fear, widened too far for the Magyars to be content to surrender their ancient constitutional rights: the Emperor insists on his autocratic right to deal with them as he pleases. Timely concession—a wise policy—might have done much: but the proverbial archipelagic madness seems to have seized on men, and we have little to look for but civil commotion, with bloodshed on one side, and passive resistance—passive for how long!—on the other.

Harvest news is sad both from France and Italy. It is noteworthy that in the former country a formal scientific report has issued pointing out the serious injury inflicted on the crops by the systematic annihilation of small birds. What the disgusting ennui is to an Indian village the small bird is to the farmer's ground: he may consume some useful produce, it is true, in the shape of seeds, but this is as nothing compared with the results of his voracious energies among the deadliest foes of the crop. The French savans do not hesitate to ascribe a very large proportion of the dismal failure of the French crops this year to the systematic suppression of the small-bird tribe, and the consequent increase of worms, grubs, and insects.

We almost hesitate to accept as fact the very racy anecdote which has had the run of the press, and which professes to depict the interview between the Pope and the late Count Cavour's confessor. There are circumstances connected with the narrative which our lawyers would point to as throwing a great air of doubt on the whole story, the most prominent being that according to the laws of the Roman Catholic Church no ecclesiastical superior, not even the Pope himself, can call on a confessor to divulge what has been confided to him *sub sigillo*. Still the episode is a good one as it stands, and the eagerness of the Holy Father to catch at anything in the shape of a restoration an impressive lesson.

Why should the Liverpool folk take umbrage at the circumstance that a young middleman, who had obtained leave from his ship to visit his family, should have passed through their city with all the eagerness of a boy coming home for the holidays, instead of staying on his road some dreary hours to listen to that inevitable effusion in which Mayors and Corporations are wont to express their "desire to approach" an illustrious personage with sentiments of, &c.? We are sure Prince Alfred must no longer imagine that the great commercial capital: and we rather guess that his Royal Highness's ante-luncheons on the occasion would, when done into the vernacular, have come out something like "Oh, bother! I want to go and see mamma."

CHURCH AND UNIVERSITIES.

Chichester Cathedral is reopened after Divine service performed portion having been screened off.

The Dean of Carlisle has accepted a parochial charge in that city—namely, the incumbency of Christ Church—the sanctuary of the Chapter of the Cathedral.

The Rev. A. Dawson, Curate of St. Gabriel's, Pimlico, has been appointed secretary to the Society for the Propagation of the Gospel in Ireland.

A church school was opened on the 16th inst. at Hawthorn, a hamlet in the parish of Easington, Durham. It has been built at the expense of R. L. Pemberton, Esq., High Sheriff of the county.

The restoration of the chancel of the Church of St. John the Baptist at Banbury, Worcestershire, was celebrated by special services on Wednesday, the 14th inst., when a sermon by the Archdeacon of Worcester was delivered, and a collection effected at the expense of the patron, H. P. Vernon, Esq., of Hanbury Hall, and the Rector, the Rev. Christopher Bagot.

The new organ which is being erected in the Cathedral of Llandaff, at a cost of £1000, will be opened with the procession, when the Rev. T. E. Owen preaches. But the handy-occasion for the use of the organ and a sermon will be preached by the Bishop of Winchester, formerly Bishop of Llandaff. The Right Rev. Lord Alwyne Compton is the present Bishop.

On Monday week the chief stone of a church in Millbrook, near Southampton, was laid by the Rev. Sir Stephen R. Glynne, Bart., Harleian, the owner of a large cotton-mill in the village, having contributed handsomely to the building fund. The site of the church is the property of the Earl of Stanhope, who also gives an acre of land for a parsonage-house. The church is to seat 1000 persons.

The Earl of Devon laid the foundation-stone of new national schools for Honiton on the 1st inst. There was service in the parish church at 11.30, an excellent sermon being preached by the Rector after which a procession, headed by the school children, was formed to the site of the new buildings, which are in the Gothic style. The ceremony having been performed, and the stone duly laid, the Earl of Devon addressed the people. A dinner then took place, when the Rev. Sir Stephen R. Glynne, Bart., and others, were entertained until a late hour, when the exhibition of a balloon closed the festivities of the day.

The Archbishop of York commenced the primary visitation of the diocese on the 13th inst. at Wakefield. On Wednesday he visited the section of the clergy at Doncaster; continuing his visitation according to the following arrangement:—Thursday, Aug. 15, Rotherham; Friday, Aug. 16, Motley; Tuesday, Aug. 27, Scarborough; Wednesday, Aug. 28, Beverley; Thursday, Aug. 29, Hull; Friday, Aug. 30, Howden. Lords of all manors were cautioned until a late hour, when the exhibition of a balloon closed the festivities of the day.

The Archbishop of York commenced the primary visitation of the diocese on the 13th inst. at Wakefield. On Wednesday he visited the section of the clergy at Doncaster; continuing his visitation according to the following arrangement:—Thursday, Aug. 15, Rotherham; Friday, Aug. 16, Motley; Tuesday, Aug. 27, Scarborough; Wednesday, Aug. 28, Beverley; Thursday, Aug. 29, Hull; Friday, Aug. 30, Howden. Lords of all manors holding a series of conclusions throughout the diocese in October, commencing at Ripon on the 1st inst. The Rev. Mr. Hammond, of Leeds, preached a sermon before the Archbishop and clergy at the Minster on the 13th inst., from which Archdeacon Wilberforce read the Archbishop's charge, which was then delivered by his Grace. The charge will also be examined in the Greek Testament, and in the Latin original of "Jowett's Apology." The Archbishop has notified his intention of holding an examining chaplain, the Rev. William Whitmarsh Phelps, M.A., Incumbent of Trinity Church, Leeds, who has resigned his valuable living in order to fill the primary visitation of his diocese in October.

SOCIETY FOR THE PROPAGATION OF THE GOSPEL.—An interesting meeting took place yesterday week in the board-room of the above society. The object was to welcome the bishop elect of Sierra Leone, the Right Rev. the Bishop of Labuan to six young men about to proceed as missionaries to Borneo, under the superintendence of the bishop. Among the persons present were the Bishop of Kingston, Rev. T. Sharp, Bishop Designate of Labuan; Rev. Dr. Bullock, Rev. Dr. Angelbis Collier, Rev. Canon Harvey; P. Cazenove, Esq., Q.C., and a number of ladies. The Bishop of Labuan, having been introduced to the meeting by the bishop of the diocese, during them some excellent practical advice in reference to the important duties which they were about to undertake. The Bishop of Kingston also delivered a short address. The names of the missionaries going out are the Rev. Messrs. Thomas, F. N. W. R. Evans, Wilkinson, Gomes, D. L. Schuder, and J. Richardson. They have sailed from London in the Ibis.

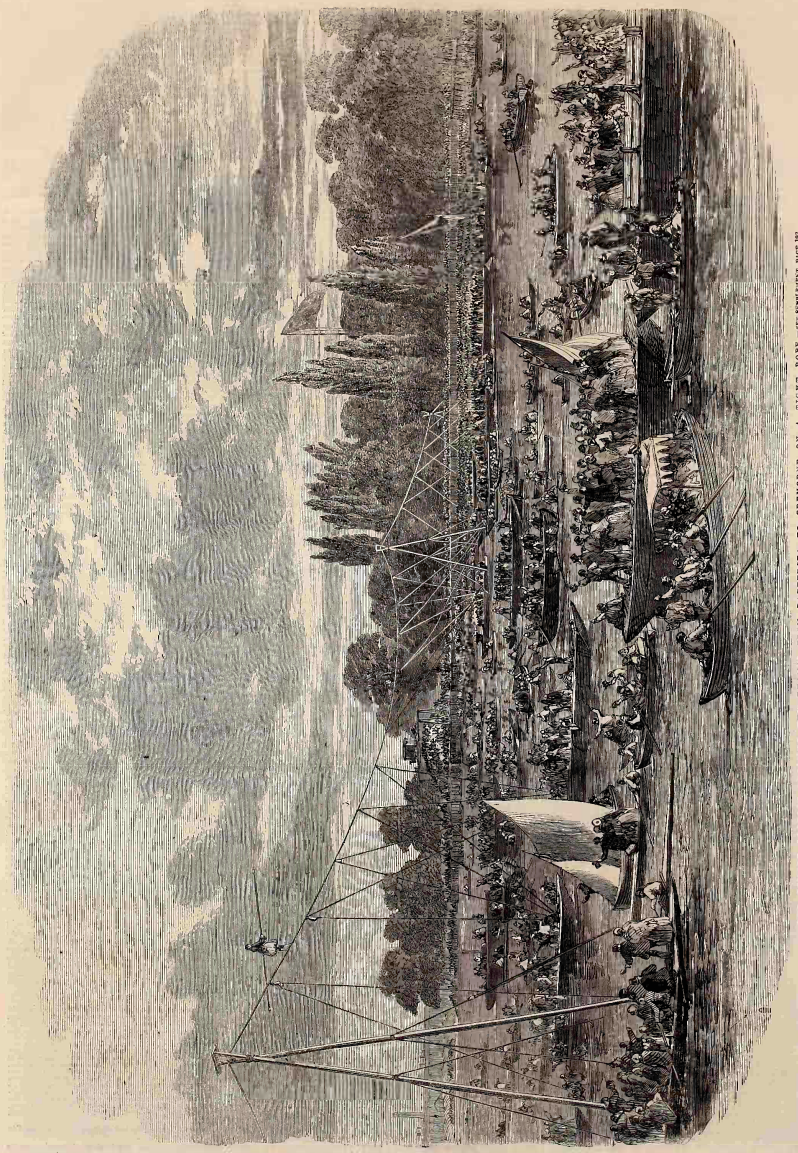
PREFERMENTS AND APPOINTMENTS.—*Rectories*: The Rev. R. B. Vaughton to Westborough (St. and Jud. mediety, with the vicarage of Long Bennington annexed), Lincoln.—The Rev. Edward Hall (Corpus) to Bexley, Rev. W. J. Williams to Saltfleetby St. Clement, Lincolnshire. *Vicarages*: The Rev. R. W. Jelf, Canon of Christ Church, Oxford, to Pluckley, Kent.—The Rev. Rees Bevan, B.A. Lewis to St. James's, Wolverhampton; Rev. W. T. Rede to Tamworth.—The Rev. J. Bowstead to the Rev. T. Bell Bowstead, to Ince Blundell.—The Rev. G. Pilkington to the Mossleas Industrial Schools, Pilkington, near Manchester.—The Rev. Thomas Pennington, Incumbent of St. Peter's, Cowgate to St. John's, Chatham; Rev. W. W. M'Guinness to Verndun Episcopal Chapel, Lambeth.—The Rev. Augustus Rees, Ch. B. Lecturer of St. Paul's, Bayswater; Rev. G. Collins to Lasher Dyke, near Bradford; Rev. G. S. Hodges to Bromsgrove, Worcestershire

ARTISTIC CONGRESS AT ANTWERP.

(From our Special Correspondent.)

Antwerp, Aug. 21.

THE long-talked-of *Vite Congrès et Solennités Artistiques* have just come off here with extraordinary *éclat* (started only by one or two drawbacks, which will be presently mentioned); and the population of this ancient city, augmented by countless visitors from all parts of Europe, are just beginning to simmer down into their ordinary equanimity, and to recover their senses from the din of sounds and of effulgent colours, decorations, illuminations, &c., which have filled up every moment of the festive days. Before I proceed to the more detailed description, you may, perhaps, wish to know something of matters of description, you may, perhaps, wish to know something of matters of description, you may, perhaps, wish to know something of matters of



THE FEMALE BLONDIN CROSSING THE THAMES FROM BATTERSEA TO CREMORNE ON A TIGHT ROPE.—SEE SUPPLEMENT, PAGE 185.

THE QUEEN'S VISIT TO IRELAND.

KENMARE HOUSE, KILLARNEY, THE SEAT OF VISCOUNT CASTLEROSSE.—SEE NEXT PAGE.

MUCKROSS HOUSE, THE SEAT OF THE RIGHT HON. COLONEL H. A. HERBERT, M.P.—SEE NEXT PAGE.

ILLUSTRATIONS OF THE QUEEN'S VISIT TO IRELAND.

As will be seen in another column, her Majesty has arrived safely at the Viceregal Lodge, Dublin, according to the well-arranged programme of the Royal movements in Ireland her Majesty—who holds a grand review to-day (Saturday) in the Camp of Curragh—will proceed on Monday next to Kilkenny, and will visit Lord Carbery. The Queen will remain at Kilkenny on Tuesday and Wednesday, on which latter day the Right Hon. Mr. Hardy will have the honour of dining with her Majesty.

On the preceding page we give Illustrations of the two mansions at Killarney which will be honoured by the presence of Royalty; and we hope to be able to give in our next Number some further Engravings, in connection with the auspicious event—her Majesty's visit to Ireland.

Kenmare House, the residence of Lord Castlerosse, only son of the Earl of Kenmare, is situated in the most picturesque valley of Killarney amid the most extensive demesne, pleasure-grounds, and gardens, and, with its extensive domains, commands, on all sides, the finest views of the Kenmare demesne (open for the public) several inviting glimpses of the surrounding scenery are caught, although the range of vision is rather limited by the various plantations and woods in the immediate neighbourhood. Tourists who would obtain a more distinct conception of the situation and varied characteristics of the Upper Lake should proceed by the western side of Kenmare Park, which is washed by the waters of Lake Leane, to the ruins of Aghadoe. These ruins, consisting of an abbey, round tower, and castle, occupy a picturesque position, being placed on a commanding eminence, at an elevation of about 320 feet above the level of the lakes. From portion of these ruins commands a splendid view of the Lower Lake, with the magnificent scenery by which it is surrounded. The views from Kenmare House are exceedingly beautiful. "I think," says one writer, "that I never beheld anything more captivating than the vista from the drawing-room windows on the declining sun, streaming from above the mountain-tops, falls slanting on the lake and on the bright velvet turf, and stretches to my chair." Lord Castlerosse has been indefatigable in his endeavours to make Kenmare House suitable for her Majesty's reception; and it is stated that a large section of the Old Red Sand has been taken by his lordship to complete the repairs of the Queen's suite. The State barge, purchased in London by Lord Castlerosse for the purpose of conveying her Majesty and the Royal party through the lakes, arrived safe by train on Saturday week.

Blackrock Abbey Mansion is the seat of the Right Hon. Henry Arthur Herbert, member for the county of Kerry, in conjunction with Lord Castlerosse. It is a fine example of the Elizabethan style, and was built from designs by Mr. James Pain, London. Good views of the mansion and surrounding scenery can be obtained from various points in the demesne. The Abbey of Muckross, a picturesque ruin, is situated in Mr. Herbert's grounds. This abbey was founded in 1440, and rebuilt in 1602. A considerable portion of Muckross demesne is thrust wedge-like between Lower Leane and Lough Muckross, the latter lake on its south side and at its western extremity, and on its south the latter lake.

Of the lakes themselves, and of the objects of interest in their neighbourhood, we shall have ample opportunity of dwelling in future Numbers, in connection with our Illustrations of the Royal Progress in Ireland.

THE COURT.

DEPARTURE OF THE QUEEN FOR IRELAND.

The Queen and the Prince Consort, accompanied by Princess Alice, Prince Alfred (who arrived in England from his tour through America), and Princess Helena, left Osborne on Wednesday morning for Ireland. Her Majesty embarked in the Fairy Royal steam-yacht for Osborne pier, and crossed to the Victoria and Albert, which lay in readiness to convey the illustrious travellers to Holyhead.

The suite of Her Majesty consisted of Earl Granville, Secretary of State in attendance on her Majesty; Viscount Sydney, Lord Chamberlain; Lady Churchill, Lady in Waiting; the Hon. Miss Stuart Wortley; Major-General Bruce; Colonel the Hon. C. Phipps; Colonel Gathorne Hardy; the Hon. C. Grey, Equerry on Waiting; Major Du Plat, and Dr. Jenner.

The Royal train started at a quarter to ten o'clock, and proceeding via Portsmouth, Reading, and Oxford, arrived at Paddington, where the Queen touched, at a quarter-past one o'clock. Thence forward the journey was by Birmingham, Wolverhampton, Stafford, Crewe, Chester, Holywell, and Bangor, to Holyhead, where the Queen arrived at a quarter to seven. Her Majesty embarked in the Victoria and Albert immediately, and sailed for Kingstown at seven o'clock precisely.

The Queen landed at Kingstown at about a quarter past eleven o'clock, and proceeded direct to the Viceregal Lodge.

Her Majesty was everywhere received with the greatest enthusiasm.

The Queen Prince and Princess of Prussia took their departure for Berlin yesterday week; and on Saturday last the King of Sweden and Prince Oscar left England for the Continent.

His Royal Highness the Duke of Cambridge returned to town on Friday morning from his visit to Ireland. His Royal Highness leaves town for a few days for Germany to attend the christening of the infant Prince Marie at Baden-Baden. His Royal Highness purposes to absent about three weeks.

His Royal Highness the Duke of Oporto has left Claridge's Hotel for Southampton.

The Marquis of Lansdowne has left town for Cromer for a short period.

The marriage of the Marquis of Bath and the Hon. Miss Vereker took place on Monday.

The Earl and Countess of Chesterfield have left town, accompanied by Lady Gordon Stanhope, for a visit to the seat of Lord Ilchester. The noble Earl and Countess come to town next month for the marriage of Lady Susan Fox-Strangways and the Earl of Carnarvon.

Viscount and Viscountess Palmerston have left town for Walmer Castle, Kent.

Miss Coutts has left town for the Continent.

WILLS AND BEQUESTS.

The will of the Most Noble Richard Plantagenet, Duke of Buckingham and Chandos, K.G., G.C.B., P.C., D.C.L., F.R.S., &c., has been proved by the Most Noble the Duke, by the executor named in the will. The contents of the will are not published, and we are therefore unable to state the real and personal property and personal estate to say friend Henry Smith, of Middle Morton, in the county of Berks, gentleman, to hold the same to the said Henry Smith, his executors, administrators, and assigns, but as to the estates vested in the said testator subject to the equitable charges the same to and to support the said Henry Smith sole executor." Dated July 28, 1856. Signed, Buckingham and Chandos; attested by Robert Smythe and T. H. Sanders, solicitor, Ely place.

The will of Mr. Douglas, wife of General Sir James Douglas, G.C.B., of York-crescent, Clifton, near Bristol, was proved in the London Court by the executors, the Hon. Sir Henry Edward John Stracey, Bart., and Mr. Bushell to all the personal estate and effects under the will of the late Richard Bushell, Esq., of Hadleigh, Suffolk, by the relict of which Mr. Bushell has made the following disposition. Her Ladyship bequeaths in her interest in this property to such of her children as may survive her, and in the event of any one or more of them decease it is to revert to the six sons and four daughters of the testator in equal shares, free from the control of any future husband she may marry, and not subject to his debts or liabilities.

The will of Sir James Cosmo Melvill, K.C.B., F.R.S., late Secretary to the Hon. East India Company, was proved in the principal registry, on the 16th inst., by his sons, James Cosmo Melvill and William Henry Melvill, Esqrs., the executors acting under the power. The property was sworn under £25,000. Sir James leaves to his relict his carriages, horses, and certain other effects, absolutely, and an annuity of £600 during her widowhood, and also a house and small annuities; and on her decease the property is to be equally divided between his sons and daughters. The plate presented to Sir James by the Hon. East India Company is directed, on the decease of Lady Melvill, to pass in certain proportions to his sons and grandsons, Philip Lawrence Melvill. The will bears date Dec. 28, 1858, and was witnessed by V. Huggins and J. Hall, both of the East India House.

Professor Quekett, F.R.S., the distinguished microscopist, died on the 20th inst. at Pangbourne, Berkshire. The deceased was Professor of Histology in the Royal College of Surgeons of England, and Curator of the Hunterian Museum, having succeeded Professor Owen in 1856, on that gentleman's appointment as chief of the Natural History Department of the British Museum. (We intend giving a Portrait of Professor Quekett in our next Number.)

THE SOCIAL SCIENCE CONGRESS AT DUBLIN.

The fifth annual meeting of the National Association for the Promotion of Social Science was inaugurated on Wednesday week by an address on the Progress of Jurisprudence by the Right Hon. Joseph Napier, which contained a summary of his Lordship's address.

THURSDAY.

The various departments of the association were opened on Thursday morning in the Law Courts. At the first meeting of the department of Jurisprudence the Right Hon. Joseph Napier, president of the department, delivered the opening address. The first paper read was on the Outlines of Penal Law Consolidation, and Mr. D. C. Heron, Q.C. (in the absence of Mr. Arthur Symonds), read a paper "On the Consolidation of the Criminal Law." Mr. James Whiteside, Q.C. and M.P., read a paper "On the Progress of Legislation in Criminal Law;" Mr. Arthur Houghton read a paper "On Sea-Weed Dingies," "On the Machinery of Legislation," after which the section adjourned.

The business of the Educational Department commenced with the reading of a paper by Mr. Fitzpatrick, Secretary to the Lord Lieutenant, on the principle of Education in Schools for the Lower Classes of Society." The Rev. Jack Seddon read a paper "On Education and Pauperism;" another paper was read "On the Education Commissioners' Plan for Rendering Assistance to the Schools of Ireland." Dr. Ahearne read a paper "On Irish Schools;" and Mr. A. M. Pollock "On the Educational Position of the Established Church in Ireland."

The third department—Reformation and Punishment—met in the Court of Common Pleas, the Right Hon. Thomas Berry Cusack presiding. The Rev. J. Hunter Monahan commenced the business with a paper "On Irish Penitential Institutions, and the Principles by which they are regulated." Mr. P. J. Murray, "On Catholic Reformatories." Several other papers were read, after which the section adjourned.

In the fourth or Public Health Department, under the presidency of Lord Talbot de Malahide, the first paper read was on the Unhealthy Locality," which gave rise to an animated conversation; after which Dr. Harkin read a paper "On Fevers, Epidemic and Endemic." Dr. Hancock read a paper, followed by Miss Florence Nightingale, "On Hospital Statistics."

In the Social Science Department, Lieut.-Col. Jadge Longfield presiding, sat in the Kilmainham Court. The secretary of the section read a paper "On the Progress of Science," by Professor Fleeming Jenkin, of Edinburgh," and a paper by Mr. Frederick Harrison, M.A., "On the Building Trades of Paris and London." Mr. Hancock read a paper on the progress of free museums. A discussion ensued on both papers, in which Mr. Hancock, Professor Fleeming, Mr. W. Ball Wright, M.D., and Mr. Hall took part. Mr. Hancock read a paper "On Sanitary Legislation," which referred to the beneficial effects of the Act of Parliament closing the public-houses on Sunday and Sunday week, and to the efforts which had been made to shield the poor of London from the evils of intemperance. Mr. Hancock also read a paper "On the Recent Position of the Amalgamated Society of Engineers," and, after a brief discussion, the section adjourned.

Mr. Michel Chevalier opened the sixth or Trade and International Department with a paper "On the Progress of Science, Industry, and Commerce." "On the Australian Gold Discovery, and Its Effects on Australia." The Rev. Mr. Haughton read a paper "On the Laws of Health, as connected with the weights, measures, and coinage, which led to considerable discussion. Mr. Jackson read a paper "On the Progress of Trade Unions," and a discussion upon it took place, in which the arguments in support of this practice were entered into by Mr. Jackson, Professor Fleeming, Mr. Hancock, and others, during the day.

In the evening a distinguished assembly dined in the Oak Room, Mansion House, Dublin, on the invitation of the Lord Mayor and Lady Mayoress, Alderman Hoyte, Dublin, on the occasion of the visit of the Association. About 140 persons, including the Lord Lieutenant, M. Garnier Pages, M. Dunoyer, M. Michel Chevalier, and several other distinguished foreigners, were present.

FRIDAY.

In the department of Jurisprudence, Baron Holtzendorf, of Berlin, read a paper "On Public Prosecution in Prussia;" which was followed by a paper "On the Progress of Jurisprudence," read by Mr. R. Dowse, Q.C. Mr. Dowse gave rise to a conversation between professional men, when it was unanimously agreed that a Council of Law Reform should be established throughout Ireland. The Solicitor-General next read a paper "On the History and Practice of Law Reporting in Ireland." Mr. Hall then read a paper, followed by a paper on the same subject, which elicited observations from Mr. Pollard-Urquhart, Q.C., and Mr. Dowse.

The second department—Education—presided to the Court of Exchequer, the Lord Chief Baron Pigot presiding. The Rev. Mr. Haughton read a paper, the first paper on the list was, "Suggestions on the Failure of Education in the Lower Classes of Society, particularly with Regard to Ireland," by Mr. Wilmot, D.D. Dr. David Ross then read a paper "On the Advantages of the Recent Public Libraries Act," followed by a paper by Mr. Shaw, followed with a paper "On the Treatment of Adult Offenders, and the Results of the System in Ireland," by Mr. Frederick Hill, late of the Home Office. Mr. Hancock read an able paper, "Why the Community should take an Active Interest in the Training of Children," and a paper by Mr. Sharpe on Orations.

In the fourth department—Public Health—the Earl of Carlisle presiding, Dr. Lyon Playfair read a paper "On Recent Facts and Suggestions on the Registration of Disease;" by Henry Kennedy, M.D., on "The Progress and Prospects of Girls Employed in Manufactories in Dublin;" by David Barry, M.D., on "Hospitals;" by Dr. Beaumont, M.D., on "Diseases and Remedies in the North of Ireland."

In the sixth department—Trade and International Law—Mr. Herman read a paper on the linen trade of Ireland, which gave rise to a discussion.

A meeting of the members of the Young Men's Christian Association was held in the evening, in the round room of the Mansion House, for the purpose of forming an association for the mutual improvement of the members of the Congress. The attendance was exceedingly numerous, and included a large proportion of the ladies. The meeting was organised by the gentlemen who were advocates by the Solicitor-General, Mr. G. W. Hastings; the Rev. Father Mathew, Mr. Hancock, Mr. Chevalier, Mr. Dargan, Mr. Guinness, and Mr. Gardner Pages, in observations upon the study of social science, and in recommendations for the best mode of forming associations in their studies, for the individual good as well as for the welfare of society.

SATURDAY.

M. Michel Chevalier, President of the Department of Treland International Law, delivered his address in the Solicitors' Hall on Saturday morning. Lord Brougham, and the Lord Chief Baron Pigot, Chief Justice Monahan, and others were present. The attendance was numerous, and the address, which was delivered in French, was interrupted by the applause of the audience. Many of the audience who understood the language—a large proportion, judging from the hall—frequently applauded the sentiments of the speaker on the important subject to which it referred. When M. Chevalier concluded the president announced that the next meeting would be held in Belfast, and the hour of meeting when he stated they were deeply indebted to the author of the very able address which they had just heard. The address was received with loud applause by the sounding principles and the greatest felicity of illustration.

After the address was delivered the work in the sections began.

In the first Dr. Lloyd read a paper on the Admiralty Court and its many important functions. Dr. Lushington read a paper on the subject, written by the Rev. Dr. M'Cork, of Queen's College, Belfast, pointing out the necessity of a Court of Appeal to be established in Ireland, similar to that which exists in the Queen's College.

In the section of Public Health, Mrs. Fitch, an English lady, read an able paper "On Sanitary Work in Town and Country Districts," which was followed by a paper on the Inclosure of Open Spaces, after which the department closed, the members who could remain until next week proceeding to Belfast, and the Archbishop of Captain Crofton, to inspect the convict establishment there.

The Congress closed on Saturday at one o'clock.

Immediately after the Congress had been terminated there was a Convocation held in the University, when the honorary degree of LL.D. was conferred upon Lord Brougham, Sir J. C. Shaw Lefevre, Sir James Emerson Tennent, and M. Michel Chevalier. There never was a greater concourse of the people in the University than there was on the occasion. Lord Brougham and his companions were enthusiastically cheered by the students.

Subsequently there was a promenade in the Zoological Gardens, Phœnix Park, which was attended by a large number of the members of the Congress and their friends.

SUNDAY.

In the evening the President of the Royal Irish Academy received his Excellency the Lord Lieutenant, Lord Brougham, and the Council of the Social Science Congress, and many of the nobility and a numerous audience of that body, at a conversazione in the Academy House.

MONDAY.

The proceedings of the congress commenced on Monday by the Attorney-General reading an address on Reformatories, which was listened to with marked attention. Lord Brougham occupied the chair.

In the first department—Jurisprudence—which was presided over by the Right Hon. Joseph Napier, Mr. Arthur Kinnaird read the report of the Mercantile Legislative Committee on the Bankruptcy Law Amendment Act. Mr. D. C. Heron, Q.C., next read a paper "On Joint-stock Frauds," in which he suggested that Government be invited to take public offence to see to the arrangements of all joint-stock companies for the protection of the shareholders. Mr. David M'Cubbin read a paper "On the management of bankrupts' estates, or to the mode of obtaining assignees more independent of the trust, or to the mode of a system of trustees recommended by the creditors." The following papers were then read: Mr. David Barry, M.D., "On Hospitals;" how to have no one's ever in order to obtain unpaid labour. "Under pain of publishment;" Mr. D. C. Heron, Q.C., "On the Irish Bankruptcy and Insolvent Act;" Mr. T. M. Deakin, "On the Extension of the Bills of Exchange Act to Ireland."

Amongst the papers read in the second department—Education—were "On the Education of Pauper Children," by Miss L. Twining; "On the Introduction of the Domestic Economy System into Schools," by Miss Carpenter; and "On the Education of Pauper Children," by Mr. Senior, Poor-law Commissioner.

In the third department—Punishment and Reformation—a number of papers were read, amongst which was "On Irish Penitentiaries," by Miss Hutchinson, was followed by an interesting conversation.

In the fourth department—Public Health—Mr. Vaughan Robinson read the first paper, entitled "A Glance at the Dwellings of the Poor, including Lodging-houses, Model Houses, &c." Mr. Robert Rawlinson read a paper "On Pipelaw," "On the Prevention of Smallpox in Ireland;" Mr. Corbett, "On the Operation of the Act for Regulating Lodging-houses in Dublin;" Mr. Bourne, "On the Drainage of the City of Dublin."

The following papers were read in the sixth department—Social Economy:—Mr. Henry Hennessy, F.R.S., "On the Law of Fluctuation of Wages;" Mr. F. W. Cossins, "On the Application of the Free Public Library Act to Dublin;" Dr. Robert Riddell, "On Working Men's Reading Rooms as an Important Modification of Recreation;" Mr. Hancock, "On the Present and Future Social Condition of the Working Classes and their Habitations;" Miss Carter, "On the Home and Domestic Habits of Working Women," "On Women Among the Female Peasantry;" Mr. W. Hickey, "On the Social Condition of the Agricultural Labourers of Ireland."

In the sixth department—Trade and International Law—Mr. T. Bailey read a paper "On Land as a Commodity, which followed Mr. Barry's paper. Mr. Greer, and other gentlemen took part. A paper "On the Pernicious Trade of Ireland" was read by Mr. Hancock, which gave rise to a long and animated discussion. Mr. Clarke read a paper "On the Extending of Bonding Warehouses."

On Monday, at twelve o'clock, the model schools of the National Board were visited by the Social Science Congress, Lord Brougham, Mr. Hancock, Mr. Rocoder Hill, and other distinguished strangers at present in Dublin. The pupils were examined in the various subjects in the various classes in which they receive instruction. This examination lasted for a considerable time, and was then followed by the performance of a selection of sacred and other songs, under the direction of Professor Glover. The different classes examined exhibited a degree of proficiency in their respective courses, and studies.

So much interest was excited by the reading of Miss Parkes and Miss Faithfull's paper, last Monday, that it was determined to hold a meeting on Monday at Dublin, that a special meeting was called on Monday in order to hear the interesting society paper, read by Miss Parkes. The Rev. Dr. Lloyd presided, and Miss Parkes and Miss Faithfull addressed the meeting, followed by Lord Brougham, Lord Talbot de Malahide, the Rev. Dr. Lloyd, and others. The meeting was very successful, and a committee of gentlemen appointed.

THE FARM.

The harvest did not become general in the north till last Tuesday week, and then came an afternoon of heavy wet on Wednesday, which stopped everything for a time. Still no material injury has arisen, and although the crops who have fallen back for comfort on the potato disease, with statements which are absurd as reliable as the price from Horncastle or Horncastle fair.

The Royal Society's prize-ploughing trials commenced near Leeds on Wednesday, when twenty-one of them had their first trial, and the best performers were selected for a harder work on Thursday and the following days. Out of the £50 amongst two fifths was allotted to the combined machines, for which there were only three entries, one-fifth for the single action or best delivery plough, for which there were ten entries, and two-fifths for the side delivery. The combined machines, towards which the Royal Society seem to have taken rather too much interest, did far the worst in the three classes, and there was a strong impression that nothing would be awarded to them, whereas the majority of the single-action ones did better. On the second day it was fine, and a large number of agriculturists as well as ladies were present. The judges were Mr. Cuthbert Bailey, one of the judges, Messrs. Tindall, Hipwell, and Hichen; and the consulting engineer, Mr. Amos; and a pretty busy time they all had of it.

It is stated that the new Agricultural Hall at Islington is to be finished by June next, at a cost of something like £15,000. By a recent purchase, the company acquire a frontage to Liverpool of 50 feet opposite Islington-green, where the statue and fountain to Whittington are shortly to be erected.

Mr. Barnes's Friar Tuck did not go to Belfast, as he had been sold at Leeds, for a good price, to Mr. Dudding, of Euston, who has let him to the Hon. Rod Hill. Sir Colin was sent to Belfast alone, but he gone off that he was not noticed; and, as a specimen of the weakness of the Irish Derby, Lord John Scott's Ely, who was not entered at Leeds and passed over at Perth, won the gold medal given for the best in all the classes.

The Executive have reduced Master Annandale from the position which he had no right to hold at Newcastle behind Count de Lon one more; but Mr. Wood, of Scawcliffe Hall, was the best judge of the Champion. Sir James the Rose is in the neighbourhood, but his mob owner will not show him. Mr. Merryfield's Ivanhoe was not allowed to compete, and his Lady Grace was put before his Queen of the Vale; while Soldier's Bride was virtually empounded in her stable. Lord Zetland, the Duke of Hamilton, and Lord Portsmouth, Lord Exeter, and Mr. Jackson, of Oran (whose willow favourite, Sauntere, quitted England like a man satisfied with the chances of his race), will find another in the five-year-old, and won the £20 prize with it.

The catalogue of the Berners sale on the 29th ult. has been issued by Mr. Prince. It sets the hats on the first day consist of 142 stock cows and heifers with their calves, and on the second of 45 two-year-olds and yearling heifers, 31 bulls and bull calves, 20 rams, 6 sheep cows, and 4 Dorkings, one of the latter fancies that his Lordship had. About 600 sheep, principally Shropshires, and 72 white Berkshires, will also be sold on the second day. It is an extraordinary feature of the year that we can find no account of any sale in the Suburban one should have taken into the catalogue, and quite a new thing in the remarks in the body of it are most valuable to those who study the pedigrees of "the white faces."

The French farmers have just been informed by the Court of Cassation, not only that grasses have a legal right to cut over the hedges of their neighbours, but they have no right to turn sheep into the fields till two days after the crop has been carried, or to let the grazing to a third party. The same decision is applicable to the vintage, and drivers and agricultural regulations to the contrary are therefore declared invalid.

Mr. Lloyd-Baker's sale of Aston-upon-Carrant, on Tuesday, Sept. 27, the day before Taunton Fair, and will be held in a field near the Taunton station. The year's sale will consist of about 150 Devon cows and heifers, young, and powerful animals, resulting from a cross with the Exmoor pony mare. Ten draught pony mares, with their first cross-foals at foot, and intended to an Arab horse, will also be put up. The cobs, &c., are from three years and a half to five years old, and of all heights, from 13½ to 15 hands.

NATIONAL SPORTS.

The finish between King of Hearts by David O'Rourke and Margery, at Reading, was almost as fine as that between Gemma di Vergy and Zadée in Belfast, where the same owner and rider were also concerned to another between Patriot, who was a trifling favourite, and Miss Yyvine, who received 10lb, and just pulled through by the shortest of heads.

York August stands for Wednesday, Thursday, and Friday; but the list is not very promising. Kedlestrom, we believe, is not to run, and Dictator, Tattoo, and Yorkminster seem the strongest names in an unusually week Great Yorkshire stakes.

The four yearlings of Sykes's family will come to the hammer on the morning of Thursday at the old spot near the theatre. Thirteen lots of them, as Mr. Ellerman, the last of the stock of the celebrated compeer of Pandopo which are left in England, six by Daniel O'Rourke, and one of eighty-two parentage between the two sets, one of them are brothers to Wynnstay and Gaspard, and many who have seen them rather hang to a hay Hillerman from Southampton's dam, who has a colt foal of King of Hearts about him. Mr. Spencer's clever brood mares come up to Tattersall's on Sept. 2.

The race for goodness at Yarm was a great success, but the committees must unfortunately (although the bench, headed by Mr. Naisbey, seemed on the morning of Wednesday the judging of the last race) have left Mr. Bentinck Boythorp hound entries did not come, and though Tom Sebright was fortified to the spot, and carried back £20 in prizes to Bilham, we must find the faces of Adam Walker, Jack Spicer, Jack Morgan, Clark, Cooper, and others of our leading huntsmen. The locale of the meeting is not sufficiently central, and the absence of the huntsmen do not care to enter. Mr. Hill's kennel was unusually lucky, but his crack hound, Bonny Face, was rather a very fine than a very workmanlike hound, and a little coarse, and lacked quality and neck. Our telegram, however, gave the kennel (whose twenty-six couples are now under the care of Will Shepherd, late of Mr. Fox's) due credit in the third class for foxhound puppies of 1863, as the first prize was won by Mr. Middleton, and the second by Mr. Hutchinson. There are arrangements for the hound judging which occupied about two hours, and was watched by a large crowd with the greatest delight, were most satisfactory, and we much regret to hear that Mr. Bentinck Boythorp determined to retire from the scratchings, which he has held so ably for eleven years. He has, in fact, communicated how like to this class of meeting by the £100 hound sire prize and hound show.

Surrey had a terrible defeat from Kent in their return match at the Oval on Thursday and Tuesday by seven wickets. Under circumstances Surrey should have won, and Mr. Miller's catch of Mr. Hodgson at Canterbury, and Mr. Hodgson of Kent was not good, but Mr. Miller's catch of their Hopkinson was "a hit" to remember. On the whole, it was an unsatisfactory match for both sides. The United have been beaten since only by the Gentlemen of Sussex, and Mr. Grundy's Australians, who are now at Portsmouth; while All England has won by nine wickets at Lincoln, by seven wickets at Swinton cricket ground, in Yorkshire. Everybody seems anxious to play everybody, and the "Dried Fruit Rockers" engaged the "Wholesale Fruit Dealers" in their outlaw at Belvidere Park, and were worsted in one innings by 151 runs. Preliminaries are being at last settled for a picked English eleven to sail to Australia this autumn. George Parr declines another sea voyage from his lively recollections of the last, and Diver, Daft, Hayward, Anderson, H. H. Stephenson, Crewe, Jackson, Carpenter, Grundy, Caffyn, Griffith, and Lockyer are the team which will meet probably go. The fixtures for next week are—on Monday, Surrey Club v. Southgate, at Southgate and, on Thursday, Gentlemen of the Surrey Club v. Essex, at Chelmsford; Gentlemen of Kent v. Gentle men of Surrey (return), at the Oval

All England v. Twenty-Two of Gainsborough, at Gainsborough; and United v. Twenty of Leamington, at Leamington.

Arrow (102 tons) won the £100 prize given by the Royal Victoria Yacht Club, with 3 min. 20 sec. to spare; Claymated, whose victory at Cowes made her a great favourite, being second. This was also her place in a very fine contest the next day, when she was beaten by Andax. The owner of the Arrow, who only entered her for the 100 sovereign match under the idea that the Andax and Ione would have contested, announced his intention of giving a prize of equal amount next year. For the Royal Yacht Squadron Challenge Cup, Arrow, the Albert, and two others were withdrawn, and the Chrystabel had it all her own way against the Enid and Phantasia.

DACLIFFE RACES.—MONDAY.

Stand Plate—Bolton, 1, Lambert, 2.
Maiden Plate—Dutbon, 1, Kinnaird, 2.
Wilton Cup—Newspaper, 1, Rosamond, 2.
Heaton Park Handicap—Knutsford, 1, Ralph Brooks, 2.
Selling Handicap—Newspaper, 1, Lambert, 2.

TUESDAY.

Grey de Wilton Handicap—Surrey Stakes—Forester, 1.
Captain Grey, 2.
Stewards' Cup—Sunstar, 1, Twinkle, 2.
Radcliffe Plate—Bettercup, 1, Sheffield, 2.
Bridegroom Plate—Bettercup, 1, Rara Avis, 2.
All-Aged Selling Stakes—Ralph Brooke, 1, Dubious, 2.
Surrey Handicap—Knutsford, 1, North Lancashire, 2.

EGHAM RACES.—TUESDAY.

Runnymede Stakes.—Nunnery, 1, Llewellyner, 2.
King John Stakes.—Miss Virtue, 1, Patriot, 2.
Windsor Cup.—Newspaper, 1, Lady Somerfield, 2.
Queen's Plate.—Blue Jacket, 1, Cornet, 2.
Betting Race.—Miss Virtue, 1, Lambert, 2.
Archwaye Stakes.—St. Bernard, 1, Anchorite, 2.
Silver Goblet.—Nunnery, 1, Cornet, 2.

WEDNESDAY.

Barons' Stakes.—Thunderbolt, 1, Peshen, 2.
Magna Charta Stakes.—Dunoon, 1, Sweetbread, 2.
Prize and Maiden Stakes.—Wanderer, 1, Chairo, 2.
Town Plate.—Santa Claus, 1, Enfield, 2.
Railway Handicap.—Dunoon, 1, Wanderer, 2.
Surrey Handicap Sweepstakes.—Enfield, 1, White Wave, 2.

OXFORD RACES.—THURSDAY.

Hopeful Stakes.—Mr. Gretton's b. f. Rosa, 1.
Oxfordshire Stakes.—Baby Edmonds, 1, Sycophant, 2.
Visit Stakes.—Lambourn, 1, Bettercup, 2.
Members' Plate.—Memo, 1, Don John, 2.
Visiting Stakes.—Sir Colin, 1, Bettercup, 2.
Welter Handicap.—Ariadne, 1, Southsayer, 2.
Prince of Wales' Stakes.—Master Fenton, 1, Exchequer, 2.

M. Wothly, of Aix-la-Chapelle, states that, after experiments for many years, he has succeeded in obtaining positive proofs from his photographic pictures, which are perfectly visible to the eye or any other of the present stages of photography. These are re-placed by a chemical composition much more sensitive than the surface upon which the positive picture or negative is without detect.

DESPERATE AFFRAY WITH POACHERS NEAR OTLEY.—Early the gang of poachers, which has been long known to infest the neighbourhood, proceeds they discovered three poachers netting in a field, accompanied by three dogs. The keepers, who were unarmed, attempted to capture, but just at this time a party of six other poachers came out of the thicket, and a desperate conflict ensued. The keepers were beaten with clubs and stones, and were several times knocked down. The watchers, however, sustained the unequal contest until all the poachers but two had succeeded in making their escape, them under-off. But their retreat was somewhat endangered after all, for a keeper who had been left behind recovered from the discharge of blood chambers at the firing men, and evidently with some effect, for tracked blood the fugitives until all trace was lost in the direction of Otley, the leading to the neighborhood of Leeds. Mr. Kendall, man is very dangerously wounded, and the police are on the look-out for the delinquents, who will probably feel the effects of the combat. The superintendent of the police is on the track of the offenders, and he has some hopes of bringing them to speedy justice.

THE WEATHER.

REPORT OF METEOROLOGICAL OBSERVATIONS AT THE
KEW OBSERVATORY OF THE BRITISH ASSOCIATION.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

NOTWITHSTANDING that the amount of business done in all National Securities, Railway Shares, Foreign Stocks, Joint-stock undertakings, and there is still a large quantity of stock afloat, prices have steadily advanced, and the general tendency of the markets is upwards. The continuance of the favourable state of the weather for harvest work, and the fine condition in which the crops are now looking to hand, have exercised a considerable influence upon the operations of the jobbers.

There has been a steady but not a pressing active demand for money for commercial purposes. Generally speaking, the rates of discount in the open market are firm, the following quotations for first-class paper being current:—

	Per cent.		Per cent.
Short bills	2½	Four months bills	2½
Three months bills	2½	Six months bills	2½ to 3

In the Stock Exchange loans may be had for short periods at from 2½ to 2½ per cent., and for the end of the month.

The discount houses are now giving 2½ per cent for money at call, and 2½ per cent for short bills, and the joint-stock banks give a uniform rate of 3½ per cent.

Subjoined are the current rates for money on the Continent:—

	Bank rate.	Open market.		Bank rate.	Open market.
	Per cent.	Per cent.		Per cent.	Per cent.
Paris	3	2½	Trieste	3	3
Berlin	4	3½	Madrid	5	5
Hamburg	3	2½	Hamburg	3	2½
Frankfort	3	2½	St. Petersburg	5	5
Amsterdam	3	2½			

The total imports of the precious metals have amounted to about £420,000, and nearly the whole of them have been disposed of to the Bank of England.

An instalment of 20 per cent has fallen due upon the Indian loan of £4,000,000. As about one-half of the stock has already been paid in full, the amount required was only about £500,000.

The value of the gold now on passage from Australia is only £500,000, an amount considerably beneath the usual average.

The Continental exchanges continue steady; but those at New York have declined to 107 and 107½. This fall, however, is not likely to increase the shipments of gold from this side. The packet took out only £4725. The Indian steamer has on board £61,425 in silver and £3000 in gold.

At the half-yearly meeting of the shareholders in the Bank of Australasia a dividend and bonus at the rate of 10 per cent per annum was declared.

Very little change took place in the value of National Stocks on Monday; nevertheless, prices were well supported. Indian Securities, however, were very firm.—Consols were done at 90¾ for Money, and 90¾ for Account; the Reduced and New Three per Cents were done 90¼; Exchequer Bills, March, 12s. to 9s. dis.; Ditto, June, 4s. dis. to par; Bank Stock marked 215; India Stock, 214, and 213 to 212; Ditto, New, 101¼; and the Long Annuity, 1885, 17 1-16th; the Debentures, 1863, realised 97; and the Bonds, 5s. dis. On the following day Securities continued to yield very firm, and Consols advanced fully ¼ per cent. For Money, they touched 90¾; for Account, 90 to 90¼; Reduced and New Three per Cents sold at 90¼; Long Annuities, 1885, 17 1-16th; Exchequer Bills, March, 12s. to 8s. dis.; Ditto, June, 4s. dis. to par. India Five per Cent Stock was 104; the Loan of 1859, 102½; and the Five per Cent Loan of 1858, 94¼ to 95. The transactions on Wednesday were rather numerous, as enhanced currencies.—Consols, for Money, realised 90¾ per cent; for Account, 90¾ to ¼; the Reduced and New Threes, 90¼; Bank Stock, 214; and Long Annuities 17 1-16th; Exchequer Bills, 8s. to 6s. dis.; Ditto, March, 12s. dis. to par; and Ditto, June, 4s. dis. to par; Bank Stock realised 215; India Stock, 214; and 213. On Thursday Home Securities further improved in value.—Consols, for Money, realised 90¾ to ¼ per cent; for Account, 91 to ⅛; the Reduced and the New Three per Cents, 91 to ⅛; Bank Exchequer Bills, June, 4s. dis. to par; Ditto, March, 8s. dis. to par; Bank Stock sold at 215 and 214½; India Stock, 214, 213½ and 213; and the New Long Annuities, 17 1-16th.

The market for Bonds has exhibited a fair amount of firmness, and prices have been well supported. The value of Turkish Stock during the past week must be taken place:—Brazilian Five per Cents have realised 99½; Brazilian Four-and-a-Half per Cents, 93½; Buenos Ayres Six per Cents, 1862, 94; Chilian Three per Cents, 75; Equador New Consolidated, 15½; Mexican Three per Cents, 21; Peruvian Four per Cents, 1849, 77; Ditto, Deferred Interest, 36½; Portuguese Three per Cents, Small, 47; Russian Three per Cents, 67½; Spanish Three per Cents, Active, 39; New Deferred, 17; Ditto, Committee's Certificates of Coupons not funded, 5½; Turkish Old Six per Cents, 74½; Ditto, New, 70; Ditto, 1858, 84½; Ditto, 1860, 84½; Ditto, 1862, 84½; Venezuela Three per Cents, 17½; and Peruvian Four-and-a-Half per Cents, 63

COMBINED THRASHING AND STACKING MACHINE.

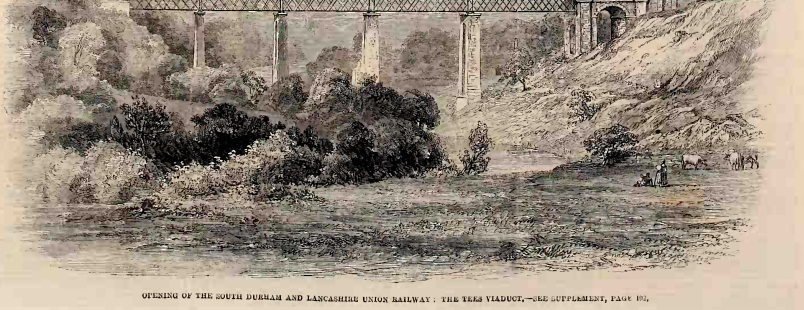
COMBINED THRASHING AND STACKING MACHINE.

THE well-known firm of Wilkinson, Wright, and Co., engineers and millwrights, of Boston, Lincolnshire, obtained the prize medal for their thrashing-machine at the Highland Agricultural Society's Show at Dumfries last year; and the firm gained further celebrity at the Royal Agricultural Society's Show held at Leeds for a new instrument called the Patent Self-acting Straw-Elevator. This implement, from the crowd of observers constantly watching its motion, seems decidedly to have won—along with the silver medal awarded to it by the society—the "blue ribbon" of the showyard; and for the benefit of our agricultural readers we shall endeavour to give a short description of it. It consists of an endless net, revolving on four points of a framework made in appearance somewhat like that of a fire-escape. The action of the net running upwards carries away the straw as it is delivered from the thresher, rolling it up by the vibration and holding properties of the network as it ascends into something like what haymakers call a "windrow," the narrow longitudinal proportions of which make it tolerably safe against the action of the wind, and finally delivering it on the top of the sack, apparently at any distance, point, direction, or elevation that may be required. We may mention that it is so portable as to make no perceptible addition to the draught of the thrashing-machine; that it can be set to deliver its work in any direction from the machine; and that its cost is only about half that of other elevators. It is a decided improvement on the elevator commonly used in Scotland; and, in course of time, it will probably supersede all the clumsy implements at present seen in our farmyards.

THE PNEUMATIC DESPATCH.

A COMPANY has been formed, under the title of the Pneumatic Despatch Company, for establishing in the metropolis lines of pneumatic tube for the speedy conveyance of letters and parcels. The chief feature of the invention consists in propelling a train of carriages through a tube by the creation of a vacuum before them; the tube being, in fact, the cylinder, and the carriages the piston. A piece of ground adjoining the Victoria Railway-bridge at Battersea, and belonging to the Vauxhall Waterworks Company and London and Brighton Company, has been selected for testing the project. Here upwards of a quarter of a mile of the tubing has been laid down; various irregular curves and gradients being introduced to show that hills and valleys would not prevent the effective working of the system. The apparatus certainly works well. With an exhaustion varying from 7 in. to 11 in. of water, or from 4 oz. to 6 oz. per square inch, the speed is about twenty-five miles an hour. The tube through which the despatch-trucks are drawn is not circular in form, but of a section resembling that of an ordinary railway tunnel; the internal height being 2 ft. 9 in., the width at the springing of the arch (the top being semicircular) 2 ft. 6 in., and at the springing of the invert (for the tube has a segmental bottom) 2 ft. 4 in. The tube is of cast iron, in 9 ft. lengths, each weighing about one ton, and fitted into each other with an ordinary socket-joint, packed with lead. Within the tube, and at the lower angles on either side, are cast raised ledges, 2 in. wide on the top, and 1 in. high, answering the purpose of rails for the wheels of the despatch-trucks to run upon. The latter are made of a framing 7 or 8 ft. long, inclosed in sheet iron and having four flanged wheels, 20 in. in diameter each. The whole truck is so made that its external form, in cross section, conforms to that of the tube, although it does not fit it closely, an intervening space of an inch or so being left all around. Some light indiarubber flanges or rings are applied at each end of the truck, but even these do not actually fit the inner surface of the tube, a slight "windage" being left around the whole truck. There is, therefore, no friction beyond that of the wheels; and the leakage of air, under a pressure of four or five ounces per square inch, amounts to but little. The air is exhausted, from near one end of the tube, by means of an exhausting apparatus, from which the air is discharged by centrifugal force. Some idea of this apparatus, which is very simple, may be formed by comparing it to an ordinary exhausting-fan. It is the intention of this company, now that they have obtained Parliamentary powers for opening the streets to lay down their tubes, to establish a line between St. Martin's-le-Grand and one of the district post-offices, and ultimately to extend their system throughout the metropolis, so as to connect the railway stations and public offices.

Some successful experiments were made on Tuesday. One trip was made in sixty seconds, and a second in fifty-five seconds, the distance being a quarter of a mile. Two gentlemen occupied the carriages during the first trip. They lay on their backs on mattresses, with horsecloths for coverings, and appeared to be perfectly satisfied with their journey. It is calculated that the carriages will eventually move through the tubes at the rate of from thirty to forty miles an hour. The arrangements are in the hands of Mr. Latimer Clarke and Mr. Rimmell.



OPENING OF THE SOUTH DURHAM AND LANCASHIRE UNION RAILWAY: THE TEES VIADUCT.—SEE SUPPLEMENT, PAGE 193.

** *The charge for the insertion of Births, Marriages, and Deaths, is Five Shillings for each Announcement.*

BIRTHS.

On the 16th inst., at 11, Princes-square, Bayswater, the wife of Captain John Andover Weed, of a son, stillborn.

On the 18th inst., at the Laurels, Oldswinford, Worcestershire, the wife of James Surrocld Tierney, Esq., of a son.

On the 14th inst., at 59, Seymour-place, the wife of Captain William Barrow, of a son, who survived but a few hours.

On the 14th inst., at 39, South-street, Vincentsquare Hamilton, of a daughter.

On the 16th inst., at 29, Curzon-street, Mayfair, Lady Jane Ingram, of a son.

On the 20th inst., at 59, Rutland-gate, Lady Nunn, of a daughter.

MARRIAGES.

On the 17th inst., at St. Stephen's Church, Paddington, by the Rev. Henry Brooke, Incumbent, Andrew Rosse Esq., Hamilton Rosse, Lexnalgeon, to Louisa, widow of Lieut.-Colonel Andrew Auriol Drummond Thorburn, late of the county of Fife, and youngest daughter of the late Major-General Sir Edward Edgeworth Bayley, Bart., Royal Engineers.

On the 15th inst., at Bonchurch, by the Rev. Edmund Carr, Rector, Wm. Campbell Spence, eldest son of Wm. Blundell Spence, Esq., of Heversen, to Sara, third daughter of Martin Bucklerow, Esq., of Bonchurch, Isle of Wight.

On the 15th inst., at Hanwell Church, Middlesex, by the father of the bride, John Storer Brown, Esq., only son of Philip Brown, Esq., of Tregothnan, Cornwall, to Caroline Ellen, second daughter of the Rev. J. A. Emerton, M.D., of Harrow.

On the 16th inst., at St. George's, Hanover-square, by the Rev. Arthur C. Wilson, brother of the bride, assisted by the Rev. Edward Stevens, William H. Dashwood, Esq., late Lieutenant 3rd Light Dragoons, of Kirtlington Park, Oxfordshire, to Emily Mary, eldest child and only daughter, of Admiral Mends, Esq., of Donat's Grove, Devon.

On the 17th inst., at Dollar, N.B., Charlotte Blackwell, wife of J. G. Goodchild, Esq., late of Belper Lodge, Derbyshire.

On the 19th inst., aged 46, at Pangbourne, Berks, where he had gone for the benefit of his health, Joseph Prestwich, F.R.S., F.G.S., &c., Professor of Geology, and Curator of the Hunterian Museum of the Royal College of Surgeons, England.

On the 19th inst., at the Camp, Chertsey, Surrey, and on the 10th inst., at Clapham, Surrey, Lieutenant-General Sir Frederick Christian Hamilton, Esq., Grenadier Guards.

THE LONDON GAZETTE.

FRIDAY, AUGUST 18.

TOOLE (New Adelphi, Theatre, W.C.) has to announce his ANNUAL BENEFIT, WEDNESDAY, August 23, when will be performed, for the last time, THE DUTCHMAN; OR, THE SCOTCH OF NATURAL; a Romantic Melodrama of intensity and notoriety as performed at the Royal Dramatic College First at the Orchil Patent, founded on THE HUNGRY SPECTRE, or the Red Scourge; and several of the Laughable Farces SOMEBODY ELSE'S.

THE SISTERS SOPHIA and ANNIE,

in their celebrated and highly successful Entertainment, entitled SISTERS SMILE AND SING, open at Scarborough, Aug. 21; Brighton, 28 and 29; Scarborough, 30.

CRYSTAL PALACE.—BLONDIN will make his ASCENT every MONDAY AFTERNOON, at Half-past Six, as a special and additional novelty on this occasion. Blondin kindly undertakes to carry to Wood Mr. Blondin using the rope in his hazard. Admission, One Shilling.

CRYSTAL PALACE.—BLONDIN will make his DESPERATE and only secret visit next WEDNESDAY, THE RUNAWAYS on MONDAY, Aug. 28, at Half-past Six o'clock precisely.

The Directors have been induced to adopt these extraordinary steps, in consequence of the numerous letters which have been received from all parts of the country, from persons who have been unable, especially for this purpose, since the thousand feet in height. Blondin will, therefore, on the occasion of his visit, carry with him a rope purchase for the use of all those persons who may desire it, such exercise the rope should be well strained and poised, and in the best manner for the purpose. Mr. Blondin has announced that the rope used at the Crystal Palace is far more secure and reliable than any rope of equal length ever before stretched. Mr. Blondin will be happy to show the rope to any scientific gentleman.

The Directors will be glad if the whole period of the performance, from Six to Seven o'clock, could be devoted to the ascent of Blondin, and the descent of the Runaways.

Open at Nine. Admission (including Blondin's Performance, the Great Fountains, and Illuminations), Half-a-Crown; Children (if without extra charge), One Shilling; Children and Schools, Half-price.

THE QUEEN, an Illustrated Journal and Review.—Men of all classes in England—the clergymen, the officers, the civilians, the merchants, the artists, the mechanics, the settlers—have such a journal written especially for them; but they have it not. The QUEEN, the Lady's Newspaper and Court Chronicle, is the only publication which supplies the want. Every English gentleman is now in preparation. The first Number will appear on SATURDAY, the 26th inst. The QUEEN will be published on the 1st of October, and will contain high-class Journals are for non-morning and Advertisements, and Numbers can be had of all Booksellers and Newsmen. The QUEEN will be a Journal for the Drawing-room, the Library, the nursery, and home and abroad; while, to be made, the "Queen"

NEW MUSIC.

STEPHEN GLOVER'S EXERCISES FOR PERFECTING THE ELOCUTION.
"Away with Melancholy"—one octave.
"Auld Lang Syne"—repeated notes.

street). London.

OPERA, RACE, FIELD, and general one-door
Glasses, by DOLLOND, CUMMING, KUDDERMINSTER, and
RICH. GRAMER, each containing 12 and 18 lenses, will show
distinctly 3 miles, and by moonlight or any moon 10 to 12 miles.
Her Majesty's Coast Guards are making use of them at day and
night. Sold by the Opticians to the Queen, the Royal Family,
Navy, and all Governments and nations. It is the only glass adapted
for the purpose of ship-practice at long ranges. An brilliant to-
day as when first introduced, and perfectly free from colour. Any
range seen at 3 miles, and as clear at 12 to 14 miles; with an
extraordinary field of view. Also Telescopes and Opera Glasses of
every description in stock. They are also exceedingly strong and
well powering powers, and are secured by her Majesty's Royal
Letters Patent.—H. Atkinson, Optician, 2, Royal-exchange.

EYESIGHT.—Messrs. SOLOMONS,
Opticians, having directed their whole attention to by and
long years practice, and the many testimonials they have received
perused TINTED SPECTACLE LENSES of the greatest benefit
to the sight, have now the pleasure to offer them to the public as
manufactured. They are recommended as equally useful and
as the most scientific occupation, can see with them for 3 months
together without the least fatigue. Spectacles suited to every
requisite correctly adapted.—39, Albemarle-street, Piccadilly.

DEAFNESS.—A newly-invented Instrument
for extreme cases of Deafness, called the Aerial Magnetic
Organic Vibrator, and Invisible Voice Conductor. It fits into the ear
entirely out of sight, and is not perceptible to the most scrutinising
inquiries in the least to satisfy required. It affords instant
relief in deaf persons, and makes them to hear distinctly at church
and at public meetings. Every other kind of hearing fashioned.—
HOOKE, SOLOMONS Optician, 39 Albemarle-street, Piccadilly, W.

MAGIC LANTERNS, Dissolving Views, and
Effects of the highest character, first and last words like
recovery, with the option to purchase. Slides by first-rate artistes.—
Mr. Nathaniel Ambrose Isle, 84a, 39, Albemarle-street, Piccadilly.

NEW FIVE-GUINEA HARMONIUM, by ALEXANDRE, the best of all makers. In each case, with a perfect set of knee-swells, and the percussive stop, or their Prize Five-Guinea.—At CHAPPELL'S, 50, New Bond-street.

NEW SIX-GUINEA HARMONIUM, by ALEXANDRE, with two rows of vox-humanas, and in oak case. These instruments are lower in pitch and more suitable for all sacred purposes than those of any other maker. Also, a new model, with Venetian swell, to be had of no other manufacturer in the kingdom. Testimonials to the above instruments from Sir Alexander Mackenzie, Professor Pierson, Mr. Sterndale Bennett and Sir Geo. Gardiner; also from Dr. Rimbault, Dr. Gauntlett, Rev. Sir F. Gore Ouseley, Bart., and other eminent organists, may be had on application. Lists of prices forwarded on application to CHAPPELL and CO., 50, New Bond-street.

HARMONIUMS at CHAPPELL'S.—The HARMONIUM is fast becoming the most popular instrument of the kind that remains in force, from the simplicity of its construction to both skilful and unskilful performers, and is unrivalled for the Church, Chapel, School, or Drawing-room.
CHAPPELL and Co., 50, New Bond-street.

EVANS'S HARMONIUMS, from 9 to 150 guineas, manufactured throughout in England, by workmen of the first class, and of the most perfect tone that can be obtained. The most flattering unsolicited testimonials are daily received from the most eminent Professional Instruments. Illustrated Catalogues on application to the manufacturers, DOBSON and EVANS, 14, Hollis-street, Oxford-street.

BASS BANDS—DRUM-AND-FIFE BANDS.—Genuine, Exclusive, Circular Vibrating Horns, Bugles, Fifes, Drums, and all Brass Instruments used in Bands, on the premises, at prices below Jewish Instruments, by GEORGE and JOHN ASTON, Manufacturers, 4, Princes-street, Hanover-square, corner of Regent-street. Estimates, free by post.

THE NEW SCREW-STEAMER SICILIA.

THE STEAM-SHIP SICILIA.

The constant problem of steam navigation, especially in a commercial view, is the economy of motive power, so as to increase the room for freightage while lessening the consumption of fuel. It was in the spring of last year that an experiment was made with the object of solving this problem, and of demonstrating the feasibility of a saving in coal of at least seventy-five per cent. The London and Mediterranean Steam Navigation Company tested the merits of Mr. J. M. Rowan's patent engines first with the screw-steamer Thetis, a vessel of 355 tons register. The result was so encouraging that the directors determined to adopt the principle and to apply it gradually to their fleet. On Wednesday week the new ship Sicilia, a screw-steamer of 800 tons and 150 nominal horse-power, made a trip from Blackwall down the Thames, and proved, to the satisfaction of a large company of practical and scientific persons, the capabilities of the machinery by which an improvement so great as that we have indicated may be brought to bear on steam navigation.

The water to be used in Mr. Rowan's boilers is fresh, and a distilling apparatus is connected with them for the purpose of ridding sea water of its salt. The chief recommendation, however, of the new machinery is that it uses the steam twice over, first at high and then at low pressure. The boilers, being tubular and cellular, expose an immense heating surface in a very limited space. The steam, being worked very expansively, is condensed in the interior of the tubes, which are kept free from all earthy or saline deposits by the arrangement we have already mentioned.

The following are the results which were obtained at the trial-trip:—1st run against the tide, 9·2, or 6·642 knots; 2nd run with the tide, 5·0, or 12·000 knots; 3rd run against the tide, 7·58 or 7·031 knots; 4th run with the tide, 5·4, or 11·765 knots; mean speed of all the runs, 9·180 knots per hour; averages of revolutions, 74; pressure, 115lb. per square inch; vacuum, 28½; barometer, 29·90; coal consumed on a trial of several hours averaged 5 cwt. per hour, which at the power developed would be equal to 1·36lb. per indicated horse-power per hour, or very considerably less than one half of the consumption of the best class

EISTEDDFOD, OR CONGRESS OF WELSH LITERATI, AT CONWAY CASTLE: THE TOWN AND CASTLE OF CONWAY,—SEE NEXT PAGE.

of ordinary mercantile or Government marine-engines. From there being a stiff breeze and a crowded state of the river, as well as the state of the tide, the speed was not quite so good as it would otherwise have been, or at it was on her official trial at Hartlepool, but the performance of the machinery was in every respect perfect. The Sicilia is not so showy a vessel as the Isaac Wallis, which is another steamer belonging to the same company, but her lines are exceedingly graceful, and the fencing of her sides to shown great strength and finish. She was built at Stockton-on-Tees, by Messrs. Richardson, Duck, and Co., and her engines have been made by Messrs. Dudgeon, of Shoreham, Co., and her engines have been made by Messrs. Dudgeon, of Shoreham, Sussex, and Cuttle," and the solitary paper was not deemed worthy of the prize. Professor Bunkum, of Queen's College, Cork, then adjourned the audience. Thursday's proceedings were wound up by a grand concert in the evening.

On Friday business was commenced as on the previous days at 9.30 a.m. A great number of ladies and gentlemen attended the degree of cease at the Gorsedd. After a few genial remarks from the president, and the performance of two choice pieces of national music, the Rev. Robert Hughes (Robin Ddu) delivered the following address in explanation of the Welsh terms of Epeeia and Reading of Cattle." Two essays had been received; both very good. The prize of £10, offered by Messrs. T. A. Roberts and Co., of Conway, was divided between the authors—the Rev. J. Owen (Op Llwyd), Llanfairfechan, and Mr. Morgan Jones, Bangor. The subject for competition on the "White Shirt" was announced to be Mrs. Williams, of Dinorwic, Llanberis, and Llanrug spinsh, was stated to be "Joan," the successful author of the successful competition on the previous day. "Oil Out!" subject was announced to be Mr. J. Evans, of St. Asaph. The most interesting feature of the proceedings was the competition for the prize offered by "Gwalchmai Hills" Gwalchmai read the adjudication of himself, D. D. Fridd, and Creuddyndra" on "Fight" subject, which was read by Mrs. Hughes, of Bangor. There were two "Patchwork quilt, complete," was won by Mrs. Llewelyn Bach, Menai Bridge. "Patchwork quilt, complete," was won by Mrs. Jones, Bodfan, of Conway. In the harp competition the following players appeared:—Miss Jones, Llanfairfechan; Miss Jones, Penmaenmawr; Miss Griffiths, of Llanwrst; and Miss Evans, of Mold. The winners were Griffiths and Jones, both pupils of Parry, of Bangor. The adjudicators declared they could not decide between them. The former, a boy, was this time successful. Oldfield (Eryr Meirion) and Mr. Jones (Mynydd Mawr) were the adjudicators. Mr. Jones (Mynydd Mawr) kindly presented her with £5. Mr. Jones, Bangor, Mr. Jones, Llanfairfechan, and the Rev. O. Jones, of Manchester, were the gentlemen who officiated as adjudicators in the competition for the prize in Welsh, the Rev. J. Evans (I. D. Fryn) of Llanfairfechan, and Mr. Jones (Mynydd Mawr) of Bangor. Mr. J. Gwynfai Jones carried off the prizes. The prize for the best exposition to the Gorsedd was awarded to Mr. Jones, Bangor. Mr. Jones (Mynydd Mawr), of Bangor, Mr. Evans (Ieuan Glan Geirionydd), of Llanrwst, and Mr. Williams, of Llanberis, were next read the adjudication on the "Englyn" on both equal. The authors were Mr. J. O. Griffith (Brynsiencyn) and Mr. Jones, Llanfairfechan. There were Mr. J. O. Griffith (Iron Artist), Carnarvon, and Mr. Jones, Llanfairfechan. There were two "Welsh essays, given" were read by Mr. Ellis Evans, who divided

OUR COLOURED SUPPLEMENT.

"THE CHASE: TIME OF GEORGE II." BY F. TAYLER.

THIS spirited picture commends itself to our notice both as a fair representation of one of our most favourite national field sports in the days of our ancestors three generations back and of the extraordinary costume of the period. The "meet" has taken place at the trysting-tree, probably in Yorkshire, and the horses and their riders exhibit all the pluck and bottom of that fine old England country.

There are, perhaps, more hunting, more meets, and more numerous fields assembled on than at any former period. The sport is not now restricted to any particular class of men, for, although the old Epping Hunt, of venerable antiquity, in virtue of the rights of *free commons*, confirmed by decrees of London by Henry III., in 1226, has lost its former prestige, the Lord Mayor, Aldermen, and Corporation no longer proceeding to the hunt in "solemn state," the wealthy citizens by the aid of the railways take their turn with the hounds at the various points within a few hours' distance from town, either on horse or by train a week, and return to look in at their offices and counting-houses just before the close of business.

Of course there is now, as formerly, there always was, a great disparity in the character of the fields, and the ceremonial observed in them. At your "provincial" meets the costume is very multifarious, and while the bonedealer, the harrister, the little country attorney, often turning out in ruffs; whilst the M.P., the City merchant, and the leading men of the county appear in the legitimate scarlet. Ascendible is the hunting county par excellence, and Melton Mowbray the head-quarters. This was till lately a purely agricultural district town, but it is now rapidly becoming a sort of metropolis for our fashionting aristocracy. "The uninitiated reader," says Nimrod, "would perhaps be surprised by an enumeration of the persons of rank, wealth, and fashion who during several months of every year reign the comforts and elegancies of their lordly mansions for a small house in the immediate village of Leicestershire — to say but the eye of a sportsman nearly the ugliest country in England. The same authority gives us the following carp-drell of the legitimate Meltonian, which contrasts widely with the miscellaneous field in provincial hunts, and so strangely with the hunting gentry of the time of George II., as represented in Mr. Tayler's picture: "The style of your Meltonian fashionable is to have about eighteen stone to carry, and as for what he calls the *provincial* class. 'When turned out of the hands of his valet he presents the very *beau-ideal* of his order. The tightest possible fit of his coat, immaculately well-cleaned leather breeches, and the generally apparent high breeding of the man can seldom be matched elsewhere; and the most fastidious would generally find no cause for criticism on this fact at a single inspection."

One step more from this entertaining writer and thoroughgoing sportsman, drawing the line between the foshunter of the eighteenth and the nineteenth centuries respectively — Compared with the luxurious one with which the present generation is established, the latter — either toiling in his chaise and four, or galloping along in the rear of twenty miles an hour on a hundred-guinea hack — the sturdy old English yeoman was all but distressing. In proportion to the distance he had to ride by early daylight to the kennel or rendezvous, in order to be in time for the start after the universal eight consume, mother serious matter was to be provided for. This was the filling his hair with powder and pomatum until it could no more, and then combing it out, a hitching of his hat on club, as it was called by his valet, which was commonly a good hour's work. The connecting windows, the causeway being the general haunt in the field, were luxuries unknown to him; and his well-oiled buckskin and brown-topped boots would have cut an indifferent figure in the presence of a modern connoisseur by a Leicestershire groom. Notwithstanding all this, however, we are inclined strongly to suspect that, out of the number of gentlemen riding to hounds in the present day, the proportion of really scientific sportsmen may have been in favour of the olden times.

But another still more important change effected in modern hunting is in the character of the horses. They are now higher bred than before, and better. It is true to a considerable extent that they have more running in them, and whether the slap-dash, touch-and-go style of hunting of the present day, is more conducive to the attainment of moral impossibility for a third of the field to be within sight of the fox at "the death," is equally interesting as the more moderate but more enduring pace which our ancestors were accustomed to go in.

But it will be proper to say a word or two about Mr. Tayler's picture in illustrating the costume of the period to which it refers. The gentleman wore the heavy square-cut, buckram-supported coat which was common generally in society, the triangular hat, the powdered and pomatumed head, and the pigtail periwig. The large boots, sometimes cocked hat, called a leven-hitcher, was imported from Germany, and is a specialty of the times of the first two Georges. As we are informed by a writer of the time:—"It is shaped like an equilateral triangle, placed with the point midmost upwards on the head, and over what cheerful kindred, and sloping in an unvarying angle down wards to the eyes, surrounded by a long stuff, formal feather, rising from the apex rectte of black plicks or cocks' tails. With respect to ladies' equestrian costume just now, by-the-way, the subject of ventilation in the parks and rides of late has been observed that the riding habit was first introduced in the reign of Charles II., and was still looked upon with astonishment in the reign of Queen Anne, as appears by the following remarks of Addison :—'Among the several female extravagancies I have already taken notice of, one which still remains in fashion I mean that of ladies who dress themselves in a hat and feather, a riding-coat and a periwig — and, in short, appear in the dress of a beau or ribbon, in imitation of the smart part of the opposite sex.' And he goes on to give an account of one of those monstrous personages—*Her hair*, well curled and powdered, hung to a considerable length on his shoulders, and was tied, as if by the band of his mistress, with a couple of ribbons, which played like a streamer behind him, he had a coat and waistcoat of blue camlet trimmed and embroidered with silver, a cravat of the finest lace, and wore, in a smart cock, a little beaver hat edged with silver, and made more stylish by a couple of feathers.

As I was praising the luxury of this young person, who appeared to me to have been only recently let out of leading-strings, I was struck cold, on my nearer approach, and as I turned my eye downward, a part of the equipage I had not observed before, which was a petticoat of the same as the coat and waistcoat."

"THE HOP-GARLAND." BY WITHERINGTON.

It would be almost impossible to select a subject for the painter's art more truly rural than that of a party of hop-pickers at their work, or an exciting work and most pleasingly has Mr. Witherington treated it in a picture of his, lately painted, having been exhibited at the Royal Academy in 1843. The little group of a young woman crowning a pretty, merry-looking girl with a garland of rich hop-flowers, and a young lad bringing fresh bines and hops to complete the wreath, which is charmingly conceived and executed, the colours having the true healthy look of nature.

This picture, which we present printed in colours, will prove very opportune at this period, the hop-picking being now in full progress, and in a most bountiful way. Before long the annual Hop Fete scenes are more picturesque and cheerful than that afforded by every village hop-ground during the picking season. Women, and children are all employed. Labourers, cottagers, hostlers, factory girls, dairymaids, fishermen's wives, young watermen, and even clerks out of employment, all throng the Kentish highways at this time, attracted by the opportunity of earning a couple of shillings per week; and still the cry is more, and the farmer in pleasant seasons is frequently embarrassed for want of hands. The work is said to be especially healthy and strengthening, owing to the tonic properties of the hop; and invalids are occasionally recommended to pass whole days in the hop-grounds as a substitute—and a very efficient one—for the usual 'exhibition' of Bass or Allsopp. Whole armies of pickers encamp at night in the neighbourhood of the grounds. In huts, and stables, and outhouses, in abandoned mills, in crumbling barns and dilapidated cast-houses whose cracks are ineffectually stuffed with straw and clay; under posts, against walls, in tents and under canvas awnings, this multitude cook, eat, drink, smoke, and sleep. Many of these (rather fewer than formerly) are frail, and serious scenes of riot and disturbance occasionally occur at the hop-pickings."

Mr. Witherington has seized a glimpse at a quieter moment in the hop-field; but he has imbued it with a lively dramatic character.

CAPE RACE, NEWFOUNDLAND.

CAPE RACE is the south-eastern extremity of the peninsula of Avalon, which is a portion of the great island of Newfoundland, and is nearer to Europe than any other part of North America. Newfoundland lies between the latitudes of 46 deg. 40 min. and 51 deg. 39 min. north and the longitudes of 52 deg. 44 min. and 59 deg. 17 min. west. Its extent is about 1000 miles; it is separated from Cape Breton, or Breton Island, by a passage fifty miles wide, and from Labrador by the straits of Belleisle, which are about ten miles in width; its south and eastern shores are washed by the waves of the great Atlantic, its western coast by the Gulf of St. Lawrence. The interior of Newfoundland, the general form of the island is that of an irregular triangle, having the south coast for its base.

The coast of the island is picturesque in the extreme, being composed entirely of rocky headlands, deep bays, and inlets, and in some places the huge walls of granite rise up perpendicularly out of the sea to many hundreds of feet in height. These faces are full of deep sea-worn caverns, into which the waves rush with such fury that the noise is like that of artillery, and fishermen are often warned by this means of their dangerous proximity to the coast when navigating along it in foggy weather, and would be utterly unable to ascertain their position position by any other means.

The interior of the island of Newfoundland is but little more inviting than is the coast: it consists of mountains, hills, swamps, and small lakes, with but little land that is available for agricultural purposes, the soil generally consisting of decomposed granite or other primitive rock or peat. On the western side there is, however, some tolerable land, but the severity of the winter is a great bar to the cultivation of the passage. The best soil is that called 'intervale land,' which consists of alluvial deposits from the beds of the numerous rivers. The principal settlements on the island are situated upon the peninsula of Avalon, at the south-eastern extremity of the island, St. John's is the capital, and is remarkably well built town, situated at the entrance of a deep bay, with gradually-rising ground behind it. The harbour is capacious, and is considered one of the finest in the world, being land-locked between two lofty cliffs, and the passage so narrow that there is only room for one huge ship to enter at a time. It is most conveniently situated for the commerce of Europe or America. A series of forts guard the entrance, as well as the more distant ports, of the harbour of St. John's.

This island was supposed to be the first portion of America ever visited by Europeans, but was probably overlooked by the coast of Labrador for more than land. Newfoundland was, without doubt, discovered by Cabot in 1497, and has always been claimed by the British, and was formally taken possession of by them in the early date. That of Mr. Hoare was the first, in 1536; afterwards Mr. Gay, and in 1583 Sir Humphrey Gilbert established the first colony and claimed many of the eminent men of that time, Lord Bacon being one of the number. A patent was granted to him in 1610 for the planting a nation of the "London and Bristol Company of Adventurers and Planters of the Cities of London and Bristol for the Colony and Plantation in Newfoundland," and Sir George Calvert, (Lord Baltimore,) in 1623, was more endeavured to found a Catholic settlement on the western side of the island. He returned to England, and, from the favour of Charles I., was enabled to found another colony on the more genial shores of the Chesapeake. In 1670 Sir Josiah Child, then the highest patentee in the island, declared the right of the inhabitants of Newfoundland was a mistake, and tended to destroy the Great Bank fishery that, up to that time, had been carried on by ships which came to or from the inhabitants of the island. Of such weight were his opinions that the Lords of Trade and Plantations recommended the utter destruction of the colony, and Sir Josiah was sent out with the object in pursuance but he encountered so much opposition to the island, and on no account was any strange person to be allowed to settle there.

During the reign of Charles the colonists were subject to great vicissitudes, St. John's having been destroyed on more than one occasion, and at the Peace of Utrecht, in 1713, the whole of the island, with the exception of the station Carbonier. Louis XIV., yielding to the pressure of circumstances, gave up all his possessions on the coast of Newfoundland, but, by the Treaty of Versailles, his subjects were allowed to erect huts and stages for fishing along part of the eastern coast, from Cape Bonavista to Point Riche, and then along the western coast as far as Point Riche. At the peace of Paris, in 1763, these arrangements were again placed on the same footing as before the peace of Utrecht, and they were finally confirmed by the treaty of 1783. Newfoundland enjoyed the highest state of prosperity, its exports having risen to the enormous amount of £4,000,000 sterling, and ships of all nations were to be seen from the banks, and the Americans had not the means to carry on any very successful competition with them; consequently the fishery was the entire monopoly of the fishing trade. At the peace of 1814 matters returned to their original position, and the prosperity of Newfoundland increased rapidly, the fishery employing a large number of men, and the trade in the seal fishery. About a hundred miles west of Cape Race, which is the most easterly point of Newfoundland, is Placentia Bay, are the two islands of St. Pierre and Miquelon; these islands were ceded to the French in entire sovereignty, and are made the headquarters of the French fishing fleet employed on the coast, also lately as to what right the French actually possess here, and at some future time this question will be settled. The seal fishery also occupies the Newfoundland fishery has of late years been carried on with great energy by the sealing fleet, which sails from the little harbour of Torbay, north of Normandy when the deep-sea fishing fleet is fitting out; their vessels are large, and carry as many boats as they can, with an efficient crew on each boat. They also carry a red ensign, which distinguishes them from the British and Dutch in all the ports of the Mediterranean and Baltic.

The great point of interest on the south coast is Cape Race—the subject of illustration—as it is the point of land which nearly all the steamers coming to or from Europe, and many sailing vessels, endeavour to make. The coast at Cape Race is bold and rocky, the cliffs rising precipitately into the sea, and presenting a fine iron-bound appearance, but some great convulsion of nature; a huge black rock lifts its head up out of the deep water immediately in front of the cape, the channel to the north of the island has many deep hollows, and in some cases masses of rock stand out isolated from the great granite wall that breaks the violence of the Atlantic rollers. On the top of the cliffs, a short distance from the edge, is a well-built lighthouse painted white, and striped with red vertical bands, distinguishing it from the lighthouse on Cape Pine, an important point of the coast, about thirty miles west of Cape Race, where the lighthouse is striped with horizontal bands of red.

Cape Race is also the terminal point eastward of that remarkable system of telegraphic communication which connects the shores of the United States and the British possessions. The Americans delight in the telegraph, and use it continually for every sort of purpose, and in a way and extent that Europeans have no conception of. On the lonely rock standing out in the Atlantic amid fogs and storms, European news is flashed to the New World, and American news to the Old, and from Cape Race to New Orleans the newspapers have it, print it, and the intelligence is carried by the ship arrives at New York, three or four days after passing Cape Race.
